A HAPPY NEW YEAR

THE SENIOR SIRE OF BLOOMINGDALE HERD

A Show Bull of Wonderful Type and Individuality

KING MODEL

His dam, Mabel Segis Korndyke, the first 40 lb. heifer, is a cow of perfect conformation.

Through his sire and dam he traces twice to that great transmitting sire, King Segis.

His first tested daughter produced over 25 lb. butter at two years and over 31 lb. at three years. She is State Champion of Connecticut.

Another two year old daughter won 2d Prize last year at the National Dairy Show and later became State Champion of Maryland.

His first daughter to complete a yearly record produced over 873 lb. butter in the 365 days at two years old.

With only two exceptions, all of his 31 tested daughters have produced more than their dams at the same age, a sure proof of his wonderful ability to transmit.

We have a few choice sons of KING MODEL to offer, one from a 40 lb. daughter of Matador Segis Walker, another from a two times 30 lb. dam, also a young son from a 20 lb. junior two year old.

BLOOMINGDALE FARMS

SOMERVILLE, N. J.

FINDERNE STOCK FARMS

HOME OF

KING VALDESSA

A bull of royal breeding.
An animal of remarkable individuality.
A sire of everyday and all-the-year 'round producers.

His dam, Valdessa Scott, 2d 41.88 lb. A. R. O., the first cow to make a 40 lb. seven day official butter record, was developed and made her A. R. O. records on this farm. She was the first cow to make over 37 lb. butter in seven days two different years, which she did at eight and ten years old.

His sire's dam, K. P. Pontiac Lass, 44.18 lb. was the first 44 lb. cow and the first to beat his own dam. The two nearest dams of King Valdessa average:

7 days—Butter, 43.036 lb.; Milk, 640.25 lb.
30 days—Butter, 167.894 lb.; Milk, 2,625.15 lb.

Each have high record daughters and are transmitting their own great producing powers to their offspring.

While our cows are kept for every day business, yet, when tried out they have made records that leads the list. Among the record smashers bred and developed at Finderne are:—

FINDERNE PRIDE JOHANNA RUE.

1470.58 lb. butter in a year at full age. World record when made.

FINDERNE HOLINGEN FAYNE

1395.06 lb. butter in a year as a junior three year old. World record over all ages and breeds when made. World record in class now, altho made seven years ago.

FINDERNE MUTUAL FAYNE

1200.63 lb. butter in a year as a junior two year old. World record in class.

To head your herd you need a bull of FINDERNE QUALITY. Our prices are within your reach, so TO-DAY, write

ORIGIN HERD

OF REGISTERED HOLSTEINS THAT ARE NATURALLY HORNLESS

Origin Herd animals possess a combination of desirable characteristics: Individuality; Producing Ability; Persistency and Hornlessness.

A 1,000-lb. dam with two 1,000-lb. daughters.

The milk produced by this cow and her four A. R. S. O. daughters in year test averaged 3.98% butterfat.

The center cow is the dam
CORNUCOPIA PLUM JOHANNA
19,958.6 lb. milk, 1,056.78 lb. butter in a year, record made from three quarters.

The daughter on the right side is
KEYSTONE PLUM JOHANNA
22,190.7 lb. milk, 1,052.96 lb. butter in a year.

The daughter on the left hand is
KEYSTONE BEAUTY PLUM JOHANNA
25,787.5 lb. milk, 1,294.71 lb. butter in a year as a senior four-year-old. In strictly official test throughout the year. WORLD CHAMPION OF HER CLASS FOR BUTTER.

We judge our animals by their work at the pail, day by day, month by month, and year by year. You can depend upon the stock you get from Origin Herd, they are right.

Home of the Royally Bred Young Bull

KING SYLVIA JOHANNA PONTIAC

Son of KING ECHO SYLVIA JOHANNA who also sired the $106,000 bull, and of the great cow OTEGO VALLEY CHRISTMAS BELLE:

Butter, 40.56 lbs., Milk, 651.2 lbs. in 7 days.

One of her daughters has twice made over 31 lbs. butter in seven day official test.

Besides being royally bred he is a SHOW BULL, straight as a line, square rump, deep chest and barrel, a dandy handler and he just fills your eye. COME AND SEE HIM.

Our herd is run for production coupled with economy and profit. Cows in this herd have made and are still making dandy records in both short time official and long time semi-official work. A present member of this herd in semi-official work has made in the past eight months, 16,000 lbs. milk and 600 lbs. butter; a cow we sold to State College produced 22,247 lbs. milk, 851.1 lbs. butter in a year; and we think we have others just as good. COME AND SEE FOR YOURSELF.

Herd under State and Federal Supervision

VOL. I HARRISBURG, PA., JANUARY 1, 1922 No. 1

Retesting a World Champion

IT IS nearly twenty years since the first official record of thirty pounds of butter in seven days was made by the Holstein cow, Sadie Vale Concordia, she thus becoming the world champion for seven-day butter production. At that time many thought that the extent of the producing capacity of Holstein cows had been reached, and that her record would stand supreme for many years, if not for all time. How badly they were mistaken.

The very next animal to surpass thirty pounds of butter in seven-day official test was the four-year-old Aaggie Cornucopia Pauline. In course of time, Sadie Vale Concordia 4th, a three-year-old daughter of the first thirty-pound cow, in turn made over thirty pounds of butter in seven days, but the limit was still far away, for two-year-olds began to make thirty-pound seven-day official butter records. It is true that not many have reached this high mark at this tender age, but both junior and senior two-year-olds have made more than 30 lb. of butter in seven days. It remained, however, for a Canadian heifer, the subject of our story, to make thirty-one pounds of butter in a week as a junior two-year-old, thus setting a mark which many in her class have aimed at, but that no other has attained.

The new champion is Eco-Sylv Belle, No. 533,992 H. F. H. B. and No. 69,518 Canadian Registry. This heifer is owned and was bred by A. C. Hardy of Brockville, Ontario, Canada, a breeder whose reputation is international and whose establishment stands as one of the greatest in America. Eco-Sylv Belle was born August 7, 1919. Her sire is Champion Echo-Sylvia Pontiac, No. 154,719, the famous bull at the head of the Avondale herd. The dam of the heifer is Belle De Kol Clyde Pontiac, No. 399,698. The heifer herself freshened November 24, 1921, at the age of two years, three months and seventeen days.

She was started in official test at 11 p. m., November 29th, and at her very first test milking, at 5 a. m., November 30, she produced .840 pounds of fat, which is at the rate of nearly thirty pounds of butter in the week. The first day of her test she made 3.567 lb. of fat, practically a 32-lb. gait.

Superintendent Gardner, of the American Advanced Registry Office, and Secretary Clemons, of the Canadian Holstein-Friesian Association, were immediately notified by telegram. Superintendent Gardner as soon as he received the first partial preliminary report, wired Professor Dean, of the Guelph Agricultural College, Secretary Clemons, Mr. Hardy, Professor H. H. Wing of Cornell University, and Mr. E. R. Zimmer, Secretary of the New York State Holstein-Friesian Association. He asked Mr. Zimmer to go to Avondale Farms, if possible, and investigate. If he was unable to go Professor Wing was to send someone in his place. Mr. Zimmer had conference meetings to attend and suggested to Professor Wing to send the writer, and as he agreed, I received orders to proceed to Brockville and observe, investigate and check up the work of this heifer. The evening of December 6th I arrived at Avondale.

The same evening a telephone call was received by Mr. H. Lynn, manager of the Avondale Farms, announcing that Mr. G. H. Cossitt, a supervisor of the Ontario Agricultural College, had been delegated by Professor Dean to act as the retest supervisor on the animal. At the eleven p. m. milking, December 6th, three of us were present, Mr. George Noack, the regular supervisor, Mr. Cossitt and myself. Belle was milked dry at that time and the next morning, before the milkers had reached her in the test string, Mr. Grummett, representing the Canadian Holstein-Friesian Association, walked into the barn. For five milkings, there were four supervisors present at each milking, and practically all this time, two or more of us had her in plain sight, while at no time was she left alone, and when Mr. Grummett and myself left after the morning milking of December 8, Mr. Cossitt remained to continue the retest for at least a two-day period.

The morning of December 7, Eco-Sylv Belle produced 16.6 lb. of milk which tested 5.3%, equivalent to .880 lb. of fat. This "cut out" the first milking of her test and made a gain of .040 lb. of fat, but she did not increase after this time. The seven-day period in which she made her record started at 5:45 a. m., November 30, and ended at the same time, December 7. In these seven days she made 439.7 lb. of milk, 24.916 lb. of fat, equivalent to 31.145 lb. of butter. Her production day by day was:

	Lb. Milk	*Lb. Fat*
November 30 (three milkings)	45.0	2.327
December 1	61.5	3.674
December 2	63.8	3.715
December 3	63.9	3.708
December 4	62.4	3.552
December 5	63.8	3.353
December 6	62.7	3.307
December 7 (one milking)	16.6	.880
	439.7	24.916

The 5 a. m. milking of December 7, 16.6 lb., was the largest of the twenty-eight. Notice how evenly she milked, day by day. The two supervisors proper each

took a sample of the milk of each milking after it was weighed and these were tested separately, each man taking the fat readings of his own samples. So close was the work of these two men, that only one-thousandth (.001 lb.) of a pound of fat was the variation between their totals for the day of December 7, Mr. Noack's figures for the day being 3.166 lb. and Mr. Cossitt's 3.165 lb. The heifer in this twenty-four hours made 64.3 pounds of milk. Mr. Grummett read the test bottles in every instance, the writer acting as checker, so that no precautions were omitted to verify the enormous production of the animal.

The record of Eco-Sylv Belle was made without many of the advantages that some of our great record animals receive and that we have come to expect they should have. The heifer stood in the stanchion row and to my knowledge was not out of the stanchions during the more than thirty-six hours I was at Avondale. Four animals were on test, and Belle was the third animal to be milked. Of interest is the fact that all of the animals at Avondale Farm are broken to be milked on both sides at once, and Belle is no exception to the rule, her two milkers being Watson, the youngest son of Mr. Lynn, and "Archie," who has been milking the test cows at Avondale for some time past. Each man milked with their sleeves rolled well above his elbows and both were good milkers, fast and clean, getting done at the same time.

The heifer is well grown and in good condition but not extra fat. I should estimate her weight at right around 1,200 pounds. There is quite a story regarding her condition. She was bred last February, and sold at the Toronto National Sale in April, being struck off to Professor Wade, of the Guelph Agricultural College, who was acting as agent for a South African cattleman. After she was taken away, she came into season and was returned to the farm to be rebred, and then it was suggested that another heifer that was sure with calf should be taken in her stead. After breeding again the heifer was turned out with some other heifers in pasture but proved to be in calf by the first service. She was not fitted until her udder began to develop and there was not time to get her in the shape that the Avondale heifers usually are in at freshening time.

As an individual, Eco-Sylv Belle is good but not a real show animal. Her udder is very large and square and her teats are well placed and of good size. Her barrel is large but we have seen larger on heifers of similar age. Her rump is wide but not as square as might be. Her head is clean-cut, shoulders sharp and although, as I said before, not a show animal, she is one that anyone would be proud to own or to have bred.

Everyone connected with Avondale is proud of the heifer, not only because of her record, but also of the fact that she was bred at Avondale and that her sire heads the Avondale herd and is a son of the world milk champion, May Echo Sylvia, so that the new champion in the junior two-year-old class is a granddaughter of the champion milk cow of the world.

Eco-Sylv Belle appeared perfectly healthy. Her appetite was good at all times and she was ever on the lookout for more to eat. She readily cleaned up her grain and roots at each feeding. The hay chute through which the alfalfa came from the mow to the stable was very close to her head and she reached eagerly for choice morsels when the hay for the test cows was thrown down.

This heifer received 12 pounds of grain a day, fed in four equal portions, consisting of the following mixture:

336 lb. distillers' grains,
207 lb. bran,
114 lb. hominy,
156 lb. ground oats,
142 lb. gluten,
50 lb. oil meal,
10 lb. salt,
10 lb. charcoal.

This, Mr. Lynn told us, was a ration he has fed for many years. In addition to her grain, she received cut mangels at each milking, her grain being put into a ten-quart pail and this being filled with sliced roots, the whole dumped in front of the heifer just before she was milked. In addition, she had alfalfa hay, all she would eat up clean, besides corn silage twice a day.

By her record just completed, Eco-Sylv Belle becomes leader of her class, dethroning the other great Canadian born heifer, Het Loo Pietertje, who made her record of 30.22 lb. a very short distance from Brockville and who is now owned by the Lisle Farms of Illinois.

Belle De Kol Clyde Pontiac, the dam of the new champion, has no official record, for they unfortunately lost her at her first freshening when she dropped Eco-Sylv Belle. She was a daughter of Woodcrest Sir Clyde, who for a time stood at Avondale and now is herd sire for W. B. Barney & Son of Iowa. She was from Belle De Kol Pontiac, a daughter of King Pontiac Artis Canada with a record of 23.28 lb. of butter made at 24 months old. Each of these bulls have a long list of big producing daughters and formerly headed the Avondale herd.

There are other two-year-old daughters of Champion Echo Sylvia Pontiac that are soon to freshen, some looking to have as much capacity as the champion herself. Right next to her in the stanchion row, stood Eco-Sylv Cornelia, due to freshen in a very few days. This heifer is really larger than Belle, is very deep and had a great udder, although it is not as square as that of the champion. As said above the dam of the champion is a daughter of Woodcrest Sir Clyde from a daughter of King Pontiac Artis Canada. The dam of Cornelia is a 31-lb. four-year-old daughter of the latter bull and is from a 32-lb. cow. Other animals in the heifer string also have wonderful pedigrees, so that it is more than probable that retesters will be again dispached to Avondale Farm before the present testing season ends. The daughters of "Champ" are making a great showing this season. Besides the thirty-one-pound heifer, another two-year-old has made a record of 29 lb., and still another of 27 lb., and it is plainly evident from even a casual glance over the youngsters at this great establishment that the blood of May Echo Sylvia is breeding on and that her wonderful producing ability is being transmitted through her sons to her granddaughters, thus founding a family or strain whose influence will be felt in the Holstein breed and in the dairy world for many years to come.

Finderne—A Herd that Produces Champions

FINDERNE is one of the great names in Holstein history. It is only a few years ago since bulletin after bulletin coming from the Advanced Registry office were headed by Finderne animals.

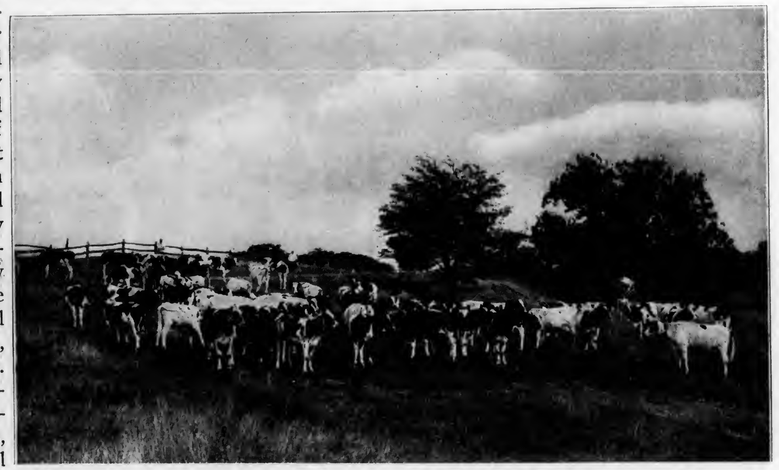
The first 40-lb. cow was an animal developed and tested in Finderne Herd; two Finderne cows, one a three-year-old and the other full aged, successively headed the list of year record holders. The mature animal was the first 1,400-lb. cow, the three-year-old made a year record that, at time of making, was not equaled by any other cow of any age or breed. To-day the policy of aiming for tremendous long-time records is not practiced in this establishment, yet the long lists of junior three-year-olds and junior two-year-olds with year records are both headed by animals bred, developed and tested in the Finderne Herd.

KING VALDESSA, PRESENT HEAD OF THE FINDERNE HERD

Finderne Farms, located at Finderne, New Jersey, are owned by Bernhard Meyer, who has associated in business with him his two sons, Fred and Ben. Mr Meyer has four sons and all four of them with their families live on the farm.

Mr. Meyer came to this country when he was seventeen years old and he says that he brought very little, if any, money with him. He now is 75 and has gathered together a generous supply of this world's goods, by hard work and use of good judgment.

Some thirty years ago Mr. Meyer bought the home farm at Finderne. He was not satisfied with the grade and native cows on the farm. He bought and sold quite a number of cows; occasionally he would get an opportunity to pick up a purebred Holstein, and these he did not offer for sale, gradually adding to his herd until he had 50 head of registered cattle. At that time prices were very low. Mr. Meyer was a shrewd buyer and he said that the first fifty averaged to cost him less than than $50.00 each. His first big purchase was of sitxy-seven head, an entire herd. For these he was to give $5,410.00, of which he paid $4,000.00 down, the balance to be given on receipt of all the registry and transfer papers. In this deal there was a point that many purchasers of Holsteins would do well to follow, and that is—not to pay all of the purchase price until all of the certificates and papers necessary are produced. The negotiations took two months before the deal was consummated, but a few days after he sold twenty-two head from his purchase for an average price of $275 each, the purchaser taking cows that were fresh or nearly so, and leaving Valdessa Scott 2d, future World's Champion because she was dry.



In the summer of 1912 the dairy world was electrified by the announcement that Valdessa Scott 2d had attained the thought to be unattainable and had passed the forty-lb. mark in seven-day official test, the record finally accepted by the Advanced Registry office being 41.88 lb. of butter, 694.6 lb. of milk in seven days, both being world records at that time. These records were made as an eight-year-old. When Valdessa was ten years old she made another large record of 37.49 lb. butter, 611.4 lb. of milk in a week and 142.49 lb. butter, 2,475.7 lb. milk in thirty days. She was the first 40-lb. cow; she was the first cow to make two separate butter day records, each about 37 lb., and her seven- and thirty-day butter records made at ten years old were world records for an animal of that age at time of making. This daughter of Agatha Netherland Pieterje now has five A. R. O. daughters, two with seven-day records above 33 lb. and others all above 20 lb.

During the Holstein fiscal year 1913-14 Finderne Holingen Fayne, who had previously completed a seven-day record of 37.34 lb. butter as a junior three-year-old, completed a year test, rolling up the stupendous total of 1,395.06 lb. butter; her milk production was 24,612.08. At time of making, no other cow of any age or breed had ever made as much butter in a year. The first cow to surpass her was her own stablemate, Finderne Pride Johanna Rue, who made largest record ever made by a cow in yearly test up to that time.

A little later Finderne Mutual Fayne as a junior two-year-old made 1,2000.64 lb. butter in the year from 22,150.4 lb. of milk. Although this great record was

made seven years ago it still stands at the head of the class, and to show that she was not hurt in any way by this great performance, at her next freshening, which was as a senior three-year-old, she produced 36.73 lb. of butter in seven days.

The greatest record ever made at Finderne, in fact the third largest record ever reported for any cow of any age or breed, was made by Finderne Price Johanna Rue nearly seven years ago. She freshened at 5 years, 4 months and 4 days old, and in seven days she made official records of 692.5 lb. milk, 36.87 lb. butter, and 2,683.9 lb. milk, 139.96 lb. butter in 30 days. She was continued on year test semi-officially but was frequently officially tested. She made 344 days from freshening a 30-day official record of 2,437.3 lb. milk, 147.05 lb. butter. Her best seven days in this period began 357 days from her freshening date and her record for the week is 602.4 lb. milk, 36.03 lb. butter. In the full year she rolled up the gigantic totals of 28,403.7 lb. of milk, 1,470.59 lb. butter. Her record for both 7 days and 30 days are world records in the eight months after Calving Division. Her year record was not only world record at time of making but has only been exceeded twice, by Duchess Skylark Ormsby and by the present world champion, Bella Pontiac.

PART OF THE FINDERNE HERD AT PASTURE

Besides sensational long-time records, wonderful short-time records were made in the herd. Finderne Alexis Pontiac as a senior three-year-old made 38.01 lb. butter in seven days, 135.35 lb. in 30 days. Finderne Pieterje Johanna made 35.21 lb. butter, 637.9 lb. milk in seven days, 141.58 lb. butter, 2,701.7 lb. milk in 30 days as a junior three-year-old, both world records in class at time of making.

Finderne Pontiac Netherland when only 26 months old made world record in class for both the 7-day and 30-day periods. Finderne Lady Fayne as a junior three-year-old made 32.76 lb. butter in a week and in year test made 1,075.29 lb. butter. Finderne Soldene Hengerveld made 35.34 lb. butter in a week, and Finderne Wachusett Fayne made 642.7 lb. milk, 35.61 lb. butter in 7 days and a correspondingly large 30-day record, while a number of other records nearly as large were made at this great establishment.

A succession of high-class sires have headed this herd, high-class from the standpoint of blood lines, high-class because backed up closely by great sires and heavy producing dams, and what is more important, high-class because of the transmitting ability they have demonstrated by the performance of their daughters in short-time and long-time test work.

The first sire to bring the Finderne herd into the very front rank was Gordon Glen Pontiac. Among his daughters are a 38-lb. three-year-old and three others over 30 lb. One of his best daughters was Finderne Pontiac Netherland, former world record two-year-old mentioned above.

His successor, King Hengerveld Aaggie Fayne, is even more noted and more familiar to cattle men of the present day. This bull is credited with 31 A. R. O. daughters, of which eleven have records above the 30-lb. mark; he has four daughters tested for the full year, of which three are above a thousand lb., Finderne Holigen Fayne, present world champion in the junior three-year-old class and formerly world champion over all ages and breeds; Finderne Mutual Fayne, present world champion in the junior-two-year-old class, and Finderne Lady Fayne. These three daughters have year records averaging 1,223.66 lb. butter, two are junior three-year-olds and the other a junior two-year-old. An equal showing cannot be made for the daughters of any other sire.

King Pontiac Segis Korndyke, a son of King Segis De Kol Korndyke, then headed the herd. He was from Beauty Rauwerd De Kol, a 30-lb. daughter of Pietertje Hengerveld's Count De Kol, and his sire was from Pontiac Clothilde De Kol 2d, the first 37-lb. cow and the first to make a thousand pounds of butter fat in a year. This bull has a number of good daughters although nothing sensational. Finderne Kodienna Korndyke made 743.5 lb. milk, 28.61 lb. butter in seven days at five years old, and Finderne Dream Korndyke made 26.37 lb. butter in a week at 26 months old. Sons of this bull head some of the best herds in the country and are making good as sires.

The present herd sire, King Valdessa, is a home-grown product, being a son of the first 40-lb. cow Valdessa Scott 2d. His sire, Spring Farm Pontiac Cornucopia, is a son of K. P. Pontiac Lass, the first 44-lb. cow, so that he combines the blood of two former world champions. The records of his two nearest dams average 43.036 lb. butter, 640.25 lb. milk for seven days and 167.894 lb. butter, 2,625.15 lb. milk for 30 days. He has a number of good record daughters, all of which were tested as heifers.

At the present time there are 125 head of all ages in the herd, of which 50 are now milking. The milk is sold in the near by town to two separate milkmen who come to the farm for it. One takes the evening supply and the other the morning.

There are no frills on the Finderne establishment, it has to pay its own way. If you go there most any day you will find Mr. Meyer himself overseeing the work. Sometimes he drives a car but often you will see him on a buckboard wagon, driving a horse that has spent a good many years on the farm and has carried Mr. Meyer around many days. The hard-headed business sense which enabled Bernhard Meyer to start with nothing and make a success of the provision business, is present in the farm management, and the dairy pays its own way. Despite his wealth, Mr. Meyer is democratic and home-loving and likes his children and grandchildren around him. All four of his sons live on the farm; two are associated with him and the others are in business in the village. It is worth your while to visit Bernhard Meyer and the Finderne Herd.

Cow Testing Associations and their Growth

OF all the agencies that work to improve the dairy cattle of America, none have exerted a greater influence than have the coöperative Cow Testing Associations. Started by a few earnest spirits sixteen years ago, the movement had a steady and consistent growth until America entered the great World War. After this first check, growth was resumed until the business readjustment of the period we are passing through gave another slight and we believe only temporary check.

There are sound reasons for the popularity of this great work. The records show the every day work of the cattle, month by month and year by year, and are practically free from the objection of "forcing" which is offered by some who doubt the value of the official and semi-official work of the great dairy cattle associations with its heavy feeding and four times a day milking.

The men and women who own the animals in each association are neighbors. There is friendly rivalry with the opportunity to see and handle the competing animals. There is little endeavor to make the highest record in the world, but each owner has the idea he owns one or more of the best cows in the neighborhood and he also believes that he is just as good a cow feeder and handler as is any one he knows. And he strives to do his best with his feeds and animals.

There is the opportunity to see and handle the competing animals. This is denied almost everyone who takes part in nation-wide official record work. Only a comparatively few cattle owners ever behold any world's dairy champion, none are so situated that they can see them all, but it is a short and pleasurable trip to visit the leading herd of the local association and look over the champion cow. Rations and feeding practices with their results can be compared and criticized and each of the feeders can learn which grain mixtures and fodder combinations give the best results under local conditions.

Cow testing association work is growing rapidly in many states. On July 1, 1921, there were 452 active associations, a decrease of 16 from the previous year, which in point of numbers was by far the largest. Wisconsin leads in number of associations with 103, or more than twice as many as Pennsylvania, her nearest competitor, with 46, Ohio coming third with 35.

Wisconsin has the largest number of cows in test, 51,005 in 3,028 different herds. The average number of herds in the Wisconsin associations is 29.3; the average number of cows, 495. California leads both in number of cows and number of herds in an association. The average number of herds in each California association is 36.8, while the average number of cows in each association in this state is 1,352. Oregon comes second in this respect; its five test associations comprise 174 herds, consisting of 3,030 cows; the average number of herds in an Oregon association is 34.8; the average number of cows in each association, 606.

Pennsylvania ranks high in every respect. There are 46 active associations in the Keystone State, composed of 1,201 herds consisting of 15,986 cows undergoing tests, the average number being 348 cows in an association, with an average of 26.1 herds.

In the 452 active associations in the United States there are 11,209 herds. On the first of last July there were 193,932 cows undergoing tests. The average number of cows in an association is 429; the average number of herds, 24.8.

That the work finds favor with the Federal and state governments goes without saying. In the foreword of the United States directory of cow testing associations the Dairy Division of the Bureau of Animal Industry has these remarks: "The farmer, in selling feeds to dairy cows, has a wide choice of markets; bad, good and very good. Few men discriminate closely enough between these markets. If a wheat buyer offers a cent or two a bushel more than other buyers he gets our wheat; if a wool buyer offers half a cent a pound more for our wool we sell our wool to him; but if one cow returns three dollars from a dollar's worth of feed and another only two, we scarcely notice it at all. Here we have a difference of a dollar every time each of these two cows consumes a dollar's worth of feed, and, frequently, with a year this difference is great enough to amount to a hundred dollars or more. We believe much more attention would be given to a choice of cows if we would think of them as markets for our labor and for corn silage, concentrates, and clover hay. Here is one place where the farmer has the market largely under his control."

Year by year the work has shown consistent growth until the World's War disrupted general business and took many of the test supervisors. The banner year was 1920, but the year ending July 1, 1917, is a close second with 459 associations active on July 1st of that year.

Florida is the only state that has never had a cow testing association, but no less than ten other states have

started and then dropped out of the work, one of these being Texas, which had three associations working in 1919, but has not had any since. This is a state of affairs that will not long continue, for Texas is making rapid progress in dairying.

In 1906 the first coöperative cow testing association was started in Michigan, the next year there were four. Maine and New York each started in 1908. The war put the Maine associations out of commission; in 1916 there were 11 worikng, and in 1917 there was a drop to 5; in 1918 only one was functioning, and there has been none since that time.

Table number one shows the growth of cow testing association work year by year, from its start in Michigan in 1906, up to July 1, 1921.

California associations average much larger than those in any part of the country in regard to number of herds in each association and also in number of cows in herds. The California cow average is 1,352, her nearest competitors being Mississippi with 651, and Oregon with 606. It certainly is a surprise to find the Mississippi associations so large, but there are only three in this state, consisting of 71 herds, in which are 1,954 cows.

TABLE I—SUMMARY BY YEARS (1906-1921)

Coöperative Cow Testing Associations in Operation on July 1 of Each Year

Wisconsin, California, Nebraska, Iowa and Vermont each started in 1909. The work has never progressed very well in Nebraska. In 1916 and 1917 there were four associations in operation, and this is the most there has been in this state at any time. On the other hand association work in Wisconsin has shown a rapid growth. The very first year there were nine cow testing associations working in the Badger State, and only once since, in 1912, has the number sunk below this mark, there being eight that year. In 1918 there were 112, and in 1920 the number rose to 115, although there is only 103 at the present time.

Pennsylvania and Ohio each started in 1910. The high mark for each of these states was reached in 1920, there being 64 in operation in Pennsylvania and 41 in Ohio in this year. California started in 1909 with one association, and on July 1, 1921, it has 21 working, the highest number of any year.

California has the two largest associations in the country with a long distance between them and the associations of any other state. The Ferndale Cow Testing Association, operating around Ferndale, California, leads the entire country in number of cows enrolled. This association started March, 1909, and consists of 100 herds in which are no less than 4,400 cows.

The Los Angeles Association, however, leads in size of herds. This association did not start until May, 1918, but has forged ahead rapidly to the front. On July 1st, last, it consisted of 46 herds, in which 4,000 cows were enrolled. California has ten other associations in each of which there are between a thousand and two thousand cows.

The Tillamook Association of Oregon is another very large one. This association started February, 1912, and at the date the figures were compiled there were in the 46 herds no less than 1,200 cows. The only other association in which are enrolled a thousand cows is the Pioneer Association, operating in the great dairy district of Albert-Lea, Minnesota. Pioneer started December, 1910, has 73 herds, in which are 1,168 milkers.

Attached table No. 2 shows by states the number of associations functioning, the total number of herds in such associations, the total number of cows enrolled in said associations and the average number of herds and cows in the associations of each state with the grand totals for the entire United States.

TABLE II—SUMMARY BY STATES

The number of herds and cows under test July, 1921, in coöperative cow testing associations.

STATE	Number of Associations	Number of Herds	Number of Cows	Average Per Association: Herds	Average Per Association: Cows
Alabama	1	17	399	17.0	399
Arkansas	2	39	310	19.5	155
Arizona	2	37	1,080	18.5	540

United States	452	11,209	193,932	24.8	429

New Champion for New York State

A NEW state record for New York is being made by Johanna Korndyke Artis Queen in the herd of E. T. Jenkins, Rensselær Falls, N. Y. With 32 days to go on her year's work she has produced 1,044 lb. butter as a junior three-year-old, she calving at the age of three years, four months and thirteen days. When fresh she made 611.6 lb. milk, 27.09 lb. butter in seven days; 2,630.1 lb. milk, 109.99 lb. butter in thirty days. This great heifer won eight different prizes from the association during the fiscal year 1920-21, as her junior two-year-old and junior three-year-old records were all published by the superintendent's office the same year, and she won prizes for both milk and butter for both seven- and thirty-day production in each of her lactation periods.

Calving for the first time at two years, five months and twenty-two days old, she made 563.7 lb. milk, 24.06 lb. butter in seven days, 47 days after freshening, and her thirty-day record was 2,382.1 lb. milk, 97.97 lb. butter. She was awarded second prize for seven-day milk production and twelfth for butter; on her thirty-day record she won first prize for milk and fourth for butter. She freshened again ten months and twenty-three days from her first freshening and this time, in official test 44 days later, made the records stated above, winning twenty-fifth prize for butter and ninth for milk for the seven-day period and fourth for milk and ninth for butter for the thirty days. She is a daughter of Highland Spring Farm Pontiac King, he by Spring Farm Pontiac Cornucopia from a 27-lb. four-year-old daughter of Pontiac Korndyke. Her dam, Johanna Korndyke Artis, made 31.58 lb. butter, 650 lb. milk in seven days last year as a five-year old; has a year record of 21,345.3 lb. milk, 936.76 lb. butter made as a senior three-year-old, and is by a son of Sir Korndyke Pontiac Artis and grandson of Sir Veeman Hengerveld, while his dam is a daughter of Sir Johanna Colantha Gladi. She is of New York State breeding for generations back, as is befitting the holder of the Empire State championship. She deposes K. K. S. V. Lockhart, whose year record is 1,037 lb. butter.

Two Irish-Americans, one of whom had never before seen Erin, were representing the United States at a convention in Dublin.

"Fifty-three years ago," declared one, "I left Ireland, a naked boy, without a dollar in me pockets."

The audience was greatly affected and the other speaker decided not to be outdone.

"Until last week," he orated, "until last week, I had never set foot in the land of me birth."

A traveler who believed himself to be the sole survivor of a shipwreck on a cannibal island hid for three days in terror of his life. Finally, driven out by hunger he discovered a thin wisp of smoke rising from a point inland. Crawling there cautiously on his hands and knees, he arrived just in time to hear a racous voice demand:

"Why the blinkety-blankety-blank did you pay that blank-blanked card?"

"Praise the Lord!" gasped the survivor, kneeling devoutly, "they are Christians."

Speaking of white mule, two rustic sports were uncertainly flivvering their way home from the county seat.

"Bill," said Henry, "I wantcha to be very careful. Firs' thing y' know you'll have us in a ditch."

"Me?" said Bill in astonishment." "Why, I thought you was drivin'."

Johnny—Mother, do I have to wash my face?

Mother—Certainly, dear.

Johnny—Aw, why can't I just powder it, like you do yours?—*New York Daily News.*

Harrisburg, Pa., January 1, 1922.

To Those Who Own and Breed Holsteins:

THE HOLSTEIN BREEDER AND DAIRYMAN is established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising and Honest Dealing. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America and the Breed and Breeders generally.

In our efforts we not only solicit your support by subscribing to our publication and using our advertising columns, but we want you to keep us posted regarding the situation in your locality.

It is our purpose to make this publication up-to-date and of the highest possible standard. In this we trust that we can rely on the breeders and dairymen from time to time to send in their suggestions so that we can consider them in formulating our policies. Remember, we want to make this YOUR paper.

To introduce the new publication, we are making a special offer of two years for one dollar. Subscription blank and return envelope are enclosed in this issue. To become a subscriber it is only necessary for you to attach your check, money order, or cash, to the slip, write your name and address plainly and mail it to us in the enclosed self-addressed envelope.

Thanking you for your co-operation and wishing you a Happy and Prosperous New Year, we are,

Yours very truly,

THE HOLSTEIN BREEDER AND DAIRYMAN.

WHEN Benjamin Franklin first thought of starting a newspaper in Philadelphia, many of his friends advised against it, because there was a paper published in Boston. Some of them doubted that the United States would be able to support two newspapers.

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Evangelical Press Bldg., North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.

Copy for publication should be received not later than the 5th or 20th of each month preceding date of issue.

January 1, 1922

For the Year 1922

THE BREEDER AND DAIRYMAN making its initial call to the public, extends to breeders and dairymen everywhere, an earnest good wish for a prosperous 1922.

When the period of reconstruction came following the great World's War through which we have passed, farmers generally were the first to feel the result of deflation and to find the purchasing power of their bushel of wheat, can of milk, and of their day's labor diminished to a larger extent proportionately than any other field of industry.

True to tradition and to the history of our rural population; true to the high standards of responsibility by which our country people are at all times governed, and true to their ideas of a patriotic duty, they have borne this burden of deflation and of reduced earning power manfully and in most part uncomplainingly.

We believe that the worst is over. We believe that the year 1922 will find the readjustment of values bringing a better return to the farmer and that a more equitable ratio will be found to exist between values and the purchasing power of the farmer's labor. We believe that with the general development of the atmosphere of peace which has come from the recent Armament Conference at Washington, and the seemingly general desire of the world to be relieved from the burdens of war conditions, that a larger degree of prosperity will come to all our people, and that the year 1922 will be, indeed, a prosperous one for those whose interests are so intimately associated with American farm life.

THE BREEDER AND DAIRYMAN hopes for a bettered condition in the Holstein industry. It hopes for a more optimistic feeling among those who are engaged in the breeding and development of dairy cattle. It hopes for a greater spirit of coöperation and a lesser degree of personal ambition in the management of the Association's affairs. It hopes for a general trend of public thought along the lines of placing and leaving the management of the Holstein-Friesian Association's affairs in the hands of the men whose earnest activities have made its success possible, and it hopes for the renewal of public confidence in the great black and white cow as the most wonderful dairy animal in the world, and we earnestly urge the fullest coöperation upon the part of all toward a line of conduct in the Association's affairs that will promote and insure the fullest confidence of the public in the Holstein breed of cattle.

THE BREEDER AND DAIRYMAN extends to all its friends, in conclusion, a most earnest wish for a Happy and prosperous New Year, wherein human effort may be invigorated by having the horizon of Holstein affairs free from all clouds of distrust and bright with the possibilities which should be at all times assured to those who are actively and earnestly engaged in the breeding and development of that great "Foster Mother of Humanity."

Here's to 1922 and a wealth of happiness and prosperity for all.

A Business for a Patient Man

THE breeding of livestock is no business for the impatient man. It is to he who can work and wait that livestock breeding yields its fullest results. Animal breeding increases numbers rapidly but it requires time to effect and fix changes in forms. Men without patience cannot wait ofr the great satisfactions which time alone can bring in any field.

Because they lack patience many who establish herds quit and sell out before giving pedigree livestock breeding a fair trial. If they do not make money from the outset they are sure that something is wrong wtih the animals or the breed, so they quit or try another breed, class or system. Others, who may be less concerned about immediate financial returns but aspire to prominence as constructive breeders, lose interest because progress is slow.

Stock breeding is not a fad-like recreation in which quick reward, in money or progress, is possible, except in infreqeunt instances. No one should engage in the business with the expectation of being a notable exception to the rule. Whatever his qualifications and favoring conditions, every beginner is practically sure to travel the long road of the masters, if he achieve ends comparable with theirs. As with learning, there is no royal road; no short-cuts can be promised; the quick ways usually lead deviously and expensively back to the main route.

The breeding of livestock is most attractive to the patient man who has a genuine passion to paint masterpieces with the wondrous pigments of animal life. Monetary recompenses in generous measure may be and generally will be his, but the joy of ownership, the pride of the skilled workman, the fascination of modeling with living, breathing tools will be his chief rewards.

How Many Milkings a Day

IT has been mentioned among the officers and some of the more prominent breeders of the Holstein-Friesian Association of America, men who have acquainted themselves with the problems that confront the breeder and dairyman, that there should be a change in our Advanced Registry System relative to the number of times a cow should be milked while on test.

The motive that prompts this suggested change is to put the yearly record work in the reach of the practical breeder and dairymen. It is felt that three milkings a day at eight-hour intervals would fit into the regular farm schedule much better than four milkings a day at intervals of six hours.

THE HOLSTEIN BREEDER AND DAIRYMAN feels that there is merit in this suggestion and invites the breeders to discuss the advisability of making any such change through its columns.

Association Takes Steps to Prevent Certificate Delays

BUYERS of Holsteins, especially those who have recently made their first purchase, find considerable fault with the delay they experience in getting the certificates of their animals, particularly the certificates of transfer. Even when everything is in shape it takes several weeks before the applications go the rounds in the Secretary's office, but when some required signature is omitted or is incorrect, necessarily there is a delay and this delay often alarms the buyer who comes to the conclusion either that "someone is trying to put something over him," or that the affairs of the Association are handled in a dilatory manner, or else that Holstein breeders are not good business men and do not keep their books in order.

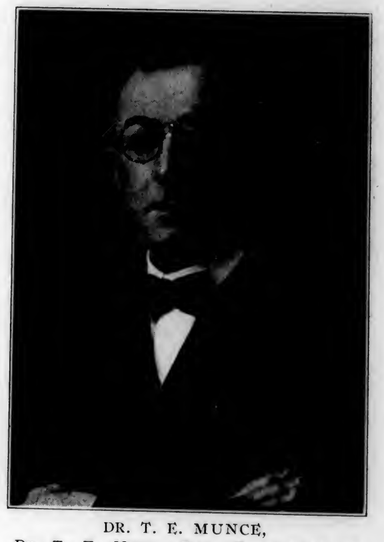
Any one of these suppositions is an annoyance to the new owner and many a man, whose first choice was the "black-and-whites" has turned in disgust to other breeds, thus losing the Association a member and depriving the members of business that might have gone to them.

There has always been a weak link in the chain between seller, public sales and the buyer. And the buyer oftentimes has been unable to tell where he should rightfully put the blame. As a general rule, the fault has not been with the sale manager, who has acted in good faith, has remitted to the consignor all that was his due, and so can only ask and cannot compel the delinquent seller to straighten out the tangle. Often this party has really not been to blame, the trouble has been farther back; quite often the signature of "owner of bull" has been wrong or not in accordance with the signatures on file in the Secretary's office, or that some date is incorrect. In any case, there is delay and trouble all around.

The Holstein-Friesian Association of America has long been cognizant of this state of affairs, and its attempts to straighten tangles has cost it many dollars.

It has recently been decided to take a short cut and help the sales manager. On receipt of a sale catalogue at the Secretary's office the data on the animals listed will be checked with the files in the Association office. If the catalogues and files do not correspond in regard to ownership, or if registry applications have not been filed for animals catalogued a letter will be written to the consignor telling him what is lacking and this notification will help him to rectify any omission or mistake.

Those who sell purebreds assume an obligation which should be fulfilled promptly,—that of seeing that their customers are furnished certificates of registry and transfer free of charge.



The breeder is seriously at fault because he puts off registering and transferring until the sale is made, and then, after sending his applications to the Secretary he learns for the first time that some detail of his record is incorrect or incomplete, and this delays the issuing of the certificates. One of the common causes of delay is the fact that the sire or dam of the animal to be registered has not been transferred to the person who signed the application.

Sales managers should require the certificates of registry, identifying each animal consigned and take the precaution to see that it *does* identify. Where the consignor is not the breeder, a certificate of transfer should show the consignor's ownership.

A genuine effort for coöperation on the part of all those who are connected with sales of purebred Holsteins will help to bring about a more favorable condition, and be conducive to methods which will make correct registration less difficult for both the consignor and the consignee.

Newly Elected President of the United States Livestock Sanitary Association

THE twenty-fifth annual meeting of the United States Livestock Sanitary Association, held at Chicago at the time of the recent International Livestock Exhibition, honored T. E. Munce, State Veterinarian and Director of the Bureau of Animal Industry of the Pennsylvania Department of Agriculture, by electing him its president for the ensuing year.

DR. T. E. MUNCE,
Dr. T. E. Munce, State Veterinarian of Pennsylvania, President of the U. S. Livestock Sanitary Association.

Dr. Munce's long association with the livestock interests, and with the administrative officials of Pennsylvania for years numbering more than a decade; his efforts in tuberculosis eradication work; his splendid report as Chairman of the Tuberculosis Committee of United States Livestock Sanitary Association which undoubtedly required a vast amount of energetic study; and his keen interest in devising practical methods for the prevention, control and eradication of other transmissible animal diseases, demonstrate that he is worthy of the honor which he has received.

The efficient manner in which he has performed his duties in his many other undertakings is an assurance that he will prove an efficient President of the United States Livestock Sanitary Association.

Pennsylvania Holstein Breeders to Honor President Lowden

THE Dairymen and Holstein breeders of the Central-eastern states will gather in Harrisburg, Pa., Jan. 25, 1922, to greet President Lowden of the Holstein-Friesian Association of America. The Pennsylvania Federation of Holstein-Friesian Clubs will hold a banquet and give a reception in honor of our president.

President Lowden is the owner of Sinissippi Farms, Oregon, Illinois, one of the great breeding establishments of the Central West. Among the celebrated animals owned by Mr. Lowden is Bloomingdale Hengerveld Edith, the second highest record daughter of the celebrated bull, Hengerveld De Kol, the first century sire of the breed.

THE HON. FRANK O. LOWDEN,
President of the Holstein-Friesian Association of America.

When Mr. Lowden was elected governor of Illinois, he ran far ahead of his ticket. As governor, he made an enviable record for efficiency and executive ability and his administration is regarded as being the most business-like of any governor of that great state Unnecessary offices were done away with. Bureaus were merged and the taxpayers were saved a vast sum of money. As head of the Holstein-Friesian Association of America, President Lowden has already shown the same grasp of affairs and is doing much to harmonize differences within the association. Holstein breeders from the great dairy states of New York, New Jersey, Pennsylvania, Delaware, Maryland, and Virginia, will be eager to seize this opportunity of becoming better acquainted with our president, who is by far the most famous man that ever presided over the deliberations of the association.

The morning after the banquet, at 9: 30 a. m., January 26, the annual meeting and election of officers of the Pennsylvania Federation of Holstein-Friesian Clubs will be held in Cameron Hall, Harrisburg, President John A. Bell, Jr., presiding.

The same week the Pennsylvania State Farm Products Show will also be staged in Harrisburg, opening January 24 and closing January 28. Admission to this show is free and the exhibits are always worth the attention of anyone who can attend.

Better plan your work so that you can attend and take in all the doings, meet our association's president and get better acquainted with your fellow breeders.

New York State Breeders Plan Banquet and Sale

THE second annual state breeders' sale under the auspices of the New York Holstein-Friesian Association is scheduled for January 11 and 12, 1922, at the Liverpool Sale Pavilion, which is reached by trolley from Syracuse (the fare being eight cents at the present time). This is a selected sale, the animals being chosen either by a committee of the association or by representatives of the local County Club Committees. One hundred and fifty animals are expected.

The annual meeting of the New York Holstein-Friesian Association will be held at Syracuse on January 10th. The report of the first year's business under directors elected by districts will be interesitng, not only to New Yorkers, but, in view of the action taken by the National Association at the St. Paul special meeting, also to dwellers in other states. President Bigler and State Secretary Zimmer have an extensive and comprehensive program in view and both these officials and the directors want all who possibly can attend to do so and to voice their opinions openly on the floor. The work for next year should be laid out at the meeting so that the necessary plans can be made by the officers.

President Lowden is expected to be the guest of honor and principal out-of-state speaker and this meeting will afford New York State Holstein breeders a splendid opportunity to become better acquainted with our association president who has worked steadily for harmony within the National Association since his election last June.

The South as a Purebred Cattle Market

THE territory south of the Ohio and Potomac Rivers and east of the Mississippi, is one of the coming livestock sections of the United States. Nearly all conditions for the most profitable raising of livestock and for dairy farming are found in these regions. In no other section of America can livestock be raised at lower cost. In the south is found a combination of advantages; favorable climate for stock, long grazing seasons, a large supply of nutrious grasses and forage crops, and plenty of pure water. Good prices are obtained for all kinds of stock and dairy products.

Farmers throughout the South are turning from the one crop idea (cotton only) and are seeking to build up their herds and flocks by the use of purebred sires. While it may be many years before there are many large herds of dairy cattle in the southern states, yet the time is sure to come. It must be remembered that in Texas there is a Jersey herd of over 2,000 head, many members of which won high honors at leading state fairs and national dairy shows. Breeders and purebred livestock should cultivate the Southern market, for in the course of years this region will become one of the leading dairy sections of the United States.

RED AND WHITE HOLSTEIN LEADS TEST ASSOCIATION

Five years ago, in the vicinity of Hanford, Calif., a purebred Holstein cow dropped an off-colored or red and white heifer calf, said calf having a registered sire. The owner was greatly disgusted with this reversion or "throwback" as it was called locally, and as it was impossible to get it registered, sold it for a few dollars to a Portuguese dairyman living in the neighborhood, who raised it, giving it all the chance he could.

To-day, the one-time discard is the best butter-fat producer in the local cow testing association, leading all the other cows and heifers in year butter fat production. Her owner thinks that there is not another cow like her and would not sell her for $500.

The producing capacity of the profit-making Holstein was there latent in the little red heifer. When she was given the opportunity her blood and breeding deserved, she made good. As one of the leading auctioneers often remarks in the ring, "There isn't any milk in the hair and you don't want any hair in the milk."

IDEA THAT LEADS TO SALES

The Pickering Farm, of Belton, Missouri, makes an extensive trip around the big show ring circuit each fall. This year they had a little idea that we are told, resulted in many inquiries some of which led to business. In a box near their Holstein exhibit was a bunch of cards, post card size, already addressed to Major Harlo J. Fiske, the genial manager of the Pickering establishment. On part of the address side is a brief summary of the leading features of Pickering Farm,—a $3,000,000 cattle breeding institution,—on the reverse a place to sign the name and address of the inquirer, and to check the kind of stock he is interested in. Placing a one-cent stamp on this card and dropping it in a mail box brings to the inquirer's home an illustrated catalog and descriptive literature. The Major informs us that this little idea has proven very profitable, and has led a number of show visitors to "Pick a Pickering."

SHIPPING POWDERED MILK THROUGH PANAMA

Few of us realize the importance of foreign trade in its influence on dairying. During the month of September alone, one hundred tons of powdered milk were shipped through the Panama Canal, consigned from New York to Chilean and Peruvian ports. In August 26 tons were shipped from Pacific Coast states. During the first nine months of the calendar year 2,741 tons of dried or powdered milk has passed through the Panama Canal going from the Pacific to the Atlantic, of which 2,750 tons were from Australia and New Zealand, consigned to the United Kingdom, and 171 tons were from Pacific Coast points and destined for the Atlantic Coast of the United States.

HIS FATHER'S BOY

They tell quite a story on a prominent Holstein auctioneer, who has a young son. The mother is very desirous that the boy should be polite and well mannered and recently when the child was invited to a small party, gave him explicit directions on how to act.

On his return she quizzed him on the happenings. "And did you refuse cake the second time it was passed?" she queried. "Ma," I said, "no, thank you, but you didn't tell me what answer to say if they asked me the third time," was the reply. "What did you do, darling?" said mamma. And the young hopeful replied, "Oh, I said just what daddy does when you give him corn flakes for breakfast, "Take the damn stuff away."

MILK TESTING IN THE MOVIES

The Onondaga Milk Producers' Association has, in Syracuse, N. Y., one of the most complete and up-to-date equipped dairy buildings in the country. A big majority of the Holstein breeders of this great dairy section belong to the association and sell their milk through it. The Charles Urban Laboratories recently made three reels of movie film, each a thousand feet long, of this plant, and these films, which are educational and not of an advertising nature, will be released through the Kineto Company of America, and will be shown at many of the prinicpal motion picture houses, as examples of the most advanced practice in safeguarding the health of milk consumers. One reel deals with the preparation of milk for consumption in liquid form, the second shows cheese making, and the third illustrates the manufacture of butter and includes tests to detect adulteration of milk. The well known Babcock test is shown in detail.

FROM CONNECTICUT TO VERMONT

Sir Inka Segis Ophel, formerly owned by A. E. Johnson and A. C. Lake, of Bethlehem, Conn., has been sold by them to the Tyler Farms, West Newbury, Vermont. This bull is a son of Sir Inka Prilly Segis, the well-known Winterthur Farms sire, and his dam, Walker Korndyke Segis Ophelia, has a 7-day record of 29.07 lb. of butter and 658.6 lb. of milk made as a junior four-year-old, while as a junior three-year-old she made 567.6 lb. of milk, 24.63 lb. of butter in 7 days and 2,361.7 lb. milk, 102.27 lb. butter in 30 days; at five years old she made a year record of 21,520.3 lb. milk, 879.20 lb. of butter.

Sir Inka Prilly Segis Ophel is not only a real good individual himself but he has proven his ability to transmit his own superior type to his offspring. One of his daughters, Princess Beauty Prilly Segis, brought $350 at public auction, topping the Connecticut Holstein Breeders' Sale last fall.

We Don't Keep Holsteins

They keep us so our 125 head are bred for every-day and all the year 'round production.
Oh! Boy!
How they do milk!
They are good individuals too, that straight-backed, big-barrelled kind, carrying large, square udders, with a teat on each corner.
You won't have to hide any stock you get from

Ellis Ellsworth
Meshoppen, Pa.
R. No. 4.

The herd is run on the Accredited Plan.

BLOOMINGDALE, A NAME TO CONJURE WITH

Few of the herds existing to-day have exerted a greater or more beneficent influence on the Holstein breed than has Bloomingdale, one of the longest established livestock establishments of New Jersey.

A former herd sire whose transmitting ability is felt throughout the breed to-day is Johanna Rue 3d's Lad, whose daughters, granddaughters and great-granddaughters made splendid records. Then came Hengerveld De Kol, whose blood, when mingled with that of his predecessor, produced many of his greatest record daughters. The blood of Hengerveld De Kol is found in many of our highest record animals of to-day and in the rows of heavy milkers in many dairymen's herds, many an animal will be found that traces, often, several times, to this great old sire.

King Fayne Segis is another Bloomingdale herd sire whose descendants are famous for production and his daughters made world records.

In the present senior herd bull, King Model, the management of Bloomingdale Farms believe they have a sire whose progeny will be regarded, by future breed historians, as fully the equal of any of his predecessors, both as to individuality and producing capacity. In the show rings his get have won high honors, one two-year-old being placed second at the National Dairy Show of last year. In the short-time tests they have made good, for the first daughter to be given an official record exceeded 25 lb. in seven-day official test and then later, as a junior three-year-old, made over 31 lb. of butter in a week, becoming the class champion of Connecticut. The first daughter to be tested for a year made a splendid showing, more than 873 lb. of butter as a two-year-old heifer, showing that the daughters of King Model have the desirable characteristic of persistency. The sons of such a sire have every right to make high-class sires in their turn, it is "in their blood," for, on both the sire's and dam's sides of their pedigrees, they trace to many of the great producing cows and famous transmitting sires that have helped to make the breed what it is to-day.

A GOOD HERD IN A GOOD COUNTY

The Springdale Herd is one of Susquehanna County's best known herds, being founded some sixteen years ago by Mr. B. F. Jones, the senior member of the firm. The present owners are B. F. and W. Hugh Jones, doing business under the name of B. F. Jones & Son. The younger member of the firm is building quite a reputation as a writer on Holstein subjects.

The present herd sire is Woodmont Echo Sylvia Pontiac, sired by a son of "Champ," Mr. Hardy's great herd bull which also sired the wonderful 31-lb. junior two-year-old, Eco-Sylv Belle, the new world champion of her class. The dam of this young sire is Butter Boy Empress, the grand champion cow at the 1921 New York State Fair, one of the handsomest animals seen at last fall's great fairs. She is a producer too, having milked over 100 lb. in a day and having a 30-lb. seven-day butter record.

A former herd sire, whose daughters comprise the younger milkers in the herd is King Tweede Spring Farm, three of whose daughters are now in official test and making splendid records, one making 19 lb. butter in seven days as a junior two-year-old, another 21 lb. at the same age, while a senior three-year-old has reached the 26-lb. mark.

The herd carries the blood of many of the greatest transmitting sires and famous producing cows and is particularly strong in the blood of King Segis, Pontiac Korndyke and De Kol Burke.

NEW YORK STATE ASSOCIATION DOINGS

Mr. E. R. Zimmer, as secretary of the New York Holstein-Friesian Association, is sending to the members of that organization a letter calling attention to the annual meeting which will be held Tuesday, January 10, at Syracuse, New York. Besides the election of officers for the coming year, action will be taken on the proposal to increase the number of directors from eleven to twelve.

Consideration will be given the subject of the delegate representation of New York State at the National Meeting of the Holstein-Friesian Association of America to be held next June in Kansas City.

The evening of January 10 a banquet will be served at which the Hon. Frank O. Lowden, President of the National Association, will be the guest of honor and principal speaker.

The annual state sale is on January 11 and 12 and on the night of January 11 the Onondaga County Holstein Club will give a smoker, so that those who attend can enjoy three days filled with both business and pleasure. The letter is given below in full:

SYRACUSE, N. Y.,
December 16, 1921.

To the Members of the New York Holstein-Friesian Association:

Notice is hereby given of the second annual meeting of the New York Holstein-Friesian Association which will be held at the Hotel Yates, Syracuse, N. Y., at 1 p. m., on Tuesday, January 10, 1922, for the purpose of electing directors and such other business as may properly come before the meeting.

The Executive Committee of the Onondaga County Holstein Club by C. L. Amos, delegate, offers the following amendment for consideration and adoption:

"Amend Article V, Section 1, of the Constitution, to read as follows:

"The Board of Directors shall consist of twelve men."

At a meeting of our Advisory Council a resolution was adopted designating Madison County as a separate district, No. 12, and redistricting No. 5 to comprise the counties of Cayuga, Onondaga and Oswego. The amendment is therefore offered to provide a director for the new district.

The members and delegates from each district of the state should come prepared to nominate a director for their district. Another matter to come before the meeting is the nomination of 22 delegates to represent New York State at the National Meeting in June at Kansas City.

On the evening of January 10th a banquet will be served to the members. Bring the ladies. President Lowden will be here. Don't miss this event.

On the night of January 11th the Onondaga County Holstein Club will give a smoker.

The annual sale will be held on January 11th and 12th and a lot of high-class cattle sold. Tell every prospective buyer about this great event.

Yours very truly,
NEW YORK HOLSTEIN-FRIESIAN ASSOCIATION, INC.
Per E. R. Zimmer, Secretary.

NATIONAL DAIRY SHOW

The annual meeting of the National Dairy Show Association was held in Chicago, December 2d. W. E. Skinner, manager, reported the past year's work and made a number of suggestions for the future.

Mr. Skinner believes the National Dairy show should have a permanent home and he favors the lake front of Chicago; it would cost around $2,000,000 to properly house the show. The treasurer brought out that this year's show cost a little over $126,000 and the profit for the past year will be less than $6,000. Compared with the expenditures this seems small, but undoubtedly the general depression of the past year had considerable to do with the income.

Several cities sent representatives asking for next year's dairy show, but was left to the Executive Committee to determine.

STILL INTERESTED

The most famous Holstein pedigree girl was Miss Gertrude Howard, daughter of the veteran breeder, John Howard, of Sherburne, N. Y. Miss Howard started making pedigrees when ten years old and built up an extensive business without any advertising except that given her by her work and by pleased customers. A few years ago, Miss Howard married Edwin P. Smith, son of Jabez Smith and brother of Paul Smith, of Owego, N. Y. Mr. and Mrs. Smith now own Riverflat Farm, adjoining the village of Sherburne, have a select herd of Holsteins, and their many friends will be pleased to learn they are doing well. Mrs. Smith says she no longer writes pedigrees, as she has all she can manage to do her work and look after her fine eighteen-months-old son, Howard. Needless to say, she is still as keenly interested in Holstein-Friesian affairs as ever.

MARKET REPORTS

HAY AND FEED

December 28.—Hay market dull, except for best grades of Timothy at both Philadelphia and Pittsburgh. No. 1 Timothy quoted $22.00, both markets. No. 2 Timothy $21.00 Philadelphia. No. 1 Clover $21.50 Pittsburgh.

Feed market unsettled. No noticeable increase in offers from mills, but resellers are offering bran and middlings for deferred shipment at about $1.00 under current quotations. There is a fair demand for consumers, but mills are still behind on orders which are being filled slowly. Cottonseed and linseed meal market steady at unchanged prices. Few sales of gluten and hominy feed reported at Philadelphia at $42.93 for gluten and $28.50 for white hominy feed. Spring bran and middlings $30.00 per ton both markets. Linseed meal $51.50 Pittsburgh, 36 per cent cottonseed meal $41.50 Pittsburgh, $43.50 Philadelphia.

December 27.—Baltimore hay, mixed and timothy, good quality, $16 to $20 per ton; no definite market value for low grades, market dull.

Straw—Wheat $11.00 per ton. Oats $11.00 to $11.50.

VISIBLE SUPPLY OF GRAIN

The visible supply of grain in the United States showed the following changes during the past week: Wheat, increased 1,361,000 bushels; corn, increased 3,310,000 bushels; oats, decreased 772,000 bushels; rye, increased 483,000 bushels; barley, increased 107,000 bushels.

RELATIVELY HEAVY PRODUCTION OF CONDENSED AND EVAPORATED MILK FINDS BUT MODERATE DEMAND

Condensed and evaporated milk markets are still featured by more or less unsatisfactory trading conditions, with the November demand apparently offering little support beyond the very moderate movement which has continued to take place. From nowhere are there encouraging reports indicating a domestic or export demand which seem sufficient to absorb this season's production of canned milk. Export buying seems to be limited mostly to relief agencies, but latest available export figures indicate a marked falling off even of this class of business. This outlet is recognized to be of a temporary nature only and cannot be depended upon indefinitely. Other export business is difficult because of unsettled foreign trade conditions, making it more of a problem as to how the anticipated production is to be disposed of. The domestic outlet has been somewhat enlarged through advertising, but even with retailers in some quarters featuring the goods at attractively low prices the lessened purchasing power of the public presents itself as a new factor to contend with. The pressure of this condition has been felt mostly by the less known brands, although numerous manufacturers indicate that their standard brands have been affected. Late figures on production are not available, and it cannot be stated definitely whether production is being materially curtailed, but there is talk around to that effect. It appears that at present prices other manufactured milk products would offer considerable competition. Milk production has kept up remarkably well for the season, favored by the mild fall, and in certain districts the surplus is reported to be quite heavy. The advent of winter weather will materially reduce this, although there are said to be plentiful supplies of cheap feed in some of the principal producing sections.

LIGHTER EXPORTS FOR RELIEF PURPOSES

The October figures furnish the latest available export data, and show that but for a lighter movement the heaviest shipments continued to be made to the same countries as during August and September. However, exports to Germany were materially reduced during October, especially evaporated milk. As in September, exports of condensed constituted only about one-third of those of evaporated goods. In 1920 the reverse took place, the shipments of condensed goods being much the heavier. October exports this year of both classes of goods were considerably heavier than those of October, 1920, approximately an increase of 12,000,000 pounds, but the total movement for the first ten months of the year lags behind the similar period for 1920 by some 125,000,000 pounds.

Comparisons of the stocks held by manufacturers show that they were close to fifty per cent lighter on November 1, 1921, than on November 1, 1920. This is also true of unsold stocks.

Comparison with the previous month reveals slightly lower total stocks, but heavier unsold stocks. Figures showing this comparison appear in the accompanying tables. The relatively heavier movement of case evaporated during the past few months may have contributed to more interest in the manufacture of this class of goods, for from a comparison made of the total stocks of firms which reported on both November 1 and October 1 it is noted that stocks of evaporated were heavier on November 1 and stocks of condensed were lighter than the previous month. Just the reverse was true in August and September.

FLUID MILK MARKETS OF THE UNITED STATES

Producers' Prices for Standard Grade Milk Testing 3.5 Per Cent Butterfat

Geographic Section	Prices per Cwt. 1921 Dec. aver.	1921 Nov. aver.	1920 Dec. aver.
New England	$3.46	$3.44	$4.23
Middle Atlantic ..	2.90	2.90	3.32
East N. Central .	2.12	2.14	2.97
West N. Central .	1.90	2.02	3.33
South Atlantic ...	3.61	3.61	4.20

Mountain	2.32	2.38	3.14
Pacific	2.57	2.55	3.76
United States	2.56	2.58	3.41

The states making up the geographic divisions are as follows:

New England—Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut.

Middle Atlantic—New York New Jersey, Pennsylvania.

E. North Central—Ohio, Indiana, Illinois, Michigan, Wisconsin.

W. North Central—Minnesota, Iowa, Montana, South Dakota, North Dakota, Nebraska, Kansas.

South Atlantic—Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida.

E. South Central—Kentucky, Tennessee, Alabama, Mississippi.

W. South Central—Arkansas, Louisiana, Oklahoma, Texas.

Mountain—Wyoming, Colorado, New Mexico, Idaho, Arizona, Utah, Nevada.

Pacific—Washington, Oregon, California.

BUTTER

Chicago, December 27.—Receipts 8,849 packages. Quotations unchanged; Extras 42½ cents, Standards 37 cents. Dealers report that top grades are moving promptly, also that there is a fairly good demand for 90 point Centralized cars, but all other grades are accumulating and the market is easy. Trading in Storage Standards for January delivery opened at 35 cents and this price was maintained up to the last five minutes when a few cars were taken at 35¼ cents. This delivery was in good supply throughout the call and in fairly good demand at 35 cents. News from eastern points indicate the arrival of Danish and Argentine butter in sufficient quantity to have an effect on the market and all reports from the East are bearish. During the past week or ten days, there have been very few new buying orders placed on this market for butter Futures; most of the support has been given by Shorts covering previous sales and taking profit. Despite this, the January delivery has held pretty close to the 35-cent level and we do not expect any important reduction in quotations for the immediate future. Weather forecast indicates that higher temperatures may be looked for within the next forty-eight hours throughout western sections and the cold weather which developed over the holidays will probably

have no noticeable effect on fresh production.

New York, December 28.—Butter, firmer; receipts, 7,006. Creamery, higher than extras, at 42 @ 42½ cents; extras (92 score), at 36½ @ 40½ cents; packing stock, current make, No. 2, at 25 cents.

Baltimore, December 27.—Desirable grades of creamery butter are in more or less constant demand at full quotations, while store-packed goods have also held their own in price under a fair demand and no over-supply in the receipts from day to day. Creamery 45 @ 46 cents; dairy prints 28 @ 30 cents.

Philadelphia, December 28.—Receipts, 3,069 tubs. There was a fair jobbing demand for fine creamery and the market ruled steady under moderate offerings. Supplies were mostly of medium and low grades, which continued dull and irregular in value. Fresh solid-packed creamery, fancy, high-scoring goods, at 43 @ 45 cents; the latter for jobbing sales; extra at 42 cents; extra firsts at 40 @ 41 cents; firsts at 35 @ 37 cents; seconds at 32 @ 43 cents; sweet creamery, choice to fancy, at 44 @ 45 cents; fair to good at 35 @ 43 cents; ladle-packed, as to quality, at 28 @ 32 cents; packing stock at 24 @ 27 cents. Fancy brands of prints were jobbing at 54 @ 56 cents; fair to choice at 46 @ 53 cents.

NEW ILLINOIS STATE CHAMPION

Mollie Hengerveld Towanda, owned by Harry M. Wood, of Delavan, Illinois, has made a year record of 747.3 lb. butter, 21,758.2 lb. of milk at the age of two years, seven months and three days. This makes a new Illinois state record for milk production in the senior two-year-old division and displaces Fairlawn Queen Snowflake, whose record was 18,894.6 lb. milk.

Mr. Wood is District Director of the Illinois Holstein-Friesian Association. He has a small herd of high-class cattle; his farm superintendent is Mr. Washbon, a New York State boy, formerly with Woodlawn Farms, Lincoln, Nebraska.

CHAMPION JERSEY IS REMARKABLE PRODUCER

The wonderful Jersey cow Vive La France, recently completed her fifth yearly record. As a two-year-old she produced 633.29 lb. butter fat; as a three-year-old, 892.63; as a four-year-old, 1,031.64; as a five-year-old, 1,039.29; and as a six-year-old, 818.01 lb. of butter fat, a total of 4,418.86 lb.

Only the Californian Holstein Tilly Alcartra has surpassed her for four- and five-year butter production.

The Director—What experience have you had in the pictures?

The Would-Be Movie Queen—I've worked for an advertising concern as a lingerie model.

BETTER SCHOOLING FOR COUNTRY CHILDREN

John J. Tigert, Commissioner of Education, at the opening of American Education Week in New York City, asserted that the statement that every child in America had an equal opportunity is erroneous, the country child does not have the opportunity of his city cousin. "Two-thirds of the nation's 300,000 schools are one-room buildings; the average yearly expenditure for the city child was $40.59; for his rural cousin, $23.91. Urban schools," he added, "were open 182 days a year on an average, against 142 days in the country. The average city teacher received an average salary of $854, against $479 for the rural teacher."

"Educational advantages are the chief reasons for the drift from the farms to the city," and Mr. Tigert said that it was his opinion that the same financial support, together with consolidated school and good roads, would help to keep the children and the parents on the farms.

OFFICIAL FIGURES OF WORLD CHAMPION

The report of the records of Holstein-Friesian cows accepted by the Canadian Association between the dates of October 1st and November 30th, is headed by Bella Pontiac, whose official figures are 27,191 lb. milk, 1,587.50 lb. butter, the highest butter record yet reported. This is 81.14 lb. butter more than the former world record which was held by Duchess Skylark Ormsby, whose butter record was 1,506.36 lb. from 27,761.7 lb. milk.

The new champion is owned by Thomas A. Barron, of Brantford, Ontario. Mr. Barron has a small dairy consisting of animals of high quality; he is a working farmer, operates his herd on a dairying basis, and the fact that he has developed the world champion over all ages and breeds is all the more gratifying.

TWENTIETH 30-LB. DAUGHTER FOR SIR VEEMAN HENGERVELD

S. V. H. Mollie, a daughter of Sir Veeman Hengerveld, is reported as making over 34 lb. of butter in seven days as a ten-year-old cow. She is owned by the Western State Hospital, Steilacoom, Washington. As a five-year-old cow she made 684.1 lb. of milk, 27.83 lb. of butter in seven days and is credited with a year record of 26,877.2 lb. milk and 1,125.28 lb. butter. She is the twentieth daughter of Sir Veeman Hengerveld to make a 30-lb. seven-day official butter record.

ANOTHER RECORD-MAKER

W. T. Schwantz of Burnett, Wisconsin, is the owner of a Holstein cow that has had eight calves in three years, 1919 twins, 1920 triplets, 1921 three more. We believe she holds the record.

HOLSTEINS LEAD IN IOWA ASSOCIATION

During the first year's work of the Delaware County, Iowa, Cow Testing Association, 446 cows were tested, of which 365 were in test six months or more.

A six-year-old grade Holstein owned by C. J. Murray, was high cow for the year with 538.8 lb. fat, 12,390 lb. of milk. The well-known Holstein breeder, H. C. Nieman, owned the second cow, a registered Holstein, that produced 506.3 lb. fat, 16,436 lb. milk; two other cows in this herd made over 400 lb. of fat and the entire herd averaged 10,493 lb. milk for the year. The third cow was a grade Holstein owned by D. J. Schnittjer, she making 456.4 lb. fat, 13,843 lb. milk.

Mr. Schnittjer's herd consists of pure-bred and grade Holsteins. They had the highest fat average, 331.8 lb. fat and a milk average of 9,169 lb.

The average production per cow in the 26 herds was 5,777 lb. of milk, 203.4 lb. fat. The feed cost averaged $49.31, and the profit above cost of feed was $53.93.

CLINTON, PENNSYLVANIA, ASSOCIATION

The second year's work of the Clinton, Pennsylvania, Cow Testing Association, showed that the high milk-producing cow was a grade Holstein, owned by Bert F. Kennedy, and made during the year 12,063 lb. milk. The leading herd for milk production averaged 8,478 lb. and was owned by Stephen Geuther.

Members of the Clinton Association signed 100% for the Accredited Herd Plan, and 45 herds have been tested by State Veterinarian, with very few reactors.

NEW JERSEY COST OF SHORT- AND LONG-TIME TESTS

Practically 85% of the 18,500 dairy cattle in the state of New Jersey are Holstein and about 8,000 are purebreds.

During the college year ending June 30, 1921, the Jersey State College Dairy Department supervised 237 seven-day tests; besides this a number of long-time tests were supervised. Eleven cows finished in the 305-day division and 44 in the 365-day.

The college figures that it costs $18.79 to supervise a seven-day record and the average cost of the long-time work was $10.91 a head per month.

PROBABLY TRUE

The fussy old maid customer was examining a piece of dress goods at the counter. She turned the material over and over, held it up to the light, in the meantime plying the tired clerk with questions. At last the exasperated girl exclaimed: "My goodness, madam, you'd never be so particular as that if you were picking out a husband instead of a measly little bit of cloth."

Lackawanna County Holsteins

The herds of Lackawanna County consist of stock directly descended from cattle imported direct from Holland in early Holstein days by old time Lackawanna County breeders—pioneers of the breed.

These men were capable judges and selected their animals for type, individuality and producing capacity; desirable characteristics readily apparent in the present cattle of the county.

Lackawanna cattle are healthy—many of the herds are under Federal jurisdiction.

Quotations will be cheerfully given on single animals or carloads—and it is a pleasure to show the goods.

Herd under the Accredited Plan

THIS BULL WOULD MAKE

A GOOD HERD SIRE FOR YOU

He is just about ready for service. He is a son of my near 30 lb. bull, King Korndyke Sadie Vale Lona, he by King Korndyke Sadie Vale whose daughters and granddaughters are real producers.

His dam, Fairmont Segis Betta Alcartra, is by King Segis Pontiac Alcartra, century sire himself and backed by wonderful records. Her dam, Segis Betta, made 28.997 lb. butter in 7 days, 114.77 lb. in 30 days, is a daughter of King Segis and Betta Lyons Netherland, 34.71 lb. butter in a week; her dam, Blanche Lyons Netherland, made 34.36 lb. A. R. O.

HE CARRIES A LARGE PERCENTAGE OF THE BLOOD THAT LEADS THE BREED

Our herd is bred for production and profit under every day dairy conditions. The animals trace to many of the famous old time sires and great producing cows.

S. F. ZOOK **Curryville, Pa.**

THE SPRINGDALE HERD

Built up during the past sixteen years on a basis of profitable production and re-production

Present Herd Sire

WOODMONT ECHO SYLVIA CHAMPION

His sire, Sir Pietje Echo Sylvia, is by Champion Echo Sylvia Pontiac and is therefore a brother to Eco-Sylv Belle, 31.15 lb. as a junior two year old, the present World Champion in her class.

His dam, Butter Boy Empress, made 30.27 lb. butter in seven days, has milked 100 lb. in a day and was first prize aged cow, first in the A. R. O. class and Grand Champion at the 1921 New York State Fair. Judge Haeger says she is one of the three best cows shown last year.

Most of our young animals are by

KING TWEEDE SPRING FARM

His sire is Spring Farm King, full brother to the former World Champion and first 44 lb. cow; regarded as one of the best young sires of the breed.

His dam, Dressie Lady Pontiac, has a record of 30.04 lb. butter, 614.8 lb. milk made in seven days and is full sister to the 33.98 lb. cow Dressie Princess Pontiac. Their sire is Spring Farm King Pontiac. Daughters of KING TWEEDE SPRING FARM now in test are making a splendid showing under real dairy conditions.

Our older cows are daughters of

TOBE RAG APPLE KORNDYKE

Son of Christmas Tobe, 2d, 31.66 lb. butter in seven days and former World Champion ten year old. She is also the dam of Lady Tobe De Kol, 36.59 lb. butter in a week, 141.24 lb. butter in thirty days as a senior four year old, both being World Records when made. She in turn is dam of Geraldine Rag Apple Korndyke, 30.21 lb. butter in seven days, also as a four year old. Here is large production, generation after generation.

Animals from this herd will make good anywhere

INTENTIONAL SECOND EXPOSURE

THE SENIOR SIRE OF BLOOMINGDALE HERD

A Show Bull of Wonderful Type and Individuality

KING MODEL

His dam, Mabel Segis Korndyke, the first 40 lb. heifer, is a cow of perfect conformation.

Through his sire and dam he traces twice to that great transmitting sire, King Segis.

His first tested daughter produced over 25 lb. butter at two years and over 31 lb. at three years. She is State Champion of Connecticut.

Another two year old daughter won 2d Prize last year at the National Dairy Show and later became State Champion of Maryland.

His first daughter to complete a yearly record produced over 873 lb. butter in the 365 days at two years old.

With only two exceptions, all of his 31 tested daughters have produced more than their dams at the same age, a sure proof of his wonderful ability to transmit.

We have a few choice sons of KING MODEL to offer, one from a 40 lb. daughter of Matador Segis Walker, another from a two times 30 lb. dam, also a young son from a 20 lb. junior two year old.

Write to-day for pedigrees and prices

FINDERNE STOCK FARMS

HOME OF

KING VALDESSA

A bull of royal breeding.
An animal of remarkable individuality.
A sire of everyday and all-the-year 'round producers.

His dam, Valdessa Scott, 2d 41.88 lb. A. R. O., the first cow to make a 40 lb. seven day official butter record, was developed and made her A. R. O. records on this farm. She was the first cow to make over 37 lb. butter in seven days two different years, which she did at eight and ten years old.

His sire's dam, K. P. Pontiac Lass, 44.18 lb. was the first 44 lb. cow and the first to beat his own dam. The two nearest dams of King Valdessa average:

7 days—Butter, 43.036 lb.; Milk, 640.25 lb.
30 days—Butter, 167.894 lb.; Milk, 2,625.15 lb.

Each have high record daughters and are transmitting their own great producing powers to their offspring.

While our cows are kept for every day business, yet, when tried out they have made records that leads the list. Among the record smashers bred and developed at Finderne are:—

FINDERNE PRIDE JOHANNA RUE.
1470.58 lb. butter in a year at full age. World record when made.

FINDERNE HOLINGEN FAYNE
1395.06 lb. butter in a year as a junior three year old. World record over all ages and breeds when made. World record in class now, altho made seven years ago.

FINDERNE MUTUAL FAYNE
1200.63 lb. butter in a year as a junior two year old. World record in class.

To head your herd you need a bull of FINDERNE QUALITY. Our prices are within your reach, so TO-DAY, write

The Holstein Breeder and Dairyman

VOL. I HARRISBURG, PA., JANUARY 22, 1922 No. 2

BELL FARMS LEAD PENNSYLVANIA

TO raise Holsteins is not a difficult task. To breed them is comparatively easy, and to purchase what might appear to be the very best is within the power of means—but to create from the tops through a well defined plan of breeding and make progress toward the production of even better animals that have a distinctiveness of their own is the satisfaction which few of us unfortunately ever have and which disappointing as it really is, seems to have been within the grasp of some few breeders who, through discouragement and the power to "hold on and wait" have altered their course only to be lost—lost in the sense of having followed any well chartered course of breeding to success.

Pennsylvania prides herself in claiming the home and "workshop" of several with the instinctive mind and keen vision that must go with the power to create better from the best. In a small way some few have done it but none with the exactness and magnitude that has crowned the efforts of the owner of the Bell herd.

It is not to be questioned the foundation which Mr. Bell chose was as good as the breed could offer. True it is that no definite policy of blood lines was followed—rather type and conformation with production governed the selections. From this foundation he has built upward through the use of King Valdessa Pontiac, his sons, his brother, and his own dam. Without obligation and purely from a standpoint of super-excellence, Mabel Segis Korndyke, a granddaughter of both King Segis and Lord Netherland DeKol, was the foundation of the first generation to be bred at Bell Farm and the very first of these granddaughters are now freshening with most satisfactory results.

It is not only the production that is sought at Bell Farm but also an improvement with fixed type characters,—for of all channels it is Mr. Bell's belief the most pronounced failure in breeding has been in not uniformly establishing any one characteristic other than production, for this he is willing to grant is a fixed trait in certain strains. In fact this has actuated his belief that other traits can be made dominant along with the production and here is the basis of his operations.

The first herd sire was a son of Mabel Segis Korndyke (King Valdessa Pontiac). There are some forty of his daughters in the herd—sixteen of which have freshened, and these average almost 19 lb. butter at an average age of 29 mo. So strongly did Mabel Segis Korndyke mark her influence that every one of these heifers bear her stamp in their top line and udder. Thus to strengthen and intensify with the hope of forever fixing the rump and udder in his own herd at least, is his aim. To do this he has bred and is breeding the King Valdessa Pontiac daughters to another son of Mabel Segis Korndyke—by name King Mabel Segis Korndyke—a youngster by King Pontiac Hengerveld Fayne. The first ones of this combination are all that could be hoped, with similarity to the grandam even more pronounced than in their own dam, also a Mabel Segis Korndyke granddaughter. To continue the work there is now on the farm a young bull from a 28-lb. three-year-old daughter of King of the Pontiacs and Mabel Segis Korndyke—the calf being by Echo King Sylvia, he by a son of Mabel Segis Korndyke. It is the plan to cross him with the calves having the best crosses of Mabel Segis Korndyke. To some this may at first appear too close, but we must remember each line to the foundation cow is through an outcross and re-

PHOTOCOPY OF ORIGINAL

moves her four generations, but in that generation we find her no less than four times. There are now 168 head in the herd and 120 are descendants of this cow as are three of the four sires in service. Many of the most valuable and high record cows that Mr. Bell purchased when the herd was founded are still present, giving a good account of themselves. The noted Little Gift of Spring Valley family are doing great work—the old cow having just made over 800 lb. in ten months and dropped a bull by Echo King Sylvia. There is no other calf that can equal the daily average of this combination. Susie Abbekerk Colantha—the famous Canadian cow with 15,000 lb. milk in 150 days—is again in year test, going at a 1,000-lb. clip. Her last son by Echo King Sylvia goes to Brentwood in March, along with a half dozen desirable females.

Kaywood Joyce Korndyke, the champion butter record cow of the state (39 lb.), has a young daughter by the Echo sire and is again in year test, promising to go over 1,000 lb. a second time. It is her son by a son of Mabel Segis Korndyke that Mr. Bell has just brought back to the farm to use—and for very good reasons. The Echo King Sylvia sire is getting some remarkable calves from the great dams and is himself showing marked development at 32 months. He weighs 2,200 lb. and his opportunity is as rich as any youngster of his age.

Within the past two weeks, with a King Valdessa daughter of their own breeding, they made 23.63 lb. butter, lacking but four one-hundredths of the state record for a junior two-year-old, and the day previous to our visit another junior two-year-old had finished with 22.01 lb. To many it will be of interest to learn the latter is from Bloomingdale Hengerveld Palmyra, perhaps the most famous daughter of Hengerveld.

About twenty-five are now running on semi-official test with a couple of two-year-olds promising close to 20,000 lb. and a half dozen of the older cows hovering around the 1,000-lb. mark.

The entire herd is milked four times daily and the entire daily output of milk of some 900 quarts is certified and goes to the Pittsburgh trade through a city dealer.

While Mr. Bell feels perhaps it is too early to gain any valuable lesson from what he has done in the breeding of his animals, he does feel satisfied it is possible to establish more than one characteristic that is "right," and he adds if he retains only those he has, without increasing, he has made a lasting mark in progressing toward the production of better from the best. His message to breeders is, "Your sire cannot do it all—you must have good dams as well." He is a great believer in using sons of one dam if she is the right kind, by different sires, for if "dams transmit through their sons" there "like must beget like," and should we follow that course who knows but we may achieve the goal at which we aim.

Holsteins in Susquehanna County, Penna.

By W. Hugh Jones

IN the early days in Susquehanna County, Pennsylvania, the product of the dairy herds was largely manufactured into butter or cheese on the farm. Dairying was followed as a side issue, with only a few cows. These freshened in the spring, were milked until late in the fall, allowed to go dry during the winter and, as a rule, were poorly fed and cared for.

The owners of the Holstein cows were subject to much jest and sport because of the low tests of their herds. While the cows gave a large flow of milk, the dairymen believed that it did not contain much butter fat. But with the advent of the Babcock test, great rivalry sprang up among the individual dairymen and it was noticed that often the Holstein herds led in total fat production as well as in milk.

Owing to the growth of the cities, there was an increased demand for fluid milk. Then the Holstein cow came into her own as she was able to produce large quantities of high quality milk and to utilize the ample supplies of home-grown coarse fodder—factors of economy and profit that dairymen cannot afford to overlook.

Within the short space of thirty-five years, the Holstein cow arose from a position where she was barely known, to be the predominating breed, and to-day there is hardly a dairy herd in the county which does not bear the Holstein stamp.

The first herd was founded before 1890 but it was not until 1899 that J. R. Beebe, the first member, joined the National Association. He was followed by F. S. Wells in 1901; G. Fulmer Decker and Silas Decker joined in 1903; Lewis J. Drake of Springville, and W. E. Taylor of Lynn, became members in 1904. The next was F. E. Moore of Kingsley, in 1905, who owned the great sire, DeKol Burke, about that time. B. F. Jones and H. R. Decker, both of South Montrose, and who are still active breeders, joined in 1906. The following year W. H. Barnes of Brooklyn; E. D. Ellsworth, Meshoppen; John D. Miller, Susquehanna; A. E. Robinson, Montrose, and F. H. Quick, joined, and all are still active breeders with the exception of Mr. Quick, who is deceased; 1908-09 saw a slump, with only one member, W. C. Cruser, of Montrose, while 1910 added three: L. H. Ball, F. E. Bennett, and H. G. Lake, all of Montrose. In 1911 five joined; 1912 and 1913 saw two new members each. Since then, the increase has been very rapid until to-day, of the 1,638 members of the Holstein-Friesian Association of America in the State of Pennsylvania, 135 are in Susquehanna County, it having the largest membership of any county of the state.

The first official record was finished June 10, 1903, by F. S. Wells of South Montrose, on the cow Lipkje DeGroot, No. 42,521, bred by W. H. and B. F. Jones. This record, 458.1 lb. milk, 19.71 lb. butter, stood for nearly a year as the highest in the state in the full-aged

class. On June 18th of the same year, Mr. Wells completed a record on Lipkje Prize, a daughter of Lipkje DeGroot, of 484.7 lb. milk and 20.66 lb. butter at the age of 4 years, 6 months and 14 days. This stood as the highest record in the state for this class during a period of five years for butter and six years for milk.

In 1904, Wade H. Barnes made what was considered a very good record of 11.656 lb. of butter on a junior two-year-old. F. S. Wells made 9.375 lb. on a 22-months-old heifer. Before this time, people thought that it took a "mighty good" cow to make a pound of butter a day. They opened their eyes to see two-year-olds make more, and mature cows from twice to three times as much.

H. R. Decker started testing in 1906 and made 11.37 lb. on the junior two-year-old Anna Belle Netherland, who came back in the Eight-months' Division with 10.094 lb. butter from 204.5 lb. milk, made 361 days from calving, which stood as the highest record in this class for both milk and butter for six years.

G. F. Decker in 1906 made a record on Edgewood Segis Pietertje Princess as a junior two-year-old of 383.6 lb. of milk and 14.198 lb. of butter, which stood for nearly three years as the highest in the state for both milk and butter.

All the above records were made under farm conditions. I have heard the older breeders tell about Mr. Wells and the supervisor going out in the pasture and cornering the test cows against the rail fence to milk them at noon. The breeders usually ran a bunch that had freshened over a period of several months. Records in this county to the present day are made under conditions very near normal. Few breeders have enough separate stalls and so leave the test cows right in their usual stanchions.

The sires used in this county carry the best blood of the breed. Their lists of daughters are not long but it must be remembered that they have been used in small herds. Most of the breeders feel that they must avoid inbreeding and so replace their herd sire as soon as his daughters are of breeding age. Where the herd numbers only ten to twenty breeding females, the herd sire question is a problem. The method followed in the past is not one advocated by good breeding authorities but it is the method followed by these practical breeders under past conditions. The bull associations promise to offer a practical solution of this problem.

The following sires used in this county have 10 or more A. R. O. daughters:

Lilith Pauline DeKol's Son	29
Prince Segis Korndyke, Jr.	25
Tobe Rag Apple Korndyke	22
King Segis Hengerveld DeKol Burke	18
King Pontiac Alcartra Pietje	16
Walker Korndyke Copia	15
King Tweede Spring Farm	12
Rag Apple Korndyke Mercedes	10

Lilith Pauline DeKol's Son was brought into the county by H. G. Lake and A. E. Robinson & Son. His dam, Lilith Pauline DeKol, made 28.24 lb. butter from 633.4 lb. milk as a junior four-year-old, which stood for over eight years as the world's record in this class. He has one 30-lb. daughter.

Prince Segis Korndyke, Jr., was brought in by Ellis Dunlap and E. D. Ellsworth. His dam was Beauty Rauwerd DeKol, with 30.54 lb. butter from 709.9 lb. milk, one of the best daughters of Pietertje Hengerveld's Count DeKol. His daughters include Korndyke Jennie Segis, with 30.45 lb. butter in 7 days, 543.58 lb. in 194 days, and Korndyke Wilkje Jennie Segis, with 30.74 lb. in 7 days.

King Segis Hengerveld DeKol Burke was brought in when a calf by H. R. Decker and B. F. Jones. He was about seven-eights black and the color craze was at its height. When his owners were through with him, they could find no breeder willing even to keep him for his use, although he was an exceptionally good individual. Consequently he went the way of the shambles. He was a son of Pietertje Hengerveld Segis and from a 23.76-lb. daughter of DeKol Burke. His daughters include Meadowside Helena DeKol Burke 3d, with 34.93 lb.; DeKol Hengerveld Burke, with 32.66 lb.; Meadowside Queen Segis, 28.87 lb. and some remarkable heifers. He was used in two small herds for less than two years.

Tobe Rag Apple Korndyke was bought by G. F. Decker, H. R. Decker, B. F. Jones & Son, and C. E. Lowe. He was used a little over two years and sold to John M. Kelly, one of the present directors of the National Association. He is a son of Sir Rag Apple Korndyke and Christmas Tobe 2d, with 31.66 lb. butter in 7 days and 141.24 lb. in 30 days at 10 years of age. The 30-day record stood for several years as a world's record for age. His daughters include Meadowside Lady Rag Apple Korndyke, with 30.24 lb. butter at 4½ years, and several 20-lb. two-year-olds.

King Pontiac Alcartra Pietje, well known as the $10,000 son of the $50,000 sire, was bought by H. S. Brown of Thompson, A. E. Robinson & Son and Geo. E. Page, who later sold his interest to F. F. Resseguie. He is a son of King Segis Pontiac Alcartra and Fairmont Zerma Segis Pietje, 35.61 lb. butter from 608.4 lb. milk as a junor four-year-old, world's butter record in this class for three years. The records of his seven nearest dams average 30.09 lb. butter at an average age of 4½ years. He has a good list of heifers.

Walker Korndyke Copia was purchased by H. S. Brown, and later by F. F. Resseguie. He is a son of Walker Korndyke Segis and Korndyke Butter Girl Copia, a 24-lb. junior four-year-old daughter of Korndyke Butter Boy. His daughters include Spring Brook Clothilde 2d, with 30.17 lb. butter from 641.4 lb. milk in 7 days and 122.99 lb. from 2,705.3 lb. milk in 30 days.

Rag Apple Korndyke Mercedes was acquired by H. G. Lake and traces six times to Pontiac Korndyke. His daughters include Ridge Farm Helena Rag Apple with 24.12 lb. butter from 440 lb. milk at 2½ years, Ridge Farm Bessie Lipkje with 20.04 lb. at two years, Ridge Farm Rag Apple Korndyke with 25.05 lb. at three years, and two others with 20-lb. records each about fifteen days past the three-year-old line, these being his only daughters yet tested as three-year-olds.

King Tweede Spring Farm was purchased by G. F. Decker, H. R. Decker, and B. F. Jones & Son. His sire is Spring Farm King and his dam is Dyemar Lady Pontiac, 30.03 lb. in 7 days from 611.2 lb. milk, a daughter of Spring Farm King Pontiac. At the Brentwood Sale he was accepted [illegible]

PHOTOCOPY OF ORIGINAL

and was sold to Abner S. Deysher of Reading, Pa., who still owns him. This bull's daughters are making good and include Tobe Tweede Pontiac Lass with 21.29 lb. butter at 2 years; Wynola Korndyke Pontiac Lass, 20.03 lb. butter from 515.8 lb. milk as a junior two-year-old, the milk record standing as the second highest in the state in this class, and Wynola Tweede Pontiac Lass, with 17.11 lb. of butter and 443.2 lb. milk at the age of 1 year, 11 months, 12 days, which is the highest milk record in the state for the age. She also made 338 days from calving, 13.15 lb. butter from 320.8 lb. milk, state record in the eight-months-after-calving division for both milk and butter.

Besides the daughters of these sires, there are many cows worthy of mention. Space forbids telling of more than a few.

Saltrum Dijkstra DeKol 2d, developed by F. F. Resseguie, made 34.23 lb. butter from 562.2 lb. milk and held the state championship for butter for two years.

Fanny Belle Pauline DeKol 2d, developed by Glen Billings and his son Wesley of Springville, made 28.32 lb. butter from 731.7 lb. milk. She was consigned to the National Sale at Syracuse last June, where she won second place in the show competition.

Jane Genesta Pledge was developed and is still owned by John J. Sheldon of Susquehanna. At his first testing attempt, she made 31.93 lb. butter and 718.3 lb. milk in 7 days at full age, and 132.96 lb. butter from 3,012.8 lb. milk in 30 days.

DeKol Dorinda Pontiac was developed by Geo. E. Page. As a junior two-year-old she made 21.28 lb. butter from 428.6 lb. milk in 7 days and 84.59 lb. butter from 1,800.8 lb. milk in 30 days, the 30-day milk record being the highest in the state in this class. At the age of 3½ years she made 26.235 lb. butter and 567.1 lb. milk in 7 days and 102.58 lb. from 2,212.8 lb. milk in 30 days, which was the highest state butter record in this class for four years.

Aaggie Cornucopia Pauline Girl 2d was bred by A. E. Robinson & Son and developed by C. A. Stark. She made 31.77 lb. butter from 564.2 lb. milk in 7 days.

In number of purebred Holsteins, this county ranks first in the state with a total of 2,078, according to the census of Holstein cattle taken August 1, 1919. It ranks twenty-seventh among the counties of the United States. This county also leads the state in the number of purebred sires, as shown by the 1920 crop and livestock report of the Pennsylvania Department of Agriculture.

Susquehanna County has Holsteins, individuality and breeding considered, among the best in the world. She has not exploited them and advertised as breeders of some other sections have. Her breeders are dairy farmers who must make the herd pay or go out of business. That they stay in the business is an indication of the quality of the herds. A number of establishments have passed from one generation to the next and, in several instances, three generations have followed the industry. Susquehanna herds are healthy and a number are under the Accredited Herd Plan with a high percentage passing the first test without a reactor.

Dunn County Breeders Busy

THE Holstein breeders held a meeting December 17th at the County Agricultural School, Menomonie, Wis., at which a larger county association was formed.

During the previous six weeks local Holstein clubs were formed in different parts of the county. The names of these clubs are: The Wheeler Holstein Club, the Elk Mound Holstein Club, the Colfax Holstein Club, the Northern Dunn and St. Croix Holstein Club, the Menomonie Club and the Weston Holstein Club.

The Executive Board of the new county organization is made up of the president and the secretary-treasurer of each local club.

The Executive Board elected the following officers: President, William Millar, Jr.; vice-president, John Schutz, Jr., of Boyceville; secretary, D. P. Hughes; treasurer, G. U. Kappel. Mr. Millar was elected as the delegate to the state meeting.

Other business matters discussed included the promotion of calf club work and larger premiums for Holstein exhibits at the fair. It was voted to contribute $20 to the boys' and girls' club work and $20 to the general exhibits at the fair.

The association voted to support the county clean-up on tuberculosis.

It discussed the oleomargarine question and decided to ask all farmers to eat butter and thus create a better demand for their own product.

It was decided to hold a Dunn County Holstein sale next spring and a committee was appointed to make arrangements.

The association has a balance of $113 in the treasury and is making an active canvass for more members. The association still has some purebred bulls on hand that will be exchanged for scrubs or grades. The effort is being made to have all purebred bulls in the county.

The purpose of the Dunn County Holstein-Friesian Association is to stimulate interest in the breed and promote the buying and selling of cattle and to coöperate with other livestock associations in making Dunn a greater dairy county.

The Lonely Suburbs

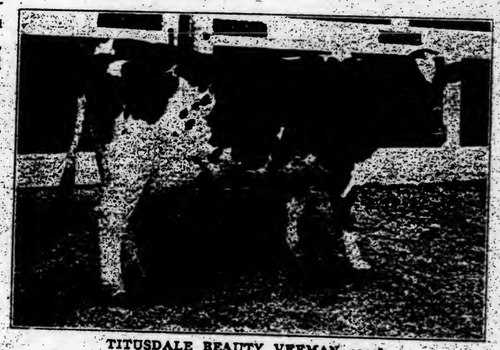
He was going home and it was growing dark. His road from the station was a lonely one and he was getting along as fast as he could when he suddenly suspected that a man behind him was following him purposely. The faster he went the faster the man followed, until they came to a cemetery.

"Now," he said to himself, "I'll find out if he's after me," and he entered the cemetery.

The man followed him. He circled a grave and his pursuer dodged after him. He ducked around a family vault. Still the man was after him. At last he turned and faced the fellow.

"What do you want? What are you following me for?"

"Well, sir, it's like this: I'm going up to Mr. Brown's house with a parcel, and the station agent told me if I followed you I should find the place, as you live next door. Do you always go home this way?"



C. W. Newman, of Merryall Farms

MR. C. W. NEWMAN, dairyman, and breeder of purebred Holsteins, resides at Wyalusing, Pa. He has a wide circle of friends and acquaintances, but if you do not already know him, we want you to, for he is worth while.

Mr. Newman, like many of our readers, made his own way in the world. After early schooling, he worked around on farms for some time and then went into creamery work, running a creamery at Wyalusing for eighteen years.

After a time, he bought a small farm and ran this with the assistance of a man, working on this place himself whenever he could find time. The day never seemed too long in those times, he says, and so, by hard work and careful planning, he got a nice start. He also sold separators and other farm machinery as a side issue, and this extra business was the means of getting him interested in the business of breeding Holsteins.

He had sold, to a family operating a farm some little distance away, a cream separator, and had taken a note in payment, as was generally the case in those days. When the time came for payment, one of the members of the debtor family suggested that he take a bull in settlement, this bull having been owned by them for a couple of years. Mr. Newman had the breeding looked up and was told that the animal was well bred, and was a son of George Carpenter's great show cow, Dijkstra Beauty. The fact that his dam was well known for her individuality and that the bull, who had been badly cared for, was still shapely, made the creamery owner buy him, despite the fact that as yet, he (Mr. Newman) knew little about purebreds and less about Holsteins.

TITUSDALE BEAUTY VEEMAN 312583
27 lb. butter in 7 days, now in year test.
Owned by C. W. Newman, Wyalusing, Pa.

The bull, Dijkstra Johanna Lad, did well in his new home and soon showed that he inherited the type and individuality that made his dam famous throughout the eastern states and enabled her to win honors and ribbons in the show rings of those days. Every time Mr. Newman,—Charlie,—as everyone around Wyalusing calls him, saw his bull he liked the animal better and the ownership of a registered animal that one has every right to be proud of, had the usual effect, so Charlie Newman determined to purchase some females and raise purebred animals himself.

The first purchase was that of a two-teated cow and her yearling daughter. The cow was heavy with calf, the heifer was left at her old home to be bred and was taken later. In due time, both had heifer calves, increasing the female herd to four, and now Mr. Newman had a bad case of "purebred fever," for both dam and daughter were real good dairy animals; the calves did well, the bull was fast developing into a beauty, and the owner grew more enthusiastic every day.

A bunch of yearling heifers were picked up and then an entire herd of stock, among which were a few registered Holsteins. Then came the opportunity to purchase the present establishment, Merryall Farms, and this opportunity was accepted, the smaller farm being traded in. Mr. and Mrs. Newman were not afraid to go into debt, and gave notes for part of the purchase price of both the cattle and the farms.

Merryall Farms consist of 300 acres, situated on a state road, three and one-half miles from Wyalusing. About one hundred acres are under cultivation, the remainder being pasture and woods. The land slopes toward a tributary of the Susquehanna River. The scenery is picturesque. Back of the farms is part of Rummerfield Mountains, while mountains in every direction can be seen. Merryall Farms rests in the brooding silence of the eternal hills.

Merryall was the name of a small community near the farms and so this name was selected for the new establishment. The grade cows were prepared for sale and realized a good price, for their owner was a real cattleman, and they looked like real milkers. The purebreds were doing well and steadily increasing in numbers. Thus, some fifteen years ago, Charlie Newman became a full fledged Holstein-Friesian breeder.

The Holstein herd proved a money-maker. It was decided to sell out the creamery to the other partner and concentrate on farming. That the decision was a good one is shown by the results, for Charlie Newman, while he still directs the work on the farms, lives in a nice house right in town and cuts quite a figure in the village, is a director in the local national bank, and has just been appointed postmaster of Wyalusing.

Nature fitted Merryall Farms for a livestock establishment. The sloping pastures give the right drainage—the surrounding hills form the source of living springs of purest water, there is abundant shade, and the natural fertility of the soil insures an adequate supply of nutritious roughage and generous pasturage.

The buildings can be duplicated on many Holstein farms. They are commodious, but not fancy. Partitions and box stalls are of wood; there were not, when we were there, water buckets in stalls, but soon will be right away, for the ditch was dug to carry water from springs by spring and the buckets and pipes were piled in the

PHOTOCOPY OF ORIGINAL

barn ready for installing. So you can see that Merryall Farms is a real breeder and dairyman's institution, similar to the homes of hundreds of our readers. There is a home lighting plant, operated by a Westinghouse motor and Exide batteries.

The farm foreman is Mr. Terry Berry, originally a factory worker, a good natural mechanic, which helps him materially in his present work. He is deeply interested in cattle handling and, besides looking after the

KING SYLVIA JOHANNA PONTIAC 339758
Owned jointly by C. W. Newman, and F. G. Herrick, Wyalusing and Son of a 40 lb. cow. The present Merryall Herd sire. Towanda, Pa.

farm, has milked a string of animals on long-time test four times a day since last spring. Large milk sheets show the owner and all interested, the production of the animals, by milkings and by days. At the end of the month, the sheets are removed and the figures totaled so that it is easy, at any time, to tell what any particular animal has done and is doing. Steady, even production was the rule for November, some of the animals varying but little in their daily work throughout the entire month.

The early history of the herd has already been told. Dijkstra Johanna Lad sired good animals and handsome individuals, but the herd sire whose influence is stamped most firmly on Merryall Herd is Korndyke Abbekerk Netherland, son of the great old sire Korndyke Abbekerk, who for some years was owned in the neighborhood, and of Milanhurst America De Kol, who has a seven-day record, made as a junior four-year-old, of 34.08 lb. butter, 651.1 lb. milk, and whose year records of 1,231.35 lb. butter, 26,433.4 lb. milk, made in strictly official test, were world's records in class at time of making. The daughters of this bull are uniformly good producers and possess individuality of a high order and these eminently desirable characteristics are, in turn, passed on to their own daughters.

The Milanhurst bull, as he is generally called in the neighborhood, was succeeded for a short time by Towanda Jr. Pietertje, whose sire was from a 33-lb. cow and was by a son of the first 44-lb. cow, while his dam was a 29.99-lb. junior two-year-old daughter of the 37-lb. bull "B" and was from a 33-lb. daughter of King of the Pontiacs.

The present herd sire is owned in company with J. G. Kerrick, of Towanda, Pa., and is King Sylvia Johanna Pontiac, 339758, a son of King Echo Sylvia Johanna, and therefore a brother to Carnation King Sylvia. His dam, Otego Valley Christmas Belle, made 651.2 lb. milk, 40.51 lb. butter in seven days, and her daughters include Otego Valley Christmas Belle 2d, with a number of large records, including two each above 31 lb. butter in a week.

King Sylvia Johanna Pontiac is just ready for service, being born March 19, 1921. He is well grown, a vigorous, sturdy fellow, of good bone, really good everywhere, with an excellent barrel and rump and remarkably straight on the back, one of the nicest bulls we have had the pleasure of looking over. His picture does not do him justice.

Official and long-time testing had not been done to any extent in the Merryall Herd until 1921. Animals bred in this herd made good records in other hands and finally the owner and Mr. Berry decided to make records at home. The pride of the establishment at the present time is Pietje Pride Homestead, whose sire is a grandson of Colantha Johanna Lad. Pride, when fresh, without any preliminary fitting, made 20.86 lb. butter, 580.3 lb. milk in seven days and, in long-time test, has 16,000 lb. milk and over 600 lb. butter to her credit in eight months, standing in stanchion with her stablemates and without the advantages usually given animals when making long-time records. She is a large, strong cow, a superior individual as her picture shows, an animal that any cattle owner would be proud to raise. Her present owner bred and developed her, and is all the more gratified at her performance in the test.

Another animal that shows the persistency of the Merryall cattle is Milanhurst Johanna Queen, a senior three-year-old that, at second calving, made better than 20 lb. of butter in seven-day official test no less than 140 days after freshening. She is now in long-time test and in five months has produced over ten thousand

PIETJE PRIDE HOMESTEAD 265,166
16,000 lb. milk, 600 lb. butter in 8 mo.
Owned and bred by C. W. Newman, Wyalusing, Pa.

pounds of milk and 440 lb. of butter. This good heifer, whose individuality is beyond reproach, is by King Pontiac Merdu, who was by Spring Farm King Pontiac 6th, while his dam, Purity Pacha Merdu 2d, made 34.3 lb. butter in seven-day official test as a junior four-year-old, and over 34 lb. again as a seven-year-old. Her dam is a daughter of Korndyke Abbekerk, so this heifer is royally bred.

Over 27 lb. butter in seven-day official test is the record made recently by Titusdale Beauty Veeman, a five-year-old sired by King Korndyke Hengerveld Veeman, he by Sir Korndyke Pontiac Artis from a 30-lb. daughter of Sir Veeman Hengerveld. This beautiful cow made 560 lb. of four per cent milk in the week and

LILITH GEM KOLKLUFF
22,247 lbs. of milk; 851 lbs. of butter, 365 days.
Owned by Pennsylvania State College
Bred by C. W. Newman

more than 2,300 lb. in the first thirty days of her long-time work.

Merryall Lilith Hengerveld was just fresh and starting on semi-official test. She was making more than 80 lb. a day. Her dam has a year record of over 20,000 lb. and is a daughter of Lilith Gem Kolkluff, who, bred and owned by Mr. Newman, was sold to the Pennsylvania State College, and in the college herd made 22,247 lb. of milk, 851.1 lb. butter in a year, carrying calf 243 days of this time, and followed this by making 18,882 lb. milk and 709 lb. butter in 284 days, carrying calf 199 days of this time. Mr. Newman as the breeder of this cow is keenly interested in her work, and her performances give him nearly as much pleasure as if she did her great work in his herd.

The Merryall Herd has made a splendid showing year after year in the Wyalusing Cow Testing Association. One of the cows made 689.7 lb. butter fat and 18,373 lb. milk in a year, at that time leading the association which had been in operation eight years. De Kol Klaasje Hillside, another member of the herd, had previously made 18,506 lb. milk, 676.4 lb. butter in an association year. The Merryall bovines are real dairy animals.

The Newmans have one son, Carl, who is studying engineering at Pennsylvania State College, but who is, so we were informed, also an Holstein enthusiast. Mrs. Newman confesses a deep interest in Holsteins and Holstein affairs, but has a number of other interests, being a booklover and voluminous reader, a social leader locally, and her own housekeeper. For some years she was the local librarian and is an entertaining talker on many subjects.

That Charlie Newman is well thought of by his fellow breeders in his native state, as well as by his neighbors, is shown by the fact that he is treasurer of the Pennsylvania Federation of Holstein-Friesian Clubs. He is a real dairyman, keeps his cows because they earn him a profit at the pail, and on top of that he is a real good fellow; the more you know of him the better you will like him.

New York State Association Meets

JANUARY 10, 11, and 12, at Syracuse, N. Y., were three busy days, full of interest and enjoyment. The doings commenced Tuesday at 11 a. m., with the judging of the cattle in the Liverpool Sale Pavilion. The New York Holstein-Friesian Association gave prizes to the county or district clubs sending the best consignments, the exhibit to consist of not less than five animals. All animals consigned from any one county or district had to be shown.

Professor H. H. Wing, of Cornell University, and Ward W. Stevens were the judges, placing the awards on the basis of individuality and sale condition. W. D. Robens, who had been deputized to examine the animals and to reject any that, in his opinion, were not worthy of a state sale, assisted them. The prizes were $50, $25, $15, and $10. Jefferson County won first prize; St. Lawrence, second; Onondaga, third, and Herkimer, fourth. Professor Wing commended the animals consigned and said that, with few exceptions, they were distinctly high class individually, and from the standpoint of sale condition there was very little to fault.

The Executive Committee of the National Association met at the Onondaga Hotel Tuesday morning. Superintendent and Mrs. Malcolm H. Gardiner, Secretary F. L. Houghton, Assistant Secretary Houghton Seaverns, and Treasurer Wing R. Smith also participated.

The annual meeting of the members of the New York Holstein-Friesian Association was held at the Yates Hotel and was called to order at 2:30 p. m., January 10, by President C. F. Bigler. The reading of the minutes of the last meeting and the calling of the roll were unanimously waived.

President Bigler gave a brief report. Last year was very harmonious and successful. The directors worked well together. The districting plan for New York State was a decided success and was being copied by other breeding organizations. He was glad to see that there were representatives from all parts of the state at the meeting and he believed that every Holstein work in every county should be represented. He is a strong believer in local and community clubs, the members of which should be, in turn, members of the state organization.

Although much had been done there was much more to do. He regretted that, in his message to the legislators of the Empire State, Governor Miller had not even mention agriculture. Much could be done by a few determined men working together and he referred to the Agricultural Bloc in the Senate, which although interfered with so-called good politics had been of benefit to the farming interests. Secretary Houghton's report was well received, although it showed that the association was not in a good financial condition. [illegible]

PHOTOCOPY OF ORIGINAL

be found elsewhere slightly abridged. The auditing committee consisted of A. J. Nankeville, H. F. Farrington, and J. C. Morris, and they reported that the vouchers and treasurer's statement agreed. The Amos resolution that the state be divided into twelve districts instead of eleven was moved by Professor Wing and seconded by John Arfmann. After some remarks by J. C. Morris the resolution was unanimously adopted.

Professor Wing moved that Madison be taken from its present district and made into district No. 12, and that Cayuga be placed with Onondaga and Oswego Counties. This was seconded by Mr. Robens and by George Smith and was carried unanimously.

The election of directors was next in order. The members from the various districts and the representatives of the county clubs were instructed to get together in groups and name their choices. Their selections met with the approval of the gathering and are as follows: District No. 1, Harry Yates, Orchard Park; District No. 2, R. E. Chapin, Batavia; District No. 3, D. M. White, Bath; District No. 4, George Abbott, Cortland; District No. 5, C. F. Bigler, Syracuse; District No. 6, Elmer T. Jenkins, Rensselaer Falls; District No. 7, W. D. Robens, Poland; District No. 8, A. W. Brown, West Winfield; District No. 9, E. J. Chaffee, Wassaic; District No. 10, D. R. Shafer, Cobleskill; District No. 11, H. L. Stafford, Peru; District No. 12, C. B. Marshall, Morrisville.

The next business before the meeting was the nomination of state delegates to the annual meeting, to be held in Kansas City, in June. A nominating committee consisting of Messrs. Ogilvie, Duell, Fletcher and Dr. Hall, was appointed by the chair after a unanimous vote directed him to do so. The selections were: District No. 1, Harry Yates; District No. 2, R. E. Chapin; District No. 3, C. R. Crandall; District No. 4, Prof. H. H. Wing; District No. 5, C. F. Bigler; District No. 6, Floyd C. Overton; District No. 7, W. D. Robens; District No. 8, A. W. Brown; District No. 9, Carl Schmid; District No. 10, James Beiermeister; District No. 11, B. M. Orton; District No. 12, A. A. Hartshorn; delegates at large: John Arfmann, Francis M. Jones, D. B. Armstrong, W. W. Stevens, Albert Roy, C. B. Marshall, Geo. N. Smith, H. Farrington, C. L. Amos.

Secretary Zimmer, on behalf of the committee, advocated a resolution on tuberculosis eradication and mentioned the resolution drawn up by the Agricultural Conference Board of the State which provides for a permanent and a temporary plan of seeking to eradicate tuberculosis. The resolution is:

Whereas, The Holstein breeders of New York State appreciate the importance of a definite plan for the eradication of tuberculosis, and

Whereas, The special committee of the New York Agricultural Conference Board has made a study of the situation and has recommended a definite state policy, thereby, be it

Resolved, That the members of the New York State Holstein-Friesian Association in annual meeting assembled approve and endorse the plan submitted by said committee and urge legislators to work for legislation to carry out said plan. Carried unanimously.

President Bigler said the effectiveness of an organization was impaired when the officers had to beg for finances and no association can be successful unless dues are high enough. He spoke of a resolution to be submitted by Dr. Armstrong which was prepared by a committee of five consisting of W. D. Robens, Professor Wing, Dr. Armstrong, President Bigler and Secretary Zimmer, and will be offered at the National Association annual meeting. This was now offered for the consideration of the members of the State Association.

This resolution calls for an increase in the transfer fee and for one-half of the increase to be returned to the State Association of the seller's state. Dr. D. M. Armstrong, a director of the National Association, said that there were two main points in having this question debated. The first was to allow each state to express opinion on the advisability of raising the transfer fees to provide additional funds, and the other was that a proportion of the funds should revert back to the state of origin. The transfer fee was reduced last June by the use of the proxy vote. There was a possibility that all who sent the proxies used for this purpose did not believe in the reduction, but, on the other hand, there were many who honestly believed the fee should be reduced. The proposed raise would be paid by the men who sell and in part would be collected from men who otherwise would not contribute to extension work support although they were reaping the benefit.

Mr. O. U. Kellogg said that he could speak only briefly on the subject. He doubted the legality and the workability of the proposed plan. The National Association could use a set portion of its funds for extension work in each state, but the proposed plan which called for an indefinite amount was, in his opinion, illegal.

The opinion of the breeders was against the views of Mr. Kellogg. Dr. Armstrong thought that if the association apportioned a set portion of an increased transfer fee, it would be a definite amount. M. S. Prescott while favoring the idea, said there might be two objections: one, that the money would be spent for extension work in selling states and not in buying states; and the other, that the National Association would have no voice in saying how the money would be spent. He believed the meeting should go on record as favoring an increase on the transfer fee.

President Bigler called on Bertram Scott, recently secretary of Minnesota Holstein-Friesian Association. Mr. Scott said that the Minnesota Association, meeting on January 5th, had, after debate, left the question open. They favored raising the transfer fee to not less than $2.00. They recognized Mr. Prescott's first objection but it was the sense of the meeting that Minnesota money could be spent to better advantage in Minnesota than it could in Arkansas or other states that were buying cattle. He and other Minnesota members believed that the various states should raise a sum to that received from the National Association—that the big cattle states should match the money given them, dollar for dollar. The Minnesota Association had been largely financed by the profit from sales and many of its members depend upon the State Association to assist them in marketing their stock.

C. L. Amos said the association fee was now fifty cents. He believed it should be a dollar, of which twenty-five cents should go to the state of origin and the other twenty-five cents should be spent for extension work in the weaker states. The National Association should have a definite plan for extension work and, in his opinion, they had had none in the past. He believed the State Association should work with the National Association but, as the money came from the members, they should have something to say as to how it should be spent. There was a vast field for expansion even in New York and he believed in taking care of his home state.

Professor Wing said that the State Associations should have some settled definite policy which would not be upset by changing policies of new directors elected to the National Association Board. The plan before the meeting only asked for a portion of the increase. A. W. Brown called attention to the fact that the resolution before the meeting was simply a recommendation to the Kansas City delegates and that it was impossible for the meeting to draft an ironclad resolution. President Bigler said the resolution was offered in a conciliatory spirit and that members of New York State wished to work with the members of the other great Holstein states. There might be differences of opinion but if both sides were governed by a spirit of conciliation good results would be achieved. He cited the Lowden proxy-delegate amendment as being a happy solution of past troubles because it was offered in a conciliatory spirit and was accepted by both sides at the St. Paul meeting in the same spirit. A. W. Brown offered a resolution instructing the New York State delegates to advocate the proposition at Kansas City and to accept the best possible terms, and this was seconded by Mr. Zimmer and Dr. Armstrong and carried unanimously. The members gave a vote of thanks to President Bigler, Secretary Zimmer and the other officers and adjourned.

At a meeting of the newly elected board of directors, C. F. Bigler and E. R. Zimmer were reëlected president and secretary; George Abbott was chosen treasurer; A. W. Brown, first vice-president, and W. D. Robens, second vice-president. The executive committee are R. E. Chapin, W. D. Robens, Harry Yates, and the president and secretary.

Onondaga Club Entertainment

The Onondaga County Holstein Club entertained the visiting breeders at a smoker at the Yates Hotel, Wednesday evening, and all present had an enjoyable time. A very pleasing program was provided. In addition John Arfmann, who recently returned from a visit to Germany, told of conditions there and of the struggle people of that country were making to get out from under the burdens caused by the war.

Dr. H. B. Leonard, in charge of the accredited herd work in New York State, reviewed the accomplishments of the state and Federal governments in tuberculosis eradication. His talk was full of information and shows that this work in New York State is progressing rapidly and favorably.

Professor H. H. Wing told of the Holstein breed in Australia and New Zealand. The professor spent a portion of last year traveling through these countries.

The New York Breeders Banquet

The banquet at the Onondaga Hotel was attended by 250 breeders and friends. President Bigler in introducing State Secretary E. R. Zimmer, said that he talked black and white, he wrote black and white, and he snored from dark to light. Mr. Zimmer spoke very briefly, welcomed the breeders from other states and members of the New York State agricultural organizations. He made a plea for coöperation as being essential for success.

Hon. Frank O. Lowden, principal speaker of the evening, was next introduced, as he had to leave early in order to speak the next day at an agricultural gathering at Lansing, Mich. He said at his last visit to Syracuse, May, 1921, he was waited upon by a committee which offered him a directorship in the National Association. This he refused as he had refused a position in the United States cabinet and a foreign ambassadorship because he wished for a rest. On his arrival home he found a pile of telegrams, a foot high, urging him to accept the presidency of the Holstein-Friesian Association of America, and he accepted office on the condition that all sides coöperated with him. He believed that no one was really for him for president, but it was necessary to have some one who knew nothing of the differences. He touched on the St. Paul meeting and said that the delegate system was apparently so satisfactory that the day after the agreement Judge Peasley and Senator Reynolds sat together and agreed on the placing of the animals at the National Dairy Show, although it was true that Judge Moscrip disagreed with them both.

No form of government could be a success unless the people made it a success, and the National Association will be successful as it coöperates with the state organizations, and the state organizations, in their turn, successful as they coöperate with the local clubs. City dwellers had an idea that there was money in farming because they knew of retired farmers, but there were very few farmers retiring from the profits of farming. They retired because they had bought cheap land which was now enhanced in value. In the past it had been easier to exhaust the fertility of the soil and move West than it was to conserve fertility. It was possible to farm and at the same time improve the soil. While he was traveling in Switzerland he saw better wheat fields than he had ever seen in the United States, and these wheat fields had fed Cæsar's legions. There was no permanent agriculture without livestock farming. It might be possible, but it was not practiced. Dairying was the best branch of livestock raising.

Middle West bankers have made a discovery. The president of the Federal Reserve Bank [illegible] ing the district of which Illinois is a part, said that in the Central West the only banks that were in good shape financially were in dairy sections. The bankers were coming to realize that dairying is the best system of permanent agriculture.

Marketing is the present great agricultural problem and one that had been neglected in the past. The prices of farm products [illegible] of supply and demand [illegible] of prices, but that law [illegible]

PHOTOCOPY OF ORIGINAL

of conditions on both sides. When the prices of wheat fluctuated 20 cents a bushel in a single day, it was evident that the law of supply and demand was not working. Marketing conditions were not local or even national problems, world conditions had to be studied.

When he traveled he spent several days in Friesland and visited a number of cattle breeders. On the wall of one house he saw a picture of one of his friends when he was a young man, Thomas B. Wales, of Iowa, former secretary of the Holstein-Friesian Association of America, and found upon inquiry that the picture was there because Mr. Wales had, in times past, purchased more cattle from that farm than had any other buyer. In Holland he found many coöperative factories owned and operated by farmers. In course of business one Holland farmer learned from others. They studied foreign markets, formed a coöperative company for export marketing and sent a representative to England to learn Stilton cheese making and then supplied a large portion of the English market with this delicacy.

The Farm Bureau was the largest American organization for the good of farming if it would only keep its feet on the ground. Agriculture in America to-day is going through the process that English agriculture went through after the Napoleonic wars. England decided in favor of manufacturing, perhaps wisely for her; but America now in the same situation, has not made and should not make the same choice. The wise course for America would be to encourage agriculture. In this country there were 4,000,000 farmers who still live on farms they own.

President Lowden was given a rising vote of thanks and retired.

In introducnig the next speaker, President Bigler said that when Holsteins were first imported into this country butter was put up in firkins, as many of the audience could remember. There were some who had visions and the next speaker was one of these.

Mr. E. A. Powell said he had spent sixty years in dairying, of which fifty were with purebred Holstein cattle. He well remembered the first meeting in Boston when a half dozen breeders met in Charles Houghton's office. He gave a short history of early importations, mentioning that in 1625, and again in 1810 Holsteins were brought into this country, but their blood became mingled with that of common cattle. Mr. Chenery imported one animal in 1852, and later made a second importation of three cows and a bull, of which all but one animal was slaughtered when disease broke out. In 1861 Mr. Chenery imported four cows and a bull and breeding records were kept from then on, although no production records were kept. Then the Hon. Gerrit S. Miller, of Petersboro, N. Y., imported three cows and a bull. Mr. Miller kept continuous records of his animals' production and his cow Dowager completed the first year record of over 12,000 lb., and Crown Princess, a little later, made over 14,000. Then the Yeomans and F. C. Stevens and John G. Dutcher made importations as well as his own firm of Smiths and Powell. This firm tested 160 cows before the establishment of the advanced registry system. All were tested for a week or thirty days and some for a year. To-day he believed that more attention should be given to individuality as well as to immense prod tion. He believed that the largest cow was not alw best, although some western breeders advertised size of their cattle. It was true that such animals mi make large records when kept in stable, but farm cows must get a large portion of their own living, it was possible to have an animal so big and clur that she could not rustle for what she ate.

Dr. Armstrong said in addition to the dates of portation that Mr. Powell had given that the Holl Land Company brought six cows and a bull to Ca novia, N. Y., in 1795. New York now has more t one-fifth of the Holsteins in the United States. Th was 115,000 Holstein purebreds in the state agai 38,000 Guernseys, Jerseys and Ayrshires. The succ of the breeder depended upon the success of the dai man. Touching the question of tuberculosis eradi tion, state assistance was of great value to the dai man but appropriations were not large enough.

H. B. Noyes, as chairman of the finance committ was down to speak on National Association polici but said he would disregard his set subject. All members owed Judge Peasley a debt for nominati and electing President Lowden last June. The assoc tion was both honored and benefited by Mr. Lowde being president. He was a man of United States pre dential calibre.

Breed extension work is all we do as an associati outside of registering and transfering cattle. When became interested in cattle, in the year 1895, you co buy good registered Holstein cows for $95 and $1 each. Mr. Hoxie thought out the Advanced Regist system, with good results to the breed. Many branch of extension work could be done better through st and county organizations than they could get throu the National Association. The analogy was somethi the same as the state and Federal governments. I believed that it was possible for each state to fix t transfer fee on its own transfers, then it could use share of the transfer fee as its members desired. T New York State members should work for the Ne York State cow, the dealer, the breeder and the heal standard so that each and all would be better than tho of the other states.

M. S. Prescott's subject was "The Signs of t Times." He said that public sales were the best baro eters of the signs of the times. There were 190 sal reported in 1921, in which 12,000 head had broug $3,326,000, an average of $278. This was the thi highest average of a ten-year period and was only e ceeded by the boom two years previous. The avera for the ten-year period was $280. In the sales of t past year 1,525 cows or heifers themselves untested ar from untested dams, averaged $196. One thousan four hundred and fourteen animals with no record but with tested dams, averaged $354, and 1,133 A.R. with tested dams, averaged $493. Superintende Gardner's reports show, that so far the present seas there was a 15% increase of A.R.O. work over th of last year.

In introducing the next speaker, Mr. Bigler said th the great value of the Holstein cow is her extreme pr duction and the great problem of the New York Sta dairyman is marketing that production.

Bradley Fuller, director of the Dairyman's League, gave a little league history and said that in November the league handled $6,179,000 of farmers' money at a charge of 6 cents per 100 pounds. Of this 4 cents was used for overhead expenses. One cent and three mills was used in advertising, and even at that they were spending $1,000 a day. One-half cent per 100 pounds went into the reserve fund, and three mills were expended locally.

The final speaker was John Arfmann, whose subject was "Our Boys." He was nicely started when he was interrupted by a squad of Boy Scouts, carrying the flag. One of them said that they were future breeders, and only as the state organization succeeded to-day could a foundation be laid for their success.

Mr. Arfmann said that they must clean the slate and wipe out the debt of the state organization and started the ball rolling by a donation of $100. The breeders and others present raised some $4,200, which wipes out all indebtedness of the New York State Association.

Said the cigar to the match as the smoker lit the vile weed a second time: "Here I am; lit up again."

Said the telephone operator to her sweetheart: "You needn't call again; I've gotten your number."

Pennsylvania for Healthy Pure Breds

ONE THOUSAND EIGHT HUNDRED HERDS UNDER ACCREDITED PLAN THAT ARE ACCREDITED OR CREDITED WITH ONE NEGATIVE TEST TO NOVEMBER 1, 1921

Magistrate—"Can't this case be settled out of court?"

Mulligan—"Sure, sure; that's what we were trying to do, your honor, when the police interfered."

Said the dog as he bit his own tail; "This is the end of me."

A Susquehanna Champion

GRAND Champion Segis 2d, No. 190872, is one of the well bred sires making history in Susquehanna County, Pennsylvania. He is owned by L. N. and F. S. Mack, of Montrose, and was bred by E. C. Brill, of Stewartsville, New Jersey.

The sire of this bull is Grand Champion Segis, a son of the noted King Segis Champion and of the 30.17 lb. cow, Maid of Center Salem DeKol. The dam of Grand Champion Segis 2d is Belle Segis Champion, who made 37.15 lb. butter in seven days from 523.6 lb. of milk. She is a daughter of King Segis Champion, who was by King Segis DeKol Korndyke from the 36-lb. show cow Aaggie Pauline Sarcastic. Back of this young bull are many famous sires and noted producing cows. One noted cow in his pedigree is the former world's champion Pontiac Clothilde DeKol 2d, the first 37-lb. cow and the first to make a thousand pounds of butter fat in a year. Among the famous sires he traces to are King Segis, Pontiac Korndyke and Hengerveld DeKol, a trio of transmitters whose combined blood is found in many of the greatest animals of the present day.

GRAND CHAMPION SEGIS 2d, NO. 190872

One of Susquehanna County's younger sires. Dam: Belle Segis Champion, 37.15 lbs. at 4 years old. Owned by L. N. and F. F. Mack, Montrose, Pa.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

JANUARY 22, 1922

Change of Publishing Date

SOME of our closest friends have suggested that we change the date of publishing our paper from the 1st and the 15th of the month to the 8th and the 22d. We believe this suggestion a good one, and until further notice THE HOLSTEIN BREEDER AND DAIRYMAN will be published on the 8th and the 22d of each month, beginning with this issue.

We Thank You

FROM the many subscriptions and letters of congratulation received in each mail we are assured that the HOLSTEIN BREEDER AND DAIRYMAN is appreciated. We had anticipated that our efforts to establish a magazine of high standard would be looked upon favorably by the majority of breeders; but little did we expect or anticipate that the first issue would bring such a generous response. We wish to thank our many friends for the prompt and cordial reception they extended to our new publication.

A Long Way to Go

THE United States census report tells that less than three per cent of the sixty-six million cattle in the country are purebreds. Of this three per cent, less than half are purebred dairy cattle, and only a trifle over a quarter are Holstein-Friesians; in other words, considerably less than one per cent of the total cattle in the United States are purebred Holsteins.

Pessimists suggest that the business of breeding registered Holsteins is being overdone. This suggestion is far from the truth, for the vast possibilities of the Holstein breeding business are scarcely grasped even by the most sanguine of its followers. Anyone who looks over the census figures and is possessed of any reasoning ability can readily grasp the fact that we have barely scratched the surface of this vast field—a field that should be cultivated carefully and steadily, with expectations bound to be realized of a rich and plenteous harvest.

Think—Then Act

THE members of the Holstein-Friesian Association will soon be called upon to nominate delegates to represent them at the coming Annual Assembly to be held at Kansas City, in June. Under the new form of government adopted at the special meeting at St. Paul, the delegates so elected will choose our officers, fix salaries, levy taxes, amend, alter or repeal our by-laws, or make any change that they see fit. Under the old form of government any proposed amendment to the constitution and by-laws had to be submitted to the membership in writing 30 days previous to the time of the Annual Convention. This gave the members an opportunity to carefully study and consider the merits and demerits of proposed changes and also gave them the privilege of expressing themselves for or against such amendments by direct or proxy votes. The new form of government does not require that a written notice be given to the membership regarding any action that may come up for consideration before the Assembly of Delegates and the members are no longer allowed a direct vote, but can only voice their opinion through their delegates. With this state of affairs it is very important that the members use great care in choosing the men to represent them at the Annual Assembly.

A movement is already on foot with the view of increasing the transfer fee and devoting a portion of the money thus collected to the support of the state organizations. Whether this movement will receive much support or not depends to a great degree whether the delegates who are sent to the convention are chosen from the conservative element that makes up eighty-five per cent of the membership of the National Association or whether the candidates elected are the ones nominated by the various state associations.

The members of the National Association, living in several of the leading Holstein states, have had an opportunity to judge from experience what has been accomplished by employing a paid secretary, and in this issue we are giving a detailed report of the association work in the leading Holstein state so that our readers can formulate an opinion.

We believe that any extension work participated in by the National Association should be educational in character with the view of educating the dairy public regarding the superiority of the Holstein cow as a milk-producing animal and the use of purebred sires in grading up and increasing the average yearly milk and butter production of the herds.

We do not believe that the National Association should devote any of its resources toward promoting or managing public sales.

The Silver Lining

THE business depression of the past year was felt in agriculture, which was hit as hard, if not harder, than any other of the great industries. Dairymen may have the idea that they were especially ill-used, but their condition is far better than that of their brothers who grow mainly corn and beef. Nation-wide country bank reports bear out this statement.

There is a significant movement at the present time particularly strong in the Central West. From all the dairy sections comes the word that buyers from the beef and corn states are seeking high-class dairy cattle. Naturally the largest demand is for grades, but there is a good demand for purebreds, and many carloads, shipped from the great dairy centers, include purebred bulls and females.

Four successive communications reaching the desk of THE BREEDER AND DAIRYMAN to-day told this story. The first one recorded the shipment of sixty Holsteins purchased to go into Idaho, from the dairy district around Owen and Curtiss, Wisconsin, the funds being obtained from war finance loans. The second communication reported the shipment of two carloads of mixed grade and purebred cattle from Cumberland, Wis., to Red Wood Falls, Minn., another carload to Mason, Wis., and also told of a carload being shipped the week before to Duluth. A Nebraska letter told of the arrival of twenty-one Holstein milkers at Kearney, to be distributed to farmers in Buffalo County. The fourth epistle told of a Wisconsin trip taken by a North Dakota County Agent, a banker representative and two dairymen of the Non-Partisan State, which resulted in a Christmas shipment of seventy head of stock. This included nine purebreds and no less than sixty-seven daughters of purebred sires. A company operating a string of banks in western states furnished the funds in this instance.

These are not isolated instances, we have received word of a number of others. In a similar Iowa deal the man stated that, in his vicinity, corn was selling far below what it cost him to produce it, and he estimated that during the past season he had dropped in his farming operations the tidy sum of $8,000. The gentleman in question has ample finances, is a business farmer, and after carefully looking over the situation decided that dairying gave surer returns.

Looking Ahead

ONE of the essentials in building a purebred herd is foresight, though it must be admitted that many men who have become successful breeders rather stumbled into the business or got into it without any previous forethought. Once in, however, foresight has a good deal to do with the ultimate attainment of a breeder. This is revealed in the discretion which he used in the culling of his herd each year, the selection of animals that are to be retained for breeding purposes and the elimination of the others. Every breeder is tempted to quote prices on his best animals because the attitude of the prospective buyers invites this. They often indicate that they would be agreeable to paying a handsome price as an invitation for him to name a figure that he knows insures a liberal profit. But the breeder who uses foresight refrains from quoting prices on his choicest productions. He insures the improvement of his herd by retaining them. On the other hand he also uses foresight who allows the less efficient ones to pass early from his possession.

There is the matter of patronage to be considered and this very largely rests with the breeder himself.

He needs to know better than anyone else what his herd represents, then he can make his appeal for patronage accordingly. He will find, however, that in the building of a permanent business it will be rather more profitable to sell his animals for slightly less than their value than to obtain for them much more than their actual worth. These patrons will be coming back year after year if they do well with the animals which they have purchased from him, but if they find in the course of time that such purchases represent a higher cost price than their usefulness justifies, their continued patronage will be uncertain. That breeder looks ahead who realizes that success in the breeding and marketing of purebred livestock is only attained through a period of years and never results from a brief period of trade activity.

Our Home

HARRISBURG, the capital of Pennsylvania, the home of THE HOLSTEIN BREEDER AND DAIRYMAN, is on the converging point of four main railroad lines: the Pennsylvania, Philadelphia & Reading, Cumberland Valley, and Northern Central. Two hundred and twenty-seven passenger trains pass through this city daily. One-fifth of the population of the United States resides within three hundred miles of Harrisburg.

The offices of THE HOLSTEIN BREEDER AND DAIRYMAN are in the Evangelical Building, North Third Street. This building was completed October, 1918. Its exterior measurements are 160 by 210 feet, and it has a floor space of 89,645 square feet, or more than

HOME OF THE HOLSTEIN BREEDER AND DAIRYMAN
Evangelical Building, North Third and Reily Streets, Harrisburg, Pennsylvania.

two acres, is well lighted and has 14,351 square feet of glass.

The building is fireproof throughout, and it contains a steam heating equipment, an automatic fire extinguishing system, a refrigerator and water cooling plant, and an electric vacuum cleaner system, all which make it modern, secure and convenient.

The printing plant contains eight typesetting machines and twenty presses. In all, 150 hands are employed besides the staff of this paper.

We take delight in showing our offices and printing plant to our friends and to show that the BREEDER AND DAIRYMAN has not only come to stay but that it has lots of room to grow and intends to.

Have you taken advantage of our Special Introductory Subscription Price of two years for $1.00? If not, sign and return the enclosed slip and receive the *Holstein Breeder and Dairyman* regularly for the next two years. Do not delay. Subscriptions are coming in fast and we wish to include you among our regular subscribers.

Naturally the beauty that's only skin deep doesn't wear well.

Cow Testing Association Work in Pennsylvania

R. H. Olmstead

COW testing association work as is generally known in this state, is an organization of about twenty-six members who desire to keep yearly records of milk and butter fat production on their herds together with feed costs, thus showing the amount of profit or loss per cow at the end of the year.

This work has taken on rapid strides during the past five years. At the present time there are fifty-two active associations in the state, which is only surpassed by one other state, viz., Wisconsin. During the past year of readjustment money has been rather tight and very few new associations have been started. In fact, it has taken a great deal of work to keep the old associations in active operation. At the present time, however, there seems to be a renewed interest in cow testing association work, and by the end of the present year there should be at least seventy associations in active operation.

This renewed interest may be due to several reasons, any one of which is sufficient for a farmer to take up this kind of work. First of all, there seems to be more and more calls for cows with cow testing association records. For the man with limited capital who wishes to start in the purebred business or who desires to pick up a few cows, the association records are a source of information which can not be overestimated. In other words, it tells just what a cow is doing in her everyday working clothes and usually on two milkings a day. Just recently a request came into one of our southern counties requesting a carload of cattle with cow testing association records. Through our extension service we find that the new breeders desire to buy more and more from these records wherever possible.

It has been clearly demonstrated time and again that these association records have helped materially at public as well as private sales. One farmer who recently had a public sale, reported that as each cow was brought under the hammer he read her milk and butter fat records. As a result he figured that his records averaged him about thirty dollars more per cow.

Another reason for the renewed interest in cow testing association work seems to be economical production. This has been considered both from the feeding and the breeding standpoint. We all realize that our highest producing cows are our most economical producers. With this in mind more dairymen are determined to know just what profit every cow is making for them. Then too, they desire to raise the heifer calves only from their best cows. By thus raising our production of milk and butter fat our cost per one hundred pounds will be lowered, and bring about a wider margin between the cost and selling price.

It is highly important that all men, who are looking forward toward herd improvement, should become associated with one of these associations. Through these yearly records an interest is stimulated that can not be brought about in any other way. No herd is good enough but what its owner wishes it to be better. The minute we are satisfied our progress stops, so it is with our herds. Let us set a goal toward which to work, and when we have obtained that goal, set one a little higher.

A farmer just outside of Williamsport who entered his herd in an association in 1915, showed an average production of 5,635 pounds of milk and 234 pounds of butter fat, with a profit above feed cost of 33 cents per cow. After continuing in the association for five years his average production was 9,985 pounds of milk and 349 pounds of butter fat, with an average profit of $138.71 per cow above feed costs. He is now on his sixth year and hopes to bring his average up over the 10,000-pound mark.

The Canton Association in Brandford County, which has been going six years, has raised their average production over 1,000 pounds of milk and 50 pounds of butter fat per cow. When it is taken into consideration that over 400 cows make up this association, the results are very encouraging. One member in this association has raised his average production per cow from 7,150 pounds of milk and 274 pounds of butter fat to 11,720 pounds of milk and 454 pounds of butter fat.

The cow testing associations have done a wonderful piece of work in Denmark, and they are doing the same for this country. The dairyman who is interested in breeding, feeding, selection, buying and selling, can not afford not to be associated with such an organization. Their value can not be estimated in dollars and cents.

Lenawee Breeders Annual Meeting

THE Lenawee County Holstein Breeders' Association held their annual meeting at the Courthouse, Adrian, Mich., December 15th, and elected officers for the ensuing year.

E. L. Smith, of Adrian Township, was reelected president of the association. Clinton Faler, of Adrian Township, was chosen vice-president, and Robert Curtis, also of Adrian Township, was reelected secretary and treasurer. Under the terms of a motion adopted at the meeting the board of directors was increased from five to nine members. The following men were elected to the board: George Knisel, of Blissfield, three years; Charles Figy, Seneca, three years; Fred Meyers, Adrian, three years; Ervin Reed, Jasper, two years; Grant Ousterhout, Britton, one year; Earl Kimball, Onsted, one year. The men already on the board, whose terms do not expire until next year, are Fred Knopf, of Blissfield; Carroll Hart, of Clayton, and Fred Tayer, of Adrian.

The breeders listened to addresses by Dr. B. J. Killham, State Veterinarian, and Dr. R. T. Rich, Federal Veterinarian for Michigan. Dr. Killham urged breeders of cattle who had their herds enrolled under the Accredited Plan to use greater precaution to prevent possible infection of the herd. He cautioned against using freight cars and motor trucks which had not been properly disinfected.

Mike (to his son)—"Now, you've been fighting again. You've lost yer two front tathe."

Emil—"Naw, I ain't lost 'em; I got 'em in me pocket."

CLUB ACTIVITIES

The Calumet County Association Elects Officers

The Calumet County Holstein-Friesian Breeders' Association held its annual meeting at the Courthouse, Chilton, Wis., December 19th.

The following officers were reëlected for 1922: President, Frank Kloehn; vice-president, A. T. Hipke; secretary, Art Bub; directors, Orrin Leverenz and W. A. Borneman; treasurer, Alfred Hertel.

The Calumet County Holstein Breeders' Association was organized a few years ago and showed a membership of over sixty members. At the present time the membership is not quite so strong, due to a lack of coöperation among the breeders. As an organization the breeders have a wonderful field ahead of them and by close coöperation can derive untold benefits.

On the question of hiring a county agent it was the unanimous opinion of the members present that one should be hired. An invitation will be tendered to the other breeder Associations in the county, to appoint two or more delegates, these to meet in Chilton, January 4th, and aid in drawing up a joint resolution to the county board asking that the Agricultural Committee be instructed to hire such agent. The Farm Bureau organization in the county will also be asked to send delegates. The members of the Holstein Breeders' Association are among the most prominent dairy farmers in Calumet County, and every one of them present expressed the opinion that the county was the loser by not hiring an Agricultural Agent. The question of holding a picnic was finally left for the Executive Board to decide.

The question of advertising animals belonging to members of the Association came before the meeting. Each member will furnish the secretary with a list of the animals he has for sale. The secretary is to advertise these animals, and if any sales result, the secretary will receive 5% of the selling price as compensation for his work.

Enthusiastic and Enterprising

The Holstein Breeders of Williams County, Ohio, with their wives held an enthusiastic meeting in Montpelier, Christmas week. C. A. Fyke presided. The Association endorsed the calf club movement and appointed a committee consisting of Glen Mochersman, E. W. Boyer, Clint Dohm, C. E. Caulkins, B. M. Baltosser, H. P. Oberlin, A. E. Shour, C. H. Estrich, C. J. Weldy, Philip Altman, D. R. Tressler, and C. F. Shook, to enroll boys in the calf club which is to start next spring. The Association voted that all calves sold to calf club members must have a certificate of tuberculosis test and must be guaranteed breeders. It was decided to exhibit at the County Fair and H. E. Bectol, Bridgewater; Clint Dohm, Madison; C. E. Caulkins, Millcreek, and H. W. Brannan, Pulaski Township, were appointed as the County Fair committee.

It was decided to ask for a two-day Holstein institute, this to consist of work on judging, pedigree writing, testing and feeding. The committee in charge this year are: Albert Kabner, H. C. Barker, and County Agent Fielder. The principal address was made by H. C. Barker, secretary of Ohio Holstein Breeders' Association, who spoke on the future of the business.

Marshfield Local Adds Members

The Marshfield local of the Wood County Holstein Association met December 20th. Five new members were added, bringing the total membership to thirty.

The meeting was opened by President William Schimmelpfenig. County Agent R. A. Peterson told of the activities of the ten other locals in Wood County. He encouraged testing cattle as an aid to production. He came out strongly for renewed activity in eradicating tuberculosis in cattle. Agent Peterson suggested that a committee be appointed to secure from Marshfield merchants an agreement not to sell oleomargarine as a substitute for butter.

The committee was appointed and consists of E. E. Royce, chairman; Charles Aldrich, William Schimmelpfenig, F. L. Musbach, E. E. Schroeder.

F. L. Musbach, superintendent of the experimental station, urged the adoption of a definite outline of work for next year.

Active Holstein Association

The St. Urban Holstein Association, operating around Winlock, Wash., has purchased a junior herd bull. Two representatives of the Association traveled to Vancouver, Wash., inspected the herd of B. O. Case & Sons, and finally decided on a eleven months' calf. The dam of this bull averaged 4.2% fat in her long-time test and his pedigree possesses a double cross of the blood of the former world champion milk producer, Margie Newman. Members of the St. Urban Association purchased five heifers at the Southwest Washington fair grounds sale, December 9th, and new members are joining the Association and showing much interest in purebred stock.

Illinois Association Re-elects Fox

At the closing session of the annual meeting of the Illinois Holstein-Friesian Association held at Dixon, Illinois, December 20th and 30th, George A. Fox was reelected president. Mr. Fox is the owner of the Stevens Stock Farm at Spaulding, and his herd includes a number of famous animals.

The vice-presidents elected at the meeting are: F. H.

PHOTOCOPY OF ORIGINAL

Swanzey, Ridott; W. H. Fitch, Aurora; J. T. Williams, Sterling; L. C. Shockley, Willsville, and Dr. W. W. Yapp, Professor of Dairying at the University of Illinois, Urbana. R. N. Thompson, of Cowden, was elected secretary-treasurer. More than 200 cattle breeders were present.

The principal address was made by the Hon. Frank O. Lowden, Ex-Governor of Illinois and president of the Holstein-Friesian Association of America.

Todd County Breeders Active

The Todd County Holstein Breeders' Association met at the Farm Bureau Office at Long Prairie, Minn., December 20th. The association voted unanimously to raise money for the Holstein calf contest and to assist the Farm Bureau with this project. It was also voted to hold the annual association picnic at Horseshoe Lake some time this coming summer.

The association went on record as favoring the growing of alfalfa on every farm in Todd County. It was voted that members of the association should pay 2% of the selling price to the Farm Bureau for all Holsteins sold through the assistance of the Farm Bureau. This is to defray the traveling expenses of the County Agent in helping to make sales for the breeders and to avoid any criticism that might be made to the effect that the Farm Bureau was unduly favoring livestock breeders.

The president of the association is M. E. Gutches, of Reynolds, while J. P. Nelson, of Eagle Valley, is secretary.

Rock County Breeders' Banquet

One hundred and fifty breeders of Holstein cattle attended the annual meeting of the Rock County Association held in Janesville, Wis., December 20th. A good time was had by all.

The doings started with a banquet held at the Hotel Meyers, followed by a business meeting at which the following officers were elected: President, J. A. Craig, Janesville; vice-president, E. L. Benedict, Clinton; secretary, John Jones, Milton; treasurer, Archie Ried, Janesville. Twelve directors for the year, besides the two Beloit men, include J. A. Craig, John Jones, E. L. Benedict, Ora Steele, Fred Gaarder, Harold Ward, Archie Ried, John L. Fisher, D. K. Latta, and E. P. Coons.

Nebraska Breeders Annual Meeting

The Nebraska Holstein-Friesian Club held its annual meeting in the Lindell Hotel, Lincoln, on January 4th. There was a good attendance. The activities of the past year were reviewed and a committee was appointed to work out a plan to improve grade herds by exchanging purebred Holstein bulls for scrubs. The following officers were elected: President, D. M. Hildebrand, Seward; vice-president, H. A. Morrison, College View; secretary, J. E. Palm, Lincoln; treasurer, Henry Stubbe, Central City; directors, C. H. Starke, Red Cloud; C. J. Furry, Franklin; W. J. Jenkinson, Monroe.

Dodge County Breeders Meet

The annual meeting of the Dodge County Holstein Breeders' Association was held at Mantorville, Minn., December 19th. The principal address was given by O. G. Schaefer, county agent, who spoke on the value of blood lines in purebred sires, citing the work in Steele County as an example. Within a year the purebred sires in this county have increased from 17 to 22%. Other addresses were given by C. L. McNally, county agent, who spoke on "Community Coöperation." J. C. Marlow, of Mankato, vice-president of the State Holstein Association, spoke on the state organization.

The officers for 1922 were elected at this meeting and are T. W. Chapin, president; W. Parkin, vice-president, and W. P. Mann, secretary-treasurer.

Clark County Has Ten

At a meeting of Holstein breeders living around Curtiss, Wis., the tenth Holstein Association in Clark County was organized December 13th. Theo. Thompson was elected president, and Albert Zenzel, secretary and treasurer.

Most of the members belong to the Curtiss Cow Testing Association, which was organized this fall. An effort will be made to organize a coöperative bull association and it is planned to bring more Holsteins into the district.

Sale Series Planned

The directors of the Waupaca County Association met December 15th, at Weyauwega, Wis., to confer with directors of the Holstein Associations of Winnebago and Outagamie Counties. Mr. Reid Murray, of Oshkosh; Paul Nyhus, of Appleton, and County Agent Gus Sell, of Winnebago County, were also present. It was planned to hold a series of grade and purebred sales in the counties represented, the grade sales to be held in March and the purebred sales in May. Committees were appointed to make the necessary arrangements.

Community Clubs Joint Meeting

Seven community breed clubs held their annual meeting at Greenwood, Wis., in the middle of December. President Wm. Krause, of Thorpe, presiding. It was decided to have a county show and to select the animals some time in January, so that there will be plenty of time to get them in shape for the fairs. The association will hold its annual consignment sale at Owen in the spring. A selection committee was chosen consisting of John Wuethrich, William Krause, and H. M. Knipfel, county agent.

First College Student—"What shall we do?"

Second College Student—"I'll spin a coin. If it's heads we'll go to the movies, tails we go to the dance, and if it stands on edge we'll study."

Cow Testing Association Reports

LEADING SEVEN ARE HOLSTEINS

The seven highest record cows in the Adell (Wis.) Cow Testing Association are either grade or registered Holsteins. The leader is the registered Holstein Queen Melchior Johanna, owned by Lewis Weinhold. She made 60.4 lb. of fat, 1,890 lb. milk in thirty days.

Mr. Weinhold also owned the highest herd, his cattle, consisting of grade and registered Holsteins, averaging 26.4 lb. fat, 752 lb. milk. The second highest herd consists of grade and registered Holsteins, owned by G. A. Schulz; one of his registered cows produced 1,179 lb. milk, 51.8 lb. fat and averaged 4.4%.

The highest producer for the first eight months of the Association year is a grade Holstein of the Weinhold herd. Her record to date is 383.7 lb. butter fat, 10,438 lb. of milk. The registered cow Peeress Johanna Beechwood 2d, owned by Roy Shaver, stands second with 375.8 lb. butter fat, 10,252 lb. of milk. The leader for milk production is Daisy Johanna De Kol Melchior, owned by Walter Hammen. Her records for the first eight months are 11,097 lb. of milk and 347.1 lb. of butter.

The total enrollment in the Adell Association is 435 cows, of which 317 were milking in November. The average production for this number is 16.3 lb. fat, 457 lb. of milk. Nineteen animals freshened during the month. Fourteen were sold, nine for dairy purposes and five for beef.

HOLSTEINS TAKE FIRST THREE PLACES

The mixed grade and purebred Holstein herd of Robert Bruesewitz led the Spencer, Wis., Cow Testing Association for the month of November. The average of this herd was 866.7 lb. of milk, 36.7 lb. of butter fat.

The three highest record cows in this herd were all registered Holsteins and occupied the leading three places in the Association list. The leader made 1,191 lb. milk, 73.8 lb. butter fat; the second made 1,703 lb. milk, 68.1 lb. butter fat, and the third made 1,247 lb. milk, 58.6 lb. butter fat. Twenty-four cows in the 327 tested produced over 30 lb. of butter fat and five over 40 lb. Harvey L. Peterson is the test supervisor.

GRADE HOLSTEINS TEST HIGH

Two grade Holsteins, one owned by Lyle Ray, and the other by Frank Griswold, made over 60 lb. butter fat during December, in the Dale and Hortonville (Wis.) Cow Testing Association. Mr. Ray's cow made 1,365 lb. of milk with a 4.6% fat test, making 62.8 lb. of butter fat. The Griswold cow made 1,389 lb. milk with a 4.4% fat test, she making 61 lb. of butter fat. Twenty-eight cows, almost all grade Holsteins, made 40 lb. or more of butter fat during the 30 days. Seven were above 50 lb.

LILY AND LILY

The two highest producing cows in the Bruce (Wis.) County Testing Association for the month ending December 15th are Lily, a purebred Holstein owned by E. C. Briggs, with a record of exactly 50 lb. of fat, and a grade Holstein named Lily, owned by H. C. Mohlenbrink, with 47.3 lb. of fat to her credit.

The herd for the month averaged 25.2 lb. fat consists of seven animals of mixed Holstein and Guernsey blood, owned by Louis Mattison.

DU PAGE HERDS RANK HIGH

DuPage County had two of the ten highest producing cows in the state of Illinois, during the month of November. W. W. Pflug, of La Grange, had the second highest record herd, seven purebred Holsteins which averaged 1,265 lb. of milk, 43.6 lb. butter fat. One of these animals gave 2,115 lb. of milk and made 74 lb. of fat, standing sixth in the list for the entire state.

The J. F. Jelke herd, of Dundee, stood ninth for the entire state with an average of 1,023 lb. of milk, 35.8 lb. butter fat. The Jelke herd consists of 58 purebreds and high-grade Holsteins.

COLLEGE COW MAKES STATE RECORD

The North Dakota State record for senior four-year-olds was recently broken by Miss Ormsby Madeline, No. 368160, owned by the Department of Dairy Husbandry of the North Dakota Experiment Station. She produced 12,500.9 lb. of milk in 365 days, making 522.99 lb. butter. As a senior three-year-old she made 509.6 lb. milk, 21.27 lb. butter in 7 days. Her year record was made under normal herd management, as she ran with the dairy herd and was milked only twice a day after the first month on test. She was bred and developed by the college and is the second college cow that attained the leadership of her class during the past year.

GOOD MICHIGAN THREE-YEAR-OLD

Munger Queen Segis, owned by John H. Chestnut and Son, of Fenton, Mich., is finishing a year record and will make 20,500 lb. of milk. She is only a three-year-old and this is her first lactation period. A number of other young cows in the Chestnut Acres herd are milking from 70 to 96 pounds a day.

CAN'T BLAME HIM

"When the new preacher tried to start his car he choked the engine three times in succession."

"Did he make any remarks appropriate to the occasion?"

"No, he didn't, but he didn't have exactly the same kind of expression on his face as when he says, 'Let us pray.'"—*Pathfinder.*

ROBERTSON'S HEIFER GOING STRONG

Hillpine Flora Finderne, a junior two-year-old, owned by H. E. Robertson, of York, Pa., is making a splendid record in long-time test. To date she has 17,140 lb. of milk to her credit with 98 days to go to complete her year.

SORT OF S. O. S.

"What sort of a time is your friend having on his motor tour?"

"Great! I've had only two letters from him—one from a police station and the other from a hospital.

MUST BE LICENSED

"It's got so these days that a man can hardly wed unless he can show the girl two licenses."

"Two licenses?"

"Yes, marriage and automobile."—*New Haven Register.*

SURE ENOUGH

Bobby—Nuts grow on trees, don't they?

Mother—Yes, my child.

Bobby—Well, what tree gives doughnuts?

Mother—Why—er—the pantry.

SOMETHING SIMILAR

Wife—What do you think of my doughnuts, Herbert?

Husband—Wonderful, darling. Scientists have tried for years to produce artificial rubber, and here you have done it at the first attempt.—*Portland Express.*

NO LAUGHING

"Do you know there's only one practical joker mentioned in the Bible?"

"And who, pray tell, was he?"

"Why it was Samson. His last joke brought down the house."—*Topics of the Day Films.*

A CONDENSED VICTORY

Mrs. Jones (reading)—New York dairies resume normal milk supply.

Mr. Jones—Better "lait" than never, I suppose.

PHOTOCOPY OF ORIGINAL

Report of State Secretary, E. R. Zimmer

Mr. President and Members of the New York Holstein-Friesian Association:

The following report covers the activities of the New York Holstein-Friesian Association from January 1, 1921, to January 1, 1922:

The Annual Meeting.—The first annual meeting of the association was held at Rochester, Jan. 11, 1921, and about 150 breeders were present. The plan of electing directors was changed to a district plan and the state divided into eleven districts, one district for each director.

From the standpoint of our office the district plan has worked out most satisfactorily. It has given each director a definite territory over which he is responsible and to whom we can go for matters pertaining to that district. We have also found that taking the state as a whole it has resulted in a better feeling among our breeders and that all parts of the state were receiving representation.

Another important change made at the annual meeting was a change in the membership fee changing it from a flat fee of $5.00 to a graduated scale of 50 cents for each purebred animal over one year, 10 cents for each grade animal over one year old, with a minimum fee of $5.00. Another amendment that was adopted at the meeting last year provided for a joint fee with those clubs that wished to work under such an agreement. Under this plan twenty-five per cent of the money collected in the county for membership is remitted to the county club to cover the membership in the local organization. This has generally worked out very satisfactorily, and already twenty of the thirty-five clubs in the state have adopted the joint fee.

The First State Breeders' Sale.—The first annual state breeders' sale was held at Rochester; 134 head were sold for an average of about $500 each. From a financial standpoint, so far as the association was concerned, the sale was a failure, because it resulted in a net loss to this association of approximately $3,828.

County Meetings.—Following the annual meeting your president and secretary held about fifty-five meetings in thirty-seven counties of the state. We were accompanied on these trips by members of the board of directors, county officers and others interested in the association. At these meetings we made a particular point to explain the new plan of organization, and to generally better acquaint the breeders of the state with the real advantages of the association and of their response to it.

Everything considered the meetings were very successful, and a goodly number of members secured. However, on account of the annual meeting and sale coming on in June, it was impossible for us to give the membership campaign the follow-up work that it should have had, and the year has resulted in a total membership of 752. We have organized a total of seven clubs covering the counties of Essex, Franklin, Niagara, Orange, Saratoga-Schnectady, Schoharie, and Yates.

National Meeting.—It was the duty this year of the breeders of New York to act as hosts to the Holstein breeders of the nation. The National Association took care of a part of the expense and a good-sized fund was raised by popular subscription from our breeders. Long automobile tours were arranged and trips made to Auburn, Ithaca, and Cortland on one day, and to Watertown and Thousand Islands on another. This report would not be complete without mentioning the courteous entertainment that was provided for our guests by Mr. J. R. White, of Auburn; Mr. George N. Smith, of Watertown, and a group of Cortland County breeders.

On June 1st a banquet of 1,000 Holstein breeders was held in the State Armory at Syracuse. Complimentary tickets were furnished by the breeders of New York to all of the breeders from other states. So far as I know, this is the largest breeders' banquet ever held in America. The value of these entertainments can not be measured. It gave the breeders of New York an opportunity to meet a large number of breeders from other states, and likewise it gave the visiting breeders an opportunity to become personally acquainted and to better understand the motives of the breeders of New York, and particularly the officers and members of the New York State Association.

The National Sale.—It is our duty this year to assume the responsibility of the conduct of the second coöperative national sale. No one who has not been actively associated with a project of this kind can imagine the immense amount of work that goes with the conduct of a sale of this character. Consignments were present from fifteen states, scattered from Maine to the Pacific Coast. One hundred and seventy-one animals were sold at an average of a little over $800 each. I am glad to say that ninety-one of those animals remained in New York State. On account of the fact that some states did not fill their quota it was necessary for New York to enter sixty-nine head, and they averaged $964. Financially the sale was a loss of about $300 to the State Association. A great deal of credit is due to Mr. W. D. Robens, Mr. George Abbott, of Cortland, and Mr. Ward Stevens, of Liverpool, who were members of the sale committee and worked untiringly for its interest.

Work With County Clubs.—During the year I have attended from time to time meetings of county clubs or other organizations of farmers on request, and addressed them on the work of the State Association or some other topic of allied interest. A total of 108 meetings have been addressed. Coöperation has been given county clubs in every way possible.

Special Fund.—Owing to the fact that our membership fees were not sufficient to carry on the work of the association for the year and meet its indebtedness, the board of directors, after careful consideration, organized a drive for a special fund. Two thousand, three hundred and fifty dollars were raised in this way.

County Fairs.—Acting on the request of the association we have judged cattle at two of our county fairs during the past year and have recommended judges for a few others. We have also been of assistance to a few clubs in the conduct of their exhibits at the State Fair. The association made an appropriation of $250 to be given in prizes for county clubs for their exhibits at the State Fair. These prizes were won as follows: *First*—Onondaga; *second*—Washington; *third*—Tompkins; *fourth*—Madison.

The Endicott Sale.—After careful consideration your board of directors decided to attempt a fall sale, and Endicott, N. Y., was selected. One hundred and twenty-six head were sold for an average of $264. Considering conditions and the class of cattle offered, our consignors were generally pleased with the average received. This was our first attempt at making the selections through the county clubs by a large number of committees, and in general the offering was a creditable one. We put the sale upon a different financial basis and I am glad to say that we made a profit of about $600. The breeders of the southern tier want the association to conduct another fall sale in that section this year.

St. Paul Special Meeting.—Your president and secretary attended the special meeting of the National Association at St. Paul, in October, and we were glad to take our part in the interment of the proxy.

Tuberculosis Eradication Work.—The bill was passed at Albany last spring which would prevent the paying of indemnities for any animals except where the entire herd was tested. We brought this matter to the attention of our breeders and we arranged for work at Albany. While we believe most heartily in this principle, we felt that until such time as the state itself was prepared to take care of all applicants for the herd test, that this law would be an injustice to our breeders. After considerable work the law was repealed. During the past few months I have attended a meeting of the Agricultural Conference Board for the discussion of this subject, and also appeared before the Joint Legislative Committee to give them the viewpoint of our breeders on these matters. If we are to continue to make progress in the eradication of tuberculosis it is absolutely necessary that this state adopt a definite policy, and I mention for your consideration the plan recommended by the Agricultural Conference Board of the State. As breeders of Holsteins I think you should make it your business to see your legislators and to urge the adoption of this program. Considerable publicity has been given during the year through the breed journals, the daily press, and the local weeklies. This is a feature that should be greatly developed.

Second Annual Sale.—Necessarily a large amount of time during the last two months has been taken with arrangements for the sale which we will hold on these next two days, and for this annual meeting and banquet. The animals have again been selected very largely under the auspices of county clubs.

A Summary of Work.—Office calls, 365; personal letters written, 4,365; circular letters written, 62; total circulation of same, 25,855; meetings arranged or addressed, 108; attendance, 5,503; meetings attended but not addressed, 13; miles traveled—auto, 3,164; railroad, 18,356; farm visits, 152; sales attended, 12; trips arranged, 2; total attendance on trips, 600.

Recommendations

Finances.—Adequate finances are absolutely necessary for the successful continuation of this association. We must do away with the plan we have had to adopt this year of begging for enough money to run the organization. We must secure a representative membership and ought to have at least 2,000 members. Your board of directors is planning to use a few paid solicitors to work with the breeders of each county and thus make a thorough canvass. I feel that this will bring us more satisfactory results of membership and urge the coöperation of all breeders interested in the association to make the membership campaign a success. If our sales can not be conducted to show great profits, they at least must be conducted without loss to the association. I believe, with the experience we have had in the past, that we can do this and they should be made a source of revenue to the association.

Organization.—We should have closer coöperation with the county clubs, and I believe it is desirable that the joint fee should apply in every case. We can then work together for the financing of the local association as well as the state. Some of the county clubs need a thorough reorganization, and I urge our breeders to work to secure active officers who will take an interest in promoting the organization. Our county clubs should also work to develop a definite program. The success of the State association is based fundamentally upon strong and active local organizations. The breeders should continue to select their directors with care, seeing to it that the men chosen to represent you will take an active interest in Holstein affairs and will make it their business

(Concluded on page 54)

REPORT OF STATE SECRETARY, E. R. ZIMMER.

(Concluded from page 53)

to be present at practically all of the board meetings.

Publicity.—This should be one of the important lines of work of the association. I believe the association should own and issue its own publication. I do not mean by that that we should develop a magazine to run in competition with the present breed journals, but I think it would be decidedly to our advantage to issue a small publication similar to the *Farm Bureau News,* which would go direct to our membership, and which would feature the news that we wish to call especially to their attention. The breed journals have been generous in offering us the use of their columns, but it is not an entirely pleasant situation to find your articles appearing in one part of a paper, while in the editorial columns you are held up before the Holstein public as a scoundrel who is working to disrupt the association.

There is also an opportunity to develop a news service to the country weeklies and agricultural press, and we should be financed so that we can also take care of a considerable amount of paid advertising each year for the advancement of New York Holsteins.

Conduct of Sales.—Your advisory council has recommended that the association conduct at least three sales per year. At the very outset we might as well recognize that a great deal of the future success of these sales depends upon selecting a class of cattle that will give satisfaction, and conducting sales in such a manner as will merit and maintain confidence of the buying public. On no other basis can we succeed. As the membership of the association becomes more extensive we may find we shall have to be more careful in the selection, not only of our cattle, but of our consignors.

There is another field of service that is open, and I think the association should accept the responsibility for carrying it out—that is, to have a more uniform understanding between buyers and sellers at cattle sales. Each party to the contract has responsibilities, and I believe a better understanding of these responsibilities would do much to minimize the number of unsatisfactory deals.

Exhibits of Cattle.—Unquestionably one of the great publicity mediums for the breed are creditable exhibits at our local and State Fair. The association should devise means to work with other agencies in the promotion of this important line of work.

PROFITABLE IN STATE HERDS

Fourteen high-grade cattle were purchased at Yakima, December 9th, by John McCormick, superintendent of the Spokane County Farm at Spangle, Washington.

The Holstein herds are greatly increasing in the Washington state institutions, owing to the fact that they have proven very profitable.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

January 23-25, 1922—Barberton, Ohio-Northern Ohio Sales, Stables at Anna Dean Farms.
January 26, 1922—Wichita, Kansas, National Show Sale.

June 8, 1922—Thorp, Wisconsin, 2d Annual Bred Heifer Sale

NEW YORK STATE SECOND ANNUAL BREEDERS SALE

New York State breeders filled the auditorium of the Liverpool Sale Pavilion, January 11 and 12, the two days of the Second Annual State Breeders Sale. A snowstorm starting on the morning of the first day and continuing until well along in the evening, caused many who had intended to stay until the end to leave early. It was the general belief that the sale was hurt thereby.

From the standpoint of individuality, the animals were decidedly high-class and were evidently selected for their conformation rather than for their official backing. Buyers were present from Indiana, New Jersey, and Pennsylvania, although most of the animals stayed in New York State. One hundred and seventy-seven were sold for $42,100, an average of $238.36. The top price, $1,100.00, was obtained for North Country Carlisle Ladoga, a nine-months-old bull calf from a 28-lb. granddaughter of Pontiac Korndyke, and sired by Champion Echo Ladoga. This animal was consigned by George N. Smith, of Watertown, and was purchased by E. M. Lumley, of Gouveneur, N. Y.

General Colantha Spofford, a yearling bull by King of the Butter Girls from a 31-lb. daughter of Colantha Johanna Lad 8th, was struck off to Francis E. Hoyt, of Penn Yan, N. Y., for $525. A very handsome bull calf, nearly nine months old, by King Pontiac Echo-Sylvia, from the 36.58-lb. cow, Scenic Wellsland Korndyke, was consigned by John M. Dewey, and purchased for $950.00 by George A. Pohl, Black River, N. Y. The auctioneers were B. V. Kelley and Harry Sisson with Wood in the box. The animals bringing $200 or more with names and addresses of the purchasers and the prices paid are as follows:

	Consigned by G. A. Abbott, Cortland.	
2	Bessie Annie De Kol, 4 yrs., S. J. Housel, Big Flats, N. Y.	$240
	Consigned by C. L. Ames, Syracuse.

GENEROUS OFFER OF WASHINGTON BREEDER

In order to raise the quality of the dairy cows around Sunnyside, Washington, Stephen E. Chaffee, of that town, has offered to donate to the dairymen of the vicinity all the bull calves produced on his ranch this year. These are sired by his Ormsby bull. The farmers who receive these calves must breed them to grade Holstein cows, and give them the best of care.

Mr. Chaffee believes that in this way he can demonstrate to the dairymen in his community the advantages of a pure-bred sire and the fact that such a sire possesses the ability to transmit dairy capacity to his offspring. The offer was made through the Chambers of Commerce of the lower Yakima Valley.

MONTANA PRODUCER IS ALSO SHOW COW

Colantha Maid Pietertje, owned by J. H. Holsteter, of Lewistown, Mont., is not only a big producer but also a show cow. As a senior four-year-old she made 508 lb. milk, 24.07 lb. butter in 7 days. At the Central Montana Fair she won first prize in the dairy cow division and Grand Championship. In her official test she was handled by Earl Peterson and the test was supervised by Professor Gray, of the Fergus County High School.

Mr. Webster owns the Lewistown Sanitary Dairy and his entire herd consists of Holsteins. This is the second state record made by animals in Mr. Peterson's charge.

CALIFORNIA BUYING HOLSTEINS

Owing to the low price of grain in California and the fact that butter and milk bring better prices comparatively, there is a distinct tendency toward increasing dairy herds. Forty-three head of high grade Holsteins have just been shipped from West Bend, Wis., to Los Angeles, Cal., consigned to the Burr Farms, where two carloads of Washington County registered Holsteins were recently sent. K. W. Abbott, of Los Angeles, did the buying. Another two carloads were shipped from West Bend to Denver on December 16th.

MONTANA DAIRYING GROWING

A carload of Holstein dairy cows was purchased at the middle of December by Fred Emling, of Sydney, Mont., he buying them around Spencer, Wis. Mr. Emling reports that the dairy business in Montana is growing by leaps and bounds.

NEW INDIANA STATE RECORD

A new state record for Indiana is claimed for Creston Evora Josie, a junior four-year-old owned by J. W. Eby, of Osceola. In 7 days she made 505.4 lb. milk, 29.4 lb. butter.

BLAIR COUNTY HOLSTEINS

are

UNSURPASSED

Write your needs, or better, come and see our stock.

Blair County Holstein Association

S. F. Zook, Secretary — Curryville, Pennsylvania

Special offering for readers of the Holstein Breeder and Dairyman

Bessie De Kol Lyons Konigen

now six years old, large, mostly white and of strictly dairy conformation throughout her entire make-up.

At three years and 21 days old she made 487.5 lb. milk, 20.84 lb. butter in 7 days. 2071.3 lb. milk, 85.67 lb. butter in 30 days.

She is a daughter of King Segis Pontiac Konigen whose daughters are making such creditable records in short time and long time tests.

Also her six-months-old heifer by our own herd bull, **King Model Beets,** one of the choicest sons of the great King Model. Other good heifer calves by the same sire.

BULL SALES IN WISCONSIN

The third of the bull sales scheduled by the Waupaca County Holstein Association was held at Manawa, Wis., December 17th. The fifteen bulls brought $1,170, an average of $51.00. The highest price was $150, which was obtained for two animals, one consigned by George Lindsay & Sons, of Manawa, purchased by Delford Wood, of Oshkosh, and the other consigned by F. W. Ferg, of Manawa, was purchased by Oscar Walbruck, of Royalton.

The first of these sales was held at Clintonville, November 6th. The twenty bulls brought $1,900, an average of $95. The second sale was held December 5th, at Weyauwego. Sixteen bulls were sold at this time for $1,260. In all 51 bulls were sold at the three sales and brought $4,330, an average of $84 per head.

IDAHO INCREASING HER HERDS

Wendell County, Idaho, is stocking up with dairy cattle, no less than 600 coming into this county from Wisconsin about the middle of December. These animals are guaranteed to have cow test associations records of not less than 300 lb. butter fat in a year. Hastings and Anderson, of Wendell, take an entire carload of Holsteins, Mr. Anderson making personal selections at the farms.

The cows are to be paid for with half of the proceeds of their milk. The buyer sells the milk to the cheese factory or the butter fat to a creamery and is to turn in half of the receipts to the fund that is to be used to pay for the cows. The money to swing the deal was procured from the war finance corporation.

One of the reasons for the change is the fact that owing to high freight rates a large portion of the 1921 hay crop is still in the hands of the growers and those who are promoting the deal believe that returns will be higher if the hay is fed to dairy cattle instead of being shipped out of the country. Field Agent Cammack, of Idaho University Extension Bureau, is in charge of the enterprise.

VILLA BUYS IOWANA HOLSTEINS

Francisco Villa, the noted revolutionary Mexican leader, is said to have settled down as a peacful stockman and recently purchased the Holstein herd exhibited by Col. G. W. French, Iowana Farms, Davenport, Iowa, at the recent International Exposition in Mexico City.

The action of General Villa was followed by a number of other Mexican stockmen bargaining for Iowa Holsteins, with a result that S. M. Sordo, of Mexico City, made a trip to Davenport and will take back with him a bunch of cattle purchased from members of the Iowa Purebred Livestock Association.

Senor Sordo says that the Mexican outlook is better than it has been for many years, that living is cheaper than it has been for some time, the railways are in good running order and that there is great need of good dairy cattle throughout the whole of Mexico.

FIRST IN THE COMMUNITY

The first registered Holstein bull to be seen in Paradise Valley, Montana, was brought in early in December, by C. N. Gum. This animal was King Butter Boy Hartje. N. F. Wampler, of Pray, obtained this bull when a calf from the herd of the Hon. Frank O. Lowden, Oregon, Illinois, and sold him to Mr. Gum, who owns three registered Holstein cows and a number of good grades.

King Butter Boy Hartje was bred at the Whitney Point Stock Farm, and was registered as Mr. Lowden's property. He was born January 10, 1918. His sire is the King of Butter Kings; his dam is Terracelawn Butter Boy Lady, a 22-lb. cow, sired by Pietertje Hengerveld Segis, century sire and son of King Segis from a 33-lb. daughter of Pietertje Hengerveld's Count De Kol.

REYNOLDS BUYS SON OF GREAT MILKER

A splendidly bred bull, said to be the best ever brought into Gratiot County, was recently purchased by Adney Reynolds, of Middletown, Mich., from the Loeb Farms, at Charlevoix. The sire of this calf is Charlevoix Danfurth and the dam is Rookwood Zwelle Riblet, has a 34-lb. official record and is a wonderful milker. She made 124 lb. of milk in a day, 843.8 in seven days, 3,342.8 in thirty days, 6,193 in sixty days, and is running on a strictly official test for the full year.

The deal was completed when Mr. R. V. Otto, assistant manager of the Loeb Farms, visited Mr. Reynolds.

STATE-OWNED HERD PROVES PROFIT-MAKER

At the second annual banquet of the Lewis County Holstein Breeders held at the St. Helens Hotel, Centralia, Wash., the principal speaker was the Hon. Lewis F. Hart, governor of the state. Governor Hart showed that he was well acquainted with the Holstein industry and in the course of his remarks mentioned that the state of Washington owned a couple of herds of Holsteins, located at the state institution at Steilacoom and Sedro-Woolley.

Washington State owns 33 registered cows and three herd sires, one of which is valued at $5,000. The governor assisted in selecting the herds and was aided by a number of the leading breeders in the state, who gave their services gratis. A number of reacting cows were also bought and the governor said that they had been very fortunate with this portion of the herd; of 23 calves dropped, 17 were heifers.

The patients at Steilacoom were given 2,750 lb. of milk weekly and butter was supplied to the soldiers' homes. Before very long the state will own registered stock only. During the first six months the herd was established it has supplied the state with $60,000 worth of dairy products. Since the herd has been improved the milk flow has been more than doubled.

At the Steilacoom Asylum there is only 26 acres of farm land. The cows at this place produced in November, 76,620 lb. milk and about 1,427 lb. of butter. The net profit of the Agricultural Department for the past two years is about $214,000, or one-third of the cost of maintaining the institution.

Other speakers at the banquet were H. C. Davis, of Granger, temporary president of the State Holstein Association; E. H. Colson, president of the Chamber of Commerce; three bankers, and Senator Wm. Bishop, of Chimacum, formerly a director of the National Holstein-Friesian Association. About 50 members were present and Auctioneer George Gue was toastmaster.

DECKER TESTS AGAIN

G. F. Decker, of Edgewood Farm, South Montrose, Pa., who has an Accredited Herd, has just completed official records on six of his good Holstein females. This is the first test conducted by this breeder since he made the record on Edgewood Segis Pietertje Princess in June, 1906, which stood for nearly three years as the highest record junior two-year-old in the state for both milk and butter. Although no state records were broken this time, Mr. Decker should feel well repaid for the effort.

The records made were as follows:

Princess Prilly Walker 2d, 3½ yr.—22.39 lb. butter, 476.6 lb. milk.

Segis Prilly Tweede Pontiac, 3 yr.—21.28 lb. butter, 503.8 lb. milk.

Prilly Christine Korndyke, 5 yr.—21.21 lb. butter, 478.8 lb. milk.

Edgewood Pontiac Korndyke 2d, 2 yr.—18.71 lb. butter, 427.1 lb. milk.

Prilly Christine Pontiac, 3½ yr.—18.68 lb. butter, 395.1 lb. milk.

Edgewood Segis Rag Apple, 5 yr.—17.41 lb. butter, 406.6 lb. milk.

Mr. Decker did not intend to make this test until time to send for a supervisor and only began to milk four times a day on the date the man arrived. The animals were not fitted for test and some had been giving milk several weeks.

GOOD RECORD AT SPRINGDALE

The following records have recently been made in the Accredited Herd owned by B. F. Jones & Son, of Springdale Farm, South Montrose, Pa. Every animal in this herd that has yet freshened has an A.R.O. record.

Daughters of King Tweede Spring Farm:

Wynola Tweede Pontiac Lass, Jr. 3—26.139 lb. butter, 588.5 lb. milk.

Tobe Tweede Pontiac Lass, 25 mo.—21.47 lb. butter, 453.6 lb. milk.

Segis Tweede Pontiac Lass, 24 mo.—20.36 lb. butter, 426.1 lb. milk.

Lipkje Tweede Pontiac Lass, Jr. 3—20.28 lb. butter, 490.5 lb. milk.

Wynola Korndyke Pontiac Lass, 29 mo.—20.03 lb. butter, 515.8 lb. milk.

Lipkje Pontiac Lass, 28 mo.—17.01 lb. butter, 412.6 lb. milk.

Daughters of Tobe Rag Apple Korndyke:

Rag Apple Segis Burke, 5 yr.—27.19 lb. butter, 550.4 lb. milk.

Tobe Segis Korndyke, 6 yr.—26.36 lb. butter, 529.4 lb. milk.

Wynola Tobe Korndyke, 5 yr.—24.56 lb. butter, 635.7 lb. milk.

NEW HOLSTEIN HERD IN WISCONSIN

A new dairy herd in Rock County, Wis., has been started by Mrs. James Menzies, of Janesville. The herd formerly consisted of dual purpose cattle and has been changed over to Holsteins. At the present time there are both grades and registered cattle in the herd under the charge of Herdsman Adolph Ellingston. Several of the grades in the herd are now milking between 75 and 80 lb. a day. The herd sire is Blackberry Korndyke Pabst.

ILLINOIS FARMERS BUYING DAIRY CATTLE

A number of farmers living around Oregon, Illinois, made a trip to Calumet County, Wis., accompanied by representatives of the Carnation Milk Products Co. They purchased twenty or more grade Holstein milkers and said that quite a number of the farmers in their vicinity will turn to dairying.

ON TO CANADA

Ever' time we think o' probition we recall the classic lines spoken by George Harris, th' fugitive slave, back in th' fifties, when he drew his wife, Eliza, t' his bosom an' said: "Be brave, darlin', we'll soon be safe on th' Canadian side."
—*Abe Martin*

LAKE MAKES GOOD RECORDS

H. G. Lake, of Montrose, Pa., proprietor of the Ridge Farm Herd of Holsteins, recently made a string of records much above the ordinary. The highest was on Ridge Farm Bessie Lipkje Rag Apple, No. 458724, tested as a junior four-year-old, a daughter of Rag Apple Korndyke Mercedes. She started out well and steadily increased until she attained the very high production of 100.6 lb. milk in one day, her complete record being 655.8 lb. milk and 28.01 lb. butter. She also has a record of 509.2 lb. milk and 23.32 lb. butter as a junior three-year-old.

The senior two-year-old, Clara Mercedes Pontiac Walker, No. 576698, made the fine record of 21.50 lb. butter and 384.9 lb. milk. This is a very large well developed heifer from Clara Mercedes Pontiac, a 35-lb. junior three-year-old daughter of Cornucopia Korndyke Pontiac.

Mr. Lake also tested a 25-months-old daughter of King Tweede Spring Farm, for his brother, Searle W. Lake, of Lakecrest Farm, South Montrose, Pa. This heifer, Lakecrest Rag Apple King Tweede, made 19.46 lb. of butter and 406.8 lb. of milk.

IOWA BEEF FARMER TURNS TO DAIRYING

An Iowa farmer who is increasing his dairy herd is J. A. Mount, of Winterset. Mr. Mount has 240 acres, located near Des Moines. Last year he raised 5,000 bushels of corn and says that the price he can obtain for it is 20 to 27 cents per bushel, which is below the cost of production. Mr. Mount has been a corn and beef farmer for many years, but believes that dairying would give a steadier and surer income.

Mr. Mount has a friend near Mosinee, Wis., and with his assistance he will pick up a half carload of purebred Holsteins, filling the car with grade Holstein heifers, all yearlings.

Mr. Mount says that deflation is crushing Iowa farmers, who branched out too much and incurred heavy debts when prices were high; to-day they find it impossible to pay these debts, with present prices for farm products. Many that are able are turning to dairying.

IDAHO BUYING HOLSTEINS

Some sixty Holsteins were shipped to the state of Idaho the week of December 15th from Owen and Curtiss, Wisconsin. They were purchased by A. Fritzler and will be taken to Goodling County, Idaho, as foundation animals for dairy herds. These cattle were purchased with war finance loans.

GRATIOT HERDS HEALTHY

Gratiot County, Mich., now has 21 herds that have passed one or more clean tests under State and Federal supervision. There are a good many large producers and a good, strong county Holstein-Friesian Association of which Edward Haynes is secretary-treasurer.

PHOTOCOPY OF ORIGINAL

Lackawanna County Holsteins

The herds of Lackawanna County consist of stock directly descended from cattle imported direct from Holland in early Holstein days by old time Lackawanna County breeders—pioneers of the breed.

These men were capable judges and selected their animals for type, individuality and producing capacity; desirable characteristics readily apparent in the present cattle of the county.

Lackawanna cattle are healthy—many of the herds are under Federal jurisdiction.

Quotations will be cheerfully given on single animals or carloads—and it is a pleasure to show the goods.

THE SPRINGDALE HERD

Built up during the past sixteen years on a basis of profitable production and re-production

Present Herd Sire

WOODMONT ECHO SYLVIA CHAMPION

His sire, Sir Pietje Echo Sylvia, is by Champion Echo Sylvia Pontiac and is therefore a brother to Eco-Sylv Belle, 31.15 lb. as a junior two year old, the present World Champion in her class.

His dam, Butter Boy Empress, made 30.27 lb. butter in seven days, has milked 100 lb. in a day and was first prize aged cow, first in the A. R. O. class and Grand Champion at the 1921 New York State Fair. Judge Haeger says she is one of the three best cows shown last year.

Most of our young animals are by

KING TWEEDE SPRING FARM

His sire is Spring Farm King, full brother to the former World Champion and first 44 lb. cow; regarded as one of the best young sires of the breed.

His dam, Dressie Lady Pontiac, has a record of 30.04 lb. butter, 614.8 lb. milk made in seven days and is full sister to the 33.08 lb. cow Dressie Princess Pontiac. Their sire is Spring Farm King Pontiac. Daughters of KING TWEEDE SPRING FARM now in test are making a splendid showing under real dairy conditions.

Our older cows are daughters of

TOBE RAG APPLE KORNDYKE

Son of Christmas Tobe, 2d, 31.66 lb. butter in seven days and former World Champion ten year old. She is also the dam of Lady Tobe De Kol, 36.59 lb. butter in a week, 141.24 lb. butter in thirty days as a senior four year old, both being World Records when made. She in turn is dam of Geraldine Rag Apple Korndyke, 30.21 lb. butter in seven days, also as a four year old. Here is large production, generation after generation.

Animals from this herd will make good anywhere

THE SENIOR SIRE OF BLOOMINGDALE HERD

A Show Bull of Wonderful Type and Individuality

KING MODEL

His dam, Mabel Segis Korndyke, the first 40 lb. heifer, is a cow of perfect conformation.

Through his sire and dam he traces twice to that great transmitting sire, King Segis.

His first tested daughter produced over 25 lb. butter at two years and over 31 lb. at three years. She is State Champion of Connecticut.

Another two year old daughter won 2d Prize last year at the National Dairy Show and later became State Champion of Maryland.

His first daughter to complete a yearly record produced over 873 lb. butter in the 365 days at two years old.

With only two exceptions, all of his 31 tested daughters have produced more than their dams at the same age, a sure proof of his wonderful ability to transmit.

We have a few choice sons of KING MODEL to offer, one from a 40 lb. daughter of Matador Segis Walker, another from a two times 30 lb. dam, also a young son from a 20 lb. junior two year old.

The Holstein Breeder and Dairyman

VOL. I. HARRISBURG, PA., FEBRUARY 8, 1922 No. 3.

The Pennsylvania Banquet

THE Pennsylvania Federation of Holstein-Friesian Clubs held their annual banquet at the Penn-Harris Hotel, Harrisburg, January 25th. Two hundred twenty-five sat down to a tasty spread and all present thoroughly enjoyed the occasion.

President John A. Bell, Jr., introduced Mr. George E. Stevenson, "Hornless George," vice-president of the Holstein-Friesian Association of America, as toastmaster. Mr. Stevenson introduced the Hon. Fred C. Rasmussen, Pennsylvania State Secretary of Agriculture, who paid tribute to the Holstein breeders of the state and nation, and said that despite the fact that Pennsylvania was regarded as the leading industrial state, the dairy interests of Pennsylvania outrank in value any other state industry. There were 855,000 dairy cows, and the annual value of the dairy product was $106,000,000. There were reasons for the preëminence of Pennsylvania as a dairy state — her ability to grow large quantities of forage, her nearness to the great city markets with their dense population, her natural conditions for the great industry. Pennsylvania dairymen have made progress in the past ten-year period, for, while the cow population of the state showed a 5% decrease, the milk production had increased 2.4% — in other words, the average amount of milk produced by the individual cow had increased 12.9%. While this was cause for congratulation it would take eighty years at this rate to double the production of the Pennsylvania dairy cow, which was the dairyman's aim. Denmark has doubled the production of the individual cow in twenty years, mainly by selection, better feeding, use of purebred sires, and the growth of the purebred industry.

The proportion of purebred cattle in the state was 5.8%, divided among the various breeds as follows: Brown Swiss, 500; Ayrshire, 3,000; Guernsey, 9,000; Jerseys, 11,000; and Holstein-Friesian, 48,000, or more than half of the 75,000 purebred animals in the Keystone State. Although Pennsylvania ranks ninth in value of purebred cattle production, there was much more to do. At the present time there was one purebred herd sire for each ten farms. Compared with other states this was a good showing, the neighboring state of Ohio had only one in twenty. Some people had suggested that the purebred dairy industry was being overdone, yet these figures show that there are vast possibilities.

Tuberculosis eradication depends more on the individual farmer than it does even on the veterinary as, unless the cattle owner and caretaker does his part, the labors of the veterinary are in vain. Pennsylvania deals with the individual herd owner instead of the community and believes that this course is the better, as the individual owner would willingly coöperate while there might be a number in a community that were not in sympathy with the rules and regulations of those entrusted with the work of tuberculosis eradication.

HON. JOHN M. DENNIS
State Treasurer of Maryland. Owner of Essex Farms.

Hon. John M. Dennis, State Treasurer of Maryland, and owner of the Essex Farms, said that Maryland needs a paid secretary for individual visits, also to tell the dairymen of the state where they could find Holsteins. Touching the question of the change of transfer fee, he said that during 1921 he sold thirty-six calves for $11,000.00, and for the transferring of these animals he paid the association only $20.00. He believed the transfer fee should be raised to at least $2.00 per animal and that part of the increase should be used for the spread of the Holstein gospel in the South.

Toastmaster Stevenson commented on Mr. Dennis's speech, saying that a large majority of the breeders of Pennsylvania and many members of the Holstein-Friesian Association of America were against taking any part in public sale business in which several of the state associations with paid secretaries were participating.

Mr. Bell read a telegram from Hon. Frank O. Lowden expressing regret that he was unable to be present owing to a severe bronchial cold with a slight congestion of one lung.

Fred Koenig, in charge of the extension department of the association, brought a message of personal regret from Mr. Lowden, which he briefly expressed.

The President of the Pennsylvania Bankers' Association was unable to be present and deputized Mr. Zim-

merman, the association's secretary, to speak in his place. Mr. Zimmerman said that the Bankers' Association is attempting to coöperate with the farmers, but it must be remembered that the banker was in the position of a fiduciary and that safety and the earning of interest had to be kept in mind by them when loaning money. He paid tribute to Pennsylvania agricultural progressiveness as shown by the Pennsylvania Farm Products Show. He asked the county agents, farm bureau agents and agricultural leaders who knew of individual farmers' financial needs to go to the local banker and support the farmer's plea for loans. Very few bankers, even in rural districts, really knew what financial aid the farmer needed to start in the purebred industry. The bankers' exhibit at the show indicated that many bankers were already coöperating with the breeders to promote the purebred livestock industry. The farmer had been hard hit by deflation and readjustment of farm values, especially in the West, but it must be remembered that in the central western states land had greatly increased in price during the war period and that depreciation was bound to come owing to the operation of economic laws.

Dr. John M. Thomas, recently elected president of Pennsylvania State College, paid an impressive tribute to Mr. Lowden both as a man and as president of the National Association. Mr. Thomas said that he was a Vermont man and that Vermont was really a greater dairy state than Pennsylvania, for in Vermont there were more cows than there were people. He mentioned that Rudyard Kipling at one time lived in Brattleboro. He paid a humorous tribute to the Holstein industry, particularly commenting on the appearance of the Holstein homes and of the ladies who preside over such homes, and closed with a plea for greater assistance to State College for the promotion of agricultural education.

In introducing C. F. Bigler, president of the New York Holstein-Friesian Association, the toastmaster paid a tribute to New York State as the pioneer and as the leading Holstein state and also for the entertainment of Pennsylvania breeders, last June. Mr. Bigler mentioned Mr. Lowden's Syracuse reference to the Farm Bureau as the great coöperative force for agricultural improvement and said that Mr. Lowden had shown his belief in the Farm Bureau organization by signing over thirty-two acres of cotton for their disposal.

The New York Association is an organization deriving most of its strength from small Holstein communities and local clubs. The animals for the first New York sale were selected by one man, but the animals for the recent sale were selected by the representatives of the county and local clubs. He referred to the districting plan of New York as shown by the election of directors and the recent nomination of Kansas City delegates. In regard to legislation affected by the New York Association, he said that the tuberculosis eradication fund deficiency of last year was $1,300,000, but that already they had assurance of an appropriation to meet this deficiency when legislature meets. The New York Association advocated a permanent plan for tuberculosis eradication and, acting in conjunction with other farm organizations, had been able to name two of the four members of the board in charge of tuberculosis eradication.

The New York Association was a clearing house for buyers' and sellers' differences. The recent sale brought a profit of $1,000. He closed with a staunch tribute to President Bell both as a man and as a breeder.

During the evening popular and patriotic songs were sung in chorus by the company. Mrs. Elizabeth C. Reinhold sang a number of tuneful and pleasing solos.

The evening's entertainment concluded with the Holstein movie film shown by representatives of the Quaker Oats Company. The reproduction of leaders of the Holstein organization and of the breed's famous show animals were enthusiastically applauded.

Are You Planning to Test

Cut out this table and paste it near your Babcock Tester or over your desk. You will find it handy many times.

Amount of butter fat an animal must make in order to equal any given amount of butter in a week.

To find the exact rate of any one milking, at four milkings a day, multiply the amount of fat produced at that milking by 35 to get the equivalent amount of butter per week. Example: .600 lb. of fat for one milking, .600x35 equals 21 lb. butter.

At three milkings a day, multiply the amount of fat for the selected milking by 26.25. Example: .800 lb. fatx26.25 equals 21 lb. butter.

Bloomingdale, Prominent in Holstein History

THE Bloomingdale herd is one of the oldest as well as one of the greatest in the country, being established in 1889 by the late A. A. Cortelyou. At the time of his marriage, 53 years ago, Mr. Cortelyou purchased 250 acres at Somerville, New Jersey, but it was not until 1889 that he purchased his first purebred Holsteins. The first animal was Shadeland Pet, a Pennsylvania cow; the second was Belle of Opperdoes 4th, a New Jersey animal. In 1891 Hillsboro Maid was added, and in 1892 five cows were purchased from the famous herd of Gerrit Miller, of Peterboro, N. Y. Among these five were Dowager Empress 5th, Emporia 3d, Annette 4th, and Empress of Ondine, ancestors of many of the large record cows of to-day.

M. W. FAITOUTE,
Owner of Bloomingdale Farms

The first herd sire in the Bloomingdale herd was Clothilde 3d's Sir Netherland, a son of the great cow Clothilde 3d. This bull together with his successor, Executor's Clothilde, came from the Smiths and Powell herd, Syracuse, N. Y.

In 1895 the noted show bull, Soldene 2d's Netherland, was purchased from Wm. Rood, of Binghamton, N. Y. This bull traveled the great show circuit several years, and was defeated only once, and then at Syracuse by one of his sons. He was twice grand champion at the Madison Square Garden Cattle Exhibition, the greatest show of its time. Bloomingdale showed two years at the Garden Show and won thirty-two ribbons, the majority blue.

After official testing was inaugurated, a 20-lb. record was made at Bloomingdale by Inka Hartog Pietertje Kate. This was the first official record made at this farm, the first of a long series which includes many world records.

The famous Allie Nig was added to the herd in 1903. This daughter of Pearl of the Dairy's Joe De Kol was one of the greatest producers of her time as well as a show cow and her official record of 25.49 lb. butter in seven days was near the top of the class at the time it was made. Her son, Woodcrest Nig De Kol, sired by Hengerveld De Kol, made his mark as a sire of producers.

In the year 1900 Mr. Cortelyou purchased from the Gillett herd of Rosendale, Wis., Johanna Rue 3d's Lad, then a three-months-old bull calf. The daughters of this bull were wonderful producers and his granddaughters ever more famous. The records made by the descendants of this bull placed the Bloomingdale herd right in the front, a position it has ever since maintained.

PANORAMIC VIEW OF BLOOMINGDALE FARMS

In the year 1905 the even more famous sire, Hengerveld De Kol, was purchased from the Pontiac herd, owned by the Eastern Michigan Asylum, Pontiac, Mich. Hengerveld De Kol already had a number of splendid record heifers. It was on this account that Mr. Cortelyou purchased him. He saw many of the heifers, then he went to Pontiac and examined the bull and then, knowing that he was heading his herd with a proven sire of great excellence, Mr. Cortelyou purchased this seven-year-old sire. That his action was a stroke of genius, was amply demonstrated when the daughters of Hengerveld De Kol from daughters of Johanna Rue 3d's Lad came into milk, for world's record after world's records were made by cows and heifers resulting from this cross. Before then, although college professors and agricultural writers had advocated the use of proven sires, very few owners of first-class herds had ever purchased an old bull for a herd sire. Bloomingdale set an example that has been copied since with incalculable value to the breeding industry.

In 1907 King Fayne Segis, then a three-months-old calf, was purchased from H. A. Moyer, of Syracuse, N. Y. This bull was a son of King Segis and of Grace Fayne 2d's Homestead, who had made world's butter records for both seven and thirty days, as a four-year-old, made over 30 lb. of butter in seven days; as a five-year-old and then, as a six-year-old, made 35.55 lb. butter in seven days, world record over any age or breed at time of making. This bull proved a remarkable sire, although he only had a short period of usefulness. His daughters and granddaughters made wonderful records. His sons headed some of the greatest herds in the country, one, King Hengerveld Aaggie Fayne, being especially noted.

A later herd sire was Beauty Walker Pietertje Prince. He too proved a sire of big producers. His daughter, Pietertje Fayne Johanna, who made 34.54 lb. butter in seven days as a junior four-year-old, is still a member of the Bloomingdale herd.

For many years Mr. Cortelyou was prominent in the Holstein-Friesian Association and took part in its annual meetings. For a number of years he was a director, and in 1905 he was elected president and was reëlected in 1906. His

death was a real loss to the Association and to the Holstein industry.

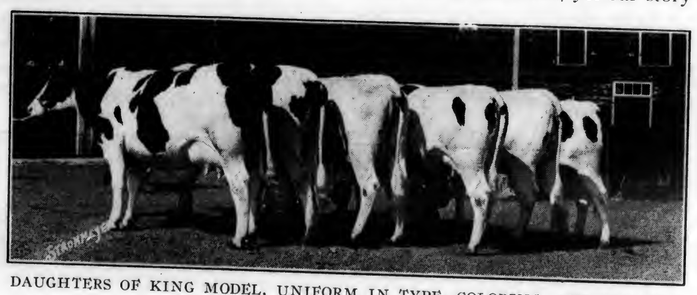
Bloomingdale Farm, with the entire herd was purchased from the A. A. Cortelyou estate in February, 1919, by Mr. M. W. Faitoute, president of the Faitoute Iron & Steel Company. At this time King Model was added to the herd by Mr. Faitoute. King Model is a son of King Segis Champion and of the famous Mabel Segis Korndyke, a beautiful individual and a remarkable producer, she being the first animal under full age to be credited with a 40-lb. official seven-day butter record, while her record of 40.32 lb. butter was, for a long time at the head of the junior four-year-old class, and still ranks not far from the top.

PIETERTJE FAYNE JOHANNA

At four years, 34.54 lb. butter in seven days. At five years, 32.26 lb. butter in seven days. At 2½ years, 27.25 lb. butter in seven days. Bred, developed, tested and still in the Bloomingdale Herd.

February, 1919, about the time King Model was purchased, Pietertje Fayne Johanna, then the highest record cow in the herd, dropped a bull calf by King Pontiac Hengerveld Fayne. This young bull, named Bloomingdale King Fayne, was retained for the junior herd sire. Pietertje Fayne Johanna as a four, and again as a five-year-old, made over 32 lb. butter in seven days. His sire, King Pontiac Hengerveld Fayne, was a son of King of the Pontiacs and of Segis Hengerveld Fayne Johanna. This cow and Pietertje Fayne Johanna are both daughters of Segis Fayne Johanna, who was born and made her first 30-lb. seven-day record as a three-year-old in the Bloomingdale herd.

Many of the daughters of Johanna Rue 3d's Lad were officially tested in the Bloomingdale herd or else on the near-by Finderne Farms. Among the great daughters of this bull bred at Bloomingdale are Belle Model Johanna, a 25-lb. cow herself and dam of Belle Model Johanna 2d, a twice 37-lb. cow, she the dam of a number of high record daughters and grandma of Carnation King Sylvia. Another is the 30-lb. cow, Belle Netherland Johanna, claimed to be the first cow to make a thousand pounds of butter in a year. For a long time she held the world's record for two-year butter production. Vikima Johanna is another famous daughter of this great sire, bred at Bloomingdale, and so is Johanna Vernon De Kol, dam of King Segis 10th, who sired the world's milk champion, Segis Pietertje Prospect.



The daughters of Hengerveld De Kol, bred at Bloomingdale, made even greater records. Among these are princess Hengerveld De Kol, 33.62 lb., the highest record daughter of this sire; Bloomingdale Hengerveld Edith, 32.44 lb., his second highest record daughter; Bloomingdale Hengerveld Countess De Kol, 32.24 lb. as a senior four-year-old; Bloomingdale Hengerveld Model, 30.26 lb. as a senior four-year-old; Bloomingdale Hengerveld Ormsby, 30.46 lb. as a junior three-year-old, world's record in class the time of making; Bloomingdale Hengerveld Palmyra, 30.40 lb., and Bloomingdale Hengerveld Aaggie, a world's record junior two-year-old and the dam of King Hengerveld Aaggie Fayne.

King Fayne Segis did not live long enough to leave a large number of daughters, but the records these daughters made showed that, had he lived as long as his predecessors, he might have had just as many high record daughters as either. One of his daughters, Segis Fayne Johanna, as a junior three-year-old, the first time she freshened made 30.66 lb. butter in seven days, 114.95 lb. in thirty days in this herd. Eirene Fayne made 31.52 lb. butter in seven days; Jewel Hengerveld Fayne made 30.48 lb. Tehee Fayne made 30.92 lb. Eirene Julip Fayne made 25.23 lb. when only twelve days past her third birthday, and several others ranked nearly as high.

The present herd sire, King Model, is not old enough to have many daughters, and none have yet been tested as four-year-olds. Johanna Segis Model, as a junior three-year-old made 31.05 lb. butter, 552.5 lb. milk in seven days; another of his daughters, Model Pontiac Cornucopia, tested at 26 months old, made 22.52 lb. butter in a week, a correspondingly large thirty-day record, and then completed a year record of 873.17 lb. butter, 18,324.9 lb. milk.

The many daughters of King Model in the Bloomingdale herd show great dairy capacity and give promise of some splendid records as time goes on.

While the herd sires of Bloomingdale through their daughters have exerted a wonderful influence on the herd and on the breed, yet our story would not be complete without mentioning at least one of the famous old-time matrons, who not only ranked with the very best of her time, but whose descendants include many noted animals. This cow, Susie De Kol, 20

DAUGHTERS OF KING MODEL, UNIFORM IN TYPE, COLORING, AND QUALITY

years ago made 25.31 lb. butter, 464.5 lb. milk in a week, and was one of the highest record cows of her day. She has five A.R.O. daughters, four of which have records above 20 lb. She is the dam of four high-class sires, one of which is the century sire, Lord Netherland De Kol. The Blue Book credits her with no less than eight daughters, which in turn are dams of A.R.O. cows. As a family group, Sadie De Kol and her daughters and Belle Korndyke, another great cow of her time, with her daughters for years stood at the top of the list for total and average production of A.R.O. cow and daughters.

Another famous matron connected with this herd is Vikina Johanna. She is the dam of Segis Fayne Johanna, who is dam of Pietertje Fayne Johanna, mentioned above, as well as of Segis Hengerveld Fayne Johanna. All four of these animals were bred at Bloomingdale.

Being run as a breeding establishment, not many animals have been purchased in recent years. One notable addition, however, is Matador Hengerveld Bess. This daughter of Matador Segis Walker is of exquisite type and, disputes with Pietertje Fayne Johanna, the title of the herd's showiest female. Her son, just about a year old, sired by King Model, is as fine a young bull as we ever saw, and would win high honors in any show ring.

Naturally there is a good demand for stock from this herd, which keeps down the surplus. Years ago, many animals went abroad, so that Bloomingdale fame is world-wide. Just as we go to press comes the word that a senior two-year-old heifer has completed a year record of 18,009.2 lb. milk, 783.9 lb. butter, which we believe makes her the state champion of her class.

The stock at Bloomingdale ranks high in the bovine world. Just as worth while is the personnel of the establishment. The genial proprietor, Mr. Faitoute, takes a great interest in Holstein affairs, although he has never taken the prominent part Mr. Cortelyou did. The farm secretary is Miss A. S. Cortelyou, a daughter of the former owner, herself an authority on Holsteins. The farm superintendent, "Jake" Reger, is known to nearly everybody at all posted in breed history, and many of the greatest records made in the state were made by animals in his charge. A trip through the eastern states without visiting Bloomingdale and becoming acquainted with its management is like visiting Washington and not seeing the White House.

Without Forcing

THAT it is possible to make large records under conditions practically normal is shown by the performance of Whittier Pontiac Netherland 4th, a heifer in the herd of the Los Angeles County Farm. This heifer has made 1,110.4 lb. of butter in the first 353 days of her semi-official year. During the year she was tested by nineteen different supervisors and six verification tests were made on her. The first fourteen days of her test she was milked four times a day. The rest of the time she was handled about the same as the other 120 cows in the county herd. That is, she stood in the stanchion and was milked three times a day and at no time did she have the benefit of a box stall. Her milk production for the year will be approximately 22,400 lb. and she will average well over 21 lb. butter a week.

This great four-year-old is a daughter of King Segis DeKol Mead, an eight-year-old sire still in active service in the herd. The Los Angeles County Farm has one of the greatest milk-producing herds in the world and there is a standing challenge for any other herd of a hundred or more cows to show as high average production of milk and butter fat.

Have you taken advantage of our Special Introductory Subscription Price of two years for $1.00? If not, sign and return the enclosed slip and receive the *Holstein Breeder and Dairyman* regularly for the next two years. Do not delay. Subscriptions are coming in fast and we wish to include you among our regular subscribers.

Judge—"Your sentence will be one year and ten days."

Victim—"What's the ten days for?"

Judge—"War tax."

As the shades of evening fall at Bloomingdale

TIGHT BINDING

Pennsylvania Federation Annual Meeting

THE annual meeting of the Pennsylvania Federation of Holstein-Friesian Clubs was held at Cameron Hall, Harrisburg, January 26. President John A. Bell, Jr., called the meeting to order at 10 a. m. The report of the secretary was read by Mr. Geo. E. Stevenson, as Secretary Howard C. Reynolds was suffering from a severe cold. The treasurer's report was read by Mr. Newman and showed that the balance, January 1, 1921, was $732.35. During the year the receipts were $359.67, disbursements $688.07, leaving a balance on hand of $403.95. On Mr. Newman's request President Bell appointed W. G. Davidson and E. B. Walton as auditing committee, and they reported the check books, bank books and vouchers agreed.

The constitution of the Pennsylvania Federation of Holstein-Friesian Clubs has two ways of acquiring membership: one direct, and one through local clubs which are affiliated with the federation. The by-laws require that any member eligible to vote at the annual meeting must be on record as a member of the federation January 1st previous to the time of the annual meeting and must have paid the dues in full on or at the time of the annual meeting. Mr. Stevenson read the by-laws and then said that it was the unanimous wish of the board of officers to throw the doors wide open to all members present, but that they had further ruled that members sent as county club delegates could vote personally but could not vote their delegate votes for members of their club who were not on record as members of the federation January 1, 1922, and whose dues have been paid on or previous to the time of the annual meeting.

After the members had given a rising vote of thanks to President John A. Bell, Jr., the officers and directors of the association, Mr. Stevenson nominated Mr. Bell for reëlection. Dr. L. M. Thompson seconded the nomination and the election was unanimous. Mr. Bell thanked the members for the honor, said that he had desired to see some one else president of the association, but since it was the desire of the breeders he should serve for another year he would gladly accept, and he asked for the coöperation of the entire federation.

Mr. C. E. Bennett was nominated for vice-president, and C. W. Newman seconded the nomination. Election unanimous. H. C. Reinhold nominated W. Hugh Jones for secretary, and this was seconded by Mr. Elliott; F. C. Brinton was nominated by Chas. Garrett and seconded by C. E. Bennett. While an opportunity was given for those present to register and record their votes, H. C. Reinhold stated his opinion that no one should vote unless all dues were paid. Mr. Stevenson spoke in favor of Mr. Jones. Mr. Reinhold replied that both candidates were mighty good men, and if either was elected the federation would be well served. There was a further discussion on the question of who had the right to vote. Mr. Auker, of Juniata County Club, said that their annual meetings were held in January and that it was impossible to send a list of paid-up members until after their own annual meeting. The president ruled that they should abide by the by-laws.

The vote was practically a tie, and while the qualifications of those voting were being investigated, Mr. Brinton asked leave to withdraw, and Mr. Jones was declared elected.

The motion was made that C. W. Newman be continued in office as treasurer, but he refused, owing to pressure of business. Mr. Davidson then nominated Mr. Brinton as treasurer. There were several seconders and Mr. Brinton was elected unanimously. The retiring directors were reëlected for a period of two years. They are: Ivo V. Otto, Carlisle; H. C. Reinhold, East Petersburg; Dr. L. M. Thompson, Montrose; W. B. Devanney, Malvern; James M. Paxton, Houston; N. A. Terpennig, Edinboro. A rising vote of thanks was given the retiring officers, Secretary H. C. Reynolds and Treasurer C. W. Newman, on motion of Mr. Elliott.

Mr. Richley, of the United States Veterans' Bureau, spoke regarding the work of that organization in training disabled soldiers and explained the working of the bureau.

President Bell read a communication from Dr. Munce, State Veterinary of Pennsylvania, and on motion of Mr. Elliott, the chair appointed Dr. Howard C. Reynolds, Reinhold and Mr. Bennett to draft a resolution endorsing the work of the Pennsylvania Sanitary Livestock Board and their attitude toward tuberculosis eradication.

Mr. H. C. Reinhold spoke on the problems of the milk producers around Philadelphia. There seemed to be a combination of Guernsey owners with the distributors with the result there was a discrimination against Holstein milk. He thought that the federation and the National Association should take steps to show to consumers the value of Holstein milk.

Dr. Thompson spoke on the power of advertising, and showed that Pennsylvania cattle owners were doing very little compared with breeders in other states. He said that local clubs should advertise as Holstein communities and that there was a big market for Holstein cattle in Maryland, Delaware and the southern states. He thought the transfer fee should be raised and the proceeds from the raise be taken for breed extension work and advertising. President Bell and Mr. Reinhold endorsed Dr. Thompson's remarks on advertising.

Mr. Auker, of Juniata County, suggested the federation hold a special meeting at State College during Farmers' Week, and the matter was referred to the board of directors.

E. R. Zimmer, New York State Secretary, said that the county clubs should be the foundation for the state organization. Whether or not Pennsylvania required a paid secretary was dependent upon the amount of coöperation work they intend to do and was purely a state proposition. There were four main lines of a state secretary's work: First, encouraging county clubs to carry out some definite line of work; second, commercial activities, holding and managing high-class consignment sales; and bringing buyers and sellers together; third, educational, as junior and dairy club work, judging at fairs, etc., and fourth, the watching and influencing of legislation.

State Veterinarian Munce came into the room and was called upon by President Bell. He spoke in reference to the finances of the tuberculosis eradication movement within the state. At the present time there were 1,200 herds on the waiting list. Congress appropriated $100,000 last year, with same asked for this year. If the bill before congress was passed as it now reads there was a possibility that indemnities would be paid only for cattle slaughtered in areas or communities of tuberculosis eradication. Pennsylvania treated with the individual owners instead of with communities, and as Pennsylvania paid one-tenth of the Federal taxes he thought that some recommendation should be made to congress so that Pennsylvania got her due share of the money appropriated in order to meet the indemnities required within the state. There was not enough money available to take care of all the work required. There was no objection to carrying on the work of the Sanitary Board but there was not enough money appropriated. They should continue to fight tuberculosis and the state and Federal authorities should work together. He believed that the necessary plans should be made by the Federal authorities and that the work of the state officials should be to carry out such plans. The members gave Dr. Munce a vote of confidence and then adopted the following resolution:

"The Pennsylvania Holstein-Friesian Association, whose membership consists of breeders of purebred Holstein cattle and which represents the largest number of purebred breeders in Pennsylvania, unanimously protest the limitation respecting the use of Federal indemnity funds to circumscribed area work in Pennsylvania; and,

"WHEREAS, Said circumscribed area work is not applicable to Pennsylvania; and,

"WHEREAS, The present methods of the Bureau of Animal Industry, Pennsylvania Department of Agriculture, and the Federal Department of Agriculture for conducting tuberculosis eradication work in Pennsylvania has been successful and meets with the approval of the Pennsylvania Holstein-Friesian Association; be it

"Resolved, That a copy of this resolution, protesting the change of policy, be sent to the United States senators and congressmen representing Pennsylvania, as well as to the Secretary of Agriculture and Chief of the Bureau of Animal Industry and United States Department of Agriculture."

H. C. Reinhold suggested that a definite program of work for the coming year should be planned for the federation. Mr. Ivo V. Otto said a plan should be devised to raise more money so as to be able to accomplish things. The federation endorsed the movement to raise the transfer fee and use the proceeds realized for various branches of extension work.

Mr. Cort suggested that the state ought to prohibit intercounty shipment of cattle unless they were tuberculin tested, but Dr. Munce thought this action should be limited to cattled sold in public sales. It was the sense of the meeting that such a regulation should apply to the movement of grade and native cattle as well as to purebreds.

Mr. Reinhold suggested that they should ask for an appropriation of $400,000 for tuberculosis eradication and pointed out that sales of native and grade cattle within the state were made without testing.

Mr. C. F. Bigler, president of the New York Holstein-Friesian Association was called upon in regard to legislative work of the New York Association. There had been a tuberculosis indemnity bill jammed through the New York State Legislature which was thought unfair to the breeders. By acting as a unit the association had been successful in having this bill, which was in the governor's hands for signing, recalled, reconsidered and changed in the houses, something, which, as far as he knew, had never been done before. He advised that, before calling the directors together, a definite plan of things to be considered be drawn up and sent out with the call to the meeting. Then there would be no trouble in getting a full attendance. After an expression of thanks to President Bell the meeting adjourned.

Are Purebreds More Profitable than Grades?

EXPERIMENT stations and agricultural colleges have sent out many bulletins and booklets, writers on dairying and cattle breeding have written and published articles on the superiority of purebreds over grades and natives cows, but never, in a long experience, have we seen more decisive proof than is to be found in the report of the Pettis County Cow Testing Association for the year 1920-1921, as set forth by E. M. Harmon, Extension Assistant Professor of Dairy Husbandry at the University of Missouri.

The Pettis County Holstein Company was formed by dairymen, business men and others interested in the welfare of the dairy farmers in Pettis County, Missouri. The Pettis County Holstein Company purchased a number of registered Holsteins and placed them with dairy farmers who pay for them with a portion of their production, the company retaining title for the present, the purchasers taking stock in the company.

It will be seen that there will be one or more registered animals in a herd of grades or natives. Each herd would receive slightly different care from any other herd, but the purebred animals in each herd would receive practically the same care and feed as the natives or grades in that herd. A fairer or more accurate test could hardly be devised, nor one that would show the operating dairymen the difference, if there was any difference, in the producing and earning capacity of his animals. In the general comparisons of purebred and grade herds the care the respective herds receive is often overlooked, while the chances are that the purebred herds would be given more feed and better care than the general run of the competing grade herds, partly because the owner of purebreds would be apt to be more progressive, although there are exceptions to this rule, and partly because, having more money in-

vested in his stock, he would naturally be inclined to give them a better opportunity than if he owned grades.

The dairymen who tend the Pettis County Holstein Company's cows are enrolled in the Pettis County Testing Association. The registered Holsteins are designated as company cows, the grades were recorded under the names of their respective owners. During the past fiscal year of the association the average amount of milk produced by the entire number of cows enrolled was 6,668 lb., the average amount of butter fat produced was 249.5 lb., and the average net profit above cost of feed was $93.67.

But the "company" cows produced, on the average, 7,782 lb. of milk, or over eleven hundred pounds above the average of the animals tested. Their fat production, when averaged, exceeded the gross average by practically 20 lb., and the net profit of the registered "company" cows was $115.63, or $22 more than the association average. The tabulated figures are certainly interesting and instructive:

	All Cows in Assn.	*Company Cows.*	*Non-Company Cows.*	*Favor of Company Cows.*
Average lbs. milk per cow	6,668.0	7,782.0	6,127.0	1,665.0
Average lbs. fat per cow ..	249.5	269.4	239.9	29.5
Average profit above feed .	$93.67	$115.63	$83.01	$32.62

A more striking test would be hard to conceive. True it is that the registered cows had been selected, some of them purchased in public sales and some chosen from herds. On the other hand, the poorer grades in the dairymen's herds had been culled out to make room for the animals brought into Pettis County, so that the animals were meeting on as fair a basis as could be humanly devised. The results show that the purebreds produced a net profit nearly 40% greater than the grades.

The profitableness of the big producer was also brought out in the year's work. We regret that we do not have the breeding of the different divisions so as to tell the production of purebreds and grades in each. Eleven per cent of the cows enrolled produced 350 lbs. or more of butter fat in the year, and these animals averaged over ten thousand pounds of milk. Eight per cent of the enrolled animals produced less than 150 lbs. of fat in the association year and their average net profit was less than $17. Notice in this table, the difference in the profit earning capacity of the large and small producer:

Class.	*% Cows in this Class.*	*Av. Fat Per Cow.*	*Av. Fat Per Cow.*	*Average Profit Above Feed Cost.*
50 to 150 lbs.	8%	126.0 lbs.	3,702 lbs.	$16.92
150 to 250 lbs.	51%	208.1 lbs.	5,617 lbs.	69.49
250 to 350 lbs.	30%	296.2 lbs.	7,991 lbs.	123.76
Over 350 lbs.	11%	406.8 lbs.	10,227 lbs.	182.96

More than half of the enrolled animals come in the class between 150 lb. fat and 250 lb. and could be termed the "average cow." These cows earned for their owners but a trifle over a third of the amount earned by the 11% top-notchers, yet they made four times as much net profit as the 8% tail-enders. The difference is so much that it is probable age entered into this to some extent and that in the lower class a portion of the feed consumed was used for growth. But notice that more than four-fifths, or 81% of the total animals, fall into the two classes producing between 150 lb. and 350 lb. of fat. Then notice that the 11% composing the leading class stand far in advance for the amounts of milk and fat and also for net profit above feed cost.

These figures show conclusively that the big producer as a class, earns the dairyman the largest amount of profit. They also show that, given the same care and feed, purebred Holstein-Friesians in the Pettis County Cow Testing Association earned for the man taking care of them, nearly forty per cent more than did the grade and native animals in the same herds.

This report of the Pettis County Cow Testing Association is worth saving and using by every owner of a registered Holstein. It should be given the widest publicity by the national Holstein-Friesian Association. Boxmen and sale managers, could they bring home to sale audiences the difference in the net earning ability of the animals they were selling over the capacity of the general run of dairy cows, would earn their wages many times over, and this report of the work done in Missouri in Pettis County shows that the purebred does earn a greater net profit than does her grade stablemate under equal feed and stable conditions.

Junior Dairy Work in Pennsylvania

A. S. Bernhart

THE junior work in Pennsylvania has been growing steadily in the last five years and promises to grow much more rapidly in the next two years than heretofore, due to the fact that the results of the work are awakening the people to the value of this type of work.

The first junior dairy work was started in June 23, 1917, when the Grove City community put out fifty purebred dairy calves. Of those distributed at that time, 26 were Holstein. Since then this club has grown quite rapidly and has become the basis of similar clubs throughout the state. Up to December 1, 1921, we had 361 dairy club members, and approximately half of them were the owners of purebred Holstein animals; the rest being divided among the other breeds of dairy cattle. We now have organizations of this type in 22 different counties of the state, and a number of counties are ready to open up in the spring.

Some of the first clubs started were county-wide in reference to organization; it has been necessary, therefore, to reorganize these clubs on a strictly community basis in order to bring the animals together for exhibition and to develop a better community interest. The new clubs being started are all organized in small sections and then allotted a county-wide classification. These clubs are the outcome of a demand for the introduction of purebred animals in a community and are fostered by the local breed associations, who act as advisory committee and assist the boys and girls wherever possible. The financial side of it is cared for by banks or other commercial organizations. We, however, depend upon the local breed association to keep up the community spirit and help in the development of the animals.

We have found that it is the best policy to start the boys and girls with bred heifers rather than calves, because the animal will come into production in less time. To raise a calf as it should be raised requires a great deal of care and experience. It is a long-time proposition from the time a boy or girl receives a purebred calf until the animal comes into production, and their interest is likely to diminish during this time. However, with a bred heifer he will gain the experience of feeding the animal, and before very long they will have a calf with which they will begin their calf feeding experience and at the same time have an animal that is producing a return on its investment and this is practically what everyone is anxious to do.

The type of animal put out to club members is the best we can secure for this type of work. We must have a purebred, registered, tuberculin tested animal from the best herds to be found.

The Holstein breed has a very good start in Pennsylvania, as shown by the fact that half of the club members demand Holsteins with which to begin their work. One good Holstein calf club member will make one good Holstein breeder for to-morrow. It is one way to get the community started in purebred dairy animals and it does not take long for the parents in a community to see the value of the animals which the boys and girls are raising. The Holstein breeders of the state realize this and have spent a great deal of time and money in promoting this work.

Lycoming County has succeeded very well in this work, largely because the breeders of Holstein cattle in that county are backing their boys and girls and taking almost as much interest in the calf club as they would in their own herd. They are looking forward to making each member a good Holstein breeder, and so trying to get him started in the game as early as possible. The experience gained in these clubs cannot help but be of great value to the future breeders. The same is true in the other counties of the state and it remains only for the Holstein breeders in the counties not having clubs awake to the fact that here is an opportunity for promoting their blood and get in on the ground floor of the Holstein game.

In the last two years of the Junior Farmers' Week we have been greatly indebted to the State Holstein Association for the support they gave us in judging in our junior contests. It was only through the generosity of the Holstein people that we were able to award a handsome silver cup to the best team in the judging of Holstein cattle. The trip to the National Dairy Show, both this year and last, would have been impossible had it not been for the support we received from this same organization. This year we had the second high man in the judging of Holsteins at the National Dairy Show, and we competed with 13 other states. The members of these teams from Pennsylvania are interested not only in judging, but in establishing herds, and the experience of the trip to the National Dairy Show did each one of them a world of good. They were able to observe the judging of the animals at the show, which fixes in their minds the ideal toward which every good breeder is working.

The demand for junior clubs is increasing and would increase more rapidly in communities where they have not started, providing the Holstein men of these sections look about and see where they can benefit themselves, their boys and girls, and their community by helping in this work.

Pennsylvania's New Secretary

MR. W. HUGH JONES, newly elected secretary of the Pennsylvania Federation of Holstein-Friesian Clubs, is well qualified to fill the position to which he has been elected. He was born and raised on a farm in Susquehanna County, educated in the local schools and took up special work in dairying at Pennsylvania State College. He has acted as supervisor for Advanced Registry Testing and also has tested many animals at Springdale Farm, South Montrose, where he has been associated with his father in breeding purebred Holstein-Friesian cattle and conducting a practical dairy farm. Springdale Farm was one of the first in Susquehanna County to be accredited under the state and Federal plan for the control of tuberculosis with a view of eradicating it.

W. HUGH JONES
Secretary of the Pennsylvania Federation of Holstein-Friesian Clubs.

Mr. Jones has served as secretary of the Susquehanna County Holstein-Friesian Association for several years, which office he holds at the present time. He has been very active in promoting the Holstein interests in his county and as the result of his efforts, the Susquehanna County Club is one of the strongest clubs in the state and has the largest membership. Mr. Jones realizes that the only way to build up a strong local club is for the officers and members to get together and work out their local problems. The experience that he has had in his own county, which is the largest Holstein county in Pennsylvania, particularly qualifies and fits him to assist the other counties in working out their local problems relative to building up a strong local club to be of the greatest service to its own members and a strong unit in the Pennsylvania Federation of Holstein-Friesian Clubs.

Ques.—If a man marries a widow named Elizabeth, with two children, what does he accrue?

Ans.—A second-hand "Lizzie" with two runabouts.

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

FEBRUARY 8, 1922

National Agricultural Conference

SECRETARY of Agriculture, Henry Wallace, tells us that the farmer's financial crisis menaces the consumer as well as the producer of farm products, because "the farmer can not continue to produce at a loss; and decreased production will result in prices so high that city consumers will complain bitterly." He states further, "that forty per cent of our people are directly dependent upon what they grow from the soil, and the purchasing power of that forty per cent can not long continue so seriously out of relation to the purchasing power of the other sixty per cent. If we do not recognize the national danger in this condition and take prompt measures to cure it the cure will come through the operation of brutal economic forces which will lay upon the sixty per cent, who do not live on the farms a burden as heavy as that which the farmers are now bearing, and a burden which will cause them even greater suffering.

"The complaints and appeals which are being voiced by the farmers and the people who speak in their behalf are not simply the recurrence of grumblings which have been heard from the farmers in past periods of depression. The truth is that we are passing through the most severe agricultural depression we have ever experienced."

The reports of the U. S. Department of Agriculture show that farmers lost $3,500,000,000 in 1921 in crop values alone compared with 1920, or $8,000,000,000 compared with 1919. All the farmers are asking for are honest markets, free from manipulation; for the chance through coöperative associations with one another to catch up with the procession of economic progress—to keep step with a business world which through its highly organized efficiency has left the great farming industry far behind and out of step with modern times, and we believe their claims are justified.

Your Neighbor

DID you ever notice that whenever any breeder looks through your herd that you have a feeling of encouragement? He may not buy a single animal that you price, he may not even ask you for prices, but the fact that he is interested enough to go with you among the cattle and comment on the merit of this one and the other has a tendency to increase your confidence and encourage better effort on your part. There is something about this neighborly manifestation of interest that has real value. It stimulates. It encourages.

So it is when you visit your neighbor's herd; he has a feeling of encouragement which though its value is intangible, it is no less real. Nor does it matter whether your neighbor is breeding the same kind or not. He invariably feels a more kindly interest in your breed if you have been with him among his animals.

Then, too, many a transaction has resulted from these neighborly visits, transactions, that means actual profit to both parties. It will pay to visit your neighbor breeder.

Black and White Only

THE attention of our readers is called to a letter appearing in this issue written by the veteran Holstein man, Mr. George E. Brown. Mr. Brown's reminiscences throw light on the actions and intentions of the pioneer importers of the Black-and-White breed, pioneers in the sense that the purity of blood of the cattle they brought to this country has been maintained so that the pedigree of many famous animals of to-day can be traced back to the stock Mr. Chenery and Mr. Whiting brought to this country.

While it is interesting to learn of early American Holstein history, these facts have very little bearing on the development of our breed to-day. Wisely or not, the founders of our herd book decided upon Black-and-White as the color scheme for our breed, and it is too late now to make any change. With over a half million animals of the breed in the United States alone, it certainly is not advisable to import animals that are not Black-and-White nor is it advisable to relax the registry rules and admit to registration animals varying from the predetermined color scheme. More than half a million purebreeds will give us all the opportunities we need for selection.

Lighting the Path

EMERSON was wrong. You may make a better mouse trap, but the world won't beat a path to your door unless you get your message across by advertising.

The two factories making Wrigley chewing gum in Brooklyn and Chicago are manufacturing the enormous total of 43,000,000 sticks of gum a day.

Forty-three million, the amount is staggering. How was the demand for this great pile built up and how is it maintained? The answer is *advertising*.

Of course, the product is good and pleased the public taste. But there are other companies, making a similar product that also pleased, and these remain smaller than the Wrigley firm, mainly because they do not extol the merits of their product from the mountaintops as does their great competitor.

Advertising is the lantern that lights the path to business in dark times.

We believe in giving people what they want, but we hain't got a drop left.—*Columbia Missourian.*

Name Your Choice

HOLSTEIN breeders are showing much interest in the delegate system of representation which will operate for the first time in the National Association at the Kansas City meeting, next June. Some of the state associations have nominated candidates, yet it must be remembered that it is the members who elect their representatives and that it is not necessary to follow any slate. Any ten members of the National Association in good standing can nominate a delegate and the vote of the entire membership of the state will elect delegates. Due notice of the procedure will be sent to each member by the secretary of the Holstein-Friesian Association of America.

As adopted at the St. Paul special meeting, the resolution bringing into being the delegate system, is:

> "Each district shall be entitled to one delegate, and one additional delegate for every 200 members or majority fraction thereof, residing in said district, as indicated by the list of members in the office of the secretary at the time the secretary sends out notices regarding nominations."

The World's Largest Ship and Its Food Supply

IN the spring of 1922 the Majestic of 56,000 tons capacity, the world's largest ship, will take her place at the head of the White Star Line fleet, in New York-Cherbourg-Southampton service. The Majestic will be about 2,000 tons larger than the Leviathan, the present largest vessel, and nearly 10,000 tons larger than the Olympic, owned by the same company.

The Majestic is a floating town, with homes for 5,100 people, of which 4,100 will be passengers. She will have quarters for about 1,000 passengers in the first cabin, 700 in second, and 2,400 in third.

To accommodate its passengers with sleeping quarters the ship will have 1,245 staterooms—there being 472 in first cabin, 212 in second, and 561 in third—besides enclosed dormitories for single men and women, respectively, in the latter class.

The staterooms range from a neat little one-bed room for a single traveler to elaborate suites of a half dozen rooms each, with parlor, private sun veranda, dining room, and bedrooms with private baths.

The main dining room has an area of more than a quarter of an acre, or 11,466 feet, being 117 feet long by 98 feet wide. Its ceiling over an area of 2,300 feet is 31 feet high. A restaurant for first-class passengers is 110 feet long by 54 feet wide, with a ceiling 23 feet high.

The Majestic's power installation is the largest ever fitted in a passenger vessel, consisting of four huge turbine engines for driving the hull ahead, and four reversing turbines. The weight of a single main turbine is 375 tons.

It is expected that the driving engines will deliver an average of 62,000 to 64,000 indicated horsepower and 100,000 maximum, through four shafts, to as many propellers, each 16 feet in diameter. These will make about 170 revolutions a minute.

The estimated speed of the boat will be about 23 knots an hour under normal conditions, or more than 26 statute miles. Oil will be used for fuel and about

5,700 tons will be consumed in a single crossing. There will be 48 boilers.

The Majestic will carry more food for a single round trip than any other vessel ever built. To feed the full number of passengers and crew for a round trip it will be necessary to stock the ship's refrigerators with 75 tons of meats, besides 10 tons of bacon and hams, 28 tons of fish, and 18 tons of poultry.

There will also be included in the stores for a voyage 1,000 each of plover, quail, snipe and pheasant, 750 each of partridges and grouse and 500 wild ducks, a total of 6,000 game birds.

The vegetables to be served with these supplies will include about 30 tons of potatoes, 7 tons of carrots and turnips, and about 10 tons of cabbages, besides several tons of onions and miscellaneous vegetables, including 1,600 pounds of hothouse tomatoes.

Fruits for the voyage will include 600 boxes of apples, 400 boxes of oranges, 60 boxes of pears, and one of hothouse grapes.

For desserts there will be one ton of ice cream and of jams and marmalades to be served at breakfast and tea there will be three tons.

To supply the ship's tables with bread and pastry 35 tons of flour will be required for each round voyage. The list of supplies calls also for eight tons of sugar and five tons of butter per voyage, besides three tons of tea and coffee, 80,000 eggs and 500 gallons of milk.

For those who care for such things there will be put on board each voyage 80,000 bottles of ale and stout, 1,000 quarts and 1,600 pints of champagne, 1,000 quarts, 1,300 pints of other wines, 4,000 bottles of whiskey, brandy and gin, and 300 bottles of liquors.

Smokers on board will be fortified with a supply of 250,000 cigarets and 2,240 pounds of tobacco per voyage.

Association Business

DURING the week ending January 14, thirty-three applications for membership were received at the office of the secretary. During the same period 2,822 certificates of registry were issued, 2,085 female, 737 male; 2,282 certificates of transfer were written, 1,523 female, 759 male.

The following prefixes were reserved during the week:

Cedar Ridge, William Buchholz & Son, Plymouth, Wis.

Harpers, H. E. Hostetler, Harper, Kans.

Lake De Noon, Reinhold Manske, Mukwonago, Wis.

Oso, William T. Tschierschky, Tracy, Calif.

Sejerome, E. B. Metcalf, Ashtabula, Ohio.

Spring Willow, H. A. Friedrich, Columbus, Wis.

Walwood, W. B. Davis, Kinsman, Ohio.

For the week ended January 21, forty-eight applications for membership were received at the office of the secretary.

During the same period, 2,570 certificates of registry were issued, 1,857 female, 713 male; 2,254 certificates of transfer were written, 1,543 female, 711 male.

The herd prefixes which were reserved are:

Alfacres, W. G. Patterson, Evansville, Wis.

Alta Crest, Burmeister Brothers, Waukesha, Wis.

Burnsdale, Harry Burns, Marysville, Ohio.

Conata, John T. Milek, Sturgis, S. Dak.

Coonhurst, Elam P. Coon, Milton Junction, Wis.

Glenoma, Louis Mohrfeld, Sharonville, Ohio.

Haycorn, C. J. Miller, Plymouth, Wis.

Hilaire, H. A. Soultz, Eugene, Ore.

Kuana, James A. Black, Juna, Idaho.

Land-O-Hope, O. P. Van Kirk, Milton, Pa.

Lewmace, Lewis Mason Waterstreet, Amsterdam, N. Y.

Monarchial, William Jennissen, Sauk Center, Minn.

Nether Hill, William Naedler, Neillsville, Wis.

Ocala, Equity Farm, Lewis, Kans.

Oldenburg, Charles Weidler, South Bend, Ind.

Ostalot, A. H. Newhouse, Ostrander, Ohio.

Palnud, W. B. Dunlap, West Salisbury, N. H.

Raelka, Ralph L. Bushey, Milford, Mich.

Seyob, Henry Boyes, Howell, Mich.

Sherman View, Milton D. Bloss, Canastota, N. Y.

Sunnyway, Arthur A. Moritz, West Bend, Wis.

Volhouden, Jacob Kooy, Elma, Wash.

Golden Willow, E. L. Peterson, Chisago City, Minn.

THE HOLSTEIN-FRIESIAN ASSOCIATION OF AMERICA,
F. L. HOUGHTON, *Sec'y.*

Who Put "Liar" in Familiarize

THE authorities of Kansas City expect a tremendous crowd when the members and delegates of the Holstein-Friesian Association of America meet there the first week of next June. We understand that cars will be provided for all who wish for them, but if anyone prefers walking, perhaps it would be advisable for them to familiarize themselves with the following rules for pedestrians, which we are told will soon be in force in that city:

1. Pedestrians crossing the streets at night shall wear a white light in the front and a red light in the rear.

2. Before turning to the right or left they shall give three short blasts on a horn at least three inches in diameter.

3. When an inexperienced automobile driver is made nervous by a pedestrian he shall indicate the same, and the pedestrian shall hide behind the tree until the automobile is passed.

4. Pedestrians shall not carry in their pockets any sharp instruments which may cut automobile tires.

5. In dodging automobiles, pedestrians shall not run more than seven miles an hour.

6. Pedestrians must register at the beginning of each year and pay a license fee of five dollars for the privilege of living. There shall be no rebate if they do not live the entire year.

7. Each pedestrian before receiving his license to walk upon the streets must demonstrate before an examining board his skill in dodging, leaping, crawling and extricating himself from machinery.

8. Pedestrians will be held responsible for all damage to automobiles or their occupants by collision.

Washington is the seat of government and the taxpayer is the pants pocket.

CLUB ACTIVITIES

Sale Closes Club

The Grade Dairy Heifer Club which was organized in the Fenton community, April, 1921, was closed January 7, with a show and sale held at Fenton, Iowa. Nearly 200 were present to see the result of the boys' and girls' work throughout the year.

Eleven heifers were exhibited—nine Holsteins and two Guernseys. The heifers were well grown and give promise of making good cows, and the results were gratifying to those responsible for the formation of the club.

Clarence Osborn won first prize on his Holstein heifer; Adolph Hanson won second prize; third and fourth prizes went to owners of Guernseys.

At the sale the average was $53.00, but none of the owners would part with their animals. Another club will be formed next spring and a number of youngsters have already signified their intention to join.

In connection with the heifer club show a Dairy Feeding and Management School was conducted by Professors Searles and Weaver, of the Iowa State College. There was a good attendance and much interest shown.

Vermont Association Nominates Delegates

The Vermont Holstein-Friesian Association met at Burlington, January 11th, President O. L. Martin in the chair. The nominations for state delegates to the Kansas City meeting of the National Association are: Dr. J. M. Allen, St. Johnsbury; F. B. Howe, Burlington; O. A. Thomas, Rutland; W. K. Farnsworth, Rutland; and F. M. Willey, of Cambridge.

C. L. Blackman, Field Secretary of the New England Holstein-Friesian Association, spoke on the New England sale which it is planned to hold at Springfield, Mass., in May.

There was a general discussion on the state bovine tuberculosis policy. The investigating committee appointed by Governor Hartness was present, listened with interest to the discussion and asked many questions.

The State Dairymen's Association held its meeting this week with an interesting program. Mr. Blackman spoke on "Improvement of Our Cattle Through Breeding." He mentioned the Iowa experiment in which a number of poor cows were purchased and bred to a Holstein sire.

The original cows averaged 3,673 lb. milk, 167 lb. fat in a year. Their daughters by the Holstein bull averaged 6,557 lb. milk, 275 lb. fat, and their granddaughters also by a registered bull, and so three-quarter bloods, averaged 10,063 lb. milk, 385 lb. fat.

Professor A. N. Rudnick, superintendent of Dairy Extension, Iowa State College, Ames, Iowa, spoke on "The Producer and Quality." He said that all things essential for growth are found in milk, and the best possible kind of product should be produced. In Iowa, the dairy industry was most prevalent in the northeast quarter of the state. That section is now prosperous, while the remainder of the state is greatly affected by the present low price of wheat corn and oats which caused the collapse of the recent land boom. During the high price period, many Iowa farmers disposed of their cattle but are now turning to the dairy industry. This will affect the eastern portion of the United States, first, because animals will be purchased there and shipped to Iowa, and second, because the Iowa cattle will now be better fed because of the low price of grain, and therefore will be heavier producers.

The speaker claimed that there was less butter that would score high than there was of the poorer grades. People will eat more good butter than they will poor butter; "better quality automatically increases butter consumption."

Professor Rudnick maintained that the milking machine has come to stay. Some of the best and some of the poorest products came from dairies where the milking machine was used. Scrupulous cleanliness was necessary and the man who said that a child could run a milking machine and that it need be washed once or twice a week is a menace to the dairy industry.

The dairymen watched with interest a moving picture film shown by the Quaker Oats Company.

Canadian Association Directors

The Canadian Holstein-Friesian Association has a rather peculiar way of electing directors. The directors for provinces other than Ontario are elected by mail vote, while the Ontario officers are chosen at the annual meeting. This year's ballot for directors representing provinces other than Ontario resulted in the election of all the old officers, viz: British Columbia, P. H. Moore, Essondale; Alberta, J. H. Laycock, Okotoks; Saskatchewan, C. W. Thurston, Regina; Manitoba, W. J. Cummings, Winnipeg; Quebec, N. Sangster, Ormstown, and P. J. Salley, Lachine Rapids; Maritime Provinces, Hon. Walter M. Lea, Charlottetown, P. E. I.

Community Club Organized

The Holstein breeders living around Augusta, Wis., organized a community club on December 19th, the first in the county.

Charles Newhouse was elected president, and C. F. Von Berg, secretary-treasurer. A membership committee of B. M. Arries, Earl Newhouse, Peter Magnussen, and Charles Cox will campaign for members. An outside speaker will probably be secured to address a dinner to be held by the club in January.

Re-Elects Officers

The Franklin-Hampshire Holstein Breeders' Association met at Greenfield, Mass., January 7th, Thomas E. Elder, of Mount Hermon, presiding. Prof. F. E. Savage, of the Animal Industry Department of Cornell University, spoke on "The Modern Dairy Ration," and told of the importance of proper mineral matter in the rations, of the various kinds of proteins and of full utilization of dairy animals. He advised feeding of legume hays, alfalfa and clover, corn silage and proper grain mixtures. Professor Savage suggested at current prices a grain mixture of 200 lb. bran, 200 lb. hominy, 100 lb. gluten feed, 200 lb. cottonseed meal, and 100 lb. oil meal.

These officers were elected: President, Thomas E. Elder, of Mount Hermon; vice-president, Harvey Copeland, of Colrain, for Franklin County; and W. W. Parsons, of Northampton, for Hampshire County; secretary and treasurer, E. J. Montague, of Amherst; executive committee, A. F. MacDougall, of Amherst; auditor committee, C. E. Clark, of Leeds; R. A. Warner, of Sunderland, and W. F. Forward, of Granby.

Unique Plan for Dairy Club

Seward County, Nebraska, has a novel plan for dairy calf club. This plan resulted from a conference between W. J. Kirkbride, of the Roberts Sanitary Dairy, and L. I. Frishbie, of the Agricultural College Extension Service. The dairy company proposes to put at the disposal of the extension service 20 or more good Holstein heifers. These will be placed with dairy calf club members and the only stipulation is that the first heifer calf be returned to the extension service and be used in the same way to give another boy or girl a similar start in the dairy business. When this part of the contract is fulfilled the original animal will become the property of the young club member.

Sheboygan County Elects Officers

At the annual meeting of the Sheboygan County Holstein Breeders' Association held at Plymouth, Wis., January 7th, Dr. A. H. Arpke was reëlected president. The office of vice-president was abolished. The appointment of secretary was left to the board of directors. Other officers elected: John Zoberlin, of Greenbush; E. C. Wipperman, of Sheboygan; J. M. Rock, of Greenbush; P. H. Leibenstein, of Adell; Emil Tittel, of Plymouth, and George Bilke, of Plymouth. After a spirited discussion it was decided to employ a paid secretary. County Agent Wendstadt had been acting in that capacity without salary.

Summit Club Plans Sale

At the annual meeting of the Summit County Holstein Breeders' Association held at Akron, Ohio, January 6th, J. E. Davis was reëlected president; W. E. Arnold, vice-president, and A. W. Bell, secretary and treasurer.

It was decided to hold the annual consignment sale the second week in October, at the Akron Fair Grounds.

An Educational Exhibit

THE Grove City cattle exhibit at the Pennsylvania Farm Show during the week of January 23d was certainly a splendid argument for the purebred industry. Three breeds figured in the exhibit. In each case a purebred female had started the young owner in the cattle industry.

The Jersey exhibit showed the descendants of a great cow, Eminent's Millie, of Park Farm, purchased in 1912 for $90. She was a great producer and she had some fine descendants. Although she had passed on, she made a number of good records in the cow testing association and so had several of her descendants. Three of her daughters, one granddaughter, and three sons had been sold for a total of $1,395. She had one daughter, eleven granddaughters, and two grandsons still in her owner's herd, valued at $3,950, making a total of $5,345 in ten years from an investment of $90.

April, 1918, Harry B. Edeburn, another member of the Grove City community, purchased a Guernsey two-year-old for $300. Two bull calves were sold for a total of $115. The original animal, two of her daughters, and two granddaughters were on show and were valued at $1,305. Quite a percentage of interest on the investment.

On June 23, 1917, Paul Searing, then eleven years old, purchased through the Grove City Cattle Club an eight-months old Holstein-Friesian heifer Silverena Urmagelsche De Kol, No. 359729, for $90. The animal, now a five-year-old, two of her daughters, a son and two granddaughters formed the black and white portion of this interesting exhibit. The first daughter was sired by "Maplecrest De Kol Highlawn Boy," No. 186938, whose dam had a record of 758.6 lb. of fat in a year as a two-year-old, and later produced close to 1,000 lb. of butter in a year. The first son, second daughter, and first granddaughter are sired by "King Moonlight Colantha De Kol," No. 243480, whose two nearest dams average 840.23 lb. of butter in a year; and the other granddaughter is sired by "King Pride Fayne De Kol," No. 295955, whose dam produced 970 lb. of butter in 305 days, and his sire's dam produced 1,470.59 lb. of butter in a year. The original cow, that cost only $90.00 as a calf, together with her offspring making up the Holstein exhibit, are valued to-day at $1,425.00.

This, however, is not all the story. The boys got their father interested in purebreds. Although the boys' calves were the first purebreds on the farm, six purebred cows and a purebred calf were later purchased for $2,915.00, which made a total investment of $3,055 in purebreds, including the calf club heifers. The present value of the herd is $5,975.00. The herd sire, the successor to a scrub bull, is "King Bride Fayne De Kol," whose dam has semi-official record of 19,475.50 lb. of milk and 970 lb. of butter in 305 days, and his sire's dam has a semi-official record of 28,403.70 lb. of milk and 1,470.59 lb. of butter in a year.

Movie Actor—But look here, if he's going to throw me into the rapids, how am I going to get out?

Director—That's all right. You don't appear again. —*Life*.

Cow Testing Association Reports

CLOSES SUCCESSFUL YEAR

The Edgar-Marathon Cow Testing Association closed a very successful year. The average milk production was 6,572 lb. milk and 254.3 lb. butter fat, a fine showing, as there were 429 cows tested during the year. Thirty-seven cows were thrown out as poor producers, 24 were sold for dairy purposes, and 10 were tested out for tuberculosis. Eighteen cows qualified for the Wisconsin Register of Production which requires a record of 365 lb. fat or more. The average cost of the feed consumed was $63.46, while the average value of their product was $110.76, leaving a net profit of $47.30 for each cow.

Eight of the first ten places were taken by Holsteins; Guernseys stood second and ninth. The eight grade Holsteins owned by Hart Brothers are in first position for herds with an average of 9,272 lb. milk and 337.9 lb. butter fat, and a net average profit of $81.10. Herman Pilgrim's nine registered Holsteins were second with an average of 9,264 lb. milk and 328.7 lb. fat, and a net profit of $72.73.

The four highest producers were black and white cows, the leader being a registered animal of the Pilgrim herd. This cow made over 40 lb. fat for eight consecutive months and produced during the year 12,261 lb. milk and 462 lb. butter fat.

LYON COUNTY, KANSAS

The high cow in the Lyon County, Kansas, Cow Testing Association for November is the registered Holstein "Pauline," owned by John Whittleton. She produced 1,859 lb. of milk and 70.6 lb. butter fat. The Whittleton herd had the highest average with 42.6 lb. butter fat.

There were 16 herds in the Lyon County Association and 172 cows were tested. Twenty-one animals made over 40 lb. butter fat in a month. The average was 713 lb. milk and 26.8 lb. fat.

During the month of October Lyon County occupied a high position in the list of Kansas testing associations, standing first in number of cows making over 40 lb. butter fat in a month and tying for first place for number above 30 lb.

COLORADO HOLSTEIN LEADS STATE

Lady Segis Pontiac Luria, registered Holstein owned by Whowell and Polley, of Johnstown, is high cow in butter fat production for November in Colorado, and high cow for the Johnstown Cow Testing Association. She produced 93.3 lb. butter fat and 2,514 lb. milk.

The high herd for the state consisting of Holsteins, is owned by Ray Gilbert, of Lamar.

HOLSTEIN BREEDERS IN PARLIAMENT

No less than eight members of the Canadian Holstein-Friesian Association were successful candidates in the recent Dominion general election. Several of these gentlemen are well known to American breeders, one of them being a former president of the Canadian Association. They are: Hon. S. F. Tolmie, Victoria, B. C.; J. Alex Wallace, Norfolk; G. A. Brethen, East Peterboro; J. W. Kennedy, Glengarry-Stormont, and M. E. Maybee, Durham, all of Ontario; E. W. Tobin, Richmond and Wolfe, Que.; T. W. Caldwell, Carleton-Victoria, N. B., and A. E. MacLean, Prince's, P. E. I.

HOLMEN, WISCONSIN, ASSOCIATION

The high herd in the Holmen, Wis., Testing Association, consists of registered Holsteins owned by Clarence Holter. During November they averaged 25.6 lb. butter fat. During the month 14 cows produced 40 or more lb. butter fat.

K. O. Gaardner completed another year's testing; his 23 cows averaged 290 lb. butter fat. The high cow produced 418.7 lb. butter fat and 7,348 lb. milk at a feed cost of $77.11, returning $127.58 profit above cost of feed. She was fed only silage, hay, cornstalks, corn, oats, bran and oil meal.

LIVINGSTON COUNTY FORMS FIRST TESTING ASSOCIATION

Livingston County, Michigan, has organized its first coöperative cow testing association. Nineteen of the 26 men are members of the Livingston County Holstein Breeders' Association, while no less than 22 of them own purebred stock. A second testing association is being planned and there are already ten intending members.

Officers of the first association are: Neevle Coondall, president; Charles White, vice-president; and Rex. Gorton, secretary and treasurer.

HIGH MINNESOTA AVERAGE

The November report of the Renville County (Minn.) Cow Testing Association is headed by a purebred Holstein owned by Fred Calef, of Hector, she making 1,952.8 lb. milk and 76.2 lb. butter fat. The Calef herd led with an average of 1,978 lb. milk and 69.9 lb. butter fat.

During the month of November four entire herds averaged over 40 lb. butter fat and 14 herds averaged between 30 and 40 lb. butter fat, which is believed to be the best showing in the state.

BUTLER ROAD COMPLETES YEAR

The Butler Road Cow Testing Association operating in Wakeman and Clarksfield Townships has completed another year's work. The animals averaged 9,022 lb. milk and 316.7 lb. butter fat.

The Lee herd held second highest position with average of 11,977 lb. milk and 432.65 lb. butter fat.

The third highest was the grade Holstein, Mary, with 14,530 lb. milk and 516.84 lb. butter fat.

Prilly Lyons Maple Crest, a registered Holstein, owned by N. W. Lee & Son, New London, Ohio, has the highest record, 19,067 lb. milk and 669.69 lb. butter fat.

Forty cows averaged over 10,000 lb. milk and 19 over 400 lb. butter fat. Three herds averaged over 10,000 lb. milk and 11 herds over 300 lb. butter fat.

HIGH AVERAGE PRODUCTION

A grade Holstein, owned by John Hesprich, of Lomira, Wis., led the Byron Cow Testing Association for December with a production of 1,941 lb. milk and 89.3 lb. butter.

Of the 458 cows tested, 94 produced 40 lb. butter fat or more during the thirty-day period.

Herd honors went to H. L. Weber, whose 20 registered Holsteins averaged 1,271 lb. milk and 44.65 lb. butter fat. Second place was won by the Holstein herd owned by Alfred A. Backhaus, fourteen cows averaging 1,228 lb. milk and 41.56 lb. butter fat.

STATE OWNED COW LEADS

A grade Holstein, owned by the Iowa State Soldiers' Orphans' Home, headed the December report of the Davenport Cow Testing Association. She made 1,969 lb. milk with a test of 3.6 per cent, making 70.9 lb. butter fat.

The Holstein dairy of R. M. Brandt, consisting of 14 animals, stood second with an average of 935 lb. milk and 33.9 lb. butter fat.

Wapsimoor Farm had several registered Holsteins in the honor list, and so did P. H. Naber.

NEW YORK HOLSTEINS LEAD

During October there were 26 dairy improvement associations active in 20 counties of New York State. The leader is a Holstein-Friesian owned by J. B. Harbeck, of the Western Allegheny County Association. She gave 2,827 lb. milk. Her nearest competitor was another animal of the breed, owned by O. J. Alberding, of the First Oneida County Association, with 2,334 lb.

Mr. Harbeck's cow was second for

butter fat production with 79.1 lb. butter fat. The Alberding cow was third with 77 lb. fat and the leader, who stood fourth for milk production, produced 79.6 lb. butter fat. She is owned by G. F. Grey & Son, of the Livonia Association, operating in Livingston County.

The previous month, Daisy May De Kol, a registered Holstein, owned by Harbeck, led the state associations for both milk and butter fat with a production of 95 lb. fat and 2,640 lb. milk.

HOLSTEINS LEAD IN DOOR COUNTY

During December 38 cows in the North Door County, Wis., Testing Association each made over 40 lb. fat, a registered Holstein, owned by Wm. Robinson taking first place with 1,736 lb. milk and 79.9 lb. butter fat. The high herd was that of the Black and White Farms, with 958 lb. milk and 32.0 lb. butter fat.

NINE OVER SIXTY POUNDS

Forty-six of the 328 cows tested during December in the Wrightstown-Greenleaf Cow Testing Association produced more than 40 lb. butter fat. Nine passed the 60-lb. mark. The high cow for the month is a three-year-old purebred Holstein owned by Boehlke Brothers of Little Rapids, Wis., she producing 1,876 lb. milk, 73.2 lb. fat. The high herd average was made by the purebred Holstein herd of T. R. McGrath, of Greenleaf, they averaging 1,431 lb. milk, 56.5 lb. butter fat.

EAGLE POINT, WISCONSIN

A grade Holstein owned by Herman Bowe took the high honors of the Eagle Point Cow Testing Association for the 30 days ending December 14, with a production of 1,785 lb. milk, and a total of 60.09 lb. fat.

Four hundred and twenty-one cows were tested during the month, 23 producing more than 40 lb. butter fat.

Herman Bowe's herd of grade Holsteins led with an average of 36.1 lb. butter fat. G. H. Polzin's herd of Holsteins was second with an average of 29.2 lb.

PRIZE WINNER COMES BACK

Brock & Jenks, of Genoa, New York, report that their great cow, Queen Carlotta De Kol, has recently closed another fine record. In 7 days she made something over 29 lb. butter, producing 783.2 lb. milk, and in 30 days she produced 3,085 lb. She is now on semi-official, and in December produced 3,247 lb. milk. It will be remembered that this great cow, last year, as a senior four-year-old, made 656.9 lb. milk, 30.25 lb. butter in 7 days, and 2,898.6 lb. milk, 123.23 lb. butter in 30 days. All four of these records appeared in the prize list, she winning fourth prize for her 30-day milk record; thirteenth for 30-day butter record; tenth for 7-day milk record, and twenty-fifth for 7-day butter record.

We are informed that there was no intention to have Queen Carlotta make a high butter record this year. She is a very persistent producer and a great milker and was handled so that her great milk-producing capacity shows to best advantage in her latest performance.

FINE RECORDS AT BELL FARM

The cattle at the Bell Farm are making good under the management of Paul B. Misner. Kolrain Nemesis Finderne has made 33.76 lb. butter in seven days, and this after closing a ten-months record of 808 lb. butter and approximately 19,000 lb. milk. For the week ending January 24th, this cow ranged from 72 lb. to 79 lb. milk a day.

Some of the younger cows are making fine records. Bell Farm Bakker, calving at two years and two months old, made 440 lb. milk, 24.16 lb. butter in seven days, which is a state record in class. She is still in test and is likley to increase this extremely creditable showing. On January 13th, she milked 51.3 lb. and produced 2.357 lb. butter fat. She had steadily increased until on the 23d, her production was 68.6 lb; 2.832 lb. fat.

Bell Farm Palmyra at two years and four months old, made 22.01 lb. butter in seven days. Bell Farm Generous at 28 months old, made 23.67 lb. butter. Bell Farm Maida, calving at 27 months old, had made 8 lb. fat in four days, and Hattie Valdessa Pontiac, freshening at 2 years, 3 months, was in test four days, and averaged 61.5 lb. milk, 2.783 lb. fat a day.

Naturally we were anxious to know what grain ration was being fed these animals to make them do so well, and Mr. Misner told us that the grain ration consisted of: three parts ground oats, three parts ground corn or hominy, three parts bran and one part oil meal. This ration is being fed at the present time to practically all the animals at the Bell Farm and the results show that it is a good one.

MADE GOOD SHOWING WHEN TESTED

In some herds official test records are made right along, in other herds the animals are occasionally given the opportunity to make records, while there are many herds in which no official work has ever yet been done, in some because the owners do not care to incur the expense, in others because they are busy or do not find time to do the work.

Harry C. Reynolds of Scranton, Pa., has not made any records for some years back. His last tested animal was Brighton Ophelia De Kol 3d, who as a junior four-year-old was run on long-time test. In 353 days she produced 18,763.3 lb. milk, 616.18 lb. butter, which certainly is a very creditable showing and on which she was awarded the 15th prize for butter fat production in the Holstein fiscal year 1914-15.

Mr. Reynolds runs his herd as a dairying proposition and sells his surplus young stock, which are of lines of breeding that have produced many famous animals.

SOUTH CAROLINA TESTING

In the month of November 109 cows were tested in the state of South Carolina, of which 49 were Holsteins. Twenty-four of these made 40 or more pounds of fat in the month and attained the roll of honor. The leader is the senior three-year-old Katie Paul Sadie Vale, owned by V. M. Montgomery, Spartanburg, with 89.423 lb. butter fat, 2,672.4 lb. milk. This great young cow won the state leadership in the senior three-year-old class for both seven and thirty days. Second highest place for a Holstein and for all breeds was taken by Inka Canary Korndyke, owned by J. T. Willard, also of Spartanburg. She made 1,924.5 lb. milk and 73.8 lb. fat.

New thirty-day state class records were made by Polly Fellinga Posch, a senior two-year-old and the junior three-year-old Copia Spring Farm Esther. Polly Fellinga Posch made 68.621 lb. fat and Copia Spring Farm Esther made 68.338 lb. fat.

Beaver Dam Laura Alcartra, owned by H. D. Jordan, of Ridge Spring, made 1,846.5 lb. milk, 65.1 lb. fat in the month as a junior three-year-old. Six other cows in the herd made over 50 lb. fat, and five others more than 40 lb.

St. J. A. Lawton, of Charleston, had six in the honor roll, headed by the mature cow Burke Roe 4th, with 1,732.5 lb. milk, 52.9 lb. fat.

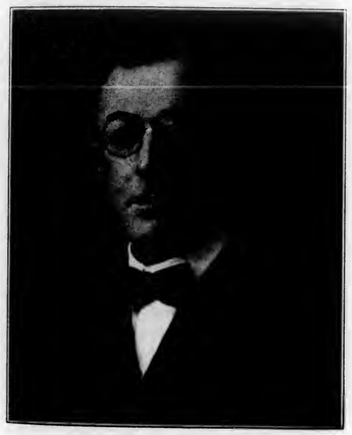
Besides Inka Canary Korndyke, Mr. Willard had six others in the honor roll. Mr. St. J. Lawton had three grade Holsteins on test with the meritorious records of 1,848 lb. milk, 61.5 lb. fat; 1,279.5 lb. milk, 49.5 lb. fat; and 1,230 lb. milk, 45.8 lb. fat, respectively.

During December 108 cows were tested; 45 were Holsteins, and of these 30 made the honor roll. Again Katie Paul Sadie Vale headed the list with a total of 2,917.1 lb. milk, 86.0 lb. butter fat.

Other very good Holstein records are those of Mr. Montgomery's cows, Princess Nell Ormsby, with 2,275.4 lb. milk and 76.9 lb. fat; Strickland Farm Ella Pontiac, with 2,563.7 lb. milk and 75.1 lb. fat; Copia Spring Farm Esther, with 1,824.4 lb. milk and 67.2 lb. fat. Icy Walker Colanthra, a mature cow owned by H. D. Jordan, produced 1,794.9 lb. milk and 69.1 lb. fat, while Clintonia De Veries Queen, owned by J. T. Willard, produced 1,858.5 lb. milk and 62.1 lb. fat. The senior two-year-old Clemson Queen Ona Bernardo, owned by the Clemson College, made 1,365.6 lb. milk and 42.0 lb. fat.

WANTED

Set of Herd Books, as complete as possible. State price for cash.



M. L., care of this paper.

There are no longer any "idle rich." They are all busy getting married or divorced.

PENNSYLVANIA A PIONEER STATE IN BOVINE TUBERCULOSIS REPRESSION

Pennsylvania ranks third among the states in the number of fully accredited tuberculosis herds of cattle. Pennsylvania is the pioneer state in bovine tuberculosis repression. The first testing was begun as early as 1892, and on February 18, 1896, a definite plan for the repression of tuberculosis was adopted which included the issuing of a certificate to herd owners after their herd had been tested and the reacting animals removed from the premises. The present Accredited Herd Plan provides for the issuing of a similar certificate.

Since the adoption of the Federal Accredited Herd Plan in Pennsylvania, 2,585 herds comprising 42,888 head of cattle, has been tested, and more than 1,000 applications from herd owners who wish their herds tested for the first time are now on file. This is quite a contrast

DR. T. E. MUNCE,

Dr. T. E. Munce, State Veterinarian of Pennsylvania, President of the U. S. Livestock Sanitary Association.

with the state of public opinion that existed twenty-nine years ago; when Dr. Pearson first took up tuberculin testing in Pennsylvania at that time he experienced great difficulty in finding any owners willing to permit the use of tuberculin on their cattle.

The direct financial loss that livestock breeders have suffered from the spread of tuberculosis in their farm animals by allowing the disease to go unchecked, together with the growing public demand for healthy animals for breeding and other purposes as well as the demand for milk and dairy products from tuberculosis-free cattle has had a great deal to do with the increased enthusiasm with which the herd owners have taken hold of the work.

In addition to this, the livestock breeder has to consider tuberculosis eradication from an economic aspect. It not only insures him against loss from the disease itself, but it increases the demand for dairy and meat products, as well as an increased demand for any surplus cattle he wishes to dispose of, and in each instance he usually receives an advance in price.

In Pennsylvania close attention is given to sanitation and disease prevention. Infected premises are cleaned and disinfected under the personal direction of men trained in that line of work. Preventive measures are outlines to the owners; for unless livestock that has been pronounced healthy are surrounded with the proper safeguards, we may expect the reoccurrence of disease.

As the result of our efforts so far, it is now possible for an owner to establish from the start a tuberculosis-free purebred herd.

A list will soon be available giving the names and addresses of owners of Accredited Herds and those herds credited with one negative test. The list is arranged alphabetically by breeds and counties and covers 1,836 herds comprising 27,769 cattle. Of this number 12,480 are purebred cattle. Of the purebreds under this plan, either Accredited or credited with one negative test, 43% are Holstein; 20% Jersey; 19% Guernsey; 11% Ayshire. The remainder or 7% of the purebreds are Shorthorn, Hereford, Angus, Red-Polled, Durham, Devon, Brown Swiss, and Dutch Belted.

T. E. MUNCE, *State Veterinarian.*

HE WILL MAKE GOOD

August J. Rammer, of Sheboygan, Wis., owns fifteen grade Holsteins. This is his entire herd. They were enrolled in the Falls-Wilson (Wis.) Cow Testing Association and headed the list for the year. Ten of these animals averaged over a pound of butter a day for the year. The herd averaged 10,416 lb. of milk, with an average test of 3.66 and average butter fat production of 380.8 lb. The leader, named "Kicker," made 11,559 lb. milk, 467.2 lb. butter fat, averaging 4.04%. She was beaten for milk production by three of her stablemates, each of which milked 12,000 lb. but did not test quite as high.

The cows were milked twice a day and there were no attempts to make any large records. They were handled under ordinary farm conditions. Besides these grades, Mr. Rammer has seven registered females, which all have the same sire and are from three cows that Mr. Rammer purchased two years ago. Their owner says he is only sorry he did not start with registered Holsteins sooner.

BUYS ORMSBY BULL

John Fasnacht and F. H. Fredericks, of Madison Lake, Minn., purchased a son of King Colantha Ormsby Bess from the Mankato Holstein Farms, Mankato, Minn. The dam is one of the Marlow and Randall's good young cows. She has a ten-months record of 550 lb. butter and nearly 13,000 lb. of milk, and is now on test again and promises to materially increase this. Her two-year-old daughter brought $2,000 at the Minnesota State Holstein Breeders Sale at Faribault, last spring.

NORTH DAKOTA, TOO

A party of four consisting of C. C. Lake, North Dakota County Agent; F. E. Tucker, of Carrington, N. D., secretary of the Bankers' Investment Company of Minneapolis, which owns a string of banks in Montana, North Dakota, Minnesota and Wisconsin, and two prominent stockmen, N. J. Nead, of Kensal, and George Herman, of Carrington, have been traveling around Oshkosh, Wis., and purchased 70 head of high-grade cattle which were shipped Christmas morning to Carrington and Kensal, N. D. There were nine purebreds and 67 daughters of purebred sires in the shipment.

"North Dakota for the last five years has gradually been taking up dairying," one of the party stated, "until to-day it is becoming a prominent industry." The farmers in searching for diversified farming have hit upon dairying, which is proving very successful. Mr. Lake, in connection with the banks of that section, canvassed the county with the result that the banks agreed to finance the farmers in the purchase of three carloads of Holsteins. Four banks are interested in the project.

POSTONS DONATE BULL TO DAIRY CLUB

Spangle, Washington, has a dairy club that owns grade Holsteins and this club was recently given a choice registered Holstein bull calf by A. H. Postons & Sons. The dam of this calf is now in test milking right around 90 lb. of milk a day. The dairy club movement is growing rapidly in this section of the country.

The Spangle club is operating under the guidance of R. H. Rudd. There is a similar club at Kit Carson, under O. D. Smith, one at Chattaroy, in charge of Mrs. E. I. Janney, and one at Cheney, under L. M. Hartley.

Each club or the parent of one of its members owns a high-class registered sire.

KENTUCKY TO ARKANSAS

The State Board of Control of Charitable Institutions purchased 54 milkers for the State Dairy Farm, located at Charity, six miles west of North Little Rock, Arkansas. Fifteen of the animals are registered, the rest are high grades.

Chairman Hamp Hall stated that the herd was being built up with the hope of furnishing milk to all four state institutions at Little Rock—the Deaf Mute Institute, the School for the Blind, the Confederate Home, and the State Hospital for Nervous Diseases.

The 54 animals consist of Holsteins and Jerseys in equal numbers and were obtained around Shelby, Ky.

POOR HOPES

"Have you heard my last joke?" asked the Pest, as he stopped the Grouch on the street.

"I hope so," replied the Grouch, as he kept on traveling.

A PAID SECRETARY FOR THE HOLSTEIN BREEDERS INOPPORTUNE

An occasional breeze of peculiar business sense often originates from sources of impracticability. We have all heard of the day dreamer who loves to do big things, theorizes with an excellent sense, but because of his lack of experience, falls miserably short of effecting a proper channel for the ailment brought to him from occasional idealists.

The question to ask yourself is, would a paid secretary for the Holstein breeders of Sheboygan County be an asset to the county? Would you care to add to your already burdensome taxes an additional assessment to the support of the present association? Would you like to add another $3,000 expense to the $1,000 already incurred in the upkeep of the present association? Would you (and some of us have) present the State Association with money if you knew that the local association is delinquent by several hundred dollars and that its liabilities cannot be met until assessment and dues are collected, back for several years? If you knew that some of us have not even paid the small sum of $1.00 in dues would you expect that a tenfold or twentyfold sum would be paid with greater ease?

In the above questions, though quite inadequate for complete argument, lies the root of evil to effect organization among farmers. You have read of the duplicate American Coöperative Association, organized for no other purpose than which occurred in the community of one of our rapidly growing northern counties. There existed a well organized Equity Local and things were running comparatively well. Suddenly, like a volcanic eruption, there appeared in our midst a silvery-tongued slippery eel who bled far and wide, in that quiet little country, farmers who already were members of an exact organization What was the result? A rapid falling off of members in the Equity, a rush for stock, a quiet spell and alas, the community had no coöperation at all. You know where the A. C. A. is.

The conclusion we can readily draw is this, an overdose will kill. The paid secretary proposition will be no more than a duplicate of what you have in your county now. "For the love of Milk." Every village, town and city has its cattle buyers, most of whom are fair-minded men, endeavoring to adjust their business with the producer in an equitable way, eliminating excessive commissions and yet drawing a reasonable livelihood. These men will not harass the farmer if the latter will impress the idea that his fine-grade heifer is worth all that he asks. These buyers are bringing thousands of dollars in this county each year and none of us would care to deny them a fair commission. While we would eliminate the middleman you cannot prevent an independent buyer from doing business but you can educate him to work for your interests by securing buyers and asking for his services at a reasonable rate. There is not a single buyer in this county who makes his home here, that would not be a booster for his county.

And again you have been given opportunity through your County Agricultural Committee, the services of the county agent, who, through his attention is called to many fields, continually carries on an oral and written advertisement for sale of stock. Who is willing to connect buyer and seller if you will but coöperate.

Those of you who would hire a paid secretary are asked to delve and ponder a little more and then ask yourselves if after all it is but a lack of proper organization and neglect to attend meetings, and the voicing of your initiative in the presence of many. If you can see fault or can give constructive criticism or realize the need of greater action and resulting business, please be forward enough to expand your ideas at the meeting of your fellow breeders.

A very suitable method for increased business and better service to buyers with due consideration for both large and small breeders could easily be worked out, if the local meetings would be 100% in attendance and each member would take care of his individual obligation, financially, socially, and in advertisement.

A strong argument in the improvement of conditions would be to unite and concentrate our efforts to increase the membership of our local association. The county has many more breeders and all should be convinced that if they are residents of said county they owe it to neighbors who give active support to the local association, an organization working for the good of the entire county.

Think it over

(Signed)

J. L. Wenstadt, *County Agent. Plymouth, Sheboygan Co., Wis.*

THE MISSOURIAN LOVES A HOUND

The Missouri Agricultural College is authority for the story that a Missouri farmer had purchased a kitchen sink with the necessary fittings, seven years back, but ever since had felt too poor to make installation. The day that Mr. Lehmann of the college and his demonstration truck visited this man's home, a hound dog also arrived in a crate from Iowa. for the owner of the long-unused sink, who had paid $40.00 for the hound and $3.70 additional for express charges, while the cost of an indoor pump, kitchen sink, ordinary drain and the necessary piping is about $45.00 in that district, and this also pays for the work of installing.

SOMEONE WAS PLEASED

Born, at Rockingham Hospital, on November 20, a son to Mr. and Mrs. Thomas Mann. Congratulations.

All together, the affair was a success and a credit to all in any way responsible.—*Bellows Falls Leader.*

BLOOMINGDALE BULLS TO PENNSYLVANIA

Bloomingdale Farms recently had the pleasure of entertaining Mr. Ross A. Corey, of Conneautville, and Messrs. Jonathan Bichel and Herbert J. Seibert, of Myerstown, who after looking over our young calves selected two of the best.

King Model Hengerveld Korndyke, No. 35224, was purchased by Mr. Corey. This young bull is sired by our senior herd sire, King Model, the famous son of the first 40-lb. heifer, Mabel Segis Korndyke. The dam of this young bull is Segis Hengerveld Korndyke Johanna, with a record of 396.1 lb. milk and 22.73 lb. butter in 7 days, and 1,984.5 lb. milk and 86.19 lb. butter in 30 days, she being a daughter of King Hengerveld Johanna Korndyke and Pietertje Segis Johanna Ormsby 3d. Her sire is a grandson of the world's record Finderne Pride Johanna Rue. This youngster through his sire and dam traces four times to King Segis as well as to Hengerveld De Kol and Johanna Rue 3d's Lad.

Messrs. Bichel and Seibert purchased the young bull King Bloomingdale Fayne, No. 345219, sired by our junior herd sire, Bloomingdale King Fayne, who traces through his sire, King Pontiac Hengerveld Fayne, to the only double century sire, King of the Pontiacs. His dam, Pietertje Fayne Johanna, has three crosses of the same blood that produced the world's champion milk producer, Segis Pietertje Prospect. This young sire possesses a combination of breeding bound to produce results, which is being proved by the exceptionally fine individuality of his sons and daughters. The dam of this young bull is Mollie Fayne Alcartra, with a record of 609.7 lb. milk and 28.83 lb. butter in 7 days at 5 years, and 451.0 lb. milk and 26.39 lb. butter in 7 days, and 2,111.60 lb. milk and 105.24 lb. butter in 30 days, and 15,242.3 lb. milk and 733.77 lb. butter in 305 days at 4 years. She is a granddaughter of King of the Pontiacs, giving this young calf a double cross of the blood of this great sire. Her daughter, Mollie Fayne Alcertra 2d, has recently completed the following record: 445.0 lb. milk and 18.55 lb. butter in 7 days and 18,009.2 lb. milk and 783.9 lb. butter in 365 days.

The individuality of these young calves combined with the blood lines represented in their breeding gives them the right to sire both splendid individuals and large producers.

PETERSON BROTHERS INCREASING HERD

Peterson Brothers, of Alden, Minn., have been adding to their herd, buying some good females from S. F. Ruble & Sons, of Albert Lea, and a fine young bull from Fred C. Steele & Son, of Conger, Minn. The sire of this bull won first prize at the county fair and third at the Minnesota State Fair. The dam has a cow testing association record of over 400 lb. of butter fat made in a year, as a heifer, and is a granddaughter of King of the Pontiacs.

COLORADO DAIRYMEN ACTIVE

Prices for dairy stock around Lamar, Colo., are holding up well. Good grades bring from $125 to $200.

A number of good animals were added to the Arkansas Valley Cow Testing Association during November. The amount of milk obtained by association members has greatly increased during the month, and the Lamar condensery reports a big increase in new patrons over the corresponding month of last year.

The Model Dairy Company of Holly has an eighteen-months-old heifer in milk that has not yet freshened. She has been milking for the past three months, and during November produced 570 lb. milk, 18.2 lb. butter fat, a remarkable showing.

Otto Harvey, formerly herdman at the Green Mountain Dairy, has purchased ten cows from his old employers and starting a small dairy of his own on one of the American Beet Sugar Company's farms. L. Wirt Markham is disposing of his grade dairy and from now on will keep only purebreds.

COLANTHA BULL FOR CONNECTICUT

To take the place of their former herd sire Sir Inka Prilly Segis Ophel, A. E. Johnson and A. C. Lake, of Bethlehem, Conn., have purchased from D. W. Field, Montello, Mass., a splendidly bred young bull. The sire of this bull is King Rag Apple Aaggie Colantha, leading herd sire of the D. W. Field herd. He is a son of Rag Apple Aaggie Colantha, 41.27 lb. butter, 713.4 lb. milk in seven days; 163.67 lb. butter, 2,851.3 lb. milk in thirty days, as a senior four-year-old.

The dam is a daughter of Colantha Sir Aaggie, himself a great sire, a son of Colantha Johanna Lad, from the former champion cow, Aaggie Cornucopia Pauline, the first animal under full age to make a 30-lb. official seven-day butter record. The dam's dam has a record of 31.13 lb. butter from 684 lb. of milk in seven days and she is a daughter of Colantha Sir De Kol Korndyke. The young bull traces four times to the great Colantha Johanna Lad, one of the greatest transmitting sires that the Holstein breed has ever developed.

THIRD PORTO RICO SHIPMENT

A shipment of six registered Holsteins to Porto Rico was made December 30th by F. N. Reaves, of Pittsburgh, Texas. These animals were shipped by express and will go to San Juan from the port of Galveston. This is the third shipment from Pittsburgh to Uncle Sam's West India Provinces during the past few months.

Sixty head of dairy cattle consisting of Holsteins and Ayrshires, have been shipped from the Fraser River Valley to China. The Hong Kong Dairy and Storage Company were the purchasers.

OGDEN LIVESTOCK SHOW

The Holstein classes at the Ogden, Utah, livestock show, were judged January 4th. O. S. Potter was the heaviest winner, his animals getting both female championships. Nelson Brothers, of Woods Cross, Utah, won Grand Champion honors on their herd sire, King Copia Rag Apple of Cherry Creek.

The Utah Agricultural College won the Student Judging Contest, competing against a team from the Brigham Young University. The exhibitors were: Utah School for the Deaf and Blind, Ogden; Ancel Hatch, Woods Cross; Nelson Bros. Company, Woods Cross; State Industrial School, Ogden; C. S. Potter, Ogden; Clark Hatch, Woods Cross.

Awards: Bull, 3 years old or over: first, Hatch, on Posch, Ogden; second, Utah School for the Deaf and Blind, on Jane Garden DeKol Korndyke. Senior yearling bull: first, Nelson, on King Copia Rag Apple of Cherry Creek. Junior yearling bull: State Industrial School, on King Bess IX. Senior bull calf: first, Potter, on Lomond View Abbekerk Matador. Junior bull calf: first, State Industrial School; second, Nelson; third, Potter, on Sir Pontiac Glade. Cow, 3 years old or over: Utah School for the Deaf and Blind, on Maplemont Artis Beets; second, State Industrial School, on Aaggie Pontiac Weber Korndyke; third, State Industrial School on Lady Posch Fidessa Weber. Cow, 2 years old: first and third, Nelson, on Belle Homestead, of Cherry Creek; second, Potter, on Langland Beauty Matador. Senior yearling heifer: first, Potter, on Gipsy Korndyke Hannah; second, Utah School for the Deaf and Blind, on Deeanbee Wasatch Lavina; third, Potter, on Sara Ann Duplicate.

Junior yearling heifer: first, Hatch, on Lady Gewina Ormsby; second, Nelson, on Rag Apple Fytge Pet; third, Nelson, on Lady Netherland Fytge. Senior heifer calf: first, Utah School for the Deaf and Blind, on Deeanbee DeKol Artis; second, Potter, on Lomond View Colantha Banostine; third, State Industrial School, on Weber Dutchland Blossom. Senior heifer calf: first, Potter, on unnamed; second, Utah School for the Deaf and Blind, on Deenanbee Abbie Johanna II; third, State Industrial School. Junior heifer calf: first, Potter; second, Utah School for the Deaf and Blind; third, Nelson.

Calf herd: first, Utah School for the Deaf and Blind; second, Potter; third, State Industrial School.

Senior champion bull: Hatch, on Posch Ogden. Junior champion bull: Nelson, on King Copia Rag Apple, of Cherry Creek. Senior champion female: Potter, on Maplemont Artis Beets. Junior champion female: Potter, on Gipsy Korndyke Hannah. Grand champion bull: Nelson, on King Copia Rag Apple, of Cherry Creek. Grand champion female: Potter, on Gipsy Korndyke Hannah.

HELM HERD WILL MAKE RECORDS

The great dairy herd of registered Holsteins owned by Frank M. Helm, of Fresno, Cal., bids fair to make some big records this testing season. There are now 36 head in preparation for official work under the care of Herdsman Harry Redd. Two nice seven-day records have just been completed. Helm Lady De Kol Pontiac Burke made 18.35 lb. butter, 379.8 lb. milk in seven days, and Helm Lady Hiske Mead made 19.26 lb. butter, 420.7 lb. milk. Both are two-year-olds.

Natoma Hermosa Pontiac lately completed a 305-day record, making 702.43 lb. butter, 16,206.3 lb. milk. She is a four-year-old and is a daughter of King Pontiac Mayflower, a son of the King of Pontiacs and Mayflower Lilith Pauline 2d, former world champion three-year-old.

ASHMAN BACK AT WALCOWIS FARMS

Fred Ashman, who for some time was herdsman at the Walcowis Farms of Lake Geneva, who resigned his position last spring and for awhile was with the Milford Meadows Stock Farm at Lake Mills, has returned to the Dickenson Farm. Mr. Ashman will resume charge of the cows on the long-time test and now has six cows and heifers making short-time records. The Holstein men of Walcowis County will be glad to have Mr. Ashman back as, in his care, the Walcowis animals made records that helped to make Walworth County famous.

Mr. Boyd Dickenson is making a trip looking over some of the big herds of Pennsylvania, New York and the East and is already talking about next fall's National Dairy Show.

IOWA STATE BUYS FROM RENSINK

Thirty head of choice Holstein cattle have just been purchased by the State of Iowa and will be placed at the State Hospital at Cherokee. They were obtained from the Rensink dairy at Sheldon, Iowa.

The Cherokee Hospital has 130 milch cows, many of which have won prizes at near-by fairs. The new purchase consists of 15 milkers, 10 yearling heifers, and a fine young bull. They will be placed in the new hospital dairy barn. This structure is 36 by 100 feet, and cost $10,000. It is planned to build an addition to this, making it twice as large and to equip it with every modern dairy appliance.

THE DIFFERENCE

"What's the difference between a parrot and a preacher?"

"I don't know—never thought about it—slip it to me."

"Well, simply this: the parrot swears without thinking and the preacher is often forced to think without swearing."
—*Florida Times-Union.*

TIGHT BINDING

ALBERTA GOVERNMENT HERD POLICY

The provincial government of Alberta, Canada, owns a number of agricultural school farms and has decided to have a large herd of a single breed on each farm instead of having a number of breeds represented in each herd. The farm at Raymond, Alta., has been selected for the Holstein herd. In this school will be taught a system of intensive irrigation farming. Other farms will have Herefords, Aberdeen-Angus, and Shorthorns, both beef and dairy types. This definite policy of livestock allocation has just been outlined by the Hon. George Hoadley, Provincial Minister of Agriculture. It is also intended to stock the provincial demonstration farms not connected with agricultural schools.

ACTIVE DEMAND FOR WISCONSIN CATTLE

During Christmas week two carloads of grade and purebred Holsteins were shipped from Cumberland, Wis., to Red Wood Falls, Minn., and one carload to Mason, Wis. The week before, a full carload was shipped to Duluth. The Minnesota cattle were consigned to D. L. Crimmins and the Mason shipment to E. Kobelt. Mr. Crimmins, who is a large landowner and dealer, says that dairying is much safer business than corn growing. There are men in the vicinity of Red Wood Falls with three crops of corn on hand. They held these for a higher price and the deflation drop hit them hard. Some of these men were worth $7,000 or $8,000 a year or so ago, and to-day are in debt.

ALMOST A HUNDRED

Miss Sarah Netherland DeKol, a five-year-old owned by Union College, Lincoln, Neb., recently closed a very nice record. She reached 99.5 lb. milk in a day but failed to attain the century mark. In seven days she made 29 lb. butter, 660 lb. of milk, and her thirty-day record is 120 lb. butter, 2,478 lb. milk.

Miss Sarah weighs 1,250. Her daily ration consisted of sixteen pounds of mixed grain, six pounds of dried beet pulp, eight pounds of alfalfa hay, and twenty pounds of beets.

BUYS PART OF STURGEON HERD

Sixteen head of registered Holstein heifers composing part of the R. C. Sturgeon herd, have recently been purchased by T. B. Pearson, of Tulare, Cal. Mr. Sturgeon is selling these animals because his duties with the Farmers State Bank take up much of his time and he is unable to give his herd the attention they deserve.

Mr. Pearson already owns a herd of high-class animals and his new purchase will form a desirable addition to those he already has.

HORNLESS HOLSTEINS BIG PRODUCERS

The vice-president of the Holstein-Friesian Association of America, Mr. George E. Stevenson, is famous among livestock owners of this country because of his success in developing a hornless strain of purebred Holsteins. Some day, we are going to tell you more about his work. That the animals of the Origin Herd retain the inherent capacity of the Holstein to produce is shown by the fact that one family in the herd, for a long time held the world's record for mother and daughters, one animal holding the world's record for butter production in two successive lactation periods and being still the world champion for yearly work in the senior four-year-old class. This animal, Keystone Beauty Plum Jo-

GEORGE E. STEVENSON,

Vice-President of the Holstein-Friesian Association of America. Toastmaster at the Banquet of the Pennsylvania Federation of Holstein-Friesian Clubs, January 25, 1922.

hanna, made her great year record in strict official test and has a long list of large records made for different periods and at different ages.

The trait of hornlessness is dominant in cattle, many scientific authorities assert. If so, it would seem that it is foolish to raise animals to maturity and then forcibly dehorn them, running the risk of accidents both to the animals and to their attendants, especially so when, by the use of naturally hornless bulls, calves can be produced that will never develop horns. Some of the greatest herds in the country, notably that of the late Peter Small, have been headed by bulls from this herd, and Mr. Small was regarded by those who knew him well as being the possessor of excellent judgment in his breeding operations.

NOT SENTIMENTAL

She—Don't you just love to motor in the moonlight?

He (without looking up from the flittering road)—Yes. It gives a fellow a better chance to fix the blow-outs.—*Wayside Tales.*

FINANCIAL CREDIT A PRESSING PROBLEM

"Fifty years ago there was land in abundance for all wha cared to farm. It could be had for the mere living on it, or for two or three dollars an acre. To-day that land is selling at from one hundred to three hundred dollars per acre. Fifty years ago the young man who had a will to work, who had a good wife, and who had saved enough money to buy a team and a few simple implements, could move into the great West with the almost certain assurance that after a time he would own his own farm and home. To-day a capital equal to from twenty to fifty thousand dollars is required to carry on farming in the great surplus-producing states. The matter of financial credit, therefore, has become one of our most pressing problems."—*Secretary of Agriculture Henry C. Wallace.*

MICHIGAN HOLSTEINS FOR PENNSYLVANIA

Two carloads of Holsteins have just been purchased around Adrian and Hudson, Mich., by Pennsylvania parties. County Agents Warner and Yerger, with H. M. Brown, Will Wilson, and B. D. Sleese, made the purchases. One car will come to Indiana, Pa., and the other to Shelocta, and will be distributed among dairymen in the vicinity of these towns.

WITMER GROWS TURKEYS

Sam T. Witmer, of Union Deposit, Pennsylavnia, is a good poultryman as well as stockman, and specializes in large turkeys. One of the birds raised this season weighed 35 lb. This is a little too heavy for the ordinary family and it looked as though there would be no sale until Charlie Neff, the well-known Union Grains salesman, purchased the bird and had it raffled off in Harrisburg.

QUITE A FELLOW

There is a South Dakota County Agent by the name of L. L. Lake, who has been traveling around Shawano County, Wis., picking up grade Holsteins and he has already secured three carloads.

The friends of Mr. Lake claim that he is the biggest county agent in the world. He is a man 6 ft. high and weighs a trifle over three hundred pounds.

DAIRY SHORTHORN MAKES GREAT RECORD

Melba 15th of Devarala, an Australian dairy Shorthorn, has recently completed a year record of 21,633.5 lb. milk, 945.5 lb. butter fat. This is the highest record for an animal of this breed yet reported, and is equivalent to 1,193.13 lb. butter, figured on the 80% or Holstein basis. This cow is owned by the Devarala Estate, Gunradia, New South Wales.

KEARNEY DAIRYING MOVEMENT

A carload of 21 Holstein milch cows arrived at Kearney, Neb., December 19, for distribution to farmers in Buffalo County. They were purchased in Wisconsin and it is expected that a number of more such importations will be made during the winter months. Local bankers and the Kearney Chamber of Commerce are coöperating in a movement to promote dairying.

A 24-LB. TWO-YEAR-OLD AT FIRST ATTEMPT

Dorothy Jewel Pontiac Korndyke, at the age of 31 months has just completed a record of 469.7 lb. milk, 24.63 lb. butter, her milk averaging 4.02 per cent.

This heifer is owned by "Doc'" Webster. She was handled by Carl Degnitz, of Holland, Wis. This was Mr. Degnitz's first attempt at official testing and her record is all the more creditable on that account.

MONTANA DAIRYMAN BUYS ENTIRE HERD

George Keehn, of Baker, Mont., was the recipient of 31 head of purebred Holstein two-year-olds and a registered bull on December 21. These were purchased for him by his father, Charles Keehn, around Blue River, Wis.

Dairying in Fallon County is on the increase and Mr. Keehn is one of the leaders in his community.

As a foundation for a purebred herd, W. R. Cuthbert, of Barron, Wis., purchased from Post Brothers and Pitzer a registered Holstein cow. Mr. Cuthbert has a good herd of grade cows and has had a purebred sire for several years. He feels that he is now in shape to develop a high-class herd of purebreds.

Dr. J. F. Barnwell, of Johnson City, Texas, sometime ago purchased a fine registered Holstein cow for $250.00. December 20th she presented him with twin heifer calves, consequently the doctor felt very good around Christmas time.

H. B. Gibson, of Waterloo, Iowa, paid $150 a head for a carload of high-grade Holsteins purchased around Cedar Grove, Wis. Most of the cows were enrolled in cow testing associations, had good records, and were real individuals.

Wm. Case & Son, of Vernon Center, Minn., recently purchased a two-year-old registered Holstein from Frank Hannay, of Amboy. The heifer is sired by the 30-lb. bull, Keep On Rag Apple Segis.

Fred W. Merkt and Adolph J. Labuwi, of Rubicon, Wis., have purchased a yearling son of the 33.7-lb. cow, Rigtje Daisy DeKol. The sire of this bull is King Pabst Pontiac Hengerveld.

THOUGHT OF GOOD THINKERS

Wherever we may be born, in stately mansion, or in flat, or in tenement, or under the humblest conditions ,we are pretty much alike, and it would be a rash man who would try to measure brains by the cost of the nursery. Go anywhere you will, there is a human soul demanding a fair chance, having the right to know what has happened in the world, having the right to be enriched with the stories and poetry of life, having the right to be inspired by the deeds of men of force who have lived amid struggles in the past, having the right to be shown the way upward to that wholesome life which is absolutely independent of circumstances and which is strong and successful because it is the life of a man or a woman doing a man's part or a woman's part in the world which is fairly understood.—*Charles E. Hughes.*

We will get through this period. The nation is not going bankrupt. The farmers are not going bankrupt. Neither are they going to lie down on their job. Gradually farm prices will be brought into fair relation with other prices and we will go ahead hitting on all cylinders. —*Secretary Wallace.*

There can be no greater anticipation or satisfaction than that of converting pale-faced children into strong, vigorous, rosy-cheeked boys and girls. Let us remember that we are no longer in the vague and shadowy land of dreams and mere theories. Careful experiment and investigation show what can be done. It remains for us to do it. America is beginning to feel the need. When we as a people feel it more keenly we shall turn our tremendous energies into this channel and produce healthy citizens with the same ease as we now mine coal, hew down the forests, and make mill and factory hum. What will be your part in this great educational program? *Dr. J. M. Andress, U. S. Bureau of Education.*

Free labor argues that as the author of man makes every individual with one head and one pair of hands, it was probably intended that heads and hands should coöperate as friends, and that that particular head should direct and control that pair of hands. As each man has one mouth to be fed, and one pair of hands to furnish food, it was probably intended that that particular pair of hands should feed that particular mouth—that each head is the natural guardian, director and protector of the hands and mouth inseparably connected with it; and that being so, every head should be cultivated and improved by whatever will add to its capacity for performing its charge. In one word, free labor insists on universal education.—*Abraham Lincoln.*

One doesn't have to become a pessimist to understand that life is a serious matter. The world never takes us more seriously than we take ourselves.

We Don't Keep Holsteins

They keep us so our 125 head are bred for every-day and all the year 'round production. Oh! Boy! How they do milk! They are good individuals too, that straight-backed, big-barrelled kind, carrying large, square udders, with a teat on each corner. You won't have to hide any stock you get from

Ellis Ellsworth
Meshoppen, Pa.
R. No. 4.

The herd is run on the Accredited Plan.

VIRGINIA GETS GREAT BULL

We are pleased to announce the sale of one of Ormsby Korndyke Lad's highest record sons to Messrs. Cheney Bros. and Jones of Randolph, Va. Individually and in breeding these gentlemen were very much pleased with this bull and from the knowledge that we have from his ancestry not only on the sires' side but also on the dams' side, all of which were raised and developed by us, I believe they have every right to place their confidence in the use of this animal.

There are but few sons of O.K.L. out of higher record dams. Shady Maple King Pontiac Hockster—the dam of this young bull, made a record with her first calf as a three-year-old, producing 27.20 lb. of butter in seven days. The next time she freshened was in June, at which time she made 35.14 lb. butter from 636.3 lb. milk in seven days, 131.5 lb. butter and 2,631 lb. milk in thirty days. Her best day's milk was 106 lb., which was really remarkable in view of the great heat prevailing at the time she was on test. This cow is a granddaughter of King of the Pontiacs through one of his good sons, who is from a 26-lb. daughter of Hengerveld De Kol. She has several sisters by the same sire with better than 30 lb. in seven days and 1,000 lb. in a year. She has two daughters in our herd. One of these, Beaver Dam Hockster Pontiac, has produced better than 30 lb. as a four-year-old and looks very much like better than 1,000 lb. in a year, having been on test some time now. The other daughter is by Ormsby Korndyke Lad and is now fresh as a two-year-old. This heifer produced close to 21 lb. of butter in seven days and milked very nearly 70 lb., this in the third month after she dropped her calf. She is now on yearly test. We have three generations of the Hockster family in our herd. They are without exception the best of individuals, have good udders, and are great producers. They are exceptionally good testers with a large flow of milk, which is a valuable asset not only to the breeder who makes records but just as much so to the man that sells his milk. All taken into consideration, I believe this young bull one of the real good sons of his sire.

BEAVER DAM STOCK FARM.

NEW JERSEY 31-LB. COW

Ame Ruble Pietertje De Kol, owned by S. L. Moore, of Daretown, N. J., is now in test and making a great record. She averaged 100 lb. milk a day for nine days, reaching 104 lb. the best day. In seven days she made 31.77 lb. butter, 698.7 lb. milk. Several other members of the Moore herd are being officially tested and are also making fine records.

A woman recently asked an inmate of Sing-Sing what he was in prison for. "Bigamy," he replied. "How many wives?" she asked. "Four," was the answer. "How are you enjoying your liberty?" was the next question.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

February 14—Lynn, Pa., R. Bruce William's Dispersal.
February 21-22, 1822—Waterloo, Ia., Iowa Holstein-Friesian Breeders' Annual.
February 22-23, 1822—Liverpool, N. Y., Breeders' 1922 Select Classic, Backus Bros., Mgrs., Mexico, N. Y.

June 14, 1922—Dixon, Ill., Rock River Valley Breeders', A. G. Harris, Sec'y.
June 15—Thorp, Wis., W. H. Krause, 2nd Annual Bred Heifer.
Oct. 21—New Douglas, Ill., Madison County Breeders'.
October 24-25, 1922—Lake Mills, Wis., Semi-Annual Holstein Consignment, F. H. Everson, Mgr.

WILLIAMS' DISPERSAL

The good herd of R. Bruce Williams will be dispersed on February 14 at Lynn, Pa. This is a good producing herd, one of the kind Susquehanna County is noted for. The herd is tuberculin tested and is under the supervision of the State and Federal officials, in fact, a test has just been made on the stock with the result that all of them were pronounced clean. Then, in addition, the animals will be sold with the privilege of a 60-day retest guarantee. The recent lifting of the war taxes on freight and express shipments of livestock will lessen the cost of the animals at the homes of the buyers. Then too, in recent years, there were many vexatious delays in shipments; the companies did not seem to care, in many instances, whether they did business or not, for they had more than they could properly attend to. To-day both railroad companies and express companies are anxious to do all the business they possibly can, and the order has gone out to look after the customer. "Get the business" is the order of the day, and the best way to both get and hold the business is to satisfy the patron.

GREAT FOUNDATION COW DEAD

Cornucopia Plum Johanna, No. 90522, the great foundation cow of the Hornless Holstein Farms, died recently in calving, in her sixteenth year. She was the first cow to have a semi-official record of over 1,050 lb. of butter a year, and to have two daughters, full sisters, each with equally as good or better records. She was purchased by Mr. Stevenson in 1914, when 8 years of age, having been sold by former owner for $75.00 as worthless because of an injury to her udder, a dislocated hip and stifle. In spite of these defects and the fact that she was lame during the entire period, she was started in test when 8 years, 7 months, 18 days old, and made a seven-day record of 489.6 lb. of milk, 25,76 lb. of butter, and a 365-day record of 19,-958.6 lb. of milk, 1,056.78 lb. of butter. She was the highest record daughter of Sir Johanna Rue DeKol, he a son of Sir Johanna DeKol.

Cornucopia Plum Johanna is the dam of Keystone Beauty Plum Johanna, who for more than six years held the world's record as a senior 4-year-old—25,787.5 lb. of milk, 1,294.71 lb. of butter. She still holds the world's strictly official record as a senior 4-year-old, over all breeds for any animal under full age. She also holds the world's record over all breeds for two consecutive records under full age, namely, as a three-and four-year-old, the average being a little over 24,000 lb. of milk, 1,203 lb. of butter per year.

Cornucopia Plum Johanna has three daughters with semi-official records. The other two are: Keystone Plum Johanna, 22,190.7 lb. of milk, 1,052.9 lb. of butter; and Plum Johanna Korndyke, 13,190.3 lb. of milk, 625.2 lb. of butter

CORNUCOPIA PLUM JOHANNA
19,958.6 lb. milk, 1,056.78 lb. butter. Dam two 1,000 lb. daughters.

as a junior two-year-old. A fourth daughter was started semi-officially, Cornucopia Johanna Pietertje, and made 393.8 lb. milk, 294.9 lb. butter in 181 days on one-fourth of an udder, when an accident deprived her of her last quarter, so she did not finish the year. Two other daughters of this great cow are now in semi-official test on the Origin Farms and, although they are not being pushed to their best, they are making creditable records.

A remarkable characteristic of this family is the high fat percentage of their milk, which, in long-time work, is around 4%, the variation being only between 3.85% for low and 4.28% for high.

Just prior to freshening Cornucopia Plum Johanna looked fitted and capable of increasing her great semi-official record. Origin Farms still own a son of four daughters of this great cow. The high percentage of fat carried by the milk of herself and daughters is transmitted into the second and third generations to a remarkable degree and Mr. Stevenson believes will also be transmitted through her sons.

Her characteristic of hornlessness was quite strong. All her progeny sired by horned bulls, with one exception have been hornless, although it is rather singular that two of her calves by a polled sire (her own grandson) had horns.

IT'S BORN IN 'EM!

Little girl—"Mother, when I get to heaven, will I play with the little angels?"

Mother—"Yes, darling, you will."

Little girl—"And dont you fink, mother, if I'm very, very good, they will let me play with a lickle devil sometimes?"—*Wayside Tales.*

The fellow who works an hour or so a day in a garden of his own, will work a lot of unpleasantness out of his system.

UNEEDME

The owners of Pleasant View Farm, New Douglas, Ill., are Mr. and Mrs. S. E. Gehrig; no one else is connected with this firm. A number of good animals have been raised in the pleasant Valley herd, two of which have been world's champions. One was Edith Maple Crest Pontiac Artis, No. 332956. At one year, eleven months this great heifer made 521 lb. milk, 27.41 lb. butter in seven days.

Daisy Pontiac Champion Artis, No. 332959, freshened at the tender age of one year and eight months. Her production in seven days' official test was 483 lb. milk and 24.17 lb. butter.

Animals from the Pleasant View herd have been shipped to many parts of the United States. The herd prefix is *Uneedme,* which is surely applicable.

It is nearly twelve years since the Gehrigs started breeding registered Holsteins. At that time some of the neighbors were sure that everyone would have registered cattle in a few years and that registered cows would bring no more than scrubs. Mr. Gehrig writes that, while there is a depression through southern Illinois at the present time, a registered cow brings from two dollars to three dollars to one dollar obtained for the scrubs.

The letterhead of the Gehrigs says that everything on this farm is purebred, including chickens, geese, sheep, horses and cattle. It further states that "Life is too short to be wasted in breeding mongrels, dunghills, and scrubs."

A LIVE BUNCH

Around West Salem, Ill., a small bunch of real live young breeders are stirring things for Holsteins. They are Guy Pixley, Albert J. Libkie, and Charles Blakeney, of West Salem, and Wm. Leintz, of Mt. Carmel. During the last year they have sold six carloads of Holsteins out of this community to go to Kentucky and Tennessee. And they still have some real cattle to show visitors to their farms, among which might be mentioned a beautiful granddaughter of Sarcastic Lad, owned by Mr. Blakeney, and some nice record cows—one a 29-lb. cow whose record was one of Mr. Pixley's first attempts at record-making. He feels sure she will beat 30 lb. this winter.

The quality of the herds of these breeders is not only shown by some very choice foundation cows but also by their herd bull, King Johanna Topsy, whose sire was by King of the Pontiacs and out of Bloomingdale Hengerveld Edith, the 32-lb. daughter of Hengerveld DeKol, and whose dam was a 34-lb. daughter of Pietertje Hengerveld and out of a daughter of Aaggie Cornucopia Johanna Lad. These men are to be congratulated upon the breeding of their herd sire.

The fellow who insists upon marrying a peach should not object to the cost of preserving her.

MARKET REPORTS

Baled Hay and Straw.—Philadelphia. Receipts, 132 tons of hay and two cars of straw. In moderate supply and demand, with little change in prices.

Timothy hay, No. 2, $21 @ $22; No. 3, $19 @ $20; sample, $15 @ $17; no grade, $13 @ $15; clover mixed hay, light mixed, $20.50 @ $21; No. 1 mixed, $19 @ $20; straw, No. 1 straight rye, $23 @ $24; No. 2 do, $22 @ $23; No. 1 wheat straw, $14 @ $14.50; No. 2 do, $13 @ $13.50.

Bran in small supply and steady, with demand fair.

Car lots, including sacks. Soft winter bran in 100-lb. sacks, per ton, $30 @ $31; spring bran in 100-lb. sacks, per ton, $29 @ $30; flour middling at $30 @ $31; standard middling at $27 @ $28.

Butter.—Receipts, 3,015 tubs. Market dull and unchanged, with liberal offerings.

Solid-packed creamery, extras, 39c; jobbing sales of high grade goods, 40c @ 42c; extra firsts, 34c @ 35c; firsts, 31c @ 33c; seconds, 26c @ 30c; sweet creamery choice to fancy, 41c @ 42c; do fair to good, 32c @ 40c; ladle packed, 25c @ 27c; packing stock, 18c @ 22c; special fancy brands of prints were jobbing as high as 52c; extras, 44c @ 47c; fair to good, 40c @ 43c.

Cheese quiet, but fine held goods steady.

New York, whole milk, flats, fancy, held, 23c; fresh, 20½c @ 21½c; do fair to good, 19c @ 20c; longhorns, 21½c @ 22½c; single daisies held, 22c @ 23c; fresh, 20½c @ 21½c; jobbing sales of fancy held goods, 25c @ 26c.

THINGS MOVING AT BRENTWOOD

While the main efforts of all connected with Brentwood Farms are directed toward making the 1922 sale excel its predecessors yet part of the time is devoted to caring for and developing Mr. Davidson's own high-class herd. An animal that surely is destined to stand high in future Holstein history is a handsomely marked well-built son of Tilly Alcartra 2d, sired by the son of Segis Pietertje Prospect, which formerly headed the Brentwood herd. Tilly Alcartra 2d recently finished a year record of 18,356.1 lb. milk, 805 lb. butter as a junior four-year-old, and is again on long-time test, starting at a rate that promises to carry her far beyond her recent performance.

While it is not yet definitely decided it is assumed that Tilly's son will be kept as the future Brentwood herd sire. Some remarkable averages for both long-time and short-time records can be shown for his three nearest dams, while the milk and butter averages of his two grandparents are unapproachable.

If you have any idea that the energy of all connected with Brentwood are being used up on the sale just cast your optics on this list. It will repay careful study.

Records Recently Completed at Brentwood

Name	*Age*	*Lb. Milk*	*Lb. Butter*	*Length of Test*
Pauline Mutual Canary,	Jr. 2 yr. old	11,756	478.5	
Queen Ella Pauline Pietertje,	6 yr. old	20,122.5	791.42	10 months
Tilly Alcartra 2d,	Jr. 4 yr. old	18,356.1	805	365 days
Ella Shadeland DeKol,		17,696.3	736.5	305 days
Nellie Pietertje DeKol Artis,		13,624	603.8	293 days
Carnation Daisy McKinley,	3 yr. old	16,187	673	
Whittum Farm Maxie,		17,895.8	896.69	One year
Miss Rag Apple Mata Burke,	2 yr. old	17,926	695	
Hengerveld Inka Vista,	2 yr. old	16,552.4		365 days

Dulcina Johanna Korndyke will finish year record end of January with over 20,000 lb. milk.

Sadie Howard Pietertje will finish February 1, with over 23,000 lb. milk and well over 900 lb. butter.

Hillview Ella Pauline 8th will finish her year the end of January with very close to 24,000 lb. milk.

Martha Videtta DeKol 3d will finish year test end of January with about 22,000 lb. milk.

Hubbavale Pauline Beets Pontiac, as a four-year-old, has now over 20,000 lb. milk and has six weeks to go.

Diane Butter Bess has been on test since May 24 and has 14,764 lb. up to the end of December and is still producing close to 60 lb. per day.

REAPED HIS REWARD

J. N. Stansfield, of Lawrenceville, needs no introduction. He has been established in the game a good many years. He began as a feeder of beef cattle, then promoted himself into the dairy business, starting with scrub cows. He bought his first purebred bull from the university, a son of one of their Sarcastic Lad daughters. Then he bought some purebred cows and began using some of Colantha Johanna Lad—the greatest son of Sarcastic Lad. Mr. Stansfield has been over the route familiar to most every breeder that has established a herd. His first son of Colantha Johanna Lad he bought at what everybody around him called "an outlandish price." It was a good price—but he got a good bull—which is the important part of it. He had to go in debt for the whole purchase price—but he doesn't have to do that any more! Mr. Stansfield sold one bull for $2,500, and he owns to-day one of Colantha Johanna Lad's best sons. And his herd of 100 head to-day is a suitable reward for his courage and industry.

A SEALED BOOK

"Huccome yuh jined dis heah new secret fritternul sassiety, Rastus?"

"I can't tell yuh, Sambo. It am a secret. A secret sassiety am sumthin' a man has to jine to fin' out why he has jined."—*From Life.*

"Now, then, the teacher asked, impatiently, "from what was the first talking machine made?" The class pricked up its ears. Here was a chance to shine. For two seconds forty minds sought for something brainy. Then a shuffling of feet at the back and a voice: "Please, miss, a rib!"—*Credit Lost.*

Are there any husbands who stay in night? Yes, lots of them, in the penitentiary.

Are there any good husbands? Yes, dead ones.

We make our Living from our Dairy—

Consequently, we must have good stock

HARRIS PHELPS
R. D. Nicholson, Pa.

DENVER NATIONAL

The Western Livestock National was fully up to the standard of its predecessors. There was great interest shown in the Holstein exhibits. H. H. Kildee, of Ames, Iowa, was the judge. He gave explicit reasons for his awards and expressed himself deeply gratified with both the quantity and quality of the exhibits.

HAS PROVEN SIRE

Jos. C. Ellen and Kemp Crome, of Albion, Ill., have been feeling away off to themselves with their little herds. Still somehow buyers have been hunting them up. The reason is to be found in the good son of Johanna McKinley Segis they have at the head of their herds. Mr. Ellen bought this bull in Wisconsin before his daughters were tested and now has the satisfaction of using a *proven* sire. His name is Wase Korndyke Segis. He has nine A.R.O. daughters, all above 20 lb., including Molly Johanna Korndyke, at 2 years, 11 months, 27 days, 30.62 lb.; Lena Johanna Korndyke, 3 years, 29.08 lb.; Juliana Johanna Korndyke, 3 years, 26.18 lb.; Flora Johanna Korndyke, 4 years, 27.72 lb.; Edith Johanna Korndyke, 3 years, 24.70 lb.; Nora Johanna Korndyke, 4 years, 24.30 lb.

LIONS WERE HUNGRY

The "Greatest Show on Earth"—one of them—was touring Georgia and having trouble with its small but select menagerie. Therefore, the management of the show advertised for an assistant animal trainer. A husky black gentleman applied, was accepted and went to work.

When the time came to feed the animals, though, his nerve faltered, especially when he was obliged to open the lions' cage.

"Oh, Lawd!" he prayed, "as yo' was wid Dan'l in de lions' den, so be wid me now."

Whereupon a voice issued from the king of beasts:

"Nebbah mind de Lord and Dan'l, big boy. Dis yere lion's yo own countryman. Jes' hustle wid dat chow."

WHAT EVERY WOMAN KNOWS

It all.

SHE COULD, TOO

When "Uncle Dave Maxwell" moved his herd from Waterloo, Iowa, to California, several of his helpers went along. Mr. Maxwell, who is very fond of children, was visiting with a five-year-old daughter of one of his men and pointing to the scenery, said, "Just think, Betty, God made all these beautiful mountains. Isn't it wonderful?"

Betty, not being in a spiritual mood, replied: "Huh! I could too, if I had the dirt."

THE PROOF

One of the most prominent Holstein breeders in southern Illinois is also a breeder of Duroc Jersey hogs. One morning his small daughter, aged four, came into breakfast and said, "That swill isn't fit to feed to hogs." "How do you know?" said her mother. "'Cause I tasted it."

HE SAID SOMETHING

Bobby (triumphantly)—I prayed that God would make grandma better in four days and He's done it.

Mother—Why didn't you pray to have her get better right away?

Bobby—You know things take time.

"The man who says it can't be done," declared George Horace Lorrimer some years ago, "is always wrong." Always wrong and entirely too numerous.

TWO FOR THE PRICE OF ONE

One of our best known Ohio breeder's home was recently visited by the stork who left twin boys. The next morning, when his little girl was being shown her brothers she observed, "Mamma is the *greatest* hand to get bargains."

PROBABLY

A so-called dairyman living near our town has sold his stock and is planning to turn his pasture into bungalow lots. He figures that it is easier to milk the city folks than it is to milk Holsteins.

TOO TRUE

"When does the honeymoon end?" asked a sweet young thing in our office. And the janitor, who is an old grouch, replied, "Frequently like the other moon, it ends after the last quarter is reached."

OURS ALSO

A professor in charge of official test work at one of our great state colleges said the other day that he had worn the same overcoat for four years; it must be about ready to graduate.

STRICTLY BUSINESS

"Gentlemen, thirty-seven, alone, works in overalls; would meet lady of like qualification, matrimony."—*Denver Post.*

MAYBE IT'S BULL

He—"I see that this country has shipped fifty thousand tons of barbed wire to Russia."

She—"I wonder what that is for."

He—"Perhaps they are going to try to keep the cow in Moscow."

NOT SURE HERSELF

Mrs. De Fashion (at a children's part)—Marie!

Nurse Girl—Yes, ma'am.

Mrs. De Fashion—It's time for us to go home. Which of these children is mine?

NOT QUITE SURE

Polite Peddler (to a small boy swinging on gate)—Little boy, is your mother engaged?

Little Boy—Come in and I will see, I think she is married.

ANSWERS TO CORRESPONDENTS

Dear Editor—After taking my best girl to dinner, theater, supper and a taxi home, should I kiss her good night?

Answer—No, you did enough for her.

The wealth of the farmer is not merely in dollars and cents, but in the deep joy of living.

No one can borrow trouble without paying interest. The troubles that afflict us most are those that never happen.

Merryall Farms

Cattle from this establishment make good wherever they go.

A cow bred in this herd is LILITH GEM KOLKLUFF 22,247 lbs. of milk; 851 lbs. of butter, 365 days.

We sold her to the Pennsylvania State College and there she made her great records.

Cattle of this kind make money for those who buy them.

Come and look over our stock.

SHE COULD, TOO

When "Uncle Dave Maxwell" moved his herd from Waterloo, Iowa, to California, several of his helpers went along. Mr. Maxwell, who is very fond of children, was visiting with a five-year-old daughter of one of his men and pointing to the scenery, said, "Just think, Betty, God made all these beautiful mountains. Isn't it wonderful?"

Betty, not being in a spiritual mood, replied: "Huh! I could too, if I had the dirt."

THE PROOF

One of the most prominent Holstein breeders in southern Illinois is also a breeder of Duroc Jersey hogs. One morning his small daughter, aged four, came into breakfast and said, "That swill isn't fit to feed to hogs." "How do you know?" said her mother. "'Cause I tasted it."

HE SAID SOMETHING

Bobby (triumphantly)—I prayed that God would make grandma better in four days and He's done it.

Mother—Why didn't you pray to have her get better right away?

Bobby—You know things take time.

"The man who says it can't be done," declared George Horace Lorrimer some years ago, "is always wrong." Always wrong and entirely too numerous.

TWO FOR THE PRICE OF ONE

One of our best known Ohio breeder's home was recently visited by the stork who left twin boys. The next morning, when his little girl was being shown her brothers she observed, "Mamma is the *greatest* hand to get bargains."

PROBABLY

A so-called dairyman living near our town has sold his stock and is planning to turn his pasture into bungalow lots. He figures that it is easier to milk the city folks than it is to milk Holsteins.

TOO TRUE

"When does the honeymoon end?" asked a sweet young thing in our office. And the janitor, who is an old grouch, replied, "Frequently like the other moon, it ends after the last quarter is reached."

OURS ALSO

A professor in charge of official test work at one of our great state colleges said the other day that he had worn the same overcoat for four years; it must be about ready to graduate.

STRICTLY BUSINESS

"Gentlemen, thirty-seven, alone, works in overalls; would meet lady of like qualification, matrimony."—*Denver Post.*

MAYBE IT'S BULL

He—"I see that this country has shipped fifty thousand tons of barbed wire to Russia."

She—"I wonder what that is for."

He—"Perhaps they are going to try to keep the cow in Moscow."

NOT SURE HERSELF

Mrs. De Fashion (at a children's part)—Marie!

Nurse Girl—Yes, ma'am.

Mrs. De Fashion—It's time for us to go home. Which of these children is mine?

NOT QUITE SURE

Polite Peddler (to a small boy swinging on gate)—Little boy, is your mother engaged?

Little Boy—Come in and I will see, I think she is married.

ANSWERS TO CORRESPONDENTS

Dear Editor—After taking my best girl to dinner, theater, supper and a taxi home, should I kiss her good night?

Answer—No, you did enough for her.

The wealth of the farmer is not merely in dollars and cents, but in the deep joy of living.

No one can borrow trouble without paying interest. The troubles that afflict us most are those that never happen.

Merryall Farms

Cattle from this establishment make good wherever they go.

A cow bred in this herd is LILITH GEM KOLKLUFF 22,247 lbs. of milk; 851 lbs. of butter, 365 days.

We sold her to the Pennsylvania State College and there she made her great records.

Cattle of this kind make money for those who buy them.

Come and look over our stock.

INTENTIONAL SECOND EXPOSURE

YOU WILL HEAR FROM OUR HERD SIRE

King Valdessa Pontiac Homestead

His sire is King Valdessa Pontiac whose dam was Mabel Segis Korndyke, the first animal under full age to make 40 lb. butter in 7 days and whose sire's dam was the first 40 lb. cow, Valdessa Scott 2d. His own dam, Joyce Fobes Korndyke, as a junior four-year-old made 34.01 lb. butter in seven days, 126.64 lb. butter in 30 days and as a two-year-old made 18,207.7 lb. milk, 797.13 lb. butter in a year. She is a daughter of the Pennsylvania champion Kayewood Joyce Korndyke, 607.5 lb. milk, 39.39 lb. butter in seven days, 23,658 lb. milk, 1,076.86 lb. butter in a year.

FINDERNE STOCK FARMS

HOME OF

KING VALDESSA

A bull of royal breeding.
An animal of remarkable individuality.
A sire of everyday and all-the-year 'round producers.

His dam, Valdessa Scott, 2d. 41.88 lb. A. R. O., the first cow to make a 40 lb. seven day official butter record, was developed and made her A. R. O. records on this farm. She was the first cow to make over 37 lb. butter in seven days two different years, which she did at eight and ten years old.

His sire's dam, K. P. Pontiac Lass, 44.18 lb. was the first 44 lb. cow and the first to beat his own dam. The two nearest dams of King Valdessa average:

7 days—Butter, 43.036 lb.; Milk, 640.25 lb.
30 days—Butter, 167.894 lb.; Milk, 2,625.15 lb.

Each have high record daughters and are transmitting their own great producing powers to their offspring.

While our cows are kept for every day business, yet, when tried out they have made records that leads the list. Among the record smashers bred and developed at Finderne are:—

FINDERNE PRIDE JOHANNA RUE.
1470.58 lb. butter in a year at full age. World record when made.

FINDERNE HOLINGEN FAYNE
1395.06 lb. butter in a year as a junior three year old. World record over all ages and breeds when made. World record in class now, altho made seven years ago.

FINDERNE MUTUAL FAYNE
1200.63 lb. butter in a year as a junior two year old. World record in class.

To head your herd you need a bull of FINDERNE QUALITY. Our prices are within your reach, so TO-DAY, write

LACKAWANNA COUNTY HOLSTEINS

The herds of Lackawanna County consist of stock directly descended from cattle imported direct from Holland in early Holstein days by old time Lackawanna County breeders —pioneers of the breed.

These men were capable judges and selected their animals for type, individuality and producing capacity; desirable characteristics readily apparent in the present cattle of the county.

Lackawanna cattle are healthy—many of the herds are under Federal supervision.

Quotations will be cheerfully given on single animals or carloads—and it is a pleasure to show the goods.

THE SENIOR SIRE OF BLOOMINGDALE HERD

A Show Bull of Wonderful Type and Individuality

KING MODEL

His dam, Mabel Segis Korndyke, the first 40 lb. heifer, is a cow of perfect conformation.

Through his sire and dam he traces twice to that great transmitting sire, King Segis.

His first tested daughter produced over 25 lb. butter at two years and over 31 lb. at three years. She is State Champion of Connecticut.

Another two year old daughter won 2d Prize last year at the National Dairy Show and later became State Champion of Maryland.

His first daughter to complete a yearly record produced over 873 lb. butter in the 365 days at two years old.

With only two exceptions, all of his 31 tested daughters have produced more than their dams at the same age, a sure proof of his wonderful ability to transmit.

We have a few choice sons of KING MODEL to offer, one from a 40 lb. daughter of Matador Segis Walker, another from a two times 30 lb. dam, also a young son from a 20 lb. junior two year old.

The Holstein Breeder and Dairyman

VOL. I. HARRISBURG, PA., FEBRUARY 22, 1922 No. 4.

Small Investment Pays Quarter Million Dollars Dividend

BY C. S. RHODE, ASSISTANT PROFESSOR, UNIVERSITY OF ILLINOIS

A QUARTER million dollars is added annually to the wealth of the dairymen in Illinois, who are members of cow testing associations. Members of the Dairy Department of the University of Illinois have organized or assisted in the organization of forty-five of these associations.

Each association is composed of approximately twenty-six dairy farmers who own in the neighborhood of 300 to 500 cows. These dairymen join testing associations in order to have feed and milk records kept on each of their cows. A man who understands the feeding and caring of dairy cattle is employed to keep accurate feed records, milk records, and butter fat records on each cow owned by members of his association.

Perhaps I can best give the results accomplished in these associations by telling about a few things that

MOLLY HENGERVELD TOWANDA

as a senior two-year-old; 746.30 lb. butter, 21,750.2 lb. milk in a year. Illinois State Champion milk producer in her class. Owned by Harry M. Wood, Delavan, Ill.

have been done. A recent report from one of the associations tells an interesting story about the highest producing herd in the association for the months of December and January. This same herd was tenth in production in the association during November. After the November test the unprofitable individuals, or boarders, in the herd were disposed of and the remaining animals were placed in a comfortable dairy barn and given a balanced ration of well prepared feeds. It is interesting to know that this herd was fed more dollars worth of feed per cow than any herd in the association, and yet the cost of milk per hundred pounds was the lowest in the entire association. By disposing of the unprofitable cows and by taking care of the herd and feeding it properly the owner now is receiving a return above feed cost of $250 per month.

In another association the tester found a dairyman who was buying and feeding a prepared dairy ration. When feeding this ration it cost $1.30 to produce 100 pounds of milk. The tester talked the feeding question over with the owner and encouraged him to feed a home-grown ration consisting of corn and cob meal, ground oats, and oil meal. The following month the herd of nine cows increased in production 1,600 pounds of milk and the cost per hundred was only ninety-two cents.

The testers are in a position to render many services to the members of cow testing associations. Many of them are checking up on the cream separators and are locating some very serious losses. In one association the tester found a separator that was leaving .2% of fat in the skim milk, which amounted to twenty-two pounds of fat for the month, or a cash loss to the farmer of $11.00. The separator was not running at the proper speed. The necessary changes were suggested by the tester and efficient skimming resulted. Had this loss continued the farmer would have been out at least $100 during the year.

Members of cow testing associations are taking the lead in the state among the dairymen who purchase high-class registered bulls. As a rule they are the first ones to clean up their herds of tuberculosis and to establish good methods of sanitation. Four years ago, when one of our associations was organized, with the exception of two herds, there were only four purebred females in the association. When the association had been in operation three years there were more than 400 purebred females owned by members, valued at $100,000.

The average production of cows in cow testing associations is at least 2,000 pounds greater than the production of cows in the same county not in associations. This increase can be accounted for almost entirely by the services rendered through cow testing associations. This increase, at a conservative estimate, would have a cash value annually of more than $225,000 to the members of the various associations. They have made a small investment and have been paid an enormous income.

The Champion Jemimas

WHEN the Canadian cow Jemima Johanna Segis finished her recent year record of 1,175 lb. butter, she established a world record three-generation group; that is, dam, daughter, and granddaughter; not only this, but she also completed the second three-generation group of 1,100-lb. cows in the Jemima family.

Our story really starts when W. C. Houck & Sons acquired Jemima Johanna of Riverside, but first we had better tell something about the Houcks themselves.

W. C. Houck is a business man of Buffalo, N. Y. He had three sons, Chris, Bill, and Jack, and he also had a small farm at Chippewa, Ontario, within sight of the Niagara River, a few miles from Buffalo. On this farm the boys spent their vacation, and they formed such a liking for farm life that when they were nearing the end of their high school course, and their father wished to know what they had decided upon to study at college, they all three selected agriculture and decided on being farmers. All three of the boys are graduates of Cornell University; all three are married; one married a school teacher, and the wives of the other two are college graduates. The three homes are all on the Llenroc Farms at Chippewa.

The fame of Llenroc Farms is founded upon old Jemima, that is, Jemima Johanna of Riverside. When a ten-year-old cow she made a series of notable records, 30.14 lb. butter, 703.4 lb. milk in seven days, a large thirty-day record and a sixty-day record of 5,613 lb. milk, 231.96 lb. butter. She was put on official test some eight months after freshening, and at that time made 555.4 lb. milk, 25.23 lb. butter in a week, over 101 lb. butter in thirty days, and no less than 6,388.3 lb. milk, 287.16 lb. butter in ninety days. In the full year she made 30,373 lb. milk, 1,280 lb. butter, and became the Canadian champion for year butter production until Bella Pontiac surpassed her. Her record, made eight or more from freshening, is well ahead of all Canadian records made in this division, and she is one of Canada's two 30,000-lb. cows.

The Houcks had several daughters of this cow and had already purchased all of her near relatives that they could get hold of. Her mother is still, as far as we know, owned by the Nova Scotia Agricultural College, and has records of 561.6 lb. milk, 26.3 lb. butter in seven days, and over 700 lb. butter in a year.

Jemima Johanna of Riverside has six daughters with official records; two of them are above 31 lb., and three others above 21 lb. The other is a two-year-old heifer of which much is expected. One of her daughters, Jemima Johanna of Riverside 2d, made 23,890 lb. milk, 1,192.3 lb. butter in a year as an eight-year-old. She is the dam of Jemima Johanna Segis, the four-year-old who made 1,175 lb. butter, 26,370 lb. milk in a year and thus became the Canadian champion in the four-year-old division. Some eight months after calving she made 16.74 lb. butter in seven days, and is her class leader in this division. Another daughter of old Jemima is Johanna Jemima Posch. This great cow was tested as a six-year-old and made 672.9 lb. milk, 31.94 lb. butter in seven days, and a year record of 26,415 lb. milk, 1,215 lb. butter. Her year record stood third at the close of the Canadian Holstein year ending April 30, 1921.

Jemima Johanna Posch is the dam of Llenroc Lady Jemima, who as a four-year-old made 18,839 lb. milk, 1,001 lb. butter in a year. Another daughter of the old cow is Jemima Johanna of Llenroc 2d. She made 767.7 lb. milk, 31.78 lb. butter in seven days and a very large thirty-day record, 8,908.5 lb. milk, 366.63 lb. butter in ninety days, and has a year record of 25,071 lb. milk, 974 lb. butter. She is close to the end of another year's test and will go quite a ways beyond her present record, as she is past the 1,000-lb. mark with nearly two months to spare.

The two year records of the third generation were made by the only two granddaughters of the old cow so far given long-time tests. Both of these were four-year-olds at the time of making their records. There is a number of other granddaughters of old Jemima in the Houck herd which undoubtedly will be herd from before very long.

Some time we hope to show our readers pictures of old Jemima and her daughters and other members of the family for, having seen the animals themselves, we know that in size, type, and producing capacity they are real good. This family is one of the greatest ever developed in the Holstein breed and anyone will be well repaid for the trouble of looking them over.

There are a few facts about Jemima and her descendants that are bound to be interesting:

She is world's record cow for age.

She and her daughter, Johanna Jemima Posch, are highest in world for butter and second for milk for dam and daughter.

She, a daughter and granddaughter are highest three-generation group in the world for butter. Another Jemima group is fourth. These are the only two such groups in Canada.

She is the only 30,000-lb. cow to have a daughter over 25,000 lb. She has two.

She is the only 1,000-lb. cow to have a daughter over 1,200 lb. butter.

A sister on the sire's side, Aaggie Wayne Princess Posch, recently completed a year record of 23,567 lb. milk, 1,272.5 lb. butter as a twelve-year-old, world record for the age. Another sister on the sire's side, Johanna Rue Luraine 2d, made 715.6 lb. milk in seven days from three quarters, which is believed to be a world record under the conditions.

Another three-fourths sister in 300 days approximated 21,320 lb. milk, and 905 lb. butter, and is being continued for the year.

The three Houck brothers, Chris, Bill, and Jack, are not what is generally considered gentleman farmers. They do most of the work on the Llenroc Farms. The boys have alternated duties, one year one milks the cows four times a day and another brother does it the next year. They have built up a wonderful herd which has rewarded their industry, pluck and persistency by making them internationally famous as cowmen.

Mrs. Holstein-Triple Purpose Cow

By Mrs. R. G. Douglas,

Ex-President of the Colorado Holstein Club

THERE is hardly an industry that is not feeling acutely the period of readjustment the country is passing through—but no livestock or farming branch has passed through this crisis with less acute suffering than the dairy interests. The grip of creditors has not tightened its deadly hold upon the throat of the dairy farmer as it has upon the other branches of farming for the reason that the dairy cow is a daily dividend earner and she works 365 days a year.

The value of farm products in 1920 depreciated $5,000,000,000 as compared with 1919, yet the value of the dairy products in the same period increased $311,000,000, despite an increase in foreign butter imports. The future looms brighter for the breeder who, with the right kind of cattle, stays with the game and who is not alone anxious to improve his herd but to improve his farm.

Our Holsteins need one thing more though. They need us to get together and join hands with the National Dairy Council and push the consumption of milk and all dairy products. The average person in the United States is using practically two glasses of milk per day, a very small consumption in comparison with European countries. Denmark, Holland, and Switzerland, for instance, have a consumption of seventy gallons of milk per capita a year against our home consumption of forty-four gallons per year—far too much advantage on the side of European countries which are our chief competitors in producing butter for importation into this country.

The Dairy Council does not ask you to drink two glasses of milk a day, although you would undoubtedly be healthier and stronger if you would do so, but you are urged to see that this amount of milk is used by every member of your household in the preparation and eating of your meals.

You need not fear overdoing the use of milk. Our Colorado breeders are doing their share to keep up the great flow of milk that the Holstein-Friesian cow is capable of giving. Colorado numbers more than one cow that has produced over 25,000 pounds of milk, and if one realizes that this means two glasses of milk per day for a year for 137 people the value of the Holstein cow as a milk producing machine is brought home to us.

We are hearing a great deal these days of dual purpose animals, but surely we may call the Holstein cow a "three-purpose" cow—she makes milk, she makes beef, and she makes money.

Everything considered, what more profitable animal could you choose at this crisis in the financial history of the world than our profitable Holstein cows—the largest dairy cows in the world, the largest milk producers in the world, and the greatest farm machine for making money that breeders have ever known?

Community Breeding Plan

THE December issue of the *Reclamation Record* carries an article on the Arizona Salt River project in which is incorporated a scheme, the author of which is Frank Reed Sanders, of Mesa, a well known breeder of Dutch Belted and Holstein-Friesian cattle.

The Salt River Valley was at one time a growing dairy section, but when the war caused cotton to bring almost fabulous prices, the dairymen turned to that crop and neglected or sold their cows to whoever would buy them. The collapse of inflated prices caused much distress in the valley. The farmers are turning back to livestock but have difficulty in securing foundation animals.

The plan calls for units of 100, 200, and 500 cows. Groups of farmers in various farm bureaus could form an association, electing a president, secretary-treasurer, and directors. These would consider applications of farmers for clubs of 5, 10, 20, and 30 cows. A thorough examination would be made of the applicants' ability, experience, and character. Having signed up the required number to make the unit, the organization would make application to borrow the necessary purchase money from a bank or group of bankers, cattle loan company, or security company. Notes signed either by individuals or a joint note signed by all parties concerned, giving a first mortgage on the stock purchased, would be offered as security. An expert judge and a member of the association would then go to the best dairy sections of the country to purchase the required animals.

It is suggested to purchase one registered cow to every nine high-grade animals, and then for each twenty cows purchased to secure a registered bull. For each 100-cow unit, there would be in addition, a registered bull of the chosen dairy breed, the dam to have a record not less than 800 lb. butter fat, made in year test; this bull to be a strictly community animal for service on the registered cows belonging to the association. Each unit would confine itself to one breed of cattle, and in ten years the cow population of the Salt River Valley would be the descendants of these purchases. The benefits of the plan are: Probability of successfully financing the purchase; large saving by purchasing cattle in numbers; elimination of speculators and inexperienced buyers; the assurance of expert help in selection; the availability of very high record community bulls; the conservative introduction of registered cows.

Association Calf Club Man

EARL J. COOPER, Assistant State Club Leader of Wisconsin, has been employed by the Holstein-Friesian Association of America to take charge of their calf club work under the direction of President Lowden. Mr. Cooper is a graduate of the College of Agriculture of the University of Wisconsin. Since finishing his course in 1916 he has been engaged in furthering livestock club work, working for the greater part of this time on dairy calf clubs exclusively. His fine showing in county club work and agricultural high school work induced the Wisconsin Extension Department three years ago to appoint him Assistant State Club Leader, specializing on dairy calf clubs. Since 1919 he has also had charge of the Winter Short Course in Agriculture, a four months' course, averaging over three hundred students each year.

EARL J. COOPER
Calf Club Organizer for the Holstein-Friesian Association of America.

Mr. Cooper is farm-raised and knows in a superior degree the methods of organizing and carrying to a successful conclusion calf club projects. He will begin his duties March 15th, making his headquarters in the Extension Offices of the Holstein-Friesian Association of America, at 910 So. Michigan Ave., Chicago, Ill.

Change in Testing Year

IN the preface to Number 11 of "Reported Tests of Holstein-Friesian Cows," Superintendent Gardner announces that the official test year has been changed by the Executive Board and that the present test year will close on March 31, 1922, instead of April 30. The superintendent is making this announcement early in order that breeders may, so far as possible, have such tests as are completed before the close of the testing year entered in the thirty-third volume of the Advanced Register Year Book. All entries for the thirty-third volume of the Blue Book will close on March 31 of this year but, as in preceding years, all certified reports of official tests mailed from any state college and bearing the postmark of March 31 or earlier, will be considered eligible to entry in this volume.

The superintendent again asks breeders to aid the advanced registry office by being careful to see that forms and reports are correct and complete when sent in. Official reports of tests sometimes give the date of birth of the calf with one date at one place and with another date in another place, while in some cases the monthly milk reports show a still different date. Nearly one hundred letters were written from the advanced registry office the week ending February 4th, in order to straighten out such small errors. These mistakes, which are pure carelessness, not only add to the work of a burdened office but also add to the expense.

Breeders have written the advanced registry office asking for advanced reports of credits of their cows on test. Such reports necessitate extra work in the advanced registry office. The rules provide for breeders obtaining preferential reports at any time, and such reports always have the right of way, but carry with them the charge of one dollar for the test of each cow so reported. The superintendent asks that breeders requiring such tests to please inclose the fee with their inquiry.

The breaking of the record in the senior four-year-old of the semi-official division is officially mentioned. The new champion is Princess Aaggie Polkadot DeKol, No. 372024, owned by Dr. H. P. Fischer, of Shakopee, Minnesota.

Princess is credited with 31,600.7 lb. milk containing 1,052.49 lb. fat, which gives her twentieth place among the cows producing over 1,000 lb. fat in one year. She becomes the forty-sixth Holstein-Friesian cow to make over 1,000 lb. fat in a year. In the senior four-year class of the yearly division she displaces Keystone Beauty Plum Johanna, whose strictly official record for 365 days is 25,787.5 lb. milk containing 1,035.77 lb. fat. Princess Aaggie Polkadot DeKol was first tested at the age of three years, eight months, two days, at which time she is credited with 591.3 lb. milk containing 19.663 lb. fat in seven days, and 2,579 lb. milk containing 79.543 lb. fat in thirty days. Next, freshening at four years, six months, twenty-six days, she is credited with 808.2 lb. milk containing 27.687 lb. fat in seven days, and 3,423.6 lb. milk containing 115.090 lb. fat in thirty days; while in the continued long-time semi-official test for 365 days she is credited with 31,600.7 lb. milk containing 1,052.49 lb. fat, equivalent to 1,315.61 lb. butter. In addition to the 49 days of official testing in the early part of the lactation period, she had eleven official test periods during the year, of which two were retests. Ten different supervisors were employed in the conduct of the test.

The tabulated monthly production follows:

	Pounds of Milk	*Per cent. of Butterfat*	*Pounds of Butterfat*
Jan., '21 16 days	1,561.9	3.58	55.916
Feb., '21, 28 days	3,208.4	3.34	107.244
Mar., '21, 31 days	3,464.8	3.16	109.488
Apr., '21, 30 days	3,314.8	3.08	102.096
May, '21, 31 days	3,069.2	3.10	95.145
June, '21, 30 days	2,658.2	3.38	89.847
July, '21, 31 days	2,492.8	3.29	82.013
Aug., '21, 31 days	2,394.5	2.95	70.638
Sept., '21, 30 days	2,189.3	3.57	78.158
Oct., '21, 31 days	2,186.8	3.41	74.570
Nov., '21, 30 days	2,065.6	3.49	72.089
Dec., '21, 31 days	2,063.4	3.85	79.441
Jan., '22, 15 days	931.0	3.85	35.844
Total, 365 days	31,600.7	3.33	1,052.490

A rolling-pin gathers no moss, but it often tells who is boss.

Kansas City Program

THE committee appointed to look after the entertainment of the delegates and members attending the National Association meeting at Kansas City, next June, have drafted the following program:

Monday: Meeting of board of directors.

Tuesday: Meeting of board of directors.

Tuesday A. M.: Competitive show of cattle from various states for which three prizes, totaling $600, will be awarded—leaving at 11 a. m. for Ft. Leavenworth, where lunch will be served. Speakers for this luncheon will be secured from men of prominence who are attending the convention, no set program being planned.

Wednesday: Meeting of National Association, adjourning at 4:30, not later than 5 o'clock p. m., for a trip to the Pickering Farm, where the evening meal will be served. The program at the Pickering Farm will also be extemporaneous.

Thursday: National Sale.

Thursday P. M.: Banquet.

Friday: Continuation of sale.

In addition there will be an exhibition in connection with the convention and sale. The State Agricultural Colleges of Kansas, Nebraska, Missouri and Oklahoma will furnish exhibits, and the National Dairy Council is also expected to be represented, as well as a number of commercial firms.

United States Secretary of Agriculture, Henry C. Wallace, is expected to speak.

The committees as appointed are:

STEERING COMMITTEE.

Walter A. Smith, Topeka, Kansas.
Professor J. B. Fitch, Manhattan, Kansas.
Major Harlo J. Fiske, Belton, Mo.
Prof. J. H. Frandsen, Lincoln, Nebraska.
W. H. Mott, Herington, Kansas.
Glenn G. Davis, Columbia, Missouri.
Prof. A. C. Ragsdale, Columbia, Missouri.
Major Harding Polk, Ft. Leavenworth, Kansas.
A. B. Cole, Jr., California, Missouri.
Geo. W. Catts, Kansas City, Mo., Chairman.

Chairman of subcommittees are as follows:

Finance Committee—Major Harlo Fiske, Belton, Mo.

Educational Committee—Prof. A. C. Ragsdale, Columbia, Mo.

Sale Committee—W. H. Mott, Herington, Kan.

Publicity Committee—Prof. J. H. Frandsen, Lincoln, Neb.

Entertainment Committee—Major Harding Polk, Ft. Leavenworth, Kan.

Colorado College Cattle

UNDER the care of George E. Morton, Professor of Animal Husbandry, the Colorado Agricultural College, is building up a real good herd.

The college herd was founded on descendants of Sir Korndyke Hengerveld Canary, a grandson of Hengerveld DeKol. The daughters of this bull proved to be better milkers than their mothers and were bred back to their sire. The resulting inbred granddaughters were even better than their mothers, so that the experiment was a success. The next bull was donated, when a calf, by Dr. Hubert Work. The progeny of this sire were rather rough in outline and as the herd were of show type, he was sold to the Jewish Hospital Dairy Farm. When the two first daughters came into milk, they showed that they were big producers, in fact, one of them now is the highest record cow in the college herd. Immediately the college authorities tried to get this sire back, but he had gone to the butcher.

The next bull was a son of Sir Pietertje Ormsby Mercedes and was in the herd less than a year before they lost him. His calves inherited the type and conformation characteristic of this great family. One of the present herd bulls is a grandson of King Segis and the other is a son of Sir Ormsby Skylark, who also sired Duchess Ormsby Skylark, the first cow to make 1,500 lb. of butter in a year. The dam of this sire has a year record of 1,017 lb. This bull was donated to the college by Mr. R. P. Lamont, and his offspring show wonderful promise.

Professor Morton says that the college herds are built with the constructive idea of furnishing proper types for instruction, but with this is the desire to hold the respect of breeders for the college herd and college breeding operations, because no institution can develop high-class students unless it has the respect of the related industry. The aim of the state college is to be of constructive service to the state in whatever operations it finds it must engage, directly or indirectly connected with its instructional work.

How Pennsylvania Bankers Help

THE Pennsylvania Bankers' Association has an agricultural committee whose work is to promote agriculture, dairying and the purebred industry. This committee works through the local banks, county agents and farm bureau agents. The president of the Bankers' Association is Mr. Alexander Dunbar, vice-president and cashier of the Bank of Pittsburgh. The association secretary is Mr. C. F. Zimmerman, treasurer of the Lebanon County Trust Co., who spoke to the Pennsylvania breeders at the Harrisburg banquet, January 25.

Some idea of the scope and activities of this association along the lines of the cattle industry can be gained from the condensed reports of the county agents. We have used only those portions bearing upon dairying.

Allegheny County.—Cow testing associations. Six bull associations, owning seven purebred Holstein bulls. One hundred thirty Holsteins brought in, also 25 Guernseys from Island of Guernsey. Dairyman's Coöperative Sales Co.

Bedford.—Have had farm bureau only 20 months. Taken up dairy improvement and cow testing association with splendid results. Plan to introduce purebred cattle and the accredited herd plan.

Bradford.—Bull associations near Troy and Canton (incorporated). First year of work, good results. Bulls in four blocks and changed every two years.

Butler County.—Two Butler banks interested in agricultural development. Financed several carloads of purebred cattle.

Chester.—Banks assist in boys' and girls' clubs by giving prizes. Bankers attend meetings of the local granges. One bank ran series of advertisements in newspapers relative to the part the Pennsylvania Bankers' Association is taking in agricultural development.

Clarion County.—Fisher community—boys' and girls' club. School fair and fair association. Fair association.

Clearfield.—Splendid coöperation between the farmers and bankers. Every banker supporting better agriculture. Bankers and farm bureau men purchased and are editing one page each month in Clearfield *Progress* containing series on livestock. This is mailed to every farmer in the county. Appropriated sum of money for educational campaign.

Columbia.—Cattle breeding and dairying. Boys' and girls' calf clubs. Field day picnic held where distribution of a carload of cattle was made. Frank Miller, of the Columbia County Trust Company, financed the farmers' purchases of cattle. Cattle insurance planned. Exhibit at county fair.

Crawford.—Five coöperative bull associations owning 15 bulls. Stock in each association sold at $15.00 per share. Crawford County Trust Company financed farmers for amount of stock taken in association. Three circuits of five bulls each. Location of bulls changed every two years. Tuberculin tests. Some stock already sold from the county.

Erie County.—Bankers coöperating splendidly. Assisted in sending judging team to State College in 1921.

Huntingdon.—Three carloads tuberculin tested registered cows purchased. More to follow. Dairymen interested in cow testing.

Mercer County.—Purebred animals shipped in and financed by banks. Greenville Chamber of Commerce employing expert to assist in dairying development. Farmers and Merchants Trust Company coöperating. Coöperative milk distributing organization resulting in better prices for milk. Sharon is organizing bull associations and cow testing associations. First National Bank has employed a dairy field man. The banks of Mercer, the merchants and the Chamber of Commerce working together.

Schuylkill County.—Boys' and girls' Holstein heifer club.

Venango County.—Oil City National Bank taken up dairy development and shipping in several carloads of purebred cattle. Titusville also putting on active campaign.

York County.—Boys' and girls' clubs. Banks coöperating in offering prizes. Fifty head purebred cattle brought in from Michigan.

Canadian Holsteins in 1921

Extracts from annual report of W. A. Clemons, Secretary of the Canadian Holstein-Friesian Association, submitted February 16, 1922.

YEAR after year the Holstein-Friesian Industry has shown a growth that is nothing less than remarkable. It is just fifty years since the first association was organized in America to promote the interests of the breed. From a foundation stock of 8,000 animals imported from Holland has sprung such a multitude of Black-and-Whites that the total registrations of purebreds in Canada and the United States now approach the million and a quarter mark, of which nearly 150,000 are credited to this Dominion. Such a growth in numbers and popularity could come only through inherent worth: constitution, fecundity, and unrivaled capacity in the production of milk and butter.

The increase in registrations for the past five years shows the steady growth of the Holstein business:

Canada.		United States.	
1917	12,019	1916-17	73,847
1918	13,046	1917-18	88,279
1919	14,284	1918-19	90,887
1920	15,497	1919-20	114,503
1921	16,221	1920-21	127,850

The severe readjustment period through which we are now passing, with its inevitable accompaniment of restricted credits, coupled with the great drop in prices of everything the farmer has to sell, has caused somewhat of a depression in the cattle trade with values considerably lower than the sensational figures which have prevailed for a few years past. But the Holstein business is a sound one and breeders should not become discouraged.

During the year 424 new members were admitted to the association, as compared with 485 in 1920. The registrations for the year numbered 16,221, a gain of 724 over 1920. As was to be expected, the number of transfers decreased from 14,947 to 13,091, a loss for the year of 1,856. In the record of merit work the number of certificates issued increased from 1,187 in 1920, to 1,247 in 1921.

During the year certificates were issued for 1,267 tests made under record of merit rules. Of these 709 were for cows tested for the first time.

There were also 621 cows qualified in the 365-day division of the record of performance test, bringing the total number up to 2,469.

Forty-four cows qualified in the 305-day division of the record of performance test. Thirty-seven bulls qualified for certificates by siring four record of performance progeny, bringing the total number up to 117.

As usual, Holsteins made practically a clean sweep of the dairy tests held during 1921. At Ottawa, Guelph and Amherst Winter Fairs the championships in every class, as well as the grand championship, were captured by Holsteins. At Ottawa the Director of Experimental Farms won the grand championship with Grace Fayne Aaggie. At Guelph the highest honors went to Colantha Mercena Beulah, owned by Mr. A. E. Cornwell, Norwich, Ont. At Amherst the championship for all breeds was won for the second successive year by Queen Abbekerk Rooker, owned by Mr. R. L. Hicks, Dalhousie Junction, N. B.

At the fall fairs throughout Canada reports received indicate that Holsteins took the highest place in every instance, winning at Calgary, Vermilion, Saskatoon, Brandon, Sherbrooke, Valleyfield, St. Scholastique, Charlottetown, Kingston, Napanee, and Woodstock.

Bonnymead

A PENNSYLVANIA herd that has been mentioned many times in the A.R.O. bulletins, is that of the Bonnymead Farms, Paxtang. This establishment consists of some 2,500 acres and has one of the best barns in that part of the country.

In the main cow stables there is room for 137 head. The stable itself is concrete throughout, and part of the barnyard is concreted also. Louden equipment is used and everything is done to insure sanitary conditions. The milk room, while part of the building, is semi-detached from the stable, and even then there is a passageway between where the cows are housed and the milk room itself. After the milk is drawn from the cows it is carried through this passageway and dumped into a small vat which communicates with the milk room by a spout. Between the milk room and the stable is a concrete walled and floored room which is unoccupied most of the day but in which cars or milk carts could stand. The object of this designing is to eliminate any stable smell in the milk room, while at the same time the workers carrying milk from the stable to the dairy are sheltered from inclement weather and the milk protected from weather-blown particles of dust and other small objects.

Concrete enters very largely into the buildings of the Bonnymead Farms. On one side of the farm barn is a large concrete floor on which autos can stand and on which wagons and autos are washed. The small calves are kept in separate pens in another building. Each one is tied by the neck and there is a solid wood partition between each animal. As the animals grow, they are shifted to larger pens until they become large enough to run outdoors for most of the time.

The bulls are kept in roomy box stalls with yards attached. The stalls are so constructed that there are open spaces through which a man can easily pass but which are too small to allow a bull to pass through. The object is to insure the safety as well as the convenience of the attendants.

A number of good official and semi-official records have been made on this establishment, although not much is done in the way of testing at the present time. The disarrangement of business caused by war conditions and the consequent readjustment now going on, has caused a temporary slackening of test work, but it is the intention of those in charge to do more before very long.

The senior sire is a very handsome bull and is a grandson of Woodcrest Nig DeKol, who breeders claim, is one of the best of the great Hengerveld DeKol. The dam of this bull was untested but was known to be a great cow, so that it is easy to see that individuality and capacity to produce are esteemed more highly at Bonnymead than are records. In addition to the farm business there is a gristmill and coal shed on the farm itself, close to the village of Paxtang. From this minor business the feed and fuel for the main establishment is obtained, but it also enjoys a good local trade among the farmers in the community.

When we referred to the disarrangement of labor conditions, this means labor shortage but does not mean labor trouble. There has never been any labor trouble on Bonnymead Farms. Mike, the head cowman, has been on the farm thirty-one years, fifteen of which have been in the cow barn, and quite a number of the other men have been there nearly as long. Perhaps one of the reasons is the fact that there is a nice recreation room on the farm, equipped with a pool table, twin bowling alleys, shower baths and a large reading or lounging room. In this room is a seven-section bookcase, filled partly with fiction, partly with instructive books. The big center table is kept loaded with magazines. Besides the many lounging chairs, there is a well-tuned piano and the room is large enough for a meeting or dance, and then leave a place beside the large open fireplace for those who do not wish such exercise.

Bonnymead Farms is a beautiful place both inside and out. Abundance of glass in the building and the solid character of the buildings would attract attention anywhere. The grounds around the buildings are set with ornamental shrubbery and the place is both useful and ornamental. It is owned by the Boyd estate, of which there are a number of heirs, and the estate owns a membership in the Holstein-Friesian Association under the name of Bonnymead Farms.

To Eliminate Oleo

The Holstein Club of Neillsville, Wis., have gone on the warpath against oleo. A committee have interviewed all dealers in the town and obtained a signed promise from them to sell no more oleo. They have made arrangements with the Neillsville Creamery to put up a high quality of pasteurized butter and are determined to boost this home industry. So successful have they been that there is very little oleo sold even in the towns surrounding Neillsville.

"Helen's cheeks are like roses."
"Aren't you laying it on pretty thick?"
"No, but Helen is."—*Boston Transcript.*

A band in a small Minnesota town had just finished a vigorous but not overly harmonious selection. As they sank perspiring to their seats after bowing for the applause, the trombonist asked hoarsely:

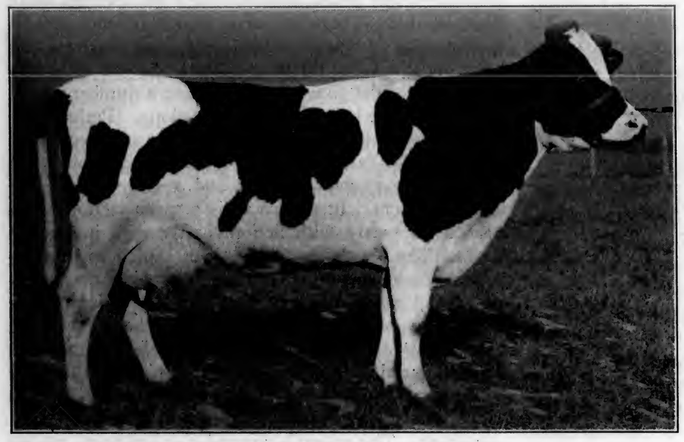
"What's the next one?"

"'The Maiden's Prayer," answered the leader, consulting his program.

"Good Lord!" ejaculated the trombonist, "I just got through playing that!"—*Washington Star.*

A writer in a contemporary complains of the unsatisfactory working of country telephones. We know of one impatient farmer, a new subscriber, who harnessed the old mare and drove down to the village to find out if his voice had come through yet.

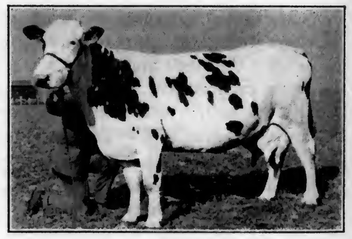
Good Records at Dixon



THE Illinois Coöperative Testing Plant, located at Dixon, is starting out very successfully and already a number of good records have been made by the animals under the charge of Herdsman Henry A. Dressel.

Mercedes Pet Canary Countess, No. 342554, freshened the day after she came to the plant, and as soon as it was possible she was put on official test. She has completed a seven-day record of 640.8 lb. milk, 29.59 lb. butter. She is being continued on long-time test, strictly official, and in 108 days has 8,563.2 lb. milk, 396.05 lb. butter to her credit. She is owned by Fitchome Farms of Aurora, Illinois.

Molly Hengerveld Towanda, No. 466733, holds the state record for year milk production in the senior two-year-old class. She finished her year record in November, making 746.30 lb. butter, 21,750.2 lb. milk. She arrived at the plant the middle of November and freshened on Christmas Day. December 31 she started in test and, as a senior three-year-old made the very creditable record of 572.5 lb. milk and 29.47 lb. butter in seven days, which record gave her fourth place in the state seven-day division. She is owned by Harry M. Wood, of Delavan, district director of the State Holstein-Friesian Association.



Another great record was made by Sonoma Johanna Champion, No. 338067. Freshening the 29th of December, she started test on the 4th of January, and in her first seven days she made slightly less than 31 lb. butter. Continuing on test, she raised these figures to 607.1 lb. milk and 31.51 lb. butter. Her best day's production in milk thus far has been 102.2 lb. Both her dam and granddam are Illinois State champions in the 305-day division, one for milk production and one for fat production. She completes a three-generation group of dam, daughter, and granddaughter, each of which have been milked over 100 lb. in a day.

John Sexauer and Sons, of Belvidere, own this cow as well as her dam, Sonoma Kantje Colanthus, and granddam, Sonoma Kantje Alexander, and are responsible for the development of the family.

SONOMA JOHANNA CHAMPION

607.1 lb. milk, 31.51 lb. butter in 7 days. 102.2 lb. milk in a day. This cow, her dam and her dam's dam have each produced more than 100 lb. milk in a day in official test. Owned by John Sexauer & Sons, Belvidere, Ill.

MERCEDES PET CANARY COUNTESS

640.8 lb. milk, 29.59 lb. butter in 7 days. 8,563.2 lb. milk, 396.05 lb. butter in 108 days. Owned by Fitchome Farms, Aurora, Ill.

College Cows

THE University of Nebraska owns a Holstein herd that is internationally famous. The cow that first placed this herd "on the map" in Holstein circles was Katy Gerben, who as a junior three-year-old made 18,573.4 lb. milk, 775.50 lb. butter in a year, and has a long list of great year records. It may surprise many of our readers to learn that Katy Gerben is still living, or at least she was alive the first day of this year. Although she is nineteen years old and has lost two of her quarters, she still does her share as a producer. Many of the animals in the present University herd are her descendants.

A number of high-class sires have headed the University herd. Prince Ormsby Mercedes DeKol, a half-brother to the famous Pietertje Maid Ormsby, has three daughters in the herd that have yearly records averaging 23,212 lb. milk, 1,080 lb. butter. The average production of these three daughters is greater than that of their dams by 2,994 lb. milk, 270 lb. butter. One of these daughters is La Verna Lincoln with 29,555 lb. milk and 1,310.62 lb. butter in a year as a seven-year-old, and is the state champion for butter production. Another of his daughters, Allie Lincoln, is expected to make at least 1,000 lb. butter this year as a nine-year-old.

Another sire with five daughters in the herd is King Segis Hengerveld Vale, a son of King Segis. The five daughters of this bull averaged 16,833 lb. milk, 718 lb. butter in long-time test, at an average of four years. The average records of these daughters surpass the records of their dams by 2,891 lb. milk and 122 lb. butter. He left a son, King Derby Lincoln, whose seven tested daughters in the University herd averaged 14,722 lb. milk, 630 lb. butter. The records of these seven daughters exceed the average records of their dams by 1,109 lb. milk, 58 lb. butter, despite the fact that they were tested at an average age of two years, five months, while their dams when tested averaged a year and one-half older. One of the daughters of King Derby Lincoln is Varsity Derby La Vinnie, a daughter of the state champion, La Verna Lincoln. As a junior two-year-old she completed, about the middle of last December, a year record of 19,830.1 lb. milk, 860.54 lb. butter.

The present herd sires are: King Piebe Pontiac Segis, son of Piebe Laura Ollie Homestead King, from a 1,158-lb. daughter of King Segis Pontiac Count; Count Ormsby Segis Pontiac, a son of King Segis Pontiac Count from a daughter of Sir Pietertje Ormsby Mercedes, and King Segis Pontiac Klaver, a son of King Segis Pontiac, from a daughter of Pontiac Korndyke. The Klaver bull made quite a reputation as a show animal and won a number of prizes at leading fairs.

At the college there are also Guernseys, Jerseys, and Ayrshires. One of the Jerseys, Bona Lincoln, has a year record of 12,091 lb. milk, 785 lb. butter, and is the second highest producer of her breed in the state. The Guernsey leader, Helene of Beatrice, made 11,346 lb. milk, 739 lb. butter, and is the breed champion of her state. Bonnie Jean, the Ayrshire Queen, made 13,062 lb. milk, 732 lb. butter in a year.

No less than 41 long-time records for periods varying from ten months to one year, have been made in the college herd, and these average 12,389 lb. milk, 629.4 lb. butter. The Holsteins exceed the showing made by any other breed and the twenty Black-and-Whites average 15,464.8 lb. milk, 706.72 lb. butter.

During the past five years the herd had been under the supervision of Mr. Nels Anderson, and much of the credit for its development is due to his untiring efforts.

Tennessee Champions

MANY believe that the Southern United States is the future great market for Holsteins. At the present time this is an almost undeveloped dairy field and particularly so from the Holstein standpoint. There are a number of good cattle scattered over this vast country, practically every agricultural college and experiment station owning a high-class herd. The state of Tenneseee owns a herd at Knoxville that has made a number of splendid records, both in short-time and in long-time test; in fact, all the state records for long-time production are held by station cows. The herd is under the management of Professor C. Elmer Wylie, head of the Dairy Department of the College of Agriculture. The Tennessee state champions are:

SEVEN-DAY DIVISION

Age	*Name*	*Owner*	*Milk*	*Butter*
Mature	King Pontiac Calypso Rockwell,	Highland Rim Holstein Co.,	548.6	32.03
Sr. 4	Olive DeKol Korndyke,	W. A. Parrish,	440.5	18.22
Jr. 4	Lynda Inka Pollyanna,	A. S. Johnson,	542.4	21.33

There is a world-wide market for good Holsteins. We shall get our share of the trade if we use the best of sires, breed for type as well as production, grow our young stock well and take every precaution to guarantee the health of our herds.

Before the days of steamships, the wife of a sea captain would send a note to her parson the Sunday before sailing date—"Captain—going to sea, his wife desires prayers." On one occasion, the note read: Captain Jones, going to sea his wife, desires prayers."

You may have observed that those who are true blue never turn green with envy.

The population of this country has increased nearly twenty millions since 1900—yet to-day we have fewer cattle than we had then. If the cattleman of to-day is not holding openers to a jackpot of prosperity, he is at least "exposed."—*Denver Record Stockman.*

Some one may have thought it necessary to put the holly in Hollywood, but no one apparently feels any necessity for mistletoe. Or orange blossoms.

Rub—Are you engaged to Mary?

Dub—No, but I'm on her waiting list.—*Kansas City Star.*

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

FEBRUARY 22, 1922

Stick

THERE is a trait inherent in man that often causes him to follow or want to follow the line of least resistance. The path seems easier; it is hard work to climb. But our leaders in all lines of business, in fact, in anything, are not men who sought the easiest way. They kept everlastingly at it.

This month we celebrate the natal days of two of our greatest Presidents. Each surmounted difficulties. Each met defeat. And each kept their cause before the country until that country gave each man the highest honor an American can have conferred upon him.

To-day some of us feel, because the boom days of the past few years are past, that we are "up against it." The readjustment period has dealt hard with the farmer. He operates a business where he cannot take advantage of sharp turns in the market. Long, slow swings govern the prices he receives unless speculation interferes, and when it does, seldom does the producer get the benefit of any change in market prices.

Sticking to it will win in the purebred industry as well as in other things. In the older countries there are many instances of establishments passing down from generation to generation until several successive descendant owners have guided the destinies of noted herds. Business has swung from boom time to depression and back, war has exerted its disturbing influence, in many cases disease has scourged the industry, yet pluck and persistency have won through and the herd representatives of to-day carry forward the banner with undaunted courage.

Perhaps the purebred industry in this country is too young to show similar examples. Maybe the American is too versatile to stay by an enterprise when financial returns are low, he would sooner turn his energies to something that promises greater and speedier returns. But the great rewards of fame and of finance are to the man who stays, who does not get discouraged and who, while doing his best to-day, lays his plans to take advantage of whatever the morrow may bring.

Proposed Purebred Sire Law

A BILL, which if passed, will mean much to the purebred breeding industry, has been introduced in the New York State Legislature by the Hon. Mr. Hickey. This bill has had its first reading and has been referred to the Committee on Agriculture.

The proposed bill would prohibit any person in the state of New York keeping any bull for breeding purposes unless said bull was purebred and its purity of blood acknowledged by a certificate of registration issued by a recognized breed association.

It is an economic waste when purebred dairy bulls are vealed while scrubs are kept in service. If there is any fundamental good in the business of purebred cattle breeding—any truth in the claims put forth by those engaged in such industry,—a purebred bull should sire more profitable dairy animals than should the grade. Unless the dairy cow is a profitable animal, there is no excuse for her existence, and it is only because animals of the recognized dairy breeds do excel, in profit-making ability, the common cattle of the country, that they are worth more and bring more at public and private sales.

The owner of a scrub bull stands in his own light and keeps such an animal at a loss, not only to himself, but also to the economic welfare of the entire country. Sometimes a scrub animal is kept because the owner knows no better, sometimes because of carelessness, sometimes because the owner pursues a pennywise, pound foolish policy and hesitates or refuses to make a small initial outlay, instead of regarding it as a necessary investment bound to bring big returns in the not far distant future. With purebred bulls readily attainable, there is no reason or excuse for any owner of livestock to keep a scrub bull in service.

There is bound to be some opposition to the passage of such a bill but in meeting argument it must be remembered that the owner of a grade or scrub bull can change without much financial loss, for he can sell his grade or scrub for beef for its full commercial value and with the proceeds purchase a purebred registered calf.

We reproduce the proposed legislation:

STATE OF NEW YORK.

No. 421 Int. 419

In Assembly, January 24, 1922.

Introduced by Mr. Hickey. Read once and referred to the Committee on Agriculture.

AN ACT

to amend the agriculture law, in relation to purebred domestic animals.

The people of the State of New York, represented in Senate and Assembly, do enact as follows:

Section 1. Section one, article fourteen, chapter nine, of the laws of nineteen hundred and nine, entitled "An act in relation to agriculture, constituting chapter one of the consolidated laws," is hereby amended by adding, at the end thereof, a new section, to be section three hundred and twenty-three, to read as follows:

323. It shall be unlawful for any person to keep or use for breeding purposes within this state any bull unless the bull shall be purebred and registered by a duly organized and recognized corporation or association formed for the purpose of registering the purebred cattle, of that particular breed, and shall have in his or her possession the certificate of registry of such bull issued by said corporation or association under its seal.

2. Any person violating this act shall be guilty of a misdemeanor.

3. This act shall take effect January 1st, nineteen hundred and twenty-three.

Junior Department

By King Solomon

Did you know that the Bible contained advice to owners of livestock and that advice is credited to the wisest man who ever lived? If you will read the twenty-seventh chapter of Proverbs you will find towards the end of the chapter the following counsel, which is as true to-day as it was when first spoken or written:

Be thou diligent to know the state of thy flocks,
And look well to thy herds.
For riches are not forever,
And doth the crown endure to all generations?
The hay is carried and the tender grass showeth itself,
And the herbs of the mountains are gathered in,
The lambs are for thy clothing.
And the goats are price of the field;
And there will be milk enough for thy food,
For the food of thy household,
And the maintenance of thy maidens.

Calf Raising

Watch out for your calf's comforts. The happy calf is the one that grows the best. Be sure that she has plenty of cool, fresh water. Be sure that she gets enough to eat. Keep her growing. If she stops, it will take time and much feed to get her growing again.

While calves are being fed on whole or skim milk, they need very little salt; but it is a good practice to feed them a small handful of salt once a week.

Be sure not to let your calf drink all the milk it wants when it first learns to drink from the pail. With the average calf one quart of milk three times a day would be ample for the first week. This should be whole milk. When the calf is a week or ten days old, skim milk may be gradually substituted for whole milk. Until the time the calf is three weeks old, it will be getting skim milk entirely. At this time, it need not be fed oftener than twice daily. The amount of milk should be gradually increased from five or six pounds a day at first to 15 to 20 pounds when the calf is from three to four months old, depending on the age of the calf.

If the calf shows any signs of scours, reduce the amount of milk at once. Overfeeding on milk and dirty utensils causes scours more than all other things put together. One teaspoonful of dried blood meal in each feed will often prevent scours.

When your calf is about three weeks old, feed her all the dry grain mixture that she will lick up clean after drinking her milk. Put the grain mixture in the feed box, not in the skim milk, nor in the pail from which the milk was fed.

A good grain mixture you can prepare yourself is:

30 pounds wheat bran.
30 pounds ground oats.
30 pounds cornmeal.
10 pounds linseed meal.

When the calf is four or five months old, two pounds of dry grain fed twice a day should be sufficient grain ration.

Calves, like boys, will not grow well unless fed well. So, whether it be winter or summer, we must ever see that the calf has enough to eat. The old idea of getting the young stock through the winter on meadow hay has vanished. The good herdsman knows that the best time to grow stock is when it is young. Calves, as well as pigs and hens, desire a variety of food, so do not neglect the grain ration.—*Mass. Calf Club Primer.*

An Irishman was hauling dynamite in a quarry. He let a stick drop, and the whole box went up, taking Mike with it. The quarry boss came around later and said to another Irishman:

"Where is Mike?"

"He's gone,," replied Pat.

"When will he be back?" asked the boss.

"Well," replied Pat, "if he comes back as fast as he went he'll be back yesterday."

"Was that fellow who was engaged to two girls properly punished?"

"He was. One of them sued him for breach of promise and the other one married him."—*Louisville Courier-Journal.*

Charged with stealing a motor car, an Irishman is reported to have blamed a policeman. He asked the way to Streatham, and the officer said: "Take the car at the end of the road." And he did.—*Punch, London.*

Mrs. Thricewedd—Well, dear, how do you like your new papa?

Marjory—Oh, mamma, do go on marrying men like that; he's given me a whole dollar.—*Boston Transcript.*

Paris can decree long skirts for the summer if she wants, but Americans still hold with their Puritan forebears that man wants but little here below, nor wants that little long.

She—John, do you believe in long engagements?

He—Sure, why shouldn't a young couple be happy as long as they can?—*Film Fun.*

Mrs. Jones never criticizes her neighbors.

Indeed! Where is her home?

In the cemetery.

In spite of the trend of the times, there are a lot of old-fashioned chaps who still prefer a cookmate to a soulmate.

Not much remains to the man who has lost his grip —whose backbone has become a wishbone.

Money makes the mare go everywhere but on the race track.

CLUB ACTIVITIES

WISCONSIN GOVERNOR TALKS TO BREEDERS

The Waukesha County Holstein Breeders' Association met at Waukesha, January 20, in the First Methodist church. The principal speaker was the Hon. J. J. Blaine, governor of the state of Wisconsin.

President F. J. Southcott in his address said that the Holstein interests of the county and nation were in a better condition to-day than they had been in the past three years, that there was a demand for choice Holsein cattle, and he looked forward to a still greater demand in the coming year. People in other states appreciated Wisconsin animals and were coming to Waukesha County for good ones.

Governor Blaine spoke on "Coöperation," the opportunity of farmers and breeders to organize and market their produce coöperatively. A change in the state laws now permits farmers to sell their produce and to buy collectively. The governor said that he did not feel like a stranger in Waukesha or in Waukesha County, because several of his relatives had been pioneers in this section and a number of them were still residing in Oconomowoc.

J. K. Lowry spoke on "Business Conditions." He asserted that liquidation, as far as the farmer was concerned, was practically completed and farmers are now facing a period of prosperity. Waukesha banks owe $400,000 to Federal Reserve, three-fourths of which were advanced to farmers.

D. C. Pryce, of Australia, compared dairying in the United States and his native land. He is looking forward to the time when Australia will be buying a good many Holsteins. Shorthorns are, at the present time, the most prominent Australian breed.

T. H. Campion, of the Milwaukee County School of Agriculture and Domestic Economy, spoke on breed association work in Wisconsin, and urged further coöperation in farm matters.

At the directors' meeting, following the annual meeting, F. J. Southcott was elected president of the association; Fred Klussendorf, vice-president; W. L. Baird, secretary and treasurer, and L. V. Garvens, field secretary.

GREEN COUNTY MEETING

At a meeting of the Green County Holstein Breeders' Association held at Monroe, Wis., January 14, the question of building a stock pavilion at the fair grounds formed the principal subject of discussion. A committee was appointed to confer with the fair grounds authorities and with other breed associations. The Holstein breeders believe that the new building should have a housing capacity of not less than 200 head.

Officers were elected for the ensuing year, and are: J. B. Pierce, president; Fred C. Coldren, first vice-president; Herman Genpeler, second vice-president; Henry Hobberman, treasurer; T. A. Hoesly, secretary; Iver Ellingston and J. H. Roderick, directors.

FORM COUNTY ORGANIZATION

The four Holstein clubs in Iowa County, Wis., have formed the Iowa County Holstein Breeders' Association. Under the plan adopted the Holstein communities hold their own meetings and elect two directors who automatically become directors of the county organization. The four communities thus far organized are Mineral Point, Dodgeville, Barneveld, and Avoca.

It is expected that there will be at least six Holstein clubs in the county by the end of the year. The directors of the four clubs met in January and elected the following officers: Roy Gordon, Mineral Point, president; Wm. McGill, Avoca, vice-president; A. G. Campbell, Barneveld, secretary; Chas. H. Jones, Dodgeville, treasurer.

CHESTER COUNTY BREEDERS MEET

The January meeting of the Holstein-Friesian Breeders of Chester County was held at West Chester, Pa., January 11. President E. B. Walton, London Grove, presided. Secretary Garrett reported on the activities of the association during the past year, including the selection of Norman S. Grubbs as delegate to the National Convention, at St. Paul, Minn., and the holding of the annual banquet.

F. C. Brinton, Jr., said the sale committee reported that the annual sale of October 19 last, has been very successful, 85 animals averaging $224.00. A number of persons spoke in favor of holding sales annually. It was decided to again offer a prize cup for the best butter fat record for the year ending October 8, next, open to owners of cows in Delaware and Chester Counties. Cups will be awarded at the next county fair, one for the champion bull and one for the champion cow on exhibition.

President E. B. Walton was nominated as delegate to the National Association meeting at Kansas City, this year.

Delegates were appointed to attend the meeting of the Pennsylvania breeders in Harrisburg, and a number of new members were taken in.

Prof. A. A. Borland, of State College, spoke of the high rank Pennsylvania occupies as a producer of dairy products, and stated that more than nineteen million gallons of ice cream were manufactured in the state, Pennsylvania ranking first in its manufacture.

COLORADO CLUB MEETING

At the annual meeting of the Colorado Holstein Club at Denver, January 24, W. S. Partridge, of Holly, was elected president, and Arthur Ponsford, of Denver, vice-president. The attendance was the largest of any meeting of the organization in recent years, and the interest manifested among the breeders of the Black-and-White portends great things for the future of the industry. Walter Polly, of Johnstown; Norman D'Arcey, of Parker; M. E. Penrose, of Denver; C. F. Louderback, of the Modern Woodman Sanitarium, Colorado Springs, and C. C. Wilson, of Turkey Creek Farm, Colorado Springs, were elected to the board of directors.

The election of a secretary was postponed and the newly elected board of directors was authorized to appoint a paid secretary and field man, who shall devote his entire time to the interests of the Holstein breed in this state.

Handsome loving cups were presented to Mrs. R. G. Douglas, of Rush, the retiring president; Mrs. Storrs Hall, of Denver, retiring secretary, and Mrs. M. E. Penrose, of Denver, retiring treasurer, as tokens of the appreciation of the club for their faithful and loyal services in behalf of the organization.

KANSAS BREEDERS ENTHUSIASTIC

An enthusiastic meeting of Holstein breeders was held in Downs, Kan., January 7th.

Last October, a public sale of Holsteins was held in Downs, The cattle were consigned by breeders in the eastern part of the States. Many of the purchasers came from a distance, although quite a number of animals remained in the vicinity of Downs. The sale created much interest in Holstein-Friesian cattle and it was decided to form an organization to be known as the Holstein-Friesian Association of Northwest Kansas. The next meeting will be held at Phillipsburg early in March. The following officers were elected. Dan Wolters, Beloit, president; O. E. Riffel, Stockton, vice-president; O. L. McCoy, Glen Elder, secretary-treasurer; board members, Fred Folger, Cawker City; Col. Bob Heinen, Cawker City; Ed. Riffel, Stockton.

TIOGA COUNTY CLUB ELECTS OFFICERS

The regular annual meeting of the Tioga County Club was held at Owego, N. Y., January 31. The members assembled at 12:30 in the dining room of the hotel where they were entertained by Sec'y R. A. Galler, of the Owego Chamber of Commerce. Professor H. H. Wing, of Ithaca, in a splendid address, told of livestock and general argricultural conditions in Australia. Professor Wing prefaced his remarks with a strong indorsement of the work of the State Association, particularly in its manner of holding consignment sales. Professor Wing was a member of the committee appointed to examine the cattle at the recent Liverpool sale, and he commended the State Association for the exceptional high quality and uniformity of the offering. He laid particular stress on the fact that the average breeder will always be most interested in the purebred animals that he can secure at a moderate figure and that will be superior to the average grade from the standpoint of production. Manager H. B. Fuller of the Farm Bureau, spoke on the importance of the club following out a definite program, and suggested that they lend their continued support of the purebred sire campaign in Tioga County and offered the facilities of the bureau for the advancement of the interests of the club. Pres. C. F. Bigler and Secretary Zimmer, of the State Association, discussed the work of that organization and touched upon the need for active coöperation by the county clubs and the State Association in order to get out the most effective program. At the close of the meeting practically all of the breeders present joined the association. Tioga is on the joint fee plan. Pres. F. H. Judd, of the Geneseo Club, and Director C. B. Marshall, Morrisville, remained in the county to assist in the membership canvass.

The following men were chosen as officers for the coming year: President, Fred Foster, Owego; vice-president, Ross Mead, Newark Valley; secretary, L. J. Yates, Owego; treasurer, F. E. Hilbert, Candor; member of the better sire campaign committee of the farm bureau, Harry Petzold, Owego. President Foster was elected as a representative of the club on the State Advisory Council.

EXPRESSING HER LOVE

"If a cow turns to lick you, don't hit her on the nose or face, for she is only showing her maternal instinct and expressing her love," was the advice given by I. P. Martny, of Chippewa Falls, to the 125 present at the joint meeting of the Chequamegon Bay Guernsey and Holstein Associations held January 17th, in the courthouse at Ashland, Wis.

"It is only when her maternal instinct is excited, when she feels as kindly towards the person milking her as she would toward her calf, that she gives freely of her milk."

Use of feeds grown locally was advocated by Professor E. J. Delwiche, of the Experimental Agricultural Station at Ashland Junction. He suggested growing root crops instead of buying beet pulp.

The Ashland district, with about a thousand farmers, has twenty-eight dairymen who are doing year testing, and a few others doing seven-day work. The only Wisconsin district exceeding in dairy testing is Waukesha County with about forty testing, out of some three thousand farmer residents.

Prof. Humphrey told that dairymen all over the United States, from the Dakotas and Pennsylvania to the west and east, and from Arkansas and Tennessee to the south, were buying cattle in carload lots, recognizing that the cows from the Northern states possess superior stamina and virility. He predicted that Ashland would become one of the important breeding centers of the country.

SANILAC ASSOCIATION ORGANIZED

Sanilac County Holstein-Friesian Association was organized at Sandusky, Mich., January 27th.

Geo. T. Black, Sandusky, was elected president; Chas. Kirkpatrick, Snover, vice-president; Oscar Bushnell, McGregor; secretary-treasurer.

H. M. Norton, head of the State Bureau of Animal Industry, was the principal speaker.

WESTERN BREEDERS FORM SALE ASSOCIATION

The Western Coöperative Holstein Association is the new name of the Western Holstein Breeders' Association, formed by Stanislaus breeders to handle all public sales in the county and to care for other business of interest to owners of Holstein-Friesian cattle. The officers are: President, A. M. Bibens, Modesto; first vice-president, F. R. Beals, Tillamook, Ore.; second vice-president, F. L. Hague, Modesto; secretary-treasurer, Ralph Newman, Elk Grove. These officers compose the board of directors together with the following: W. P. Coobs, Chowchilla; E. E. Freeman and William Way, Modesto; H. H. Sisson, Willets; Henry McCall, Princeville, Oregon. A field man or active sales manager is to be appointed who will handle all the sales for the members of the organization, the profits of which is to go to the association treasury.

In the evening the Stanislaus County Association held its annual banquet. Attorney Tom Scott was toastmaster, and among those who spoke were: Walter Packard, manager of the Delhi State Land Colony; E. H. Hughes, Animal Husbandry Division of the University Farm; J. M. Henderson, Jr., president of the Associated Dairymen of California, and Dr. W. H. Walker, president of the California Farm Bureau Federation.

MANITOBA ASSOCIATION FORMED

At the first meeting of the Manitoba Holstein Breeders' Club at Winnipeg, January 11, George Rice, of Stonewall, who is largely responsible for the organization, was elected honorary president and secretary-treasurer. Other officers elected are: President, P. Oughton, Stonewall; vice-president, Chas. W. Weaver, Deloraine; directors, Alex. Johnston, Balmoral; G. B. Monteith, Winnipeg; Jethro Clarke, Swan River; W. G. L. Hepburn, Virden; H. Hancock, Dominion City, and J. O. Glennie, Portage la Prairie.

The objects of the organization is the promotion of good fellowship and general interest of the Holstein-Friesian breed of cattle in the province of Manitoba by obtaining, as occasion may demand, favorable legislation; equitable freight rates; uniform classification at fairs; discussion of the best methods of breeding, rearing, exhibiting, and raising the standard of excellence of the breed; to bring before the public the good qualities and exceptional merits of the breed, and other subjects of interest at regularly called meetings, and in all ways to generally promote, widen, and extend the interests of this breed of cattle and to act in unison upon all occasions which demand it.

COUNTY DEFRAYS TESTING EXPENSE

The Hillsdale County Breeders' Association met at Hillsdale, Mich., January 26, with forty in attendance. The afternoon was spent in general discussion, there being no outside speaker.

A committee was appointed to go before the board of supervisors to ask for an adequate appropriation for the purpose of tuberculosis testing. This year the cattle of the county were tested for the first time; the dairymen paid ten cents a head for each animal tested, and the supervisors appropriated $3,500 to defray the expenses. It was also decided to get back of the boys' and girls' calf clubs and develop them as much as possible. The association decided to participate in the Hillsdale County Purebred Association Sale to be held February 28.

REEDSBURG ASSOCIATION FORMED

The Holstein breeders living around Reedsburg, Wis., have formed the Reedsburg Holstein Association and elected the following officers: Orrie Kirkpatrick, president; Ed Koenecke, vice-president; Walter Sorge, secretary-treasurer; H. J. Sedgwick, Pat Walsh, Jesse Churchill, and Harry O'Connor, directors.

Some of the objects of the association is to encourage a local market for the purchase and sale of purebred Holsteins; to develop a stock listing bureau, so that buyers may easily find animals; to encourage the substitution of purebreds for grades.

MUTILATED PAGE

BRATTLEBORO BUSINESS

For the week ending January 28, thirty-three applications for membership were received; at the office of the secretary 2,582 certificates of registry were issued, 1,927 female, 655 male; 1,912 certificates of transfer were written, 1,222 female, 690 male.

For the week ending February 4, twenty-four applications for membership were received; 2,882 certificates of registry were issued, 2,087 female, 795 male; 1,744 certificates of transfer were written, 1,142 female, 602 male.

The Herd Prefixes reserved during the two-week period are:

Adamseden, Paul C. Adams, Warren, Oregon.
Aukre, A. U. Krebs, Phœnix, Ariz.
Bakerbred, E. A. Baker, Stratham, N. H.
Brutus, C. H. Wilson, Jordan, N. Y.
Camp McKinley, Charles F. Teich, Watertown, Wis.
Clay Hill, Wenzel Zepnick, Seymour, Wis.
Creswell, R. J. Treptow, Iowa City, Iowa.
Doorn, Jesse T. Van Doren, Three Mile Bay, N. Y.
East Pine, W. B. Lewis, Yuba, Wis.
Fishery, Helms Bros., Randolph, N. Y.
Fitzall, Andrews Bros., Argyle, Wis.
Fruitside, Oscar Faber, West Bend, Wis.
Grassmont, Morrison Farms, Barre, Vt.
Greenwich, Oscar G. George, Klinesville, Pa.
Halfmoon, James I. Cassedy & Sons, Mechanicsville, N. Y.
Helen Hill, Perry O. Sloan, Linesville, Pa.
June Apple, Mrs. L. M. Rode, Browntown, Ill.
Kandarque, Chas. A. Teeter, Ithaca, N. Y.
La Farge, John Weckesser, La Fargeville, N. Y.
Leafmore, Robert B. Chambers, Unionville, Pa.
Lilac Grove, Edwin Klumb, Allenton, Wis.
Merlin Brook, Clinton F. Smith, Lapeer, Mich.
Minnawanam, Jas. A. Henry, Dover, Minn.
Morrisdale, A. Morrison, Jr., Kansas City, Mo.
Mount Maple, Ivan J. Doyle, New Woodstock, N. Y.
Musadale, James Bunton & Son, Willis, Mich.
Namo, C. H. Oman, North Lake, Wis.
Opechee, Lue Smith, Granton, Wis.
Orpah, H. A. Padgham, Gooding, Idaho.
Plum Valley, Fred Dreischmeier, Wonewoc, Wis.
Punxy, C. W. Weber, Punxsutawney, Pa.
Rock Oak, Wm. H. Tietgen, Milwaukee, Wis.
St. Lawrence View, Leon W. Tracy, Massena, N. Y.
San-Vall, Floyd Kerr, Great Meadows, N. J.
Sutter, J. M. Hampton, Jr., Live Oak, Calif.
Toncania, G. H. Moody, Canton, Pa.
Twin Cedars, Herman Moldenhaner, West Bend, Wis.
Tyro, J. E. Stauss, Glenbeulah, Wis.
Wellstock, O. M. Wells, Grelton, Ohio.
Westbrook, Jens Schou, Morgan, Minn.

THE HOLSTEIN-FRIESIAN ASSOCIATION OF AMERICA,
F. L. HOUGHTON, *Sec'y.*

PLAN TO HAVE GOOD TIME

At a meeting of the Marion County Holstein Breeders' Association held January 21, at Salem, Ore., officers for the year were elected, as follows: President, H. W. Cooley, Jefferson; vice-president, Ernest Werner, of Silverton; secretary, Eugene Finley, of Jefferson; directors, B. S. Thurston, Jefferson; H. H. Kuenzi, Silverton; Sam Klein, Silverton, and C. J. Bering, Silverton.

A special Holstein day will be observed at Salem, Saturday, February 25. It is planned to have a general good time and have a number of noted speakers on hand.

WAUSAU BREEDERS MEET

The Wausau Holstein Breeders' Club met January 10 at the courthouse, Wausau, Wis., for their annual meeting, R. E. Golisch in the chair.

Jerre E. Witter, secretary-treasurer, read the minutes of the previous meeting and reported a balance in the treasury of $89.72. On motion the officers were reëlected as follows: President, R. E. Golisch; vice-president, Val Denfield; secretary-treasurer, Jerre E. Witter.

TRUMBULL BREEDERS MEET

Trumbull County, Ohio, Holstein breeders held their mid-winter business meeting and banquet at the parlors of the Presbyterian church, January 26th. The church ladies served a real Holstein dinner to about seventy enthusiastic breeders, forming Holstein beef and milk part of the menu. Tables were decorated with photographs of record Holsteins. Following dinner, talks were made by President A. V. Case, of the County Club; Dr. Thornberg, county health officer, and Field Secretary H. C. Barker, of Tiffin. The latter complimented Trumbull County on its success in Holstein breeding. He referred to Kinsman's very successful Holstein sale of last fall, gave a number of pointers on the handling of the business of the association, emphasized the importance of keeping only record animals in the herd, and also suggested the establishing of a county testing barn and the adoption of community breeding.

Planning for the spring sale which is to be held at Frank McComb's farm, near Warren, the first week in May, and the election of a county sales agent, constituted the business program. Mr. E. H. Partridge, of Farmdale, was elected sales agent, and the buyers are to get in touch with him.

This was an enjoyable meeting and the outlook for business is good. TRUMBULL COUNTY SECRETARY.

FONDY CLUB RE-ELECTS OFFICERS

The Fond du Lac County Holstein breeders at the annual meeting, Fond du Lac, Wis., January 28, reëlected its officers over their protests. Sam Stanchfield was elected field secretary. The reëlected officers are S. H. Bird, South Byron, president; C. S. Stanchfield, vice-president; C. H. Brugger, secretary and treasurer. Although the association has a considerable balance in the treasury, it is planned to raise $300 in addition to the annual dues for the purpose of financing the organization for 1922. This is to enable the association to function on an even larger scale than it did last year.

The banquet was a great success, about 200 sitting down to a bounteous repast.

E. H. Korrer, C. M. Corcoran, S. D. Randall, F. H. Boyle, Flint Jones, and E. C. Peebles were named as members of the board of directors, of which the officers are ex-officio members.

PORTER COUNTY HEARD FROM

The Porter County Holstein breeders met at Valparaiso, Ind., January 20, and elected the following officers: President, Chas. Ohlfest; vice-president, Herman Homfeld; secretary-treasurer, S. B. Sink; new directors, Art Hanrahan and Frances Bushore.

Professor Fairchild, of Purdue University, spoke on work of the other breed associations in the state. The other state dairy organizations were disposing of surplus stock at good prices despite the hard times, and he believed the Holstein breeders could do the same.

S. B. Sink told of the activities of the organization in the past and how, in 1918, the county had captured the grand championship and seventeen other prizes at the state fair with an exhibit of 18 head. Successful sales had been held and calf clubs established.

HONOR LOUISIANA VISITORS

About fifty members of the Chamber of Commerce and the Holstein-Friesian Association met January 12 at Sedalia, Mo., in honor of a delegation from the state of Louisiana, who are attempting to familiarize themselves with the organization and operation of the Pettis County Holstein-Friesian Association.

W. T. Angle, county agent, was toastmaster, and talks were given by Dean W. R. Dodson, of the Agricultural Department of Baton Rouge, La., H. L. Parr, president of the Louisiana Dairy Association, and L. U. Babin, a banker of Baton Rouge.

These men told of the progress of the dairy business in Louisiana. One of the principal difficulties was the Texas fever tick, but as this is gradually being eliminated, it is hoped to have the state cleared of the plague soon.

WASHINGTON COUNTY ADOPTS JOINT FEE

About sixty breeders attended the regular annual meeting of the Washington County Holstein Club, which was held at Greenwich, N. Y., January 20. Secretary H. C. Gray reported that the club treasury showed a balance of $138.25. Among the principal projects of the club during the past year was in getting out an exhibit of 100 Holsteins at the Cambridge Fair; getting increased premiums at the Hudson Valley Fair; sending a show herd to the New York State Fair, which succeeded in winning second place; sending consignments to the state sales at Rochester, Endicott, and Liverpool.

The question of changing the membership fee to the joint fee plan of the State Association was brought up for discussion and was unanimously adopted. This is the arrangement which most of the county clubs have now adopted, and by this plan one fee covers membership both in the state association and the county club.

Talks were given by President Bigler, of the State Association; R. F. Buckman, Farm Bureau Manager; E. R. Zimmer, secretary of the State Association, and Harry B. Winters, Albany, formerly Deputy Commissioner of Agriculture. Mr. Winters' address was a particularly pleasing feature of the meeting and was followed very closely by all present. The following directors were elected: James Biermiester, Greenwich; H. C. Gray, Greenwich; Joseph Beadle, Hartford; N. W. Hicks, Granville; Geo. McGeoch, Cambridge; Geo. Ward, Whitehall; U. G. Ellis, Fort Edward. At a later meeting of the board Mr. Biermiester was elected president, and Mr. McGoech, secretary.

ALLEGHENY-STEUBEN CLUB WILL HOLD SPRING SALE

A special meeting of the Allegheny-Steuben Club was held at Hornell, N. Y., February 1, for the purpose of discussing the project of holding a spring sale and to listen to the reports of the State Association officers. The club voted to hold a two days' sale, and appointed a committee for each county to look after the selection of animals and to complete arrangements for the event. Pres. A. A. Button, of Jasper, was appointed as chairman for Steuben County, with J. L. Zeliff, of Hornell, and D. M. White, of Bath, as associates. The Allegheny County committee is composed of E. R. Crandall, Andover, chairman, with F. M. Ostrander, Almond, and Claire Cobb, Springs Mills. A definite date for the sale was not selected, but it will probably be a two days' event early in April.

At the afternoon session talks were given by Pres. C. F. Bigler and Sec'y E. R. Zimmer, of the State Association; D. M. White, director for the district; H. M. Knox, of Canton, and several of the local breeders. Most of the breeders present became members of the State Association and arrangements were made for a canvass of the county. There was considerable discussion relative to the adoption of the joint fee, and most of the breeders expressed themselves in favor of the plan, but did not consider it advisable to attempt to change the by-laws at the present time.

SHOULTES RE-ELECTED

The Lewis County Holstein-Friesian Association met January 11, at Centralia, Wash., for their annual election of officers. H. R. Shoultes, of Adna, who has served as president of the association during 1921, was reëlected. Other officers elected include: M. P. Frame, of Ceres, first vice-president; G. O. Roundtree, of Klaber, second vice-president, and E. A. Donaldson, of Adna, secretary-treasurer. The members of the executive board are A. C. Mills, Tom Nesbit, and the officers of the association. Delegates to the state convention held the early part of March, probably in Spokane, include E. A. Donaldson, H. R. Shoultes, M. P. Frame, G. O. Roundtree, E. M. Moses, and Nathan Hamilton.

Stanley Burchard, secretary of the State Holstein Association, read a report of his work during the past year.

The association plans to get back of the boys' and girls' dairy clubs in Lewis County and to give all possible assistance to the livestock survey to be held in the near future.

SIX GOOD POINTS

The Wisconsin Rapids Holstein Club reëlected O. J. Leu president at their annual meeting. F. W. Jones was reëlected secretary and treasurer, and Andrew Schultz was reëlected to board of directors. R. R. Steinbeck was named as a new director.

The association drew up a program of six points which the club will attempt to accomplish during 1922. These are:

1. Increase the membership to thirty or more.
2. Push the county tuberculosis clean-up campaign.
3. Support calf club work.
4. Test cows for production, either officially or through testing associations.
5. Coöperate with other organizations to hold a spring sale and market day program in April.
6. Discourage the use of butter substitutes and petition local merchants to discontinue handling such substitutes.

A committee consisting of F. W. Jones, R. R. Steinbeck, and R. A. Peterson was named to push the campaign against butter substitutes.

BROWN COUNTY, WISCONSIN

The annual meeting of the Brown County Holstein Breeders' Association was held at DePere, Wis., January 17. The following officers were elected: James Dillom, president; J. N. Kavanaugh, secretary; Louis Meulemans, treasurer; Nic Vanda Huvel, Jr., and Gus Zittlow, directors. Joseph Hoskens was again named sales manager, and it was again left to the retiring president, John Peeters, to appoint a committee of four to assist him in the work.

It was voted that the association should continue to affiliate with the Green Bay Association of Commerce because the latter body assists farmers' organizations whenever they put on a big event. The members present voted that the sales association was a part of the Breeders' Association.

Mr. Robert Ryan was instructed to use his best endeavors to induce the State Holstein Breeders' Association to hold the next meeting at Green Bay. Mr. Ryan explained the delegate system of the National Association but the nomination of delegates was held over for the time being.

WHY TAX PUREBRED SIRES

The annual meeting of the Lewis County Holstein-Friesian Association was held at Chehalis, Wash., January 11th.

It was decided that the association take a membership in the Chehalis Citizens' Club. There was a lengthy discussion on the question of the exemption from taxation of purebred sires. The general opinion was that all purebred stock should be exempt and a committee was directed to prepare a resolution recommending such exemption.

LIVE HOLSTEIN COUNTY

Down in Chester County, Pa., Holsteins seem to be all the go. The Chester County Holstein-Friesian Association is a very live organization with over fifty paid-up members. Cows owned by its members hold world's records as well as being first prize winners at state and county fairs.

The officers are E. B. Walton, president; C. J. Garrett, secretary; F. C. Brinton, Jr., and Willard Cloud, vice-presidents, and Frank A. Keen, treasurer.

DUBUQUE CLUB MEETS

The annual meeting of the Dubuque County Holstein-Friesian Association was held at Dyersburg, Iowa, on January 10th. The officers were reëlected and are as follows: President, H. C. Vaske; vice-president, John Ploesl; secretary and treasurer, Leo. A. Meyer; directors, Jas. I. Powers and H. Naumann, both of Dubuque.

Mr. J. P. Eves, of Waterloo, gave an interesting address on sires and breeding.

PRESIDENT TWENTY YEARS

The Illinois Dairyman's Association held their forty-eighth annual convention at Laurence, in January, and elected officers. J. P. Mason, the president, who has held the position for twenty years, was reëlected. Other officers are: Vice-president, W. S. O'Hair, Paris; H. P. Irish, Farina; Chas. Foss, Freeport; Mrs. Julia A. Taylor, Springfield; J. H. Phillips, Benton; Leslie Miles, Lawrenceville. The secretary and treasurer will be elected at the first meeting of the new board of directors.

The Holstein prizes at the show were awarded as follows:

Bull, 2 years old or over—1st, J. N. Stansfield, Lawrenceville, Ill.

Bull, under 1 year—1st, J. N. Stansfield, Lawrenceville, Ill.; 2d, same.

Cows, 3 years old or over—1st, J. N. Stansfield, Lawrenceville, Ill.; 2d, same.

Heifer, 1 year and under 2—1st, J. N. Stansfield, Lawrenceville, Ill.; 2d, same.

Heifer, under 6 months—1st, Marshall Smith, Lawrenceville, Ill.; 2d, J. N. Stansfield, Lawrenceville, Ill.

Get of sire, 2 animals, either sex—1st, J. N. Stansfield; 2d, same.

County Herd, 5 animals—1st, J. N. Stansfield; 2d, same.

Grand Champion bull—1st, J. N. Stansfield.

Grand Champion cow—1st, J. N. Stansfield.

SECURING INFORMATION

Stephenson County Holstein Breeders' Association held their annual meeting at Freeport, Ill., January 28, and elected as officers: President, Wm. F. Brown, Freeport; vice-president, E. H. Dirksen, Meekin; secretary, Dr. C. H. Rosentiel, Freeport; treasurer, Paul Barmore, Orangeville; directors, Oscar Wolfe, Winslow; Chas. Foss, Freeport; L. A. Herbruch, Pearl City.

After luncheon W. S. O'Hair, vice-president of the State Dairyman's Association, and Director Oscar Wolfe talked on "Bull Association Work." The new secretary, Dr. C. H. Rosentiel, explained the county unit plan of tuberculosis testing, and S. J. Standard, superintendent of the dairy division of the State Department of Agriculture, discussed calf club work and the milk campaign.

Each member was given a questionnaire to fill out, giving information regarding his herd and indicating the projects which he thought the association should push during the year. The executive committee will use the information secured to work out a definite program.

MISSOURI HOLSTEIN-FRIESIAN ASSOCIATION

The annual meeting of the Missouri Holstein-Friesian Association was held in Columbia, January 18, 1922.

The reports of the president and the secretary-treasurer were read and approved. Mr. E. G. Bennett, State Dairy Commissioner, spoke relative to the cow race at the Missouri State Fair and gave some statistics regarding the dairy industry. Mr. C. W. Turner, who is in charge of official testing in Missouri, spoke on the progress of official testing work among the Holstein breeders. Mr. George Catts, of Kansas City, chairman of the Steering Committee representing the joint associations of Missouri and Kansas, spoke on the National Holstein Convention to be held in Kansas City, next June, and asked for the support of Missouri and Kansas breeders. The steering committee is organized for the purpose of managing the convention foundation plans. Publicity, finance, educational and sales committees have been elected.

After a lengthy discussion regarding the work of the field man it was decided to dispense with this office for the coming year. It was decided to organize a bureau to list the animals for sale in the state. A sales list will be compiled which will be mailed to each inquirer. Different county farm bureaus will hold public sales in which dairy bulls will be a feature. These sales will take place in counties where there are very few purebreds at present. Mr. Harmon, of the state extension service, asks that the Missouri Holstein breeders support these county sales and consign at least a few bull calves. Even if they would sell at a low figure, the Holstein industry will be encouraged in these counties and it will mean the development of future herds.

Resolutions were passed: (1) Offering the dairy department of the University of Missouri, the National Holstein-Friesian Association, and the Holstein-Friesian press a vote of thanks for valuable services rendered the past year. (2) That a committee of two members of this organization be appointed by the president to confer with like committees from other organizations regarding appropriations for the dairy department. (3) That the president of this organization represent the Missouri Holstein-Friesian Association on the Missouri Agricultural Council.

Election of officers resulted as follows: Glen G. Davis, president; Major Harlo Fiske, vice-president; A. B. Cole, Jr., secretary-treasurer; directors, Harry Cooke, Oliver Calvert, W. C. North, C. E. Driver, Carl H. Soest, and A. C. Ragsdale, ex-officio. Mr. Ozle, of Hematite, Mo., was appointed on the educational committee to serve with Mr. Harmon, of the dairy department, and the president of the organization.

After some discussion it was decided to recommend to the National Association that a resolution be presented at the next annual meeting to raise the transfer fee to $1.00, as it was before the 1921 convention, the proceeds derived from the raise to be used for extension work.

PROPOSED IOWA TESTING PLANT

The A.R.O. testing plant established by the Illinois breeders at Dixon, is exciting the interest of cattle owners in many parts of the country, and the Holstein breeders of Black Hawk County, Iowa, are planning to open a coöperative plant of their own if the plans are consummated. This barn will be on or near the grounds where the Dairy Cattle Congress is held annually.

At the annual meeting, January 28th, Fred S. Miller was again elected president; Lloyd Miller, secretary-treasurer, and Orville L. Hamer, vice-president. The board of directors will consist of the above officers and Hubert Stuckert, Gilbertsville; Norris F. Sherman, Jesup; Dorsey Blough, Orange Township; G. M. Packer, Raymond, and W. D. Hostrop, Cedar Falls.

The association voted to take up a county membership campaign to support the local Holstein Calf Club, and practically all present offered the services of their herd sires free of charge to the club. The committee to investigate the coöperative test barns are J. P. Eves, O. L. Hamer, and W. D. Hostrop.

EATON BREEDERS ORGANIZE

The Holstein breeders of Eaton County, Mich., organized February 1, and elected the following officers and directors: President, C. I. Brunger, Grand Ledge; vice-president, Clifford Jordan, Charlotte; secretary-treasurer, A. N. Loucks, Charlotte; directors, J. B. Strange, Grand Ledge; Milton Sprague, Vermontville; Claude Reeder, E. A. Vanderbeck, Clifford Jordan, and A. N. Loucks.

Arrangements were made to hold a sale about the middle of April and 45 head were promised. Prof. J. E. Burnett, of the department of animal husbandry in the Michigan Agricultural College, gave a fine address on "Holstein Types and Breeding," emphasizing the three fundamentals of breeding—heredity, environment, and training.

MASSACHUSETTS NOMINATIONS

D. E. Elder, of Mount Hermon, was chosen president; Frank P. Knowles, Auburn, vice-president, and George F. Smith, of Barre, secretary-treasurer of the Massachusetts Holstein Association at its meeting at Springfield, January 28. As delegates to represent the state at the National Association meeting at Kansas City the members nominated Henry G. Gould, Grafton; Edward Shattuck, Andover, and W. F. Turner, of Rutland.

The sum of $150 was appropriated to be used for prizes in Holstein calf clubs.

PENNSYLVANIA'S NEW TREASURER

Frederick C. Brinton, Jr., of West Chester, is the newly elected treasurer of the Pennsylvania Federation of Holstein-Friesian Clubs. Mr. Brinton was nominated for the secretaryship but, in the interest of harmony, withdrew in favor of Mr. Jones, who was declared elected. Thereupon Mr. Brinton's friends nominated him for the position of treasurer and he was unanimously elected.

FREDERICK C. BRINTON, JR.,
Treasurer of the Pennsylvania Federation of Holstein-Friesian Clubs.

REDUCED RATES TO JUNE CONVENTION

Secretary Houghton informs us that the Western Passenger Association has granted the association request for a reduced rate to the Kansas City June Convention. This will be on the basis of one and one-half fare on the certificate plan and on condition of at least 250 attending presenting certificates showing purchase of one-way tickets from points from which [illegible] one-way fare to the place of meeting is 67c or [illegible]

The territory covered by the Western Passenger Association includes stations in Colorado, Idaho, Illinois, Iowa, Kansas (except points on the east of St. Louis-San Francisco Railway, Kansas City, Missouri, to Baxter, Kan., via Girard and Cherokee, Kan.), Missouri (points on and north of Missouri Pacific Railroad, St. Louis to Labadie, thence Chicago, Rock Island and Pacific Railway, Labadie to Kansas City, Mo.), Minnesota, Montana, Nebraska, North Dakota, Northern Michigan, South Dakota, Utah, Wisconsin, and Wyoming.

The Southwestern Passenger Association has also granted reduced rate on the certificate plan, and the territory includes points within the states of Texas, Arkansas, Oklahoma, Southern Missouri and Louisiana, west of the Mississippi. Concessions are expected from the other passenger associations.

CHANGE IN HOLSTEIN YEAR

The date of the closing of the association fiscal year has been set back from April 30 to December 31, so that from now on the fiscal year of the Holstein Association will agree with the calendar year.

This action was taken by the board of directors on account of the increasing difficulty in getting reports from the various departments compiled and printed in pamphlet form, so that they can be submitted for consideration of the members at the time of the annual meeting.

Secretary Houghton has prepared a statement of the association business for the past eight months which is given in comparison with the two preceding Holstein years. In studying these figures it must be remembered that we are comparing eight months against years consisting of twelve months and that the four months left off the recently ended period is usually the busiest one-third of the year.

CERTIFICATES ISSUED FOR THE FISCAL YEAR, MAY 1, 1921, TO DECEMBER 31, 1921.

Members.	
Registrations, cows, within 1 year,	29,088
Registrations, cows, over 1 year,	6,460
Registrations, bulls, within 1 year,	13,285

WAYNE COUNTY, OHIO

The Wayne County Holstein Breeders' Association at Orrville, Ohio, January 30, elected as officers for the coming year: President, Dr. Benj. Studer; vice-president, George Miller; secretary, Karl Saltsman; treasurer, Wm. Bixler; executive committee, Dr. Studer, Karl Saltsman, William Bixler, C. S. Reece, and Noah Bixler.

It was decided to hold the association spring sale in April and to purchase an association bull from the Pabst stock farms.

There are 52 members in the Wayne County Association.

Cow Testing Association Reports

NEBRASKA PUREBREDS BEST

During the thirty-day period ending January 13 there were 273 cows tested in the Scotts Bluff, Nebraska, Cow Testing Association; of these 45 produced over 40 lb. fat and 17 over 50 lb. The average production show a material increase over the previous month, the gain being 7 lb. fat and 54 lb. milk. Fresh cows and better feeding are the cause of this increase.

The high herd belongs to Sam Barton & Sons, of Gering, consisting of 14 registered Holsteins which averaged 48.5 lb. fat and 1,443 lb. milk. Six registered Holsteins belonging to J. L. Moore, also of Gering, averaged 1,072 lb. milk and 4[illegible] lb. fat. Prof. L. R. Wright, of Gering, had four registered Holsteins that averaged 1,385 lb. milk and 41.7 lb. fat. The Barton cow, Jennie, now three years old, was high individual with 2,361 lb. m[illegible] lb. fat. Two other animals of this [illegible] made 75.8 lb. fat and 69 lb. fat, respectively. The honors in this association certainly went to the purebred. Four unprofitable cows have been sold. Two registered Holstein bulls have been bought by the members of the association.

GOOD RESULTS IN MISSOURI

Missouri cow testing association work shows steady increase in production and profits due to improved methods. There were forty herds on test in 1919, 135 in 1920, and 230 in 1921. In the same time production had been increased from 229.7 lb. butter fat per cow in 1919, to 243.4 lb. for those finishing in 1920, and 261.7 lb. for 1921, an increase of 14 per cent in three years. In 1919 the average return per dollar feed cost was $2.17; in 1920 it was $2.26, and 1921 it had increased to $2.48. These results cover 230 dairy herds in twelve of Missouri's best dairy counties. They show that in spite of the low selling prices of milk and butter fat, feed costs have declined enough that the margin of profit is steadily increasing for the man with the high producing dairy herd if he practices good dairy methods.

IN WISCONSIN

The high cow in the Avoca, Wis., Cow Testing Association for December is a purebred Holstein owned by J. J. Malter & Son. She made 72 lb. butter fat and 1,044 lb. milk. The Malter herd consists of six purebreds and one grade averaged 702 lb. milk, 35.8 lb. fat.

The second high herd is owned by Alex. Metcalf, and consists of 22 grade and purebred Holsteins that averaged 667 lb. milk, 22.7 lb. butter fat.

The high cow in the Almena Cow Testing Association for the month ending December 29, 1921, is a registered four-year-old Holstein, owned by Osterkamp Bros. She made 2,106 lb. milk, 77.9 lb. butter fat. The Osterkamp herd stood in highest position for the month with an average of 1,343 lb. milk and 44.9 lb. butter fat for eight cows.

The high herd in the Menomonie, Wis., Cow Testing Association for December was owned by Ed. Webert. This herd consists of grade Holsteins and averaged 40.7 lb. fat and 1,103 lb. milk.

Goldie, a purebred Holstein, owned by J. D. McDonald, headed the West Salem Cow Testing Association for the month of December. She made 2,620 lb. milk and 96.9 lb. butter fat, and is one of the leading cows of LaCrosse County. The twenty-cow Holstein dairy of S. E. Clark averaged 1,014 lb. milk, and 37.78 lb. butter fat.

McHENRY COUNTY HOLSTEINS LEAD

McHenry County led Illinois state in the honor list of milk producers during December. Greyer and Smiley, of Harvard, had the high producing herd; fourteen purebred Holsteins which averaged 1,555 lb. milk, 44.6 lb. butter fat; the eleven cow dairy of purebred and grade Holsteins owned by G. E. Dickson, was third, with 1,425 lb. milk and 44.1 lb. butter fat. H. P. Anspach, Morrison, had the leader, a registered Holstein with 3,022 lb. milk and 93.6 lb. butter fat. R. W. Stewart was second with another purebred Holstein, which gave 2,341 lb. milk and 93.2 lb. butter fat.

Highest producing herds in each association were: McHenry County, Geyer and Smiley, fourteen purebred Holsteins; W. W. Pflug, DuPage County, ten purebred Holsteins; G. E. Dickson, Kane County, No. 3, eleven purebreds and grade Holsteins; G. Berens, Kane County, No. 2, twenty grade Holsteins; J. F. Jelke, Kane County, No. 1, sixty-four purebred and grade Holsteins.

FIRST OF THIRTY-FIVE HUNDRED

Queen Fayne Korndyke, a five-year-old registered Holstein, owned by M. Westphal & Sons, Elkhorn, Wis., produced 80 lb. fat and 2,285 lb. milk in December, leading the 3,500 cows tested by the Walworth County Cow Testing Association.

L. H. Phelps, LeGrange, had the second high cow with 73.2 lb. fat. High herd for the month was that of E. A. Peters & Son, Darien. Their eleven registered Holsteins averaged 46.4 lb. fat and 1,276 lb. milk.

Walworth County now has seven cow testing associations, which is said to be more than any other county in the country.

HOME MIXED GRAIN RATION

In the monthly report of the Dairy Improvement Associations of New York State, Professor Savage recommends as a farm mixed ration the following:

BEST MIXTURE

300 lb. distillers' dried grains,	$6.98
400 lb. yellow hominy, ...	5.30
200 lb. ground oats, ...	3.19
300 lb. wheat bran, ...	4.41
400 lb. gluten feed, ...	8.21
200 lb. cottonseed meal, ...	4.83
200 lb. oil meal, ...	5.05
2,000 lb. wholesale cost, ...	$37.97

A cheaper mixture would give good results.

600 lb. wheat bran, ...	$8.82
400 lb. yellow hominy, ...	5.32
600 lb. gluten feed, ...	12.30
200 lb. cottonseed meal, 43%,	4.82
200 lb. oil meal, ...	5.06
2,000 lb. wholesale cost, ...	$36.32

EIGHT GOOD IDAHO HOLSTEINS

The Idaho dairy reports are doing some good work for the Holstein breed by telling of the performances of eight registered Holsteins owned by L. S. Savage, Burley, Idaho. The high record was made by a cow called Albekerk, and was 15,594.3 lb. milk. The highest fat production was Baroness, with 553.17 lb. The eight cows produced 3,154.57 lb. butter fat in a year, and the milk production was 94.976 lb. The amount realized for butter fat was 35 cents a pound, which makes an average of $146.77 per cow. The feed consists of barley and alfalfa, and every milking was weighed and tested for butter fat.

FIRST AND SECOND

Three of the seventeen cows that won the honor roll of the Washington, West Virginia, Cow Testing Association for the month of December were registered Holsteins; the others were Jerseys, grades and purebreds, equally divided, with the Black-and-Whites furnishing the two leading cows. The list was headed by Muskingum Belle De Kol, owned by C. E. Chase, of Stockport, Ohio. She made 61.7 lb. butter fat, 2,058 lb. milk. Johanna Marlewood De Colantha, also owned by Mr. Chase, stood second with 61.6 lb. butter fat, 1,621 lb. milk.

HOLSTEIN HERD FIRST

The Holstein dairy of 17 cows, owned by L. F. Krassin & Sons, led the Snohomish, Wash., County Cow Testing Association for the month of December. Seventy-five cows were tested during the month with an average production of 848 lb. milk, 32.8 lb. butter fat. The Krassin herd averaged 918 lb. milk, 33.4 lb. butter fat. For the division consisting of 15 cows or less, the nine-cow dairy of Ralph Tronsrud, consisting of Guernseys and Holsteins, led with an average production of 893 lb. milk, 39 lb. fat.

VERMONT COWS ARE PRODUCERS

Nancy Jane Soldene Pietertje, owned by C. A. Welch, of Wheelock, Vt., holds the highest milk record for thirty days in the Northeastern Caledonia Cow Testing Association, producing 2,101 lb. milk, testing 3.56%, and making 74.7 lb. butter fat. For three consecutive months she has produced 5,495 lb. milk and 181.6 lb. butter fat without any extra care other than that received by the whole herd.

Jayema Farm Mary Fayne Beets De-Kol, owned by Dr. J. M. Allen, of St. Johnsbury, holds the highest yearly milk record for this association, making 12,-731 lb. in a milking period of nine months. During June, July and the first half of August she had no grain. Needless to say she would easily reach the 20,000-lb. mark if forced.

I. P. CALLENDER, *Tester.*

MINNESOTA HOLSTEIN FIRST

Grace, registered Holstein, owned by Howland Bros., led the Northfield Cow Testing Association during the month of December, with 2,963 lb. milk, 88.89 lb. butter fat.

M. A. Koester had the second highest producer, with 2.077 lb. milk and 70.61 lb. butter fat.

Nine cows in the Howland herd averaged 1,418 lb. milk and 46.78 lb. butter fat during the month. P. J. Morrison's herd was a close second with eight cows averaging 1,442 lb. milk and 46.47 lb. butter fat.

CALIFORNIA COW COMPETITION

A registered Holstein owned by Mrs. Anita M. Baldwin, Santa Anita, produced the largest amount of butter fat in the California Dairy Cows Competition during the month of November, making 83.6 lb. fat at five and one-half months from calving. The average production of the 282 cows that had not finished the ten-months record period was 34.5 lb. butter for the month, at nearly eight months from freshening.

GOOD COLLEGE COW

Keystone DeKol Pietertje Beets 448,-379, owned by the Pennsylvania State College, recently closed a year record of 16,182.6 lb. milk, 703.25 lb. butter. This senior two-year-old is one of 23 animals in the college dairy herd. Eleven of this herd at an average age of a little over four years have averaged in year tests 16,779 lb. milk, or over 700 lb. butter.

RENVILLE COUNTY COW TESTING ASSOCIATION

The average production for the 235 cows tested in the Renville County, Minn., Cow Testing Association during the month of December was 1,038 lb. milk and 41.7 lb. butter fat. One hundred four cows produced over 40 lb. fat, and 24 of this number produced in excess of 60 lb. butter fat. The 60-lb. group contained thirteen purebred and five grade Holsteins.

The leading three cows were registered Holsteins, namely: Mealia Homestead, with a production of 2,314 lb. milk and 83.3 lb. fat; Barbara Clothilde 3d, with 2,351 lb. milk, 77.6 lb. fat, both owned by Torbert & Dale, Renville, and Sylvia Mercedes Parthena, 2,189 lb. milk, containing 76.6 lb. butter fat, owned by Edgar G. Youngren, Hector.

To Fred C. Calef, Hector, went the honor of the high herd with an average of 66.2 lb. fat, 1,791 lb. milk, followed by Torbert & Dale, Renville, with 1,415 lb. milk and 50.5 lb. fat. Both the above herds consist entirely of purebred Holsteins.

Of interest is the grade herd of McCall Bros., Hector, which stands third with an average of 1,286 lb. milk and 48.1 lb. fat. Recently converted to the dairy field they procured 17 grade Holsteins this fall, and are now "tearing loose and stirring up the dust" by following advanced dairy and feeding methods—thoroughly demonstrating what the Holstein is capable of doing.

It is cows of the above caliber, and wide-awake breeders who are paying close attention to breeding, feeding and selection who are revolutionizing this county which heretofore has primarily been beef, and who will ultimately place Renville County on the map as one of the leading Holstein centers of Minnesota.

CLARENCE G. NELLESSEN. *Supervisor.*

TAKE MOST HONORS

Holsteins ranked first, second, fourth, and fifth, during December, in the Stanislaus County, California, Testing Association. Of 900 cows tested, 52 were placed upon the honor roll. The Holstein herd of the Six Brothers' Dairy, Keys, was represented in first and fifth positions, Wallahalla making 74.1 lb. butter fat and Ruby making 62.7 lb. fat.

Colantha, owned by P. Brunold, Modesto, ranked second with a record of 66.9 lb. fat, and L. Clark's Fairmont came fourth with 64.8 lb.

BLUE EARTH ENDS SECOND YEAR

The Blue Earth County Cow Testing Association has just completed its second successful season, 211 cows completing the year. Their average milk yield was 8,500 lb., butter fat, 345 lb., a gain of 50 lb. over average of last year. This substantial increase is the direct result of culling, better care and feeding.

The high cow is the famous registered Holstein, Olathe Tirania De Kol, with 953 lb. fat. She started this test when nearly twelve years old, and is owned by Marlow & Randall, of the Mankato Stock Farm. Next to her is a grade Holstein called "Bones," owned by E. D. Oliver, of Amboy, Minn., with 760 lb. fat.

Mankato leads for high average of both milk and fat production, the averages being 17,035 lb. milk and 583 lb. fat for thirteen registered Holsteins milked for an average period of eleven months.

The eighteen-cow herd of E. D. Oliver is second with 14,089 lb. milk and 501 lb. fat, followed by fifteen cows in the dairy of F. H. Sohre & Son, with 12,227 lb. milk, 455 lb. fat. Another Holstein herd owned by Brush Bros. obtained fourth position.

GOOD AVERAGE

No less than 49 cows of the 285 tested in the Bear Creek (Wis.) Cow Testing Association produced more than 40 lb. butter fat. The leader is a grade Holstein owned by Fred Pirner, she making 1,943 lb. milk, 73.8 lb. butter fat. The second highest producer, owned by C. L. Stoeke, made 1,448.9 lb. milk, 72.4 lb. butter fat.

The leading herd for the month averaged 922.2 lb. milk, 39 lb. butter fat, and is owned by Art Hintz. The C. L. Stoeke herd was second with an average of just 1,000 lb. milk, 38.8 lb. butter fat.

FIRST IN KANSAS

Representatives of the Holstein herd of Cleland & Williams took first and second place in the Bourbon County Cow Testing Association. Boone Segis, a registered Holstein, was first with 62.2 lb. fat, and Daisy, a grade two-year-old, was second with 48.4 lb. fat. Boone Segis was the highest milk producer with 1,556 lb.; Marie, a grade Holstein owned by W. J. Stevanus, of Fulton, Kan., was second with 1,392 lb., and Daisy was third with 1,210 lb.

WISCONSIN GRADE LEADS

Mercedes, a grade Holstein owned by Fred C. Kaphingst, was the highest producer in the Greenville, Outagamie County, Cow Testing Association for the month of November. Her butter fat production exceeded that of all other cows by 9 lb. She produced 1,600 lb. milk, testing 4.2%, equaling 67.2 lb. butter fat.

IOWA LED BY GRADE HOLSTEIN

A grade Holstein owned by C. J. Murray, of the Delaware Association, led all the Iowa cow testing associations with the production of 1,926 lb. milk, 92.4 lb. fat. The Monona-Farmsburg Association led with an average production of the ten cows of 1,502 lb. milk, 60.9 lb. fat. McGregor was second. Fifty-six cows each made over 50 lb. fat during the month.

Cow Testing Association Reports

NEBRASKA PUREBREDS BEST

During the thirty-day period ending January 13 there were 273 cows tested in the Scotts Bluff, Nebraska, Cow Testing Association; of these 45 produced over 40 lb. fat and 17 over 50 lb. The average production show a material increase over the previous month, the gain being 7 lb. fat and 54 lb. milk. Fresh cows and better feeding are the cause of this increase.

The high herd belongs to Sam Barton & Sons, of Gering, consisting of 14 registered Holsteins which averaged 48.5 lb. fat and 1,443 lb. milk. Six registered Holsteins belonging to J. L. Moore, also of Gering, averaged 1,072 lb. milk and 47 lb. fat. Prof. L. R. Wright, of Gering, had four registered Holsteins that averaged 1,385 lb. milk and 41.7 lb. fat. The Barton cow, Jennie, now three years old, was high individual with 2,361 lb. milk and [illegible] lb. fat. Two other animals of this herd made 75.8 lb. fat and 69 lb. fat, respectively. The honors in this association certainly went to the purebred. Four unprofitable cows have been sold. Two registered Holstein bulls have been bought by the members of the association.

GOOD RESULTS IN MISSOURI

Missouri cow testing association work shows steady increase in production and profits due to improved methods. There were forty herds on test in 1919, 135 in 1920, and 230 in 1921. In the same time production had been increased from 229.7 lb. butter fat per cow in 1919, to 243.4 lb. for those finishing in 1920, and 261.7 lb. for 1921, an increase of 14 per cent in three years. In 1919 the average return per dollar feed cost was $2.17; in 1920 it was $2.26, and 1921 it had increased to $2.48. These results cover 230 dairy herds in twelve of Missouri's best dairy counties. They show that in spite of the low selling prices of milk and butter fat, feed costs have declined enough that the margin of profit is steadily increasing for the man with the high producing dairy herd if he practices good dairy methods.

IN WISCONSIN

The high cow in the Avoca, Wis., Cow Testing Association for December is a purebred Holstein owned by J. J. Malter & Son. She made 72 lb. butter fat and 1,044 lb. milk. The Malter herd consists of six purebreds and one grade averaged 702 lb. milk, 35.8 lb. fat.

The second high herd is owned by Alex. Metcalf, and consists of 22 grade and purebred Holsteins that averaged 667 lb. milk, 22.7 lb. butter fat.

The high cow in the Almena Cow Testing Association for the month ending December 29, 1921, is a registered four-year-old Holstein, owned by Osterkamp Bros. She made 2,106 lb. milk, 77.9 lb. butter fat. The Osterkamp herd stood in highest position for the month with an average of 1,343 lb. milk and 44.9 lb. butter fat for eight cows.

The high herd in the Menomonie, Wis., Cow Testing Association for December was owned by Ed. Webert. This herd consists of grade Holsteins and averaged 40.7 lb. fat and 1,103 lb. milk.

Goldie, a purebred Holstein, owned by J. D. McDonald, headed the West Salem Cow Testing Association for the month of December. She made 2,620 lb. milk and 96.9 lb. butter fat, and is one of the leading cows of LaCrosse County. The twenty-cow Holstein dairy of S. E. Clark averaged 1,014 lb. milk, and 37.78 lb. butter fat.

McHENRY COUNTY HOLSTEINS LEAD

McHenry County led Illinois state in the honor list of milk producers during December. Greyer and Smiley, of Harvard, had the high producing herd; fourteen purebred Holsteins which averaged 1,555 lb. milk, 44.6 lb. butter fat; the eleven cow dairy of purebred and grade Holsteins owned by G. E. Dickson, was third, with 1,425 lb. milk and 44.1 lb. butter fat. H. P. Anspach, Morrison, had the leader, a registered Holstein with 3,022 lb. milk and 93.6 lb. butter fat. R. W. Stewart was second with another purebred Holstein, which gave 2,341 lb. milk and 93.2 lb. butter fat.

Highest producing herds in each association were: McHenry County, Geyer and Smiley, fourteen purebred Holsteins; W. W. Pflug, DuPage County, ten purebred Holsteins; G. E. Dickson, Kane County, No. 3, eleven purebreds and grade Holsteins; G. Berens, Kane County, No. 2, twenty grade Holsteins; J. F. Jelke, Kane County, No. 1, sixty-four purebred and grade Holsteins.

FIRST OF THIRTY-FIVE HUNDRED

Queen Fayne Korndyke, a five-year-old registered Holstein, owned by M. Westphal & Sons, Elkhorn, Wis., produced 80 lb. fat and 2,285 lb. milk in December, leading the 3,500 cows tested by the Walworth County Cow Testing Association.

L. H. Phelps, LeGrange, had the second high cow with 73.2 lb. fat. High herd for the month was that of E. A. Peters & Son, Darien. Their eleven registered Holsteins averaged 46.4 lb. fat and 1,276 lb. milk.

Walworth County now has seven cow testing associations, which is said to be more than any other county in the country.

HOME MIXED GRAIN RATION

In the monthly report of the Dairy Improvement Associations of New York State, Professor Savage recommends as a farm mixed ration the following:

BEST MIXTURE

300 lb. distillers' dried grains,	$6.98
400 lb. yellow hominy, ...	5.30
200 lb. ground oats, ...	3.19
300 lb. wheat bran, ...	4.41
400 lb. gluten feed, ...	8.21
200 lb. cottonseed meal, ...	4.83
200 lb. oil meal, ...	5.05
2,000 lb. wholesale cost, ...	$37.97

A cheaper mixture would give good results.

600 lb. wheat bran, ...	$8.82
400 lb. yellow hominy, ...	5.32
600 lb. gluten feed, ...	12.30
200 lb. cottonseed meal, 43%,	4.82
200 lb. oil meal, ...	5.06
2,000 lb. wholesale cost, ...	$36.32

EIGHT GOOD IDAHO HOLSTEINS

The Idaho dairy reports are doing some good work for the Holstein breed by telling of the performances of eight registered Holsteins owned by L. S. Savage, Burley, Idaho. The high record was made by a cow called Albekerk, and was 15,594.3 lb. milk. The highest fat production was Baroness, with 554.17 lb. The eight cows produced 3,154.57 lb. butter fat in a year, and the milk production was 94.976 lb. The amount realized for butter fat was 35 cents a pound, which makes an average of $146.77 per cow. The feed consists of barley and alfalfa, and every milking was weighed and tested for butter fat.

FIRST AND SECOND

Three of the seventeen cows that won the honor roll of the Washington, West Virginia, Cow Testing Association for the month of December were registered Holsteins; the others were Jerseys, grades and purebreds, equally divided, with the Black-and-Whites furnishing the two leading cows. The list was headed by Muskingum Belle De Kol, owned by C. E. Chase, of Stockport, Ohio. She made 61.7 lb. butter fat, 2,058 lb. milk. Johanna Marlewood De Colantha, also owned by Mr. Chase, stood second with 61.6 lb. butter fat, 1,621 lb. milk.

HOLSTEIN HERD FIRST

The Holstein dairy of 17 cows, owned by L. F. Krassin & Sons, led the Snohomish, Wash., County Cow Testing Association for the month of December. Seventy-five cows were tested during the month with an average production of 848 lb. milk, 32.8 lb. butter fat. The Krassin herd averaged 918 lb. milk, 33.4 lb. butter fat. For the division consisting of 15 cows or less, the nine-cow dairy of Ralph Tronsrud, consisting of Guernseys and Holsteins, led with an average production of 893 lb. milk, 39 lb. fat.

VERMONT COWS ARE PRODUCERS

Nancy Jane Soldene Pietertje, owned by C. A. Welch, of Wheelock, Vt., holds the highest milk record for thirty days in the Northeastern Caledonia Cow Testing Association, producing 2,101 lb. milk, testing 3.56%, and making 74.7 lb. butter fat. For three consecutive months she has produced 5,495 lb. milk and 181.6 lb. butter fat without any extra care other than that received by the whole herd.

Jayema Farm Mary Fayne Beets De-Kol, owned by Dr. J. M. Allen, of St. Johnsbury, holds the highest yearly milk record for this association, making 12,-731 lb. in a milking period of nine months. During June, July and the first half of August she had no grain. Needless to say she would easily reach the 20,000-lb. mark if forced.

I. P. CALLENDER, *Tester.*

MINNESOTA HOLSTEIN FIRST

Grace, registered Holstein, owned by Howland Bros., led the Northfield Cow Testing Association during the month of December, with 2,963 lb. milk, 88.89 lb. butter fat.

M. A. Koester had the second highest producer, with 2.077 lb. milk and 70.61 lb. butter fat.

Nine cows in the Howland herd averaged 1,418 lb. milk and 46.78 lb. butter fat during the month. P. J. Morrison's herd was a close second with eight cows averaging 1,442 lb. milk and 46.47 lb. butter fat.

CALIFORNIA COW COMPETITION

A registered Holstein owned by Mrs. Anita M. Baldwin, Santa Anita, produced the largest amount of butter fat in the California Dairy Cows Competition during the month of November, making 83.6 lb. fat at five and one-half months from calving. The average production of the 282 cows that had not finished the ten-months record period was 34.5 lb. butter for the month, at nearly eight months from freshening.

GOOD COLLEGE COW

Keystone DeKol Pietertje Beets 448,-379, owned by the Pennsylvania State College, recently closed a year record of 16,182.6 lb. milk, 703.25 lb. butter. This senior two-year-old is one of 23 animals in the college dairy herd. Eleven of this herd at an average age of a little over four years have averaged in year tests 16,779 lb. milk, or over 700 lb. butter.

RENVILLE COUNTY COW TESTING ASSOCIATION

The average production for the 235 cows tested in the Renville County, Minn., Cow Testing Association during the month of December was 1,038 lb. milk and 41.7 lb. butter fat. One hundred four cows produced over 40 lb. fat, and 24 of this number produced in excess of 60 lb. butter fat. The 60-lb. group contained thirteen purebred and five grade Holsteins.

The leading three cows were registered Holsteins, namely: Mealia Homestead, with a production of 2,314 lb. milk and 83.3 lb. fat; Barbara Clothilde 3d, with 2,351 lb. milk, 77.6 lb. fat, both owned by Torbert & Dale, Renville, and Sylvia Mercedes Parthena, 2,189 lb. milk, containing 76.6 lb. butter fat, owned by Edgar G. Youngren, Hector.

To Fred C. Calef, Hector, went the honor of the high herd with an average of 66.2 lb. fat, 1,791 lb. milk, followed by Torbert & Dale, Renville, with 1,415 lb. milk and 50.5 lb. fat. Both the above herds consist entirely of purebred Holsteins.

Of interest is the grade herd of McCall Bros., Hector, which stands third with an average of 1,286 lb. milk and 48.1 lb. fat. Recently converted to the dairy field they procured 17 grade Holsteins this fall, and are now "tearing loose and stirring up the dust" by following advanced dairy and feeding methods—thoroughly demonstrating what the Holstein is capable of doing.

It is cows of the above caliber, and wide-awake breeders who are paying close attention to breeding, feeding and selection who are revolutionizing this county which heretofore has primarily been beef, and who will ultimately place Renville County on the map as one of the leading Holstein centers of Minnesota.

CLARENCE G. NELLESSEN. *Supervisor.*

TAKE MOST HONORS

Holsteins ranked first, second, fourth, and fifth, during December, in the Stanislaus County, California, Testing Association. Of 900 cows tested, 52 were placed upon the honor roll. The Holstein herd of the Six Brothers' Dairy, Keys, was represented in first and fifth positions, Wallahalla making 74.1 lb. butter fat and Ruby making 62.7 lb. fat.

Colantha, owned by P. Brunold, Modesto, ranked second with a record of 66.9 lb. fat, and L. Clark's Fairmont came fourth with 64.8 lb.

BLUE EARTH ENDS SECOND YEAR

The Blue Earth County Cow Testing Association has just completed its second successful season, 211 cows completing the year. Their average milk yield was 8,500 lb., butter fat, 345 lb., a gain of 50 lb. over average of last year. This substantial increase is the direct result of culling, better care and feeding.

The high cow is the famous registered Holstein, Olathe Tirania De Kol, with 953 lb. fat. She started this test when nearly twelve years old, and is owned by Marlow & Randall, of the Mankato Stock Farm. Next to her is a grade Holstein called "Bones," owned by E. D. Oliver, of Amboy, Minn., with 760 lb. fat.

Mankato leads for high average of both milk and fat production, the averages being 17,035 lb. milk and 583 lb. fat for thirteen registered Holsteins milked for an average period of eleven months.

The eighteen-cow herd of E. D. Oliver is second with 14,089 lb. milk and 501 lb. fat, followed by fifteen cows in the dairy of F. H. Sohre & Son, with 12,227 lb. milk, 455 lb. fat. Another Holstein herd owned by Brush Bros. obtained fourth position.

GOOD AVERAGE

No less than 49 cows of the 285 tested in the Bear Creek (Wis.) Cow Testing Association produced more than 40 lb. butter fat. The leader is a grade Holstein owned by Fred Pirner, she making 1,943 lb. milk, 73.8 lb. butter fat. The second highest producer, owned by C. L. Stoeke, made 1,448.9 lb. milk, 72.4 lb. butter fat.

The leading herd for the month averaged 922.2 lb. milk, 39 lb. butter fat, and is owned by Art Hintz. The C. L. Stoeke herd was second with an average of just 1,000 lb. milk, 38.8 lb. butter fat.

FIRST IN KANSAS

Representatives of the Holstein herd of Cleland & Williams took first and second place in the Bourbon County Cow Testing Association. Boone Segis, a registered Holstein, was first with 62.2 lb. fat, and Daisy, a grade two-year-old, was second with 48.4 lb. fat. Boone Segis was the highest milk producer with 1,556 lb.; Marie, a grade Holstein owned by W. J. Stevanus, of Fulton, Kan., was second with 1,392 lb., and Daisy was third with 1,210 lb.

WISCONSIN GRADE LEADS

Mercedes, a grade Holstein owned by Fred C. Kaphingst, was the highest producer in the Greenville, Outagamie County, Cow Testing Association for the month of November. Her butter fat production exceeded that of all other cows by 9 lb. She produced 1,600 lb. milk, testing 4.2%, equaling 67.2 lb. butter fat.

IOWA LED BY GRADE HOLSTEIN

A grade Holstein owned by C. J. Murray, of the Delaware Association, led all the Iowa cow testing associations with the production of 1,926 lb. milk, 92.4 lb. fat. The Monona-Farmsburg Association led with an average production of the ten cows of 1,502 lb. milk, 60.9 lb. fat. McGregor was second. Fifty-six cows each made over 50 lb. fat during the month.

MUTILATED PAGE

NEW YORK HOLSTEINS ARE PRODUCERS

During December, the Black-and-White breed carried off most of the honors in the New York Cow Testing Associations. They lost the position of highest milkers, however, which was taken by an Ayrshire cow in the Western Allegheny Association. She made 2,170 lb. A grade Holstein in the First Oneida Association made 2,110 lb.; a registered Holstein, owned by Walter Agne, of the Holland Patent Association, made 2,049.9 lb., and E. E. Williamson's registered Holstein made 2,008 lb. in the East Aurora Association.

One animal, a grade Holstein, owned by Wilbur Ackley, made over 100 lb. fat. She is in the Livingston-Livonia Association and her total was 106.6 lb. Eli Bodine owns the leader in the Chemung Association, with 97.1 lb., and the four next highest leaders are all Black-and-Whites; in fact, of the 25 associations reporting, registered Holsteins furnished the leaders in 11 instances, and 8 other leaders were grades. During the month 9,653 cows were tested, of which 812 made the honor roll. There are now 29 associations operating in 21 counties of the Empire State.

The five highest record cows from the standpoint of butter fat production during November are all Black-and-White. The three leading ones are in Livingston-Livonia County, the fourth in Erie, and the fifth in Allegheny County. The leader is the registered Holstein three-year-old, Butter Girl Toney Topsy, owned by J. M. Huff, of Hemlock, N. Y. She was fresh two months and produced 86.4 lb. butter fat, 1,800 lb. milk. The grade Holstein, Botzy, owned by Thos. Costello, of Livonia, made 86.4 lb. fat. Another grade Holstein owned by Richmond Beecher, of Lima, made 79.4 lb. fat. E. E. Williamson, of East Aurora, owned a registered cow that made 75.1 lb. fat, 2,472 lb. milk, while Daisy May DeKol Mechthilde, owned by J. B. Harbeck & Sons, of Black Creek, made 73.5 lb. fat, 2,451 lb. milk in the third month of her lactation period.

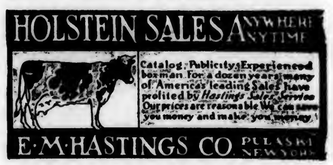
In addition to these five cows, seventeen produced between sixty and seventy lb. fat each, and eight cows produced between seventy and eighty lb. of fat each. In all there were in the associations of the state twenty-eight cows, each of which produced more than 60 lb. fat during November, or more than 2 lb. per day.

GRAIN FEEDING PAYS

The testing year of the Chippewa, Minn., Cow Testing Association ended December 31, 1921. Of the 223 cows that finished the year's test there were 37 purebreds and 32 grades that made over 300 lb. butter fat. The average per cow was 6,567 lb. milk, 273.01 lb. butter fat. The average cost of feeding was $50.79, which leaves a profit of $69.15 per cow.

The purebred herd of Stensrud Bros., of Tunsberg, headed the list with an average of 16,239 lb. milk and 524.02 lb. butter fat, the average test being 3.23%. The grade Holstein herd of S. M. Dahleen, Leenthrop, averaged 10,236 lb. milk and 380.91 lb. butter fat. The third herd consists of mixed purebred and grade Holsteins, which averaged 10,066 lb. milk and 340.2 lb. butter fat. It was owned by Emil H. Weckwerth, of Sparta.

Stensrud Brothers own the highest producing purebred cow on four-time milking. She made 23,562 lb. milk, 716.1 lb. butter fat. The highest producing purebred cow on two-time milking made 13,843 lb. milk, 458.9 lb. butter fat, and was owned by Emil H. Weckwerth. Dahleen had the highest producing grade with 14,725 lb. milk and 561.7 lb. butter fat.



The cows that were fed grain while on pasture averaged 279.4 lb. butter fat per cow, while those that did not receive grain when on pasture averaged 232.2 lb., a difference of about 47 lb. fat, or about $18.80, figuring butter fat at 40c a pound. The grain fed during these months averaged about $6.00 per cow, leaving a net gain of $12.80 for the animals fed grain while on pasture.

PENNSYLVANIA HOLSTEINS SHINE

During the month of January 25 herds underwent tests in the Uwchlands Cow Testing Association. Thirty-four cows made over 40 lb. fat, 16 made over 50 lb., while 53 cows produced over 1,000 lb. milk in the month. Eight of the biggest butter fat producers were Holsteins and two were Guernseys. The leader was a registered Holstein, owned by G. Smedley, she making 2,337 lb. milk, 95.8 lb. fat. Number two was a registered Holstein, owned by W. McIlvaine, with 1,801 lb. milk, 66.6 lb. butter fat. Mr. McIlvaine had seven cows on the honor roll.

The first eight cows in the West Chester Association were all registered Holsteins. The leader was owned by R. Evans & Son, and made 2,517 lb. milk, 83.1 lb. fat. M. L. Jones had the second, with 2,179 lb. milk, 74.1 lb. fat, and was also the owner of the fourth and eighth animals. E. P. Allison's cow made 2,108 lb. milk, 73.8 lb. fat, and Allison also had two others on the list. Mr. Stephen Trimble's registered Holstein stood sixth with 1,500 lb. milk, 64.5 lb. fat.

A registered Holstein owned by C. S. Foote headed the Avondale-West Grove Association. She made 2,089 lb. milk, 62.7 lb. butter fat. Mr. Foote had another cow in fifth place, with 1,856 lb. milk, 54.7 lb. fat.

KING VALDESSA PONTIAC HAS 30-LB. DAUGHTER

The daughters of King Valdessa Pontiac are certainly making great records this season. The first one to be tested is a three-year-old, who made 32.23 lb. butter in seven days in her senior three-year-old form. The junior two-year-old, Hattie Valdessa Pontiac, made 26.32 lb. butter in seven days, thereby establishing a new state record for Pennsylvania, and beating her sister, Bell Farm Bakker, who made 25.16 lb. butter in a week.

It is certainly gratifying to the Bell Farm management to have these young cows made such splendid records. It is possible to go out into the market and buy animals with large records or animals that look as if they could make large records if given the opportunity; it is a source of pride and pleasure for any owner of Holstein cattle to have animals make big records, but it is always more gratifying to have animals of his own breeding make a big showing, especially so when they are sisters —daughters of his herd sire.

WATERTOWN SALE DATES

The annual stockholders' meeting of the Watertown Holstein Sales Company was held at the City Hall, January 28th. The spring sale was fixed for March 28 and 29. Three directors were elected for two years, namely: Theo. Lehmann, E. C. Nitschke, and Stanley De Smidt, who is manager of the Spring Brook Farm, Burnett. The financial statement of the secretary-treasurer, Francis Darcey, showed a satisfactory condition.

The principal outside speaker was D. Q. Grabill, publicity director of the James Manufacturing Company.

GOOD HERD AVERAGES

The two highest averages in the Blair-Ettrick, Wis., Cow Testing Association for the month ending December 31 were made by Holsteins. The herd of Wm. Traux, of Ettrick, averaged 30.8 lb. fat, and the herd owned by Peterson Bros., Blair, averaged 26.7 lb. fat.

Two of the registered Holsteins owned by Peterson Bros., of Blair, stood second and third on the individual list with 1,323 lb. milk, 43.7 lb. butter fat, and 1,155 lb. milk, 42.7 lb. butter fat, respectively.

WILL ADVERTISE HOLSTEIN MILK

Howard Brown, owner of the North Star Stock Farm, Groton, S. D., has an accredited herd of fifteen purebred Holsteins. Mr. Brown does not intend to hide the light of his herd under a bushel, for he is planning to establish a milk route in Groton, advertising the fact that his herd consists of Holsteins and is healthy.

No, Maude, dear, you can't always keep a secret by putting it on ice.

LEADING TEN ALL HOLSTEINS

A Holstein cow owned by Elmer Ludt, Carlisle, Pa., made 95 lb. butter fat in the Cumberland County Cow Testing Association during the month ending January 11. The ten highest animals in this association averaged 76.6 lb. butter fat. All were Holsteins and were owned by I. V. Otto, Carlisle; J. B. Meixel, Boiling Springs; J. W. Miller, Carlisle, and G. L. Strock, Mechanicsburg.

The highest milk record for the first half year of this association was also made during the last month, and was 2,440 lb. milk, made by "Priscilla," a registered Holstein, owned by Mr. Otto. Her nearest competitor was a Holstein owned by J. B. Meixel, with 2,437 lb. The ten highest milkers averaged 2,178 lb. There are 26 herds in the association containing 323 females; 77 cows each produced more than 1,000 lb. milk in the month, and 22 over 50 lb. fat.

THREE OVER SIXTY POUNDS

Three cows in the Knox-Warren, Ill., Cow Testing Association produced 60 lb. or more butter fat during December, and five over 50 lb. The highest butter fat producer was a purebred Holstein owned by the Knox County Farm, at Knoxville. She made 2,158 lb. milk, 64.74 lb. butter fat. She freshened November 21, and her daily ration consisted of 10 lb. grain, composed of equal parts of ground corn and ground oats. She was given 30 lb. corn silage a day and was allowed the run of a stock pasture.

A mixed herd consisting of purebred Holsteins and grade Jerseys owned by E. H. Kirkpatrick, of Roseville, led the herd average with 915 lb. milk, 35.9 lb. fat. J. B. Countiss is the tester in charge.

LEADERS ALL HOLSTEINS

The high record cow in the Byron Cow Testing Association, during January, was a registered Holstein, owned by E. M. Cowles & Sons, South Byron, Wis. She produced 1,776 lb. milk, 85 lb. butter fat. The highest herd averages were made by the registered herds of Alfred A. Backhaus and H. L. Weber. The Backhaus herd averaged 1,346 lb. milk, 48.65 lb. fat, and the Weber herd averaged 1,266 lb. milk, 43.26 lb. butter fat. Four hundred forty-seven cows were tested, of which 125 made over 40 lb. fat and 62 over 50 lb. fat. Of these sixty-two, 49 were registered and seven were grade Holsteins.

WYOMING COUNTY TESTING RESULTS

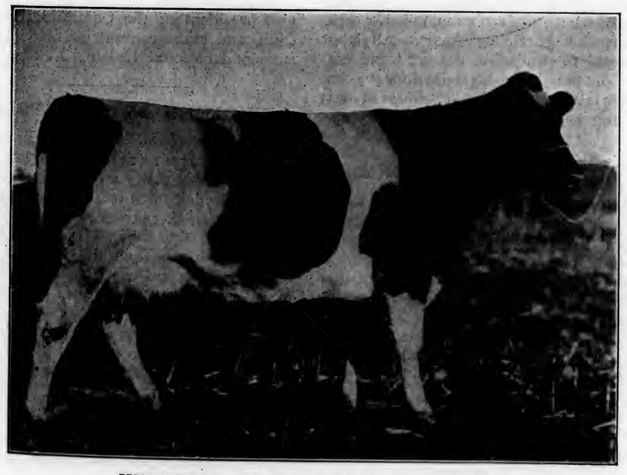
The high cow for January was a four-year-old purebred Holstein owned by D. M. Barton, Tunkhannock, Pa. She produced 2,514 lb. milk and 90.5 lb. fat, milked three times a day. A cow owned by R. Bruce Williams, Canton, stood second in fat production with 71.3 lb. fat and 1,928 lb. milk. F. M. Riker, Factoryville, owned the third highest fat producer with a record of 67.2 lb. fat, 1,599 lb. milk. H. E. Ellsworth & Son, Meshoppen, had a cow which stood fourth in fat production and second in milk, making 1,980 lb. milk and 63.4 lb. fat.

There were 98 cows averaged over 40 lb. fat, 39 over 50 lb., and 9 cows over 60 lb. fat.

One hundred thirty-three cows producing over 1,000 lb. milk and 70 cows producing over 1,200 lb. were tested.

The highest herd is owned by Chas. Ace, whose 18 cows averaged 1,230 lb. milk, two of the herd being dry. His entire herd is entered in the association's records.

BOTH HIGH HERD AND HIGH COW



I am pleased to report that a purebred Holstein cow owned by S. E. Batten, of Hudson, Wis., took first place among the high cows for January. This was her fourth month after calving, and the second time she has stood highest since then. Her record was 1,364 lb. milk, test 5.1%, 69.6 lb. butter fat.

The high herd was the grade and purebred one owned by the same person; average production 1,253 lb. milk, 3.75%, 27.07 lb. butter fat, ten cows milking.

C. A. LUND, *Tester.*
Roberts Cow Testing Association,
Roberts, Wis.

A woman's age never tells on her till she begins to lie about it.

Registered Holsteins That Are Naturally Hornless

KEYSTONE BEAUTY PLUM JOHANNA
Her work has NEVER been equalled, age considered
Nearly every animal in the herd related to her Origin Herd

25,787.5 lb. milk, 1,294.71 lb. butter in a year as a senior four-year-old. A world's record in class for more than six years; still the world's record for strictly official test. The year before she made 22,496.6 lb. milk, 1,081.88 lb. butter, as a junior three-year-old.

Production

Hornlessness

Geo. E. Stevenson & Sons, 727 Connell Building **Scranton, Pa.**

We Don't Keep Holsteins

They keep us so our 125 head are bred for every-day and all the year 'round production. Oh! Boy! How they do milk! They are good individuals too, that straight-backed, big-barrelled kind, carrying large, square udders, with a teat on each corner. You won't have to hide any stock you get from

Ellis Ellsworth

Meshoppen, Pa.

R. No. 4.

The herd is run on the Accredited Plan.

INDIAN SCHOOL HOLSTEINS

"Cows are cows," asserts Major C. J. Crandall, superintendent of the government Indian School at Pierre, S. D., "but good cows are money-makers." Major Crandall prides himself on the showing of his school herd which produced more than $33,000 in the last ten years. "When I came here, ten years ago, I found my predecessor had started in the dairy business by purchasing a registered Holstein bull which he had turned in with a bunch of ordinary scrub cattle. In the spring of 1912 we had about a half dozen heifer calves from this herd. We took particular care of them and of all the heifers which came in succeeding years. For a few years we kept the original bunch of scrub cows, but as soon as the new stock came into milk we began cleaning house by butchering, burnishing beef for the school for some time. Later we bought a few good high-grade Holstein cows and every two years, a new registered herd bulls.

Office records show the herd has made the following returns since 1911:

Milk sold,	$2,503.59
Cream sold,	1,041.85
Butter sold,	115.07
Bull calves sold,	769.65
Heifers sold,	1,325.00
Cows sold,	2,105.00
Stock fees,	292.00
Hides sold,	219.00
Total,	$8,171.25
Paid for bulls and heifers	1,372.95

Besides this the original herd was consumed as beef at the school since 1914, and butter, cream and milk to the value of $25,000 has been used at the institution. At the present time the herd consists of forty cows, headed by a grandson of the state's champion milk producer, College Belle Wayne. All labor attached to producing the feed and caring for the dairy herd is done by the Indian students at the school as a part of their regular course of agriculture.

BIG CALIFORNIA FIRM

A company has been formed to establish a herd of at least five hundred purebred Holsteins at Riverside, California. The name of the firm will be The Glenwood Stock Farm, and the manager will be S. F. Kennedy, now of the Riverside Dairy Company. The buildings are already being erected and are expected to cost $20,000, and the company already owns 110 head of registered stock.

SALE COW MILKS 103 LB.

Fonda Belle Hengerveld, owned by Donald Van Arsdale, of Beatrice, Neb., recently made 30.11 lb. butter, 672 lb. milk in a week, reaching 103 lb. her best day. She was purchased by Mr. Van Arsdale at a sale at Des Moines, Iowa, a few years ago. Mr. Van Arsdale has twenty registered Holsteins and intends to have official records on each one of them.

GOOD HERDS IN NORTHERN ILLINOIS

A herd, locally famous, consists of purebred Holstein cows on the Mrs. D. T. Smiley farm, Dunham, Ill. There are twenty-seven in the herd, of which twenty-four are milking, and make thirteen and one-half cans of milk daily besides enough to feed seventeen calves. The cows are milked three times a day and are in charge of Don M. Geyer, who rents the Smiley farm.

Another good Illinois herd is owned by Robt. and Don Stewart, of Hebron. Robert Stewart owns a registered Holstein that gave 1,497 lb. milk, 67.4 lb. butter fat during the month of December, leading all the cows in McHenry County. Don Stewart owns a herd that led for production during the same month. It consists of Holsteins and Guernseys, and the average yield was 914 lb. milk and 35 lb. butter fat.

SPLENDID COLORADO HEIFERS

Some of the good Colorado cows owned by Mrs. R. G. Douglas, of Rush, have been making high records. Diana Stem Winder de Pauline made 25,808.91 lb. milk and 702 lb. butter in a year, making new state records for milk and butter production as a senior four-year-old.

Denver Tiffany DeKol made around 18,300 lb. milk and 750 lb. butter in 305 days, commencing her record at twenty-five months old. Her production is certainly remarkable for the age, and is easily a state record. Her sire was Johan Duchess DeKol Lad, and her dam is Tiffany Qui Vive DeKol Pietertje.

Until the recent election Mrs. Douglas was president of the Colorado Holstein Club, and takes a great interest in both state and national Holstein affairs.

WYOMING BUYING STOCK

Forty-four head of Holstein cattle purchased from dairymen living in Leavenworth County were shipped January 5th to dairymen in Fremont County, Wyoming. Six registered animals were included in the shipment. These cows were bought through the local County Farm Bureau and were purchased by P. T. Myer, county agent of Freemont County, Wyoming.

The dairy business in Central Wyoming has increased to such an extent that producers were unable to supply the demand, and as a result the dairymen were forced to buy more cows.

FOR OLD MEXICO

Eight carloads of Holsteins were shipped from Ainsworth, Iowa, by A. J. Færber, of Davenport, consigned to Mexico City, for the Mexican government. They will be accompanied by a Davenport veterinarian and three other attendants. There are 84 head in the purchase and the average price is around $300.00.

GOSNEY ON THE JOB

The Gosney dairy is located at Mulvane, Kan., about eleven miles south of Wichita. This herd consists of 42 head of registered Holsteins and includes some great producers. Although Mr. Gosney has only been breeding Holsteins some seven years he had the first Federal accredited herd in his part of the state. Believing that Holstein milk from an accredited herd is something needed in the city of Wichita, he is planning to establish a milk route and will advertise the good qualities of Holstein milk.

The Gosney barn is one of the most modern in that part of the country. It is right up to date with ventilating system, cork floors, sanitary drinking cups and every modern convenience known to the dairy business. B. R. Gosney, who is superintendent of the Kansas National Livestock Show and has been for several years, is one of the committee who will stage the entertainment for the delegates of the National Association next year.

HOLSTEIN WINS DENVER CONTEST

Medanhurst Lenore, a registered Holstein, owned by Gray & Leonard, of the Arapahoe Holstein farm, Denver, carried off the honors of the milking contest at the National Western Stock Show this year. In a four days' official competition with eleven other milkers, she produced 342.6 lb. milk and 15.783 lb. butter fat. Her nearest competitor was Johanna Colanthia Korndyke DeKol 2d, owned by Lee Glasier, Denver; she produced 281.8 lb. milk and 9.587 lb. butter fat, but on account of age, had a handicap of 2.54 lb.

A Milking Shorthorn was third, and a Holstein, owned by the Colorado Agricultural College, was fourth. Other Holsteins stood high in the competition.

MURPHY SETS GOOD EXAMPLE

E. N. Murphy, of Sturgeon Bay, Wis., has donated a couple of young Holstein bulls which will be awarded to the two leading grade herds in the Door County Cow Testing Association. To secure a bull the herd must have the highest average production for the ~~months~~ of February, March, and April. The herds competing for this prize must consist of grade Holsteins, but if there are one or more purebreds it will not be barred, but there must be at least five grade cows in the herd in order to make the herd eligible for the competition.

PIONEER DAIRYMAN DIES

In announcing the death of Stephen Dungan, a retired farmer of Johnson County, Indiana, the *Indianapolis News* says that he was the first man to possess a herd of purebred Holstein cows in the state. Mr. Dungan was 84 years old and he lived in Indiana until about a year ago, when he went to live with a daughter in Pasadena, Cal., where he died. He was an organizer of the Indiana State Growers' Association, a member of the State Board of Agriculture, and served on the committee which selected the site for the Indiana State Fair Ground. He was also a veteran of the Civil War, serving in the Seventh Indiana Regiment. The *News* goes on to say that Mr. Dungan was a Mason, becoming a member of the order at the advanced age of 70.

INTERESTING THE YOUNGSTERS

D. W. Nearhof, proprietor of Maple Grove Dairy Farm at Oostburg, Wis., has an unique way of interesting the boys and girls of his locality in Holsteins. He has promised a valuable Parker fountain pen to the boy or girl under the age of sixteen who will write the best composition on the subject, "Why a Dairy Should Keep a High Producing Purebred Holstein-Friesian Dairy Herd." Three competent judges will look over the compositions and award the prizes. The contest closes March 15. THE HOLSTEIN BREEDER AND DAIRYMAN will gladly print the name, and if possible, the picture of the winner.

BEGEL GOT A GOOD ONE

On March 2, 1921, a carload of purebred registered Holsteins were purchased in Livingston County, Michigan, and were shipped into Carbon County, Pa. Adam Begel, of Harrity, obtained a heifer that afterwards gave him a nice heifer calf. She was a big producer and two weeks after freshening was producing over 70 lb. milk a day on three milkings. On November 30 she reached 82 lb. in a day. She was 34 months old when she freshened. Her name is Kolantha Canary Butter Maid. She was born December 4, 1918, and was purchased from Lewis Walker.

MAKING A START

Fred Mittlstadt, of Union, Wis., has purchased from Anton Jacobson, of Menomonie, two registered Holsteins and a heifer calf. One of the cows is Lady Kolenhurst Korndyke Mutual 5th, who has an official record of 436.8 lb. milk and 20.14 lb. butter fat; the other, Senior DeKol Duchess, made 501.3 lb. milk and 23.25 lb. butter fat. Mr. Mittlstadt intends to gradually go into the purebred business and have all his herd registered.

KANSAS OUT FOR BUSINESS

A purebred Holstein-Friesian Association has been chartered in Crawford, Kan., having a capitalization of $50,000. The purpose of the association is to promote the breeding of purebred Holsteins and to improve and develop the dairy industry in the county. The members live around Girard and Pittsburg, and the offices will be in Girard.

WANTED

Set of Herd Books, as complete as possible. State price for cash.
M. L., care of this paper.

Worth Looking Over

Don't you think a herd of 70 head, none over 5 years old, is worth looking over? One member of this herd is now making 28 lb. butter a week.

Plum Spring Farm Copia

heads this herd. His nearest dams, none below 31 lb., have seven day records averaging 32.35 lb. butter, 613.3 lb. milk

Starrucca, Pa.

WHO AM I?

I am the fellow that Milks with

"Mehring's Milker"

It makes me smile when I see poor guys pulling away by hand. Buy a Mehring Milker and you can smile too. It was the first practical milker and still has the lead in speed, efficiency and cheapness of operation and repair. Send for a catalogue and be convinced. It will milk one or two cows at once. Price $80 cash or $85 on trial. Also engine power milkers.

W. M. MEHRING, Keymar, Maryland

NEW RECORDS AT BLOOMINGDALE

Alcyon Maplecroft Banostine Lady made at the age of 2 years, 1 month, 428.5 lb. milk and 22.11 lb. butter in seven days, and 1,717.8 lb. milk and 87.72 lb. butter in thirty days, testing 4.02% fat. We are continuing her on semi-official test. She is a beautiful heifer of splendid type and conformation and is consigned to the Brentwood Sale.

Lady Pontiac Fayne Alcartra, a daughter of King Pontiac Fayne Alcartra, has made 463.9 lb. milk and 21.94 lb. butter in seven days as a junior three-year-old. Her dam is now on test, and so far has produced 28 lb. butter in her best seven days and is gradually gaining.

Bloomingdale Segis Hengerveld, a granddaughter of King Pontiac Hengerveld Fayne, made a very nice record of 442.5 lb. milk and 21.63 lb. butter in seven days, and 1,882.8 lb. milk and 88.5 lb. butter in thirty days.

Pequest Segis Fayne, a daughter of King Pontiac Hengerveld Fayne, made as a junior three-year-old, 467.5 lb. milk and 20.94 lb. butter in seven days.

The junior two-year-old heifer, Princess Hartog Grant, produced in seven days 379.4 lb. milk and 18.07 lb. butter, and in fourteen days 701.9 lb. milk and 33.29 lb. butter.

BLOOMINGDALE FARMS.
Somerville, N. J.

MILKED FROM BOTH SIDES

J. M. M'Camant, West Chester, Pa., recently completed a record of 514.6 lb. milk, 28.16 lb. butter on a Holstein heifer. This was her second freshening. Her udder was so large and inflamed that she had to be milked from both sides by her caretaker, Geo. C. Russell.

A REAL SPORT

"Ernest," said the teacher, "tell me what you know about the Mongolian race." "I wasn't there," explained Ernest, hastily. "I went to the ball game." —*Credit Lost.*

DILLON SELLS GOOD ONE

R. E. Dillon, of Wayne, Ohio, has sold to Charles Owen, of Colebrook, same state, "Prince Sensation," a grandson of Lindale Bonnie Pauline. The sire is a grandson of Ona Clothilde DeKol, the foundation cow of the Ona family. The dam of Prince Sensation made 21 lb. butter in seven days as a heifer, and is from a 700-lb. daughter of a 800-lb. cow.

We understand that Mr. Owen is the owner of several daughters of King Ona, who was recently sold by Congress Lake Farms to the Pinery Farms, Mentor, Ohio.

IOWA BULL ASSOCIATION

A bull association has been organized around Emmettsburg, Iowa, with H. R. Searles, of the Iowa State College, in charge. There will be five blocks of the association, each block headed by a pure-bred Holstein bull. A further stipulation is that the bulls purchased must be from dams with yearly records of at least 500 lb. butter fat.

HOLSTEINS MAKE POOR FARM PAY

Holsteins are credited with making a Kansas County poor farm show a profit for the first time in its history. This farm is located near Uniontown, Kan., and the custodian is W. C. Isom. The dairy of 14 Holstein cows and 14 heifers not only supplies milk and butter for the inmates but produces a surplus which is marketed at a good price.

THE ESSENTIALS

North—What are the three necessities of human life?
West—Coin, cash, and money.

Some married women seem to mistake their man for a mandolin—they are always picking on him.

NEW GOVERNMENT DAIRY

The diary division of the U. S. Department of Agriculture is establishing a Holstein herd at Woodward, Okla. One of the objects is to show how dairy cattle can utilize the native plants of the semi-arid areas of the great Southwest.

Twelve purebred Holstein-Friesian cows, two calves and one bull has been transferred from the government experimental farm at Beltsville, Md. The bull is Count Piebe Watson Hero, whose dam is a cow of great records. As a two-year-old she gave 20,352.1 lb. milk, 671.51 lb. butter fat in a year. With her second calf, she produced 735 lb. butter fat in a year. Calving again in 1921, with her third calf she is increasing this showing, and in 202 days produced 15,074.1 lb. milk, 533.61 lb. butter fat.

The dairy division aims to ascertain the possibilities of dairying in Northwestern Oklahoma, where drought frequently renders crop production a precarious undertaking. The citizens of Woodward have faith in the enterprise and have denoted 160 acres of land in proximity to the dairy farm for a term of 99 years so that the investigators will not have to wait for departmental appropriations when they desire more land for their experiments.

IDAHO 30-LB. COW

Florence of Rigby, a nine-year-old cow belonging to C. E. Johnston, of the Sunnyside Dairy, Idaho Falls, Idaho, was recently given an official test under the supervision of Wendell Lundberg, of the local high school. During the seven days she produced 648 lb. milk and just a trifle over 30 lb. butter.

The melancholy days are come.

October 24-25, 1922—Lake Mills, Wis., Semi-Annual Holstein Consignment, F. H. Everson, Mgr.

ERIE COUNTY TAKES PRIZES

For the third consecutive year, Erie County took the county honors for potato exhibits at the Pennsylvania Livestock Show and won permanent possession of the large silver cup offered for the best tuber display. Part of the Erie County exhibit was furnished by the Edinboro Lake Farms, of which N. A. Terpening is manager. Mr. Terpening is well known as a Holstein man, in fact, is one of the directors of the Pennsylvania Federation of Holstein-Friesian Clubs. The Edinboro Lake Farm won quite a number of prizes on its own account. Erie County also stood second for honors won in the apple exhibits.

LARGE TENNESSEE HOLSTEIN FARM

The Ferguson Farm consists of one thousand acres of sand and clay loam soil in Dyer County, Tenn. This farm has offices in New York, St. Louis, and Dyersburg. Raspberries, asparagus, and strawberries are grown. Various kinds of poultry are kept. Fish is raised for the market; there are orchards and vineyards growing and there is also a very nice herd of forty milkers, all registered Holsteins, headed by Carnation McKinley Korndyke, a son of Johanna McKinley Segis, from a daughter of Pontiac Korndyke. The bull calves are sold at moderate prices to encourage the dairy industry in the South; the heifers are retained on the farm and are not for sale. During the past year Mr. J. W. Magee states that the forty cows averaged a yield of 165 gallons a day, which he shipped to the Clover Farm Dairy at Memphis. The milk is cooled to forty degrees. Electric power is used, wherever possible. The dairy barn is equipped with stalls for each animal, while the maternity and calf barns have private box stalls. The cows remain in these stalls three weeks, but the calves are separated from their mothers the day following birth and are put in special stalls connected with outdoor lots and remain in these from six to nine months. The dairy is under State and Federal supervision.

The owner, Mr. Forrest Ferguson, is a successful wholesale dry goods merchant in St. Louis. His mother inherited the property and he takes delight in spending his week-ends and holidays at the old home where he was born and reared.

HANDLE 1,500 HOLSTEINS

The books of the California Breeders' Sales and Pedigree Company show that Holstein breeders of the state have sold 1,511 head of registered Holsteins through their service since January 1, 1921. The total is $527,339, an average of something better than $349 per head. While there were low prices at one or two of the fall sales, the better class of cattle maintained prices extremely well. The closing sales of the year were attended by some of the largest crowds of the season.

PROFITABLE STATE HERD

Figuring milk at 15c a quart, the Holstein dairy at South Dakota State Hospital, Yanktown, brought in $17,471.04 in 1921, according to the records of Dr. G. S. Adams, superintendent of the hospital.

The State Hospital herd now consists of 115 head, all purebred Holsteins; 63 are two years old or more, 18 are heifers from six months to two years.

On January 15, 1922, the 47 cows in milk produced 2,196.3 lb. milk, or an average of 46.7 lb. per cow. Milk produced during the calendar year 1920 was 638,575.3 lb., and milk produced during the calendar year 1921 was 698,481.6 lb. There were 14 fewer cows milking in 1921 than in 1920, but the milk production was increased by 60,266.3 lb.

Three cows produced over 95 lb. milk in a day during January, and 12 cows over 60 lb. milk a day. The records of the State Hospital herd must surely be gratifying to the citizens of South Dakota and should afford encouragement to those who are contemplating going into the dairy industry or purchasing more dairy cows. At the present time there is a trend toward dairying in many parts of the state.

WATCH FOR HER RECORD

There is a cow in Oregon making a great year record. She is Stanhope Belle Johanna, No. 282677. Belle freshened last February and has been in test ever since. She was put in official test quite a little while after she freshened, and 32 days from calving was reported with a thirty-day record of 3,560.6 lb. milk, 128.32 lb. butter. Her best week was made 44 days from freshening, and she made 859.7 lb. milk, 34.20 lb. butter. On her seven-day fat production she was awarded the twentieth association prize, and her thirty-day fat production stands in forty-second place. Her milk production won her the second prizes in both the seven- and thirty-day divisions. She has been in test 326 days to January 1st, and at this time had produced 29,369.6 lb. milk, 1,143.54 lb. butter, so it is very easy to see that she will be a thirty-thousand-pound cow; in fact, is, long before this record of her great performance is seen by our readers.

Her owner is H. G. Mullenhoff, of Gresham, who is to be congratulated on the performance of this great animal.

IOWA FARM SHOW

The business men and farming community of Schaller, Iowa, held a Farmers' Institute and Show on January 5, 6, and 7. There were fine exhibits of cattle, horses and other farm products, cooking, and fancy work. The winners in the Holstein classes were: Cow, three years and over: Patterson, 1st; E. Bennett, 2d; Louis Bennett, 3d. Cow, two years and under three: Patterson, 1st and 2d. Heifers, one year and under three: Patterson, 1st and 2d. Heifer calf, under one year: Patterson, 1st and 2d.

LADY JEAN OF NEBRASKA

Lady Jean Hengerveld, whose 365-day record was recently completed, is a granddaughter of old Sir Pietertje Ormsby Mercedes, which fact alone may account for the good record made. Her sire is Sir Pietertje Korndyke Hengerveld, who has 17 A.R.O. daughters, thirteen with records from 20 to 37 pounds of butter in 7 days. Two have over 1,000 pounds for the year.

"Lady" is quite an exceptional show cow. Last September, at the Nebraska State Fair, she was placed next to Hargrove and Arnolds show cow. Their cow was just fresh, while Lady had been milking over ten months and was showing the strain of her long-time production. At our County Fair she was easily the grand champion female. For size and true conformation it will be hard to equal this cow when she is showing in her proper form. Before her last freshening she weighed over 1,800 pounds.

On the dam's side she is also well backed up in both production and show ring qualities. Her dam, Jean Dulcie 4th, was grand champion female at the Minnesota State Fair in 1906. She has a 272-day record of 466 pounds of butter and she has three A.R.O. daughters and several A.R.O. granddaughters to her credit.

The official credits for the year have not been received to date from Mr. Gardner, but our records show a production of 1,008.7 lb. butter and 23,645.5 lb. milk.

Fortunately "Lady's" last calf was a male, and it is our hope to be able to place him in some herd where he may have an opportunity to prove his transmitting ability.

KILBROC HOLSTEIN FARMS,
By F. C. HAEGER, *Mgr.*

MILK IN THE MOVIES

The Dairy Division of the Department of Agriculture has developed a new movie film on the subject of milk for children. The story is of a little girl who refuses to drink milk at her meals or at any other time.

In due time sleep overcomes her and she dreams of fairies, good and bad, the bad fairies are the various diseases. After a while she is kidnapped by them but is finally rescued by the good fairy, Milk, and all ends well.

If you or your friends can use such a film to good advantage at local gatherings, get in touch with the Dairy Division of the Department of Agriculture, Washington, D. C.

Be sure you're right, then go ahead; but don't spend so much time making sure you're right that you never get around to go ahead.—*Typographia.*

The man worth while is the man who can smile upon receipt of his tax notices.

QUICK DEALING

J. F. Shults, of Grand Junction, Colo., purchased a couple of heifers at the sale of the Colorado Holstein Association held at Denver. While he was on his way home he thought possibly he had made a mistake, but on arriving at Grand Junction, some of those present at the station did not think so, for he sold both heifers right there, one going to Ed. T. Matthews and the other to G. B. Linton, both of Appleton.

RENO COUNTY HAS GOOD COWS

A Holstein cow owned by C. C. Kagarice, of Darlow, Kan., gave 1,830 lb. milk and 71 lb. butter fat during the month, a test conducted under the Reno County Cow Testing Association shows. The Kagarice herd averaged 1,376 lb. milk and 50.8 lb. butter fat per animal.

The association tested 179 cows in all, and fifteen herds. Of these 33 cows averaged over 40 lb. butter fat, and 86 gave an average of more than 30 lb.

Passerby—How's business?
Tailor—Oh, just sew, sew.
Dentist—Down in the mouth.
Watchmaker—Mine's winding up.
Office Boy—Mine's picking up.
Druggist—I'm dispensing without help, to-day.
Farmer—My business is growing.
Passerby passed away.

THE LAKE HERD

is strong in Pontiac Korndyke blood.

Everyone knows what that means

Production, individuality as well as bloodlines form the foundation upon which this herd is built.

Let us hear from you or, better yet, come and look over our stock.

H. G. LAKE
Ridge Farm
R. No. 4 MONTROSE, PA.

BIG CARNATION PURCHASE

A private sale of considerable importance was made by F. R. Beals, of Tillamook, Ore., when he sold 68 head of purebred Holsteins to the Carnation Stock Farms, for a rumored price of $45,000. The great show cow, Lady Aaggie Ormsby, of Rock, is included. Mr. Beal retained his herd sire and several of the latter's daughters and granddaughters and is already building up another herd.

VETERANS HAVE HOLSTEIN MILK

The Soldiers' Home at Quincy, Illinois, has a herd of 41 high-class Holstein cows, the products of which are used on the tables of the gallant veterans. These animals are well fed and cared for and everything about the barn is in first-class sanitary condition. At the present time the 41 milkers are averaging three gallons a day, which is a good showing, as they are in all stages of lactation.

OHIO COW MAKES 36 LB.

Lady Concordia Pontiac DeKol, No. 366652, recently closed an official record of 643.5 lb. milk, 36.76 lb. butter in seven days, her milk averaging 4.58% fat. She is owned by Eldin Demaline, of Wauseon, Ohio. At the time of freshening she was six years, one month and twenty-eight days old.

THE SECRET OF SUCCESS

If you think you are beaten, you are;
If you think you dare not, you don't;
If you think you'd like to win, but you think you can't,
It's almost a cinch you won't.
If you think you will lose, you've lost;
For out in the world you'll find
Success begins with one's own will—
It's all in the state of mind.

Full many a race is lost
'Ere even a step is run;
And many a coward fails
'Ere even their work's begun.
Think big and your deeds will grow,
Think small and you'll fall behind.
Think that you can and you will.
It's all in the state of mind.

If you think you are outclassed, you are.
You've got to think high to rise,
You've got to be sure of yourself before
You can ever win a prize.
Life's battles don't always go
To the strong or fast in the line;
But soon or late those who win
Are the ones who think they can.
—*Exchange.*

MAKING UP

He—"I have my mind made up to stay at home this evening."

She "But I have my face made up to go out."

Who was the mother of Santa Claus? Mary Christmas.

USEFUL AND TASTY

In the BREEDER AND DAIRYMAN office hangs a very pretty calendar, the gift of Mr. Andrew Frank, proprietor of the Pleasant Hill Stock Farm, Fox Lake, Wisconsin. It shows a typical Southern Wisconsin scene, a grassy glade with placid lake in the background. Scattered along in the foreground is a herd of forty black and white beauties, the majority grazing in knee-deep grass, some of the others apparently gazing at the beholder. The title of the picture, "The Vale of Peace and Plenty," is certainly appropriate, for the view denotes peace while the cattle and the feed they stand in certainly indicates plenty. The HOLSTEIN BREEDER AND DAIRYMAN assures Mr. Frank that his gift is appreciated.

GOOD GRADE BUSINESS

From January 1, 1920, to January 9, 1922, Washington County, Wis., has shipped 38 carloads of grade Holsteins for the neat sum of $87,271. They went to fourteen different states. During November and December, 1920, nine carloads went to different parts of California, Colorado, and Kansas, for which $15,790 was received.

"Know how to wash cars?" asked the garage owner. "Yus," said the seedy applicant looking for work. "You cleans everything but the number plates."

Merryall Farms

Cattle from this establishment make good wherever they go.

A cow bred in this herd is LILITH GEM KOLKLUFF 22,247 lbs. of milk; 851 lbs. of butter, 365 days.

We sold her to the Pennsylvania State College and there she made her great records.

Cattle of this kind make money for those who buy them.

Come and look over our stock.

Herd under State and Federal Supervision

C. W. Newman, Wyalusing, Pa.

RESEGEDALE FARMS

King Pontiac Alcartra Pietje

senior herd sire, son of King Segis Pontiac Alcartra and Fairmont Zerma Segis Pietje, 35.61 lb. butter in 7 days as a junior four-year-old, World's Record when made.

Dutchland Konigen Creamelle Boy

junior herd sire, son of King Segis Pontiac Konigen and Dutchland Creamelle Colantha Vale, 21,552 lb. milk, 881.79 lb. butter in a year. The four direct dams of this bull have year records averaging 26,262 lb. milk, 1030 lb. butter.

Write us your wants and get our prices.

F. F. RESSEGUIE, Proprietor
South Gibson, Pa.

EARLY IMPORTER ON COLOR CLASSIFICATION

The item on page 19 in your January 1st issue, regarding a "red and white" cow in California interested me, particularly because, since I learned the *facts* about Dutch cattle, called Holstein-Friesians, I have contended that Mr. Cheney's mistake in giving his cattle the name Holstein was a very unfortunate one, and another was in making the *color*, instead of *quality* the one qualification for registry.

It was the color fad that caused the controversy that resulted in the Dutch-Friesian Society being formed.

Mr. Cheney was not an experienced stockman. He got into the business by mere chance. He bought his first Dutch cow from a retired sea captain who, on his long voyages in a sailing ship, had kept the cow to supply milk for the crew.

Mr. Cheney was a wholesale liquor dealer in Boston; his home was in Waltham, and he owned a farm in Belmont. The cow proved so good he decided to order his Holland gin agent in Amsterdam to buy and ship one bull and I think, four cows, but at that time he had no thought of making it a business.

That lot proved so good and attracted so much attention he ordered two subsequent lots, and finally decided to form a society for registering. He decided on the name, because of being told they originated in Holstein and on the color, because all that he had owned, imported, or bred up to that time, were black and white.

In the fall of 1871, Thos. E. Whiting imported one bull and five cows. He knew nothing of the color rule, so paid no attention to it. The bull was solid black except face, legs, and tail, which were white. He was from the district of Groningen, where that was the prevailing color. The cows were from the Beemster and Midwoud districts; one was steel gray, one a dark yellow, one red and white, and two were the regulation black and white.

I was on a farm in Concord, Mass., at that time and Mr. Whiting brought his cattle there and remained with me that winter. I was present when Mr. Cheney came to inspect them for registry and I heard the whole conversation. He admitted that they were *all* good, but only two eligible for registry.

Of course, Mr. Whiting was disappointed and disgusted; he declared there were many colors in Holland, all equally valuable; that the name should be Dutch—not Holstein.

When he disposed of that lot, he went for more, but that time to Friesland district, which is east of Zuider Zee—Beemster and Midwond are on the west. Although he stuck to his first claim as to color, he took care to select all black and white animals, but declared the proper name was Friesians.

I took no interest in the matter at that time, but when I went for my first lot in 1874 I found that Whiting was right about colors, but not in name, for, as they were coming from the various districts, Dutch or Hollanders, would be more proper, for while they may have come originally from Holstein, their over 200 years' life on the rich Holland pastures had greatly changed and improved them, and while white and black was the prevailing color, the red and white were valued just as high.

My first experience with red and whites in America, was when a very fine heifer bought in Beemster and sold to an Elgin, Ill., dairyman, dropped a red and white heifer calf. Of course, he was disgusted. I gave him a black and white calf, on condition that he would keep the red and white one and breed from her. He did and her get soon filled one side of his large cow stable and were the best in his herd. She began with her first calf giving 50 lb. per day and increased as she grew older.

Later on I had a few red and white calves dropped, but everyone proved good. I never saw a poor red and white cow in Holland, nor, have I heard of a poor one in America.

I took especial pains to investigate them in Holland and found that as a whole they *averaged* better than the black and whites—that the flow of milk was equal in quantity and the *quality* better.

In the district of Gedderland red and white is the prevailing color, and from there they have become scattered through the other districts. They were quite numerous in Beemster, Edam, Midwoud and Alkmaan during the early 70's, but when the Dutchmen found Americans would not buy them they kept them out of sight.

I was so convinced of their extra quality that it was my intention, if I kept on importing, to bring a few directly from Gelderland as sample, to prove the mistake made by shutting them out from registry in America.

I admit that uniformity in color is desirable in all purebreds, but it should not outweigh quality. GEO. E. BROWN.
Aurora, Ill.

WILLING TO SUPPORT HER

Two young women boarded a crowded street car and we were obliged to stand. One of them, to steady herself, took hold of what she supposed was her friend's hand. They had stood thus for some time when, on looking down she discovered that she was holding a man's hand. Greatly embarrassed, she exclaimed: "Oh! I've got the wrong hand!"

Whereupon the man, with a smile, stretched forth his other hand, saying: "Here is the other one, madame."—*Philadelphia Public Ledger.*

THE QUALIFIED COMMITTEE

At a Legion Post meeting in New Jersey, one comrade was reported to be sick, and a motion was carried that a committee of three "be appointed to visit Comrade Jones, sympathize with him and try to cheer him up."

Then it was reported that another comrade had been married since the last meeting, and the commander suggested that the Post take suitable action.

"Send the same committee to see him," suggested a voice.—*American Weekly Legion.*

MONTANA IS BUYING

Four carloads of dairy cows were received in Richland County, Montana, the early part of January. One carload came to the Dairymen's Mutual Loan Association, which was organized to promote diversified farming and more milk cows as well as the spirit of co-operation between farmers and dairymen of the county.

SOUTH AMERICAN SHIPMENT

Four high-class animals were sent by Andrew Frank, of Dodge County, Wis., to the firm of Wertz & Douglas, at New Orleans, Friday, January 13. They are enroute to South America, and the express charges were over $200.

LOOKING AHEAD

To build up a wide circle of customers, present and prospective, and so to insure steady demand for any surplus stock, is the aim of every breeder. There are a number of aids, any or all of which may be employed, as—carrying advertising in the breed journals and farm papers, showing at the fairs, sending out calendars and advertising novelties.

Fred Kellicut and Son, of Vernon County, Wis., have another interesting idea. At the present time they have no animals to sell but are planning for the future and so have sent out an open letter part of which we are reproducing.

"We wish to announce to all of the Holstein-Friesian breeders that we can reach, that we have recently purchased from the well-known breeding firm of Aitken Bros., a new herd sire. We have been almost a year selecting this bull. By that we mean we have been carrying on correspondence with and visiting some of the larger Holstein farms. We found it a pretty hard proposition to go out and find a bull that suited us both as to breeding and individuality and still be able to meet the price. It is rather startling to find how much the old breeders of Holsteins obtain for bulls of this class. However, we knew what kind of an animal we must have, and made up our minds that the price should not stop us."

There follows a brief description of the bull himself, who is now thirteen months old and weighs 1,200 lb. Then comes a detailed account of his breeding which is too long to reproduce in full. His sire is King Bess Johanna Ormsby, and the bull's dam is a 27-lb. cow with a year record of around 900 lb. The letter finishes up as follows:

"Now, if you are interested in Holsteins it would be well to study this letter carefully for your own benefit. Inside of a year we will be placing some of the offspring of this bull on the market, both male and female. Of course by that time we will furnish you with a four-generation pedigree.

"In closing we wish to add that we will start our first A.R.O. testing this year." FRED KELLICUT & SON.

NO, INDEED!

A red-headed boy applied for a job in a butcher shop.

"How much will you give me?"

"Six dollars a week; but what can you do to make yourself useful around a butcher shop?"

"Anything?"

"Well, be specific. Can you dress a chicken?"

"Not on six dollars a week," said the boy.

Poverty is no disgrace, as many a woman has discovered who boasted that her face was her fortune.

NOT A HIGH FLYER

One of the men at Seabrook Farm went down-town the other day, to get a little something to help celebrate Christmas from a friend who had the real stuff. Asked what he'd like, he replied that a little good squirrel whisky would do.

"I'm all out of squirrel whisky, but here's some Old Crow."

"Yudas Priest!" exclaimed Eric. "I don't want to fly; I joost want to hop around a little."

SURPRISED

"Papa," said a six-year-old girl coming into the room with the air of one carrying valuable news, "did you know that Brown's baby was dead?"

"Yes, dear, I heard of it. Are you sorry?"

"Yes, papa. But it was only three days old. Don't you think God will be surprised to see it coming back to soon?"

AS WITH CATTLE.

Posterity may be an indication of where we are from, but ancestors do not always tell where we are headed for. —*The Silent Partner.*

Nell—"She broke off the engagement once, but finally married him."

Belle—"Does she agree that second thoughts are best?"

FINDERNE STOCK FARMS

HOME OF

KING VALDESSA

A bull of royal breeding.
An animal of remarkable individuality.
A sire of everyday and all-the-year 'round producers.

His dam, Valdessa Scott, 2d 41.88 lb. A. R. O., the first cow to make a 40 lb. seven day official butter record, was developed and made her A. R. O. records on this farm. She was the first cow to make over 37 lb. butter in seven days two different years, which she did at eight and ten years old.

His sire's dam, K. P. Pontiac Lass, 44.18 lb. was the first 44 lb. cow and the first to beat his own dam. The two nearest dams of King Valdessa average:

7 days—Butter, 43.036 lb.; Milk, 640.25 lb.
30 days—Butter, 167.894 lb.; Milk, 2,625.15 lb.

Each have high record daughters and are transmitting their own great producing powers to their offspring.

While our cows are kept for every day business, yet, when tried out they have made records that leads the list. Among the record smashers bred and developed at Finderne are:—

FINDERNE PRIDE JOHANNA RUE.
1470.58 lb. butter in a year at full age. World record when made.

FINDERNE HOLINGEN FAYNE
1395.06 lb. butter in a year as a junior three year old. World record over all ages and breeds when made. World record in class now, altho made seven years ago.

FINDERNE MUTUAL FAYNE
1200.63 lb. butter in a year as a junior two year old. World record in class.
To head your herd you need a bull of FINDERNE QUALITY. Our prices are within your reach, so TO-DAY, write

LACKAWANNA COUNTY HOLSTEINS

The herds of Lackawanna County consist of stock directly descended from cattle imported direct from Holland in early Holstein days by old time Lackawanna County breeders —pioneers of the breed.

These men were capable judges and selected their animals for type, individuality and producing capacity; desirable characteristics readily apparent in the present cattle of the county.

Lackawanna cattle are healthy—many of the herds are under Federal supervision.

Quotations will be cheerfully given on single animals or carloads—and it is a pleasure to show the goods.

Echo Sylvia Korndyke Abbekerk, No. 684723,
Born May 1, 1921

We want you to see a sample of the daughters of WOODMONT ECHO SYLVIA CHAMPION, our grandson of Champion Echo Sylvia Pontiac. Butter Boy Empress, the first-prize cow, Senior and Grand Champion, and first-prize A.R.O. cow at the New York State Fair last fall, is the dam of our sire. She was pronounced by Judge Haeger to be one of the three best shown in the United States last season.

The calf is patterned almost exactly after Butter Boy Empress in everything but color, and is possibly a little more rugged.

Her ten nearest tested dams average 26.61 lb. butter and 571.1 lb. milk at 3½ years of age.

We desire to especially emphasize her show qualities.

B. F. JONES & SON,
South Montrose, Pa.

The Holstein Breeder and Dairyman

VOL. I. HARRISBURG, PA., MARCH 8, 1922 No. 5.

Forty Pounds at Liverpool

THE chief topic of interest when Holstein breeders met around Syracuse, N. Y., during the last half of February, was the sensational performance of Highland Burke Joh, the great heifer owned by Hawley and Murphy of Liverpool, N. Y.

There were a number of reasons for this. First of all, it has been a long time since 40-lb. records were reported. There has been only one 40-lb. record placed on the books of the Association since the Cole "explosion," the one made by the Wisconsin cow, Sadie Gerben Hengerveld De Kol. Breaking this long drouth came the news that the California junior three-year-old Louise Alcartra Prilly had crossed the 40-lb. mark and on top of that was the fact that the Liverpool heifer was running at a gait that promised that she would also join the favored few. Within the last two years hundreds have attended sales at the Liverpool Pavilion and had looked over the Hawley and Murphy cattle.

It is better to begin with the beginning. Several years ago Hawley and Murphy purchased from their neighbor, H. A. Moyer, a 24-lb. cow, Walker Woodland Burke, daughter of Segis Fayne Burke and Segis Woodland Walker, she an A.R.O. daughter of King Walker Segis from a granddaughter of King Segis. This cow they bred to the Moyerdale herd sire, King Joh, and own two full sisters thus attained. It is the older one of these sisters that has just completed a seven-day record of 40.3 lb. butter and 577.6 lb. milk.

At three years, seven months, 18 days old, Highland Burke Joh entered into her first official test. She produced 86.6 lb. milk in a day and closed with records of 28.19 lb. butter, 565.3 lb. milk in seven days and 109.81 lb. buttter, 2,254.4 lb. milk in thirty days. She freshened again just one year and seven days later and as soon as possible was put again into official test and is still in test at this writing. December first, when Mr. Murphy stopped milking Highland Burke Joh twice a day and started drying her off, she weighed 1,700 lb. She was kept in a box stall and on February 1st was again weighed at which time she tipped the beam at 1,900 lb.; so you can see she is a pretty good sized four-year-old. She freshened February 11th, dropping a bull calf. Her feed ration was 12 lb. of grain a day, consisting of the following mixture, the Cornell test ration:

100 lb. distillers grains	50 lb. gluten
100 lb. bran	50 lb. ground oats
100 lb. hominy	10 lb. powdered charcoal
100 lb. cottonseed meal	6 lb. salt
50 lb. oil meal	

Mr. Murphy fed her this amount of grain throughout her test although it is the writer's opinion that she easily would have taken quite a lot more. In addition to her grain she received daily 1½ bushels of cut beets, 15 lb. of silage, 10 lb. alsike clover and 26 lb. of beet pulp over which a quart of molasses had been poured. She received her hay in four installments, getting a little after each meal. February 24th at 5 a. m. she gave 20.7 lb. milk which tested 5.5% fat and at the 11 a. m. milking, while we were there, she gave 20.3 lb. milk testing 5.4%. This milking was tested by the two supervisors in the afternoon and when it was completed she had 30.035 lb. of fat to her credit in 26 milkings.

So many knew of the performance of the cow and so many went to see her that she became a little uneasy and therefore Mr. Murphy refused to take anyone into the cow barn with the exception of the supervisor, the re-test supervisor and the official representative of the National Association, Mr. Howard Judd. The cow is not of a nervous disposition but it was thought advisable to keep her quiet and not run any chances. She stood in her stanchion in her usual place with her mother close to her on one side and her full sister on the other. Nor did she have water before her all the time. The pipe supplying the individual water buckets leaked and it was thought advisable to shut off the water after the men were through with the days work and not to turn it on again until they came in the morning. Highland Burke Joh was given all the water she would drink at midnight carried to her in pails.

As said before she is a large cow, light in color, a real good individual, straight on the back and quite deep. She has a good head, wide muzzle and rather heavy horns. No picture of her was available but we hope to have one a little later. She will be continued for thirty days in official test and then will be placed on long time test and entered in the ten months' division. It is planned to sell her in the National sale next June at Kansas City. No pains were spared to insure the correctness of this record. Instead of waiting for the required three days before notifying Mr. Gardner of the record she was making, a wire was sent the Superintendent on the second day and thereafter a telegram was sent to him every day, telling him what she was doing. Mr. Gardner, working through the New York State Association and Professor Wing, instructed Mr. Judd to immediately go to the farm and investigate all details.

The full sister to the new 40-lb. cow is Highland Walker Joh. She recently completed a record of

29.87 lb. butter, 556.8 lb. milk in seven days and 118.04 lb. butter, 2,487 lb. milk in thirty days at three year, six months and eleven days old. A daughter of the 40-lb. cow, Highland Hengerveld Burke, sired by The Mighty Monarchs Son, made at 26 months old 17.66 lb. butter and 405 lb. milk in a week.

A half sister of the 40-lb. cow is by Sir Pontiac Waldorf Pietje. Calving at two years, one month, three days old, made 19.41 lb. butter in seven days, milking 72 lb. her best day, and Mr. Murphy informed us that four days after the test closed she gave 78.8 lb. milk in the 24 hours. The pedigree of Highland Burke Joh shows that all four of her grandparents trace to King Segis, in fact she traces seven times to this sire and three times to the grand foundation cow Prilly.

It is interesting to note that she is closely related to the new Californian 40 lb. junior three-year-old Louise Alcartra Prilly, both being granddaughters of King Segis Pontiac Alcartra and both tracing to old Prilly. It is certainly interesting and perhaps significant that the two first 40-lb. records of 1922 should be made by related heifers, nearly three thousand miles apart, one in California and the other in New York State.

PEDIGREE OF THE NEW 40-LB. HEIFER

Highland Burke Joh	King Joh	King Segis Pontiac Alcartra	
		Uneeda Korndyke Abigail	
	Walker Woodland Burke	Segis Fayne Burke	
		Segis Woodland Walker	

The Hawley and Murphy herd is owned by Dr. Hawley of Syracuse and Mr. Murphy, who lives directly across from the barn on the road running from Syracuse to Liverpool. Those who have visited Liverpool will remember the salt sheds. The old salt industry is passing and the sheds are being pulled down. Hawley and Murphy are farming with very good results on the flats where so many years the salt sheds have stood.

The present herd consists of only 34 head. It is under State and Federal supervision and has been accredited two years. The herd sire was Wanhasda Korndyke Lyons who some time ago was sold for one thousand dollars to go to Argentina. He was a son of King Lyons from Lady Pontiac Korndyke Manor, a granddaughter of King of the Pontiacs with a seven-day record of 29.2 lb. of butter and 736.8 lb. of milk. She milked 108½ lb. of milk in a day and three different years made over six hundred lbs. of milk in a week. She was the first cow Mr. Murphy officially tested and three successive years made records of 22.19 lb., 28.28 lb. and 29.2 lb. Her record of 22 lb. was made after dropping twin calves and Mr. Murphy said she weighed at least 1,800 lb.

As will be noticed in our report of the Backus sale, King Walker Lyons Joh, a son of this cow, was sold for $1,900. Her daughter a year older stood in the same milking row as did this cow, as well as her full sister and her dam, while other members of the family were in the barn.

Mr. Murphy received many congratulations and good wishes on the achievements of his cow and himself. Every Holstein man at the sale and in the hotel lobbies at Syracuse seemed glad that another 40-lb. record was in the making and also glad that the animal was in a small herd, developed by its breeder and making its records under conditions that can be duplicated on hundreds of Holstein farms.

An Appreciation of the Value of the Short Time Tests

SO impressive of late has been the work of some of our animals under test, that I feel duty bound to bring before the readers of THE HOLSTEIN BREEDER AND DAIRYMAN just what the animals have done and the conditions under which the showing was made.

A few years ago I had been led to believe that the short time tests were a true method of finding out the ability of a cow to produce. Then there came a time when my faith was somewhat shattered and I thought it was probably necessary to run a cow on test for ten months or a year to discover this producing ability. I set about to determine for myself what there was to it and selected several daughters of King Valdessa Pontiac, some from well-bred dams and some from dams not so well bred.

There are those who have been inconsiderate enough to condemn seven-day work and others who discredited year work, classing it as a test to be used only by so-called big breeders. I wish to say that in my opinion, a seven-day record honestly conducted is a very important consideration in measuring the ability of a cow, and is a measure of capacity that should be encouraged and by all means retained by the Association. I do not want anyone to understand that I am upholding the seven-day work to the exclusion of the ten-months or yearly division, for both of these are employed at Bell Farm. The work of these heifers very forcibly demonstrates to me the value of a short time record in connection with a long time record if one is willing and in a position to make the long time test. I feel we should give encouragement to those breeders who are only able to make the short time record. That standard of measure and none other, has brought us to our present position and it is an open question in my mind if we have made any more impressive progress or increased our long time production by breeding from long time record dams. To me, a year record made at the sacrifice of a calf, is without great value and with the half dozen animals with which we have had our experience, it is possible to bring together a creditable seven-day record,—a good semi-official record and a calf,—all within a year or there about.

With us our animals are given seven-day records at time of freshening; they are started on semi-official test along with the rest of the herd, receive the same care, and bred when they should be without regard for the effect upon their long time work. They are given from four to six week's rest previous to next freshening, and given their next record. This method we are willing to follow through, regardless of whatever their credit might be, and we find we have the seven-day record, a very creditable long time record, a calf, and in some instances a second record, all within a period of possibly thirteen months.

Under these conditions I would like to bring before you the work of one of our three-year-old heifers. She freshened as a senior two-year-old and made almost 25 pounds of butter; in ten months she made 712.45 pounds of butter with over 15,000 pounds of milk, carried her calf two hundred and twenty-seven days of the time, freshened within twelve months, and now as a three-year-old has just made 32.74 pounds of butter from over 600 pounds of milk and will have approximately 134 pounds of butter for the month and in her last seven days she has made 630 pounds of milk.

Another freshened at twenty-seven months, made a little over 19 pounds of butter; in ten months she made 679 pounds of butter from 15,635 pounds of milk, freshened in three days over a year in very thin condition and has made 31.30 pounds of butter as a junior three-year-old and milked yesterday 75 pounds.

A third heifer made 18 pounds as a junior two-year-old, then closed her ten months with 567 pounds of butter from 14,885 pounds of milk, freshened well within a year and made over twenty-seven pounds of butter, milking 88 pounds yesterday on her long time test.

A fourth, also at twenty-six months, made her 17 pounds seven-day record, then made 583 pounds of butter in ten months, freshened within a year and has made better than twenty-six pounds of butter again, milking almost 80 pounds yesterday on her long time test.

Another one (and this one from a poorly bred dam) freshened as a junior two-year-old and made fifteen pounds of butter in seven days and her long time test is progressing proportionately. I mention this heifer particularly so that you will see from my deductions later, that this experiment has worked both ways, namely, it has shown the good producers as well as the poor producer.

Under herd conditions and without long rest and in only average condition when freshened, such work to me means a great deal and should prove a value to the average breeder. I say value because we have found there is a very strong relationship between the seven-day record and the long time test; a relationship so marked that these first four heifers made their long time test in almost identically the same order of their best seven-day record.

Thus, I am inclined to believe that were it not possible to run these heifers on long time test, their short time test is a true indication of their ability to produce where this ability has been *bred* into them. To more clearly demonstrate that they must have this ability *bred into them,* I wish to mention several junior-two-year-olds that have just completed records from 20 to over 28 pounds of butter and these are invariably from still better bred dams than the first heifers mentioned. Of course, they will be given an opportunity on long time test to prove more clearly that their short time work is in proportion to their long time work. The main deduction from this experiment is, that I am satisfied beyond the question of a doubt, that the short time test when honestly conducted, is a real test and truly indicates a cow's ability to produce. Therefore, breeders, you who do not have the time nor acocmmodations to make long time tests, take courage and go in for making all the short time tests you possibly can. Both the short time and long time tests have their places and there is room for both but I wish to emphasize that where this producing ability has been *bred into* the animals the short time test is undoubtedly a true test to go by.

Signed,

John A. Bell Jr.

March 1st, 1922.

The Kansas City Sale

THE requirements for the sale which will be held at Kansas City at the time of the National Convention are quite high. Particular stress will be laid on individuality. No animals will be under six months or over eight years. Not more than sixteen bulls will be entered in the sale.

The sale committee will examine all animals before they enter the ring and will refuse to let any be sold that they believe are not a credit to the event. There will be a state herd competition and $600 will be set aside as prizes, $300 will be given for the best herd, $200 for the second best, and $100 for the third. Any state competing must not have less than eight head of cattle in the sale.

The production requirements for entry in the sale are as follows:

	Seven-Day Record			Yearly Record		
	Lb. milk		Lb. butter	Lb. milk		Lb. butter
2 years	400	or	18	12,000	or	600
3 years	450	or	22	15,000	or	750
4 years	500	or	26	18,000	or	900
5 years	600	or	30	20,000	or	1,000

305-day records will be considered seven-eights of yearly records.

Females that have never freshened must have dams meeting the above requirements.

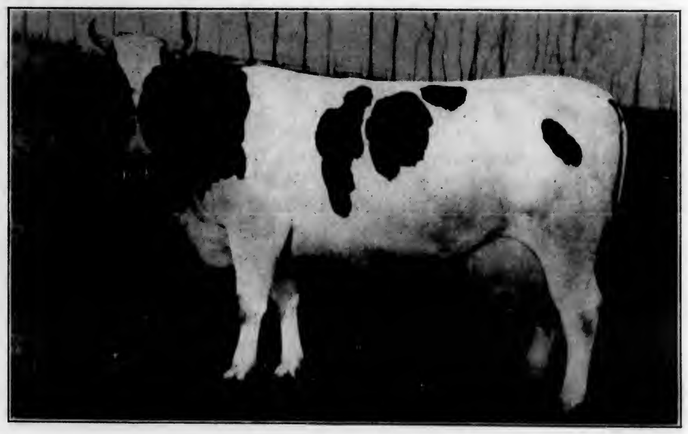
All bulls entered in the sale must have dams with records of at least 30 pounds butter in seven days, or a yearly record of 1,000 lb. of butter or 20,000 lb. milk.

Only animals that have passed Federal Tuberculin Test will be accepted.

Soon will come the wee damfli—
Summer's coming by and bye.

Boiling Springs Ormsby

BOILING SPRINGS ORMSBY holds the Pennsylvania State Championship in her class for seven-day milk production. Calving at the age of three years, one month and two days, she made an official record some twenty-eight days after freshening of 19.24 lb. butter, 670.5 lb. milk.



Her owner and breeder, Mr. Ivo V. Otto, of Carlisle, says that she was in abnormally thin flesh when she freshened and that she actually produced about twenty pounds more of milk in seven days than was reported in her record which covers the period of her highest seven days' fat production. Boiling Springs Ormsby freshened again in November, 1921, as a junior four-year-old, and at this time made 25.02 lb. butter, 602 lb. milk in a week. Her owner says that this time her udder was so swollen that he did not dare feed her much grain, and she is capable of making a much larger record both for milk and butter. In the middle of December she was put on twice-a-day milking, and during January averaged more than 80 lb. milk in a day, which is certainly a great production on twice-a-day milking. Her best single day was 86.2 lb., and her next 85.6 lb.

Boiling Springs Ormsby was enrolled in cow testing association work as a junior three-year-old and made over 16,000 lb. milk. As a junior four-year-old she is on long-time test and will compete in subdivision B of the ten months' test.

This great young cow was born September 29, 1917. Her sire is Bonnymeads Pontiac Paul, No. 103454, and her dam is Orange Korndyke Segis, No. 285736.

Her sire has only six registered daughters, and all of these, with one exception have made over twenty pounds of butter in seven days' official test as heifers. The exception was tested as a junior three-year-old and milked twice a day. She made nineteen pounds butter in a week eleven weeks after freshening, producing over 68 lb. of milk her best day.

There is one of the many tragedies of the livestock industry connected with the story of Boiling Springs Ormsby. Her sire, Bonnymeads Pontiac Paul, was sold to the butcher for nine cents a pound before the producing ability of his daughters could be ascertained. Mr. Otto says he would give one dollar a pound to have this bull back, and this would mean $2,245. Another daughter of this bull made over 26½ lb. butter and over 600 lb. milk in a week as a senior three-year-old, around 700 lb. butter and 17,000 lb. milk in ten months, and then as a senior four-year-old made over 27 lb. butter and over 630 lb. milk in a week. There was just eleven months, fourteen days, between these two freshenings.

BOILING SPRINGS ORMSBY

670.5 lb. milk in seven days.

Pennsylvania State Champion, junior three-year-old.

Owned and bred by Ivo V. Otto, Carlisle, Pa.

A Day at Beaver Dam

TO many of our readers it will be news that Beaver Dam Stock Farm owns nearly forty daughters of Ormsby Korndyke Lad that have never freshened. One of the reasons for this belief is the fact that Ormsby Korndyke Lad was well advanced in years at the time of his decease. Quite a number of people know, however, that for a long time this sire stood in the stable at Beaver Dam and was not in service. He was kept around because of his superb individuality and because Mr. Schmid made somewhat of a pet of this bull. When daughter after daughter of this sire made splendid records in both short time and long time tests, naturally he was returned to the breeding head and the present splendid group of yearlings and two-year-old heifers that can be seen at Beaver Dam were sired during his last two years of life.

At the present time it is not the practice of Mr. Julius Schmid and his son Carl to aim to make the largest possible record from the daughters of O. K. L. although, quite a number are on the long time test. O. K. L. Royal Beets, who as a four-year-old, made 28,084.9 lb. milk, 1,208.58 lb. butter in a year, was at the time of our visit finishing another year test. Carl explained that there was no attempt to force her at all. She was simply carried along with a number of her sisters and her record would be approximately 25,000 lb. milk, 1,130 lb. butter. At the time we went there it was easy to see from the looks of the cow that she could be forced to produce considerable more.

She was not even in the home barn as, with a number of her sisters, she had been sent to another building on the place so that some needed repairs and alterations could be made to her own stable.

Another handsome individual that was finishing a year's work was Princess Wera Monadnock, who as a seven-year-old made 646.8 lb. milk, 30.80 lb. butter in a week. She was purchased in the 1921 Brentwood Sale at which time she was fresh. She was put on long time test by her new owner in which she made 1,100 lb. butter and 27,000 lb. milk.

The young daughters of O. K. L. Andire Posch took the eye of the DAIRYMAN'S representative. One of these heifers is a three-year-old, another is a two-year-old. The three-year-old milked eighty lb. a day when fresh and the two-year-old, recently fresh, was reaching the seventy pound mark.

The calves of this establishment, as well as a number of the younger heifers, were sired by Ormsby Korndyke Pearl, son of Ormsby Korndyke Lad and O. K. L. Pearl Tula, 34.43 lb. butter in seven days, 1,366.75 lb. butter in a year. O. K. L. Pearl was at the time of our visit at his other residence, the Walton Lake Farms, Monroe, N. Y. The type and conformation of the offspring of this bull show that he is a sire of extra quality.

So much has been said about the wonderful daughters of Ormsby Korndyke Lad that it is hardly worth while to repeat at this time. We hope in the not far distant future to have a more complete story and to present with it illustrations of some of the more notable animals.

The younger herd sire, Ormsby Sensation, is all he is cracked up to be and is a bull of outstanding character. His first calf to be dropped at Beaver Dam Farms evidently inherited the individuality of the sire and this family. When Mr. Schmid purchased this bull he acquired several heifers sired by him, the older of which will be seen in the coming Brentwood sale and we can assure our readers that she is worth while looking after and she is one of the most promising things it has been our privilege to see.

This is only a short account of a very pleasant trip but we feel this would be incomplete without mention of the Schmid home where a visitor is made to feel that he belongs to the family. Montgomery stands a little back from the beaten highway and so the farm is not overrun with idle sight-seers as are many of our big breeding establishments located near cities or on state roads.

Successful Dairywoman

AT the recent meeting of Illinois State Dairymen's Association the members re-elected to the Board of Directors Mrs. Julia A. Taylor of West Wood Farm, Springfield, Ill.

Mrs. Taylor is an enthusiastic dairywoman. Her husband, Professor G. W. Taylor, for 20 years superintendent of schools in Springfield, was interested in dairying as a side line. Mrs. Taylor was a teacher but on her husband's death six years ago she took charge of the herd of nine cows. To-day she has thirty, most of which are pure-bred Holsteins. She has a man to work in the barn and a boy to deliver the milk. The dairy output is 200 quarts a day which goes chiefly to babies and invalids. Last year her exhibit at the Illinois State Fair won first and second on milk and cream. The herd is under State and Federal supervision and has passed two tests without showing any reactors.

West Wood Farm consists of 90 acres. Milking machines are used, Mrs. Taylor believing that they are great labor savers. No heifer calves are sold but the young bulls are marketed as soon as possible. Six Duroc sows are kept and the young pigs are sold as feeders. There are two silos on the farm and practically everything fed is raised.

Mrs. Taylor is secretary-treasurer of the Springfield Milk Producers Association. She formerly was secretary of the Tri-county Cow Testing Association which consisted of dairies in Sangamon, Morgan and Macon counties. Despite the business she has had to look after she has not neglected her family. One of her sons has set out for himself in commercial aviation, another son is in business college, one is a High School student and the fourth is a Sophomore in the University of Illinois.

Worth Thinking About

THE calf club idea has now grown to an extent that it may well be recognized as one of the most important features of the work of rebuilding our agricultural industry.

In the case of dairy calves, there is one point which should receive the early attention of the various breed associations, and that is to be found in the fact that the average boy or girl who raises a dairy calf in this club work, cannot receive the fullest benefit from the effort unless the animal can be entered for a record test after it reaches milking age.

In many cases the purebred calf thus raised is the only one on the farm, and the expense of entering the animal and paying the monthly cost of an official supervisor for the test is not warranted.

We would suggest that some plan be devised whereby the county agent or club leader could take the place of the supervisor and have his reports accepted by the cattle associations.

Of course the tests would not be based on the milkings now required, but if the man in charge took two samples a month, surely a sufficiently authentic record could be made and accepted by the breed association at least for the first lactation period of the club boy or girl raised heifer.

There is little advantage for the boys and girls to raise purebred dairy heifer calves, if when the animals are of milking age they cannot be used in a better way than the ordinary grades already on the farm.

A year's test costs a total of $132, plus the board of the supervisor and the entry fee of $5; an expense too great for one animal owned by a boy or girl.

This is an important matter and we earnestly urge the attention of the club leaders and the officials of the associations.—*New England Farms.*

Champion Eighteen-year-old

THIS grand old lady has proven herself a real dairy cow. She has held, for the past two years, the world's record for a cow 18 years of age. This record is 21.72 lb. butter from 468.4 lb. milk in seven days; 40.71 lb. butter from 916.2 lb. milk in fourteen days; and 84.46 lb. butter from 1,917.3 lb. milk in thirty days. This record was made without any fitting and goes to show that she is a wonderful, persistent producer. She is sired by Sir Abbekerk Parana and her dam is Netherland Lotta, both old time lines of breeding. She has five A.R.O. daughters—Lotta Sprig, with record of 20.43 lb. butter; Abbekerk Lotta Cornucopia, with record of 22.64 lb. butter; Abbekerk Lotta 2d, with record of 19.92 lb. butter; Lotta Abbekerk, with record of 13.90 lb. butter at twenty-six months; and also Dulcevista Abbekerk Lotta, with 10.77 lb. butter at two years and two months. The latter heifer is about ready to start another test. Besides this world record, Abbekerk Lotta also has a record of 22.23 lb. butter, 451.3 lb. milk made nine years before. She is owned and was developed in the Dulcevista Herd, owned by F. R. Babcock, Pittsburgh, Pennsylvania.

ABBEKERK LOTTA
World's champion eighteen-year-old cow.
Owned by F. R. Babcock, Chestnut Hill Farms, Gibsonia, Pa.

Successful Washington Breeder

WILLIAM TODD, well-known dairyman of Washington, was 49 years old when he left Scotland with his family to make a home in America. They first stopped in Manitoba then tried Minnesota and finally landed some 27 years ago in Yakima, Wash., where they had acquaintances.

Mr. Todd was interested in purebred cattle by a couple of brothers named Miller who ran a creamery in Tacoma. Mr. Todd happened to express a wish for more cows and they told him of some registered Holsteins on which they held mortgage and promised to give him time if he bought any of them. Mr. Todd inspected the stock. They looked like good producers but had had poor care and were very thin. He had only to pay $50 a head for the four animals he took. A daughter of one of these cows, now 16 years old, is still on the Todd ranch.

After a time it became necessary to get a young bull for a herd sire and Mr. Todd wrote to the Holstein breeder he knew the most of, W. G. Gillett of Rosendale, Wis., who priced an animal at $150. This seemed quite a figure at the time but finally it was bought, then a little later, when it became time to have a successor, another Gillett bull was obtained for $300. This one was Sir Johanna Ruth Fayne who was head of the herd for a long time and who is ancestor of nearly all the animals in the herd. A third bull was obtained for $500 from the Gillett herd but he only had two or three daughters before they had the misfortune to lose him.

The Todd herd is one of high quality and the cattle are noted for producing ability. Three different animals sold have made world records for milk production. Two sons, Alec and William, assist their father in the management of the herd.

Pure Bred Possibilities

THE possibilities of the pure-bred Holstein breed- business is shown in the story of the Valley Star herd, owned by Louis H. Pape of Dyersville, Iowa. Some 14 years ago Mr. Pape, then 23 years old, became dissatisfied with the cows in his herd. For a short time he had been running the farm on which his father had made a fair living with a herd of grade dairy cows.

Mr. Pape attended a sale of purebred Holsteins held in Northern Illinois in January, 1908. Prices were low and he purchased three yearling heifers at an average price of $55. Even when the shipping expenses were added the total investment was less than $200. One of the heifers was a disappointment and was soon disposed of. The other two were kept as foundation animals and the entire herd, now consisting of 33 animals, trace directly to the pair.

The present herd is conservatively valued at $8,000. During the past fourteen years 97 head of stock have been sold for $10,825 so that the initial investment of $200 in 14 years has been increased 19 times.

The two foundation animals were Maple Grove Belle DeKol 3rd and Daughter Alice Eveland. Both are members of the herd to-day at fifteen years old and each has produced 12 living calves.

One of the reasons for the rapid increase is the fact that during the early years of the herd's existence a large percentage of the calves born were heifers. Maple Grove Belle DeKol 3rd produced five heifers before she had a son and several of her daughters came near equaling their dam's performance.

As the purebred heifers developed and came into milking the grades were gradually disposed of, the last one going in 1917. From then on the herd has been altogether purebred. Prices have not been at all fancy. Ten mature cows and 40 heifers have been sold from prices ranging from $100 to $250 and the bull calves, which have ranged from four months to a year old at time of selling, have gone to dairymen living in the neighborhood at a price averaging close to one hundred dollars. Mr. Pape joined the National Association in 1913.

Dean Van Norman's Views

THE universal need for associated action on the part of farmers, dairymen and stock breeders was explained by H. E. Van Norman, president of the World's Dairy Congress Association, in speaking February 16th, at the convention of the Virginia State Dairymen's Association, at Charlotteville. Dean Van Norman, who was "loaned" by the University of California to prepare for the congress after having headed the National Dairy Association for ten consecutive terms, was a delegate to the National Agricultural Conference. He said in part:

"The recent conference, called together at Washington by Secretary Wallace, of the Department of Agriculture, and opened by President Harding, stands in my mind for one, big thought—a thought worthy the serious consideration of every farmer, dairymen and stock breeder. It seems to me to have been an official recognition by the national government of the essential unity of American farm industries a recognition of the need for the men engaged in those industries from Maine to Texas and from Virginia to California to get together, a recognition o fthe modern demand for coöperation. If the National Agricultural Conference achieved no other result than to impress this thought upon the minds of the countrymen of America, it served a purpose of the highest import.

"Our nation was established by one-man enterprise—the one-man farm whose products fed and clothed the family, the one-man store, the one-man blacksmith shop, the one-man stagecoach, the one-man mail service. What distinguishes the nation to-day is the fruit of associated, or organized, effort. Transportation, communication, manufacture, merchandising are all conducted by great groups, often of thousands of individuals, each with its leadership of superior ability—leadership which has been earned by the survival of the fittest in years of competition.

"Because every farm is a home, it is not likely to become factory organized, but agriculture, like other industries, has come to a time when all its problems cannot be solved by the farmer acting as an individual. Farmers must associate in groups. They must acquire the assistance and benefits of associated effort under skilled leadership. Successful leadership is the result of accumulated experience. The permanence and effectiveness of associated groups in agricultural efforts depends upon the development of successful leaders, able to read all factors aright, to think rightly and to decide rightly, to the end that all in the groups may prosper better because of the leadership and the associated effort.

"The prices of dairy products of all classes in all communities is determined primarily by the law of supply and demand. Surplus or shortage in Australia, New Zealand, Argentine, Siberia, Denmark, as well as in the United States, affects the price of dairy products in America. Organized effort may effect economies, may correct local injustices temporarily, thwarting fundamental economic law; but cannot endure by exercise of monopolistic control of prices—as witnessed by repeated failures of coöperated effort unwisely exercised. The success of the Pacific Coast fruit, nut and raisin organizations lies in the skill with which they have eliminated unnecessary expense of distribution and carried their products to the consumer at prices which would insure the total consumption of the available supply. They early learned that a price that was too high resulted in a corresponding failure to market all their product. Insufficient price discourages production and must of necessity eliminate the least efficient producer. Associated effort standardizes products, rewards quality, penalizes inefficiency. The economies effected often increase the return sufficiently to change failure into financial success for the year's effort.

"The World's Dairy Congress is planned to recognize the world unity of the dairy industry which furnishes a most essential human food. Through it, we hope to encourage associated effort, to develop leaders, to advance and exchange knowledge of science and economics and to improve standards within the industry and to increase public appreciation of milk products."

Canadian Records

THE list of Canadian records reported during January are led by Arkano DeKol Faforit in the mature class with 665.5 lb. milk, 32.16 lb. butter in seven days, and a very large thirty-day record. She is owned by W. B. Mason, Cainsville, Ontario.

Glen Gloriana, owned by T. H. Dent & Son, Woodstock, Ont., leads the senior four-year-old class with 584 lb. milk, 28.74 lb. butter, while the junior four-year-olds are led by Countess Velva DeKol with 578.5 lb. milk, 25.25 lb. butter, owned by Frank O. Davis, Jasper, Ont.

The sensation of the report is furnished by the senior three-year-old Echo Griselda DeKol 2d. At the age of three years, seven months, twenty-five days, she is credited with 592.9 lb. milk, 129.6 lb. butter in thirty days. She is owned by A. C. Hardy, Brockville, Ont.

Agassiz Mechthilde Sylvia heads the junior three-year-old class with 497.6 lb. milk, 23.6 lb. butter. She is a member of the herd at the Exeriment Farms, Agassiz, B. C.

The A. C. Hardy herd certainly carries off the honors in this report as, besides furnishing the leader of the senior three year- class, both of the two-year classes are headed by Hardy animals. Eco-Sylv Griselda, at the age of thirty months, has 530.7 lb. milk, 29.34 lb. butter in seven days, and a sixty-day record of 4,722.6 lb. milk, 229.9 lb. butter. Next to her is Eco-Sylv Belle Model Pietje with 27.48 lb. to her credit. The new champion junior two-year-old, Eco-Sylv Belle, is officially reported by the Canadian Association. Her seven-day test verification forms the leading article in the January 1 issue of the BREEDER AND DAIRYMAN. She supplemented her seven-day record of 31.15 lb. butter with a thirty-day test of 2,071.8 lb. milk, 118.75 lb. butter. Her thirty-day record stands second to the world champion Het Loo Pietertje, 122.01 lb.

The sensation of the long-time division is furnished by the three-year-old Forest Ridge Nancy Fayne, with 25,653 lb. milk, 1,263.75 lb. butter. This is easily the high record in the class for Canada.

Shall We Increase the Transfer Fee at the Next Annual Meeting?

ONE of the vital questions to be decided at the Kansas City meeting will unquestionably be: Whether or not we shall increase our transfer fees from the present cost of 50 cents to double the amount, or more.

A study of the past history of the National Association will disclose that a transfer fee of 25 cents prevailed until the meeting in Philadelphia in June, 1919, when it was increased to one dollar—four times as great a sum, and the board of directors increased to sixteen. At that time the Holstein-Friesian Association of America was, I believe, the largest and strongest cattle organization in the world. It had the largest fund in its treasury and the largest membership. All this growth was accomplished with a transfer fee only one-half the present one. Can we now not get along with the present fee and serve all members of the National Association just as well as with increased fees? Evidently, the advocates of the increased transfer fee have a definite purpose in mind, and this was probably outlined in Senator Reynolds' article, on page 46, of the December 24th issue of the *Holstein-Friesian World*. The purpose evidently is to increase the fee beyond the requirements of the Holstein-Friesian Association of America as operated prior to June, 1919, and for the purpose of dividing this fee with the state organizations in order to enable them to maintain a paid secretary and function as consignment sale organizations. Personally, I feel there are many serious objections to this proposition. Only a small fraction of the members of the National Association in each state are members of the state organizations, and a still smaller fraction of the members of the National Association are active in the management of the affairs of the state organizations. This is well illustrated by the history of the New York State Association, which I believe has been as well managed and by as able and honest men as could be secured. Personally, I have opposed the adoption in our state of Pennsylvania of the plan of a paid secretary and of state associations devoting its attention to organizing consignment sales. I began this opposition in January, 1920, when President Aitken offered to come into the state of Pennsylvania and conduct a whirlwind campaign for membership in our state as he had conducted in other states. I had some correspondence with him at the time, and I quote from his correspondence the following:

"A large part of the fund available for extension work has been expended * * * in a series of meetings in the organizations of state clubs with sufficient financial backing to put their own men in the field, etc. * * *."

"What we are aiming to do is to spend our money largely in promoting organizations in the states * * * etc., * * * and then the board of directors * * * hire one or two men and their whole time is given to the manager of the state * * *. When anyone in the state wants to buy animals the inquiry is referred to the manager of the state; in other words, they employ someone to look after their business of *buying and selling* animals * * *. This is what we are putting these campaigns on for * * *."

On January 26, 1920, I wrote President Aitken, and in his reply dated February 2, 1920, among other things he stated:

"I am in receipt of your letter of the 26th on my return from New York, where we have spent two weeks in a drive for membership for the State Association, ending up with practically 2,200 members. This will leave the state with $11,000 in their fund with which to start operations."

At the Rochester meeting I learned that the actual membership of the New York State Association never had exceeded 1,200.

On February 14th, I again wrote Mr. Aitken, acknowledging his letter of the second and reviewed the results in New York State, and added:

"I am afraid that I am not in harmony with the plan of the organization, if I understand it correctly."

I then quoted briefly from his letter to Mr. Bennett, then president of our State Association, read by me at the Harrisburg meeting, and informed Mr. Aitken what happened there. I then added:

"My own personal opinion is, that when you mix a National Association or a State Breeders' Association with the selling game, you make a very serious mistake, as far as the best interests of the breed are concerned."

"I believe the question of selling should be left to the individual breeder and the breed papers, and it is a mistake for either the National or State Association to take it up. I spoke openly against it at the meeting and my attitude was sustained by a very large majority. I am heartily in sympathy with the publicity movement, but I think if the manager of the State or National organization makes it his business to introduce the purchasers to the breeders in the association, in the buying and selling, it will surely work against the interest of the breeders who are least active in promoting the breeders' organization. Let the sales end take care of itself."

Mr. Aitken courteously replied to my letter of February 14th on February 25th, and the correspondence was then dropped.

I am only referring to it here in order to show that I have been devoting considerable thought to this subject. No criticism of President Aitken is intended or implied and I have never doubted that he believed in the merits of his campaign for state organizations and paid secretaries. I simply held a different opinion.

I attended the meeting and sale of the New York State Association at Rochester, and talked with President Bigler and Secretary Zimmer about the affairs of that association. Both of these men I hold in high esteem and believe them to be thoroughly honest and efficient in the management of the affairs of the association, and want to say again, that, in presenting these figures, no criticism of their conduct of the State Association's affairs is intended. The question is: Shall other states follow and shall we increase the transfer fees and thereby compel all breeders and members of the National Holstein-Friesian Association of America to contribute to these state organizations?

I found the actual membership of the New York State Association has never exceeded 1,200 members. The total fund raised was $12,500. The cost to the State Association of the campaign for membership was $1,800. No figures were available as to what amount the National Association expended in this campaign. The New York State returns from the National sale were about $3,600, so from all sources the treasury receipts of the State Association for the year ending December 31, 1920, were about $17,000. Of this sum $4,200 was expended in salaries from May 1 to December 31, 1920; advertising publications (of which the *World* received $2,600), $3,400; all other advertising, $1,000; campaign for membership, $1,800; preliminary sale expense, $1,300; selection of cattle for the sale, $1,000; contingent, $1,200; balance in the treasury December 31, 1920, $361.03.

At the Rochester sale there were fifty-eight New York State consignors, one consignor from Canada. In the January 21, 1922, issue of the *Holstein-Friesian World*, page 172 (28), the net indebtedness of the New York State Holstein-Friesian Association at the end of the second year's operations amounted to $3,396.92, which indebtedness was met by subscription by the members and guests at the banquet. At the banquet the following resolution was adopted:

"*Resolved*, That the National Secretary be directed to keep in his office a separate book showing the amount received from the transfer of all animals from the different states and place to the credit of their duly authorized State Association from which the transfer fees come, one-fourth part of such fee."

At the Pennsylvania State meeting in Harrisburg, in January, 1922, I was informed that the membership of the New York State Association is now 721. That the membership of the National Association in the state of New York is 4,400. In other words, not to exceed 15% of the members of the National Association, residing in the state of New York, are members also of the State Association. This resolution would therefore compel the other 85% of the breeders of the state of New York, who are not members of the State Association to be involuntarily contributors to its maintenance. I am of the opinion if the breeders and members of the National Association thoroughly digest this question and understand it, they will be very much opposed to increasing the transfer fees for the purpose of maintaining state organizations. I doubt if any more competent men can be found to manage the affairs of the State Association than the present officers of the New York State Association, and they have demonstrated that a State Association with a paid secretary can not be made self-supporting by the membership without contributions from some other source, as the chief business of the paid secretary and the State Association seems to be the management and encouragement of consignment sales at which only a very small percentage of their membership, not more than 10%, are represented as consignors. I very much doubt whether the 4,400 members of the National Association in the state of New York will be willing to be assessed in order that some seventy members may reap the benefit of consignment sales conducted by the State Association. I am sure the breeders of Pennsylvania do not desire any such state of affairs. I further believe that the functions of the National Association should be limited about as follows:

First: The maintenance of an office for the purpose of registering the progeny of all purebred Holstein-Friesian cattle, and that this registration should be safeguarded in every way possible to insure that the animals registered are purebred beyond question.

Second: The maintenance of an office for the supervision and recording of A.R. records and production, which should be safeguarded in every way possible, and whose accuracy should be unquestionably proven before publication.

Third: The expenditure of a reasonable sum to be derived from the registry and transfer fees for an extension service, which should be limited to advocating generally the excellent qualities of Holstein-Friesians, but in no instance to the buying and selling of any particular animals from any individual breeder's herd. The last is a matter for the breeders themselves.

GEO. E. STEVENSON.

March 1, 1922.

A Pure Bred Market

WE are pleased to report to the readers of THE HOLSTEIN BREEDER AND DAIRYMAN that our publication is not only being welcomed by the breeders of purebred cattle, but also by the dairymen who own grades and make the production of market milk their chief occupation.

One of our solicitors recently reported forty-three subscribers; twenty-two were not subscribers to a Holstein or breed paper and their herds were composed of grades and scrub cattle, no purebreds. It is very gratifying to us to receive subscriptions from these sources because we hope through our new publication to bring the breeders of purebred cattle in closer touch with the dairymen who own grade or scrub cattle. We believe that by building up such a subscription list we will open up a big market for the surplus purebred cattle that are for sale in the districts where purebreds are bred almost exclusively, enabling the grade breeder to get in touch with the owners of purebred cattle and buy direct at prices which the breeder can well afford to accept.

With less than three per cent of the total number of dairy cattle in the United States purebreds and thousands of scrub bulls heading dairy herds, there is a great deal of room to expand and develop along those lines. Most of the surplus purebred bull calves that are now going to the butcher could be utilized to head grade or scrub herds. We recognize full well that it is necessary for breeders of purebred cattle to exchange sires in an endeavor to build up and improve the various strains or families within the breed, but we must branch out and sell our surplus in new fields where the true worth of purebred cattle and purebred sires are not fully realized and little appreciated.

Pennsylvania's Competent Sales Manager

H. R. LONGACRE

Royersford, Pa.

WRITE OR WIRE FOR TERMS AND DATES

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

MARCH 8, 1922

The Holstein Breeder and Dairyman **was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.**

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Special Offer

BY special arrangement with Mr. F. L. Houghton, secretary of the Holstein-Friesian Association of America and editor and owner of *The Holstein-Friesian Register,* the oldest Holstein publication in the field, we are able to make the very attractive special clubbing offer, giving both *The Holstein-Friesian Register* and THE HOLSTEIN BREEDER AND DAIRYMAN for one year, for a single subscription price of one dollar.

The Holstein-Friesian Register is published on the first and fifteenth of each month, and THE HOLSTEIN BREEDER AND DAIRYMAN on the eighth and twenty-second. This will be to the advantage of the subscribers, as it will place one or the other of these publications in their home each week.

We are pleased to announce to the breeders the above arrangement and believe that the few breeders who are not already subscribers to both publications will avail themselves of the splendid opportunity to obtain the oldest and newest Holstein publications for the small sum of one dollar per year and thus receive each week the most interesting, newsy, and conservative Holstein publication.

Shall the Transfer Fee Be Increased?

FROM the time that the Holstein-Friesian Association of America was organized and for a period of more than twenty-five years, the fee charged to the members for transferring cattle was 25 cents. This sum was found to be sufficient. The pioneers in the Holstein industry had been continuously extending the breed and building up the Association and they had seen their efforts rewarded by having their chosen breed of cattle recognized as the leading dairy breed in America and their Association as the leading purebred registry Association with a handsome surplus, June, 1919, of $230,000, and over $100,000 on hand in cash. With this business one would naturally expect that the transfer fee would be decreased instead of increased. The Hereford Association, the third largest purebred association in the world, does not charge a transfer fee and yet is piling up a handsome surplus.

It is a recognized fact that it is dangerous for a membership association, such as is the Holstein-Friesian Association of America, to accumulate a large surplus as such a surplus has a tendency to attract undesirable elements to continually and persistently try to fasten themselves upon the Association with a view of exploiting its resources. Possibly the Holstein-Friesian Association had arrived at this point in its history at the time of the Philadelphia Convention; for at this meeting, under the guise of getting funds for extension work, the transfer fee was increased from 25 cents to $1.00.

The records show that this money was spent largely in paying high salaries, hotel bills and traveling expenses to a group of paid organizers who spent their time traveling about in the more thickly populated Holstein districts building up political fences to maintain themselves in office.

Last June, at the annual meeting, we saw the majority of the membership registering their disapproval of the way the Association's money was being spent by reducing the transfer fee and removing from office, as far as possible, the men who were directly responsible for the extravagant expenditure of the Association's money. Now, with the Association just recovering from its financial jag of 1919 and 1920, we see another effort being made to have the transfer fee increased, and the excuse that is offered at this time is the same one that was offered at Philadelphia.

We believe in conservative extension work, but if it is necessary to raise additional funds to carry on the work, we feel that those who advocate increasing the transfer fee should substantiate their claims by setting forth a plain statement of the facts of what they propose to do and how much it would cost.

We believe that unnecessary taxation is unjust taxation. We believe that we are entitled to enjoy the privileges of the Association at the smallest possible expense consistent with adequate service. We believe that economy should be our watchword and that any man or set of men who advocate taxing the men who milk their own cows in order to raise money for needless purposes should be relegated to the ranks and men who believe in economy, sanity and security of the Association's affairs should be in their place.

The New Postmaster General

Dr. Hubert Work, the newly appointed postmaster general, hails from Pueblo, Colo. He is one of the leading Holstein breeders of that State and is well known to lovers of the Black and Whites all over the country. He is 61 years old, was born in Marion Center, Pa., studied medicine at the Universities of Pennsylvania and Michigan. He is prominent in medical societies, has a splendid war record and was formerly Republican National Committeeman of his state.

The Modern Woodmen Herd

THE Modern Woodmen of America maintain a sanatorium near Colorado Springs, Colorado, and attached to this is a herd of purebred Holsteins that is making breed history in the Centennial State.

Two years ago there were only a few purebreds at this establishment, but the Executive Council of the Modern Woodmen of America, basing their action on cold facts and clear reasoning, decided to make a change. First of all, they satisfied themselves that Holstein milk was the best obtainable for their purposes. Second, they wanted their milk to come from clean, healthy cows, and third, they decided that purebred cows would need no more care and would not consume as much feed in proportion to milk produced as would grade and scrubs. They reasoned that offspring from purebred record cows would bring prices much in excess of prices obtainable for grade calves.

Then they secured a good man, O. L. Ward, former herdsman for the Pine Valley Dairy and Farm Company. Acting under the direction of the Executive Council, C. F. Louderback, business manager of the institution, together with Mr. Ward, has built up a great Holstein breeding establishment. Foundation stock was secured from some of the great Eastern herds and high-class bulls have been used. The result was that last fall a show herd, from this establishment, made a six weeks' tour, taking in fairs at Hutchinson, Kansas; Muskogee and Oklahoma City, Oklahoma, and Dallas, Texas, and winning, besides many trophies and ribbons, no less than $1,444 in cash premiums. The main dairy barn was remodeled and now has stanchion room for 80 cows. An addition to the barn was recently completed at the cost of $10,000, and this contains the bull pens, maternity box stalls and quarters for the show herd. There is a roomy sunlit calf barn with runs attached and a large main barn with sheds for winter shelter of the herd.

The recently secured herd sire, King Pontiac Parthenea Champion, was junior champion at the 1921 National Dairy Show. Evidently the Modern Woodmen herd will be seen and heard from in future leading show rings.

The New Forty-Pound Cow

Official Notification

I AM advised through preliminary reports and by wire that the Holstein-Friesian cow, Highland Burke Joh 476801, has shown a production of 577.6 lb. milk containing 32.260 lb. fat in seven consecutive days, with the test still in progress. She freshened at the age of four years, seven months, twenty-five days. Her sire is King Joh 143460; her dam is Walker Woodland Burke 207096. She was bred and is now owned by Hawley & Murphy, Liverpool, New York. The productions by days are as follows: 76 lb. milk, 4.735 lb. fat; 80.7 lb. milk, 4.851 lb. fat; 80.6 lb. milk, 4.474 lb. fat; 86.1 lb. milk, 4.804 lb. fat; 87.6 lb. milk, 4.554 lb. fat; 84.6 lb. milk, 4.382 lb. fat; 82 lb. milk, 4.460 lb. fat. Mr. F. Howard Judd, nominated as inspector by the officers of the New York Holstein-Friesian Association, inspected and approved the conduct of the test. The two days' verification, which constituted a portion of the best seven days, was carried on wholly by Mr. Judd and the supervisor appointed by Professor Wing to assist entirely independent of the supervisor in charge. Computed on the 80% basis, the equivalent butter claimed by the owners for Highland Burke Joh amounts to 40.325 lb.

MALCOLM H. GARDNER, *Supt. A. R.*

During the past year Australia, New Zealand, France, Hawaii, Java, India, China, Japan, Mexico, Argentina, Venezuela, Ecuador, Peru, Brazil, Chili, Colombia, the West Indies, Bermuda, and Newfoundland have all been importers of Holsteins, mainly from America. The prairie provinces of Canada are now developing a strong demand for dairy cattle and the inquiry for Holsteins from the West is greater than ever before. Dairy produce has suffered least in the price decline of agricultural products. Consequently, hundreds of Western farmers are looking more to dairy cows for future earnings and less to grain farming and beef growing.

Junior Department

Club Calves Cop Cups

The Holstein Calf Club of Modesto, California, was formed in 1920 with 17 members. The calves were shown at the County Fair at Patterson, then exhibited at the State Fair at Sacramento and sold, which ended the life of the first year of the club.

In 1921 the members increased to 35. The calves were again taken to the County Fair and prizes were won in the open classes. William Stammerjohn's calf won the silver cup. The calves were then taken to the State Fair and again won prizes in the open classes. In competition open to all calf clubs in the state the animal owned by Smith Bibbens won the silver cup. A third calf club is being formed at the present time. The rules require that any boy or girl wishing to join must be over 10 or under 18 years.

In Father's Footsteps

J. G. Voss, Elkhorn, Wis., is a well-known Holstein breeder and pedigree man, and formerly was a director of the National Association. John has a couple of boys coming along who promise to be just as good or even better than dad. Both boys have exhibited cattle at the Walworth County Fair for several years. Mr. and Mrs. Voss want both boys to go through college and believe the best way is to have them self-supporting. Each boy has two or three Holsteins and the receipts from these cattle pay the boys' expenses.

John, one of the Voss boys, is fifteen years old, and owns a junior two-year-old that has just made over 21 lb. butter in a week in official test. John had the heifer on test for eleven days, did not miss a recitation at school while she was on test, feeding her and milking her four times a day, and doing all the necessary work of caring for her. He rode horseback to and from school, so was enabled to come home for the noon milking.

Forty Pound Records

LARGE records usually come in streaks. For a long time a record will stand at the head of its class, but when once it is beaten others as large or larger usually follow in rapid succession. It is quite a while since the seven-day record of 40.04 lb. butter was reported for the Wisconsin cow, Sadie Gerben Hengerveld DeKol. Quite a number have suggested that there would be no more 40-lb. records, yet lately a record of over 40 lb. of butter in seven days is reported for a Californian junior three-year-old, and within a week a 40-lb. record is claimed for a New York State four-year-old. It is interesting to note that the heifers are slightly related, each one is a granddaughter of King Segis Pontiac Alcartra, and each one traces to the grand old foundation cow, Prilly. Both heifers were bred by their present owners, a fact which adds considerable to the value of their performances.

The story of the New York heifer is told elsewhere in our columns, as a representative of this paper was present while the test was going on. We herewith present Superintendent Gardner's official notification of the California heifer's performance.

DELAVAN, WIS., February 24, 1922.

To All Interested:

I am advised through preliminary reports and by wire that the Holstein-Friesian cow, Louise Alcartra Prilly, No. 473556, has broken the record for fat production in the junior three-year class of the seven-day division, by producing in seven consecutive days 589.9 lb. milk containing 32.158 lb. fat. She freshened at the age of 3 years, 4 months, 29 days. Her sire is King Segis Alcartra Prilly, No. 192705; her dam is Louise of Riverside, No. 93945. She was bred and is now owned by the Bridgford Holstein Company, Patterson, California. In the junior three-year class of the seven-day division she far exceeds any record heretofore reported. The productions for Louise by 24-hour periods are as follows: 82.2 lb. milk, 5.011 lb. fat; 82.4 lb. milk, 4.532 lb. fat; 83.2 lb. milk, 4.469 lb. fat; 84.6 lb. milk, 4.511 lb. fat; 84.1 lb. milk, 4.533 lb. fat; 84.9 lb. milk, 4.402 lb. fat; 88.5 lb. milk, 4.700 lb. fat. The verification test, with two supervisors constantly in charge, was for three days and constituted the latter part of the selected period. Also, the conduct of the test was inspected and approved by Mr. Frank Morris, president of the California Holstein-Friesian Association and a director of the National Association. Computed on the 80% basis, the equivalent butter claimed for Louise Alcartra Prilly amounts to 40.197 lb.

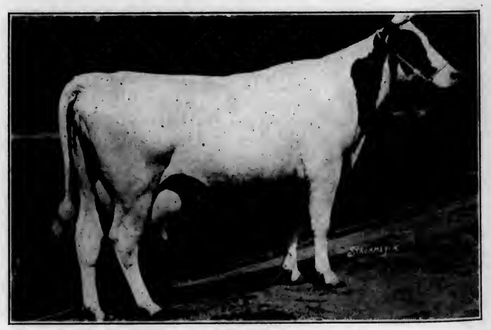
MALCOLM H. GARDNER, *Supt. A. R.*

Mallory's Views

Extracts from President F. R. Mallory's address at the thirty-ninth annual meeting of the Holstein-Friesian Association of Canada.

I CONSIDER it a greater honor to be president of the Holstein-Friesian Association of Canada than to be leader of a political faction or head of a cold-blooded financial institution. For are not we, through the medium of our Holstein cows, the greatest, if not the largest, manufacturing institution in Canada?

The dairy industry of Canada has stood the test the best of all her agricultural industries. The Holstein-Friesian cow has maintained and enhanced her position as the biggest factor in that dairy industry and she has brought more big production and honors to Canada during this year of depression than in any previous year.



International trade with our neighbors to the south of us has been more or less hampered by the passing and making active their Emergency and Fordney tariff regulations.

There seems to be some misunderstanding of this tariff measure in the minds of some breeders on both sides of the line, but let me make it plain that our neighbors to the south can still buy our Canadian cattle and not pay any duty. We, as Canadian citizens, cannot take them over there and sell them in their country. We can go over there and buy all the cattle we have money to pay for and still have no duty to pay on bringing them to Canada.

There is a feeling prevalent that when a good breeding animal reacts, she should not be slaughtered but should be cared for in some central place under an isolation system. Many of our breeders have neither sufficient help nor proper quarters for a Bang herd. Consequently, when unusually good animals are declared reactors they are lost to the breed.

Polly Douglass Fayne

ONE of the greatest cows in Pennsylvania is Polly Douglass Fayne, who will be one of the centers of interest when the Bellwood herd disposal takes place. Polly is a daughter of Fobes Fayne DeKol and Helen Douglass. When she was a junior three-year-old she made the fine records of 26.72 lb. butter, 588.2 lb. milk in seven days; 108.51 lb. butter, 2,266.6 lb. milk in thirty days. She freshened again at four years and five months old, the property of John A. Bell, Jr. She milked 101.9 lb. milk in a day, 682.1 lb. in seven days, and 2,709.9 lb. in thirty days. Her seven-day butter record was 32.47 lb., and her thirty-day record 128.48 lb. Her seven-day milk and her thirty-day butter records were both Pennsylvania state records at time of making. She was put in long-time test, and when eleven months along was sold in the second Brentwood sale, where she was purchased by her present owner, C. W. Bray. She completed her year, making the splendid records of 1,219.21 lb. butter, 24,468.1 lb. milk, both of which were state records in the junior four-year-old class. Her thirty-day butter record and her year records still stand at the head of her class in the state, and her seven-day milk record is only surpassed by one other animal.

POLLY DOUGLASS FAYNE

32.48 lb. butter in seven days, and 1,219.21 lb. butter and 24,468.1 lb. milk in a year. Owned by C. W. Bray, Pridgeport, Pa.

CLUB ACTIVITIES

VIRGINIA BREEDERS' MEETING

The annual meeting and banquet of the Virginia Holstein-Friesian Club was held in the Y. M. C. A. building, Charlottesville, February 16th.

President Frank S. Walker called the meeting to order and introduced Mr. W. F. Schilling of Northfield, Minnesota. Mr. Schilling, who is one of the leading breeders of the Gopher State and is prominent in the Twin Cities Milk Producers Association, spoke earnestly and forcibly on the Holstein cow and the reasons for her popularity.

Mr. A. J. Glover, editor of *Hoard's Dairyman* gave an able address on developing the Holstein industry. Carl Schmid of Beaver Dam Stock Farms, Montgomery, New York, spoke on the future development of the Virginia Holstein-Friesian Club.

H. E. Van Norman, president of the World's Dairy Congress Association, told of the plans for the World's Dairy Congress which is to be held at Washington, D. C. in the fall of 1923. Part of his address will be found elsewhere in our columns. It is proposed to raise a fund of $10,000 of which $70,000 has already been pledged. Mr. Van Norman said this amount could easily have been obtained from a few people interested in the development of the dairy industry but they wish to have all branches of the industry represented and as many members as possible. He suggested that the Virginia Holstein-Friesian Club contribute and thereby become a member. He also urged each breeder present to ask the Maine experiment station for bulletin No. 300. The matter of contributing to the World's Dairy Congress fund was left to the Board of Directors.

The club passed a resolution favoring the increase of the transfer fee from the present charge of fifty cents to one dollar and fifty cents, the extra money raised to be spent in extension work.

The secretary presented his annual report covering the work done during the year, and one of the strong features was the number of excellent sires that had been brought into the state.

The election of officers resulted in the following being chosen: Frank S. Walker, Woodbury Forest, president; J. Abney Clarkson, Brookwood, first vice-president; James McI. Ruffin, Petersburg, second vice-president; Joseph A. Turner, Hollins; C. E. Gardner, Rapidan; W. C. Hoover, Timberville; J. O. Sullivan, Brandy Station; G. L. Oliver, Richmond; J. R. Wingfield, Jr., Charlottesville, Board of Directors.

Mr. W. L. Kirby refused to accept the office of secretary for another year alleging that he did not have time to give the work proper attention. The matter of choosing a secretary was left to the Board of Directors who on the following day, elected G. L. Oliver, Richmond, to that office.

It was moved that the Club request the Virginia Experiment Station to publish each Virginia Holstein-Friesian record in the *Dairy News Letter* upon the completion of the record.

A motion was made and unanimously carried that the dues of the club be increased so that the minimum dues would be $2.00 a year and every member owning more than eight registered females pay at the rate of 25 cents per cow for all over that number.

President Frank S. Walker, who was elected for the third successive time spoke on the question of a paid or field secretary. He had received communications from Maryland, Delaware, and New Jersey suggesting that the interests of the four states be pooled. Mr. Walker doubted the advisability of a paid secretary.

The breeders present were polled as to the advisability of having a spring sale, sufficient cattle were readily promised and the event is assured. Past sales of the Virginia Holstein-Friesian Club has been of very high character and it is intended that the 1922 event should be no exception. The cattle will be selected by a real Holstein judge.

There was a good attendance at the meeting and the members present were very enthusiastic. Several well-known faces, however were absent. W. C. Hoover, of Timberville was kept away owing to work in connection with the Richmond Legislature. Joe Turner was missed and it was the opinion that he must have had something unusually important on hand to miss an opportunity to talk purebred Holsteins and, if you know him you will say so.

The banquet was thoroughly enjoyed by all. In addition to roast chicken and Virginia cured ham, etc., the breeders consumed a large quantity of milk and ice cream—dairy products.

SHEBOYGAN BREEDERS' MEETING AND BANQUET

Nearly two hundred breeders and their friends assembled at Plymouth, Wisconsin, February 18th for the Sheboygan County Holstein Breeders' Association annual meeting and banquet.

After the banquet a number of noted speakers addressed the meeting. Dr. Arpke, president of the Sheboygan County Holstein Breeders' Association acted as "Toast Master." W. L. Baird, secretary of the Waukesha Holstein Breeders' Association gave a short address, but declined to say very much, excusing himself by saying that he wished to save his principal talk for the business meeting. Major Mead of Plymouth, made some interesting remarks on the progress made in farming. W. F. Swoboda, general manager of the Wisconsin Cheese Federation gave a spirited talk urging on farmers the necessity of organizing in their various lines of work. Reid Murray of Oshkosh kept the crowd in good humor, and had considerable fun at the expense of the prominent men present at the banquet. In addition to the addresses the meeting was given a treat in the form of a musical program furnished by local talent.

After the speaking the breeders adjourned to another room and held a business meeting. W. L. Baird gave a very interesting and instructive talk in regard to the manner of conducting a breeders' organization. Mr. Baird is very decisive in his opinion that the breeder who is benefited through the organization is the man who should pay for this service. He spoke in favor of charging a commission for livestock sold through the county organization. He stated that assessments made in general on the members produced dissatisfaction many times, because of the fact that some breeders paying the assessments derive no personal benefits. On the other hand, on the commission basis the man who does not sell anything through the help of the organization is not called upon to support it to such an extent as the man who sells his stock. Reid Murray showed that he could do something besides interesting the crowd, by handing some facts that made the breeders of this county realize that they have not begun to make use of our leadership as one of the greatest Holstein centers in the country. He pointed out ways in which we might find a market for our excess purebred bulls and good grade heifer calves. We give Murray credit for giving the breeders of Sheboygan County something worth while to think about.

At the business meeting it was decided that this county will hold a quality sale May 12, 1922. Judging from the number of members that have paid up their dues and assessments, and after seeing the biggest turnout at the banquet that we have ever had with the many new members who are joining the association, we feel safe in predicting that the Sheboygan County Holstein Breeders' Association is going to have the biggest and best year in 1922 that it has ever had since the organization has been formed.

GLENN W. LYCAN, *Secretary.*
Sheboygan County Holstein Breeders' Association.

Earl Vanderkan of Bennington, Michigan, was elected president of the Shiawassee County Holstein Breeders' Association at its annual meeting February 16th. The principal speaker was H. W. Norton, field secretary of the National State Association. Fred Martin of Caledonia, was elected vice-president and Carl Baldwin of Bennington, Wesley Spitler of New Haven, Bert E. Smith of Perry and Charles Payne of Vernon, directors.

QUARTERLY MEETING OF THE EASTERN NEW YORK HOLSTEIN BREEDERS' ASSOCIATION

The quarterly meeting of the Eastern New York Holstein Breeders' Association was held at the Nelson House, Poughkeepsie, Saturday, February 18. Considering the conditions of the roads on account of the storm the day previous there was an exceptional good attendance.

The first speaker was L. O. Stevenson, Supt. Odgen Mills Farm, Staatsburg. Mr. Stevenson spoke on public and private sales methods of the Jersey breeders. He brought out very forcibly the importance of selling real service with the animals. If a animal is to be shipped by express, it should be properly crated in a crate that will protect the animal, should be well blanketed, and a bag of feed sent along with instructions when to feed. All of the animals should be put in good condition for shipment, and all the little details looked after, so that when the customer receives the animal he will write back in appreciation, and not say the animal arrived, but———. Mr. Stevenson cited instances where they have made shipments by this method, and looking after the customer has brought repeat orders.

Dr. Otto Faust, one of the leading veterinaries of Poughkeepsie, spoke on several of the important diseases; tuberculosis, contagious abortion and hemorrhagic septiciemia, commonly called shipping fever. This last subject brought out a number of inquiries and a great deal of interest, as there has been two cases in this vicinity recently, brought in with animals shipped from distances. Doctor Faust told of the importance of using 50 C. C. serum on animals showing temperatures, refusing feed, or any other indications of sickness, and of vaccinating all of the herd. This in case there has been any signs of disease having been brought in from outside.

Secretary Zimmer of the New York Holstein Association spoke on the work of the State Association in the past, and the proposed plans for the coming year. He stressed the importance of all breeders joining the association, and showed how much help the State Association could be to the Holstein Breeders, if each breeder will do his part by paying his fifty cents per cow promptly, thus providing sufficient funds for all work which can be profitably done.

President Bigler of the State Association told of the splendid coöperation of the breeders in a recent sale. He spoke feelingly of the helpful and willing spirit shown when at the meeting preceding the sale the attending breeders raised $4,100 in less than thirty minutes to pay up debts which had been carried over from the previous year, thus placing the association on a good standing ready to do increased and better work.

The local association which has members from Duchess, Columbia, Orange, Ulster and Putnum counties is one of the live associations of the state. The treasurer reported 72 paid up members already for this year, and with an excellent prospect for 100. The next quarterly meeting of the association will be the annual basket picnic at the farm of one of the members.

GEORGE C. HUBBARD,
Secretary and Treasurer.

FIFTEENTH ANNUAL CONVENTION OF VIRGINA DAIRYMEN A GREAT SUCCESS

BY FRANK A. BUCHANAN

The fifteenth annual convention of the Virginia State Dairymen's Association, held at Charlottesville, February 16th and 17th, was declared by all those attending to be the best convention of Virginia dairymen ever held.

In spite of a snow storm, which made the roads almost impassable, the sessions were well attended on both days.

The convention was opened by Mr. F. S. Walker, president of the Association. Mr. Walker told his audience of some of the important problems before the industry in this State, and suggested that Virginia dairymen more thoroughly organize in order that they can meet these conditions.

Ex-Governor Westmoreland Davis reviewed pending legislation relating to the industry, and emphasized the importance of every Virginia dairyman becoming thoroughly familiar with this legislation. Following Ex-Governor Davis' address, Professor F. C. Minkler, of Chicago, Ill., gave a most instructive talk on "Newer Ideas in Animal Nutrition."

The principal speaker of the morning was Mr. A. J. Glover, Editor of *Hoards' Dairyman,* and one of the foremost authorities on dairying in the United States. In Mr. Glover's inspiring address he discussed the possibilities of the dairy industry for Virginia and its effect upon home life. In a vivid and interesting manner he related important history of the dairy industry in his native state, Wisconsin.

The afternoon session was begun by an address from Dr. Julian A. Burrus, president of the Virginia Polytechnic Institute. Dr. Burrus brought to the minds of Virginia dairymen the valuable service which the state agricultural college can render through its college department, experimental station and extension service.

Professor T. E. Van Norman, of the University of California, who is President of the National Dairy Show and World's Dairy Congress, brought out the importance of sane leadership in developing community spirit in the dairying sections of this country. He closed by telling of the important part this country has in further developing the dairy industry throughout the world and the opportunity of making the World's Dairy Congress of world-wide influence and the dairy industry of this country of greater importance.

The first day's session closed with an address from Mr. R. M. Cooper, of Wisacky, S. C., a leading Guernsey breeder of the South, member of the State Legislature and President of the Southeastern Guernsey Breeders' Association. Mr. Cooper's address was inspiring, and was full of enthusiasm for his favorite breed.

The second day's session was opened by the regular business meeting of the Association. The President received the reports from the Resolutions Committee and the Committee on Nominations. The Secretary presented a suggested plan of service for the Association, based on the formation of local dairy clubs and of organization membership in the State Association. This plan was heartily endorsed and will be put in operation during the coming year.

The first outside speaker of the second morning was Dr. W. L. Williams, Emeritus Professor, Cornell University, Ithaca, N. Y. His subject was: "Breeding Problems in the Dairy Herd with Particular Reference to Contagious Abortion." A series of illustrated charts was used by Dr. Williams to bring his message to the Convention, and much valuable information was obtained by those listening which will assist them in meeting herd problems.

Director John R. Hutcheson, of the V. P. I. Extension Service made a short but forceful talk on the "Necessity of Better Organization for Marketing Virginia's Dairy Products." In closing his talk, he introduced the speaker of the day, Mr. W. F. Schilling, president of the Twin Cities Milk Producers Assocation and prominent Holstein breeder of Minnesota.

Mr. Schilling, in an impressive address, told the history of the Twin Cities Milk Producers Association, and explained the operation of a milk marketing association. The plan which Mr. Schilling gave to Virginia dairymen will be valuable help to them in the forming of milk marketing associations in this State.

At the afternoon session Dr. J. G. Ferneyhough, State Veterinarian, told of the importance of the tuberculosis eradication work in this State and showed from statistics that Virginia was one of the leading States in the country in this work.

This address was followed by an excellent talk by Mr. T. E. Woodward, Dairy Husbandman in charge of the Government Dairy at Beltsville, Md. His subject was: "Putting Economy into the Dairy Ration." Mr. Woodward in an instructive manner, told the audience of the importance of raising home-grown feeds for the dairy ration, in order that milk production may be profitable.

The Officers and Directors of the Virginia State Dairymen's Association for 1922 and 1923 are:

President—Frank S. Walker, Woodberry Forest.
Vice-President—J. V. Nichols, Purcellville.
Secretary and Treasurer—F. A. Buchanan, Blacksburg.
Directors—Lee McChesney, Bristol; C. L. Stahl, Lynchburg; F. C. Baldwin, Fredericksburg; W. G. Houston, Fairfield; W. M. Cease, Richmond; F. S. Walker, Woodberry Forest; C. Nelson Beck, Charlottesville; C. W. Holdaway, Blacksburg; J. V. Nichols, Purcellville; W. C. Hoover, Timberville; J. C. Courter, Jetersville; E. B. Foote, Milton, N. C. (Pittsylvania county).

Executive Committee—F. S. Walker, Ex-Officio; J. V. Nichols, Ex-Officio; W. M. Cease, Richmond; C. L. Stahl, Lynchburg; F. C. Baldwin, Fredericksburg.

Legislative Committee—W. C. Hoover, Timberville; E. B. Foote, Milton, N. C.; J. V. Nichols, Purcellville.

Convention Committee—C. N. Beck, Charlottesville; C. W. Holdaway, Blacksburg; W. G. Houston, Fairfield.

Organization Committee—J. C. Courter, Jetersville; Lee McChesney, Bristol; C. L. Stahl, Lynchburg.

PROFITABLE DAIRIES

The herd of Magneson Bros. of Murdock, Minn., consists of 28 high grade Holstein cows, 15 of which freshened in November and 13 in December. There were 11 calves drinking whole milk and some milk and cream was used for the household. But in spite of this the cream for an even week brought at the creamery $70.69 or better than $300 per month.

RATIONS PER DAY

They were fed 12 pounds of corn and oats per day per cow, silage and alfalfa hay. The feed was worth at market prices $36.64 for the week, so there was almost $2 returns for $1 not allowing for what the calves were getting and what was used in the house. The feed bill was very cheap as the alfalfa took the place of bran and oil meal. As near as can be estimated, the cows produced about $2.40 for each $1 of feed.

Another small herd south of Benson belonging to W. O. Wilkin is producing $9.45 per cow per month at a cost of $4.50 per month, which is a little better than $2 for $1 for feed. These cows have been fresh since the middle of November. It will be noticed that these records run very much alike—round $2 for $1.—*W. E. Hargrave, County Agent.*

The Beltrami Holstein Association was organized at Bemidji, Minn., February 15th. A number of breeders spoke including Nels Willett, probably the oldest breeder of Holsteins in the country. Owing to the severe weather only a small number of those intending to join were able to be present but a constitution was adopted and the following officers were elected: President, Nels Willet of Frohn township; vice-president, J. F. Johnson of Hines; secretary, J. J. McCurdy of Bemidji; and treasurer, E. E. Schulke of Tenstrike.

The Washtenaw County Holstein Friesian cattle Bredeer's Club Association met at Ypsilanti, Mich., February 14th. President John Bazley presided. He refused to serve again and Glen Bird was elected president, Harvey Day vice-president and Luman Seamans secretary. The treasurer is T. J. Snyder and D. Thompson and William Geiger were chosen directors.

The proposed work of the cattle club, its advantages to the students who are to enter into the work and a contest to be arranged, was explained by O. W. Laidlaw of the agricultural department of the high school and B. O. Haggerman, county club agent.

Members of the association responded liberally with offers of registered stock and prizes will be awarded principally on the basis of best showing of butter fat per dollar cost, the aim being to educate farmers to the advantage of feeding a balanced ration and knowing just how much each cow in the herd is producing for each dollar invested for her feed. A prize cup for the contestant winner will be furnished by the Association.

A pleasant feature of the evening was a banquet served in an upper hall of the school by students of the domestic science department. Fifty members of the association were present.

The Holstein Breeders of Washington County, Oregon, recently held a meeting at which W. N. Hathorn was elected president, A. D. Hill vice-president and O. T. McWhorter secretary-treasurer.

During the past year Washington County Holstein Club displaced five grade bulls with pure bred bulls, held a Holstein picnic, exhibited a county herd at the state fair and the Pacific International Livestock show, and provided a silver cup to go to the winning boys' and girls' club members in the Holstein classes at the Banks' Hog and Dairy show. This cup was won by Harry Hub of Banks.

SONG AFTER EATS

The cannibals had just dined sumptuously. And as the servants removed the celluloid collar, the suspenders, the gold tooth-pick, the striped hose, the made-up four-in-hand tie, the white-edged vest, the light-yellow button shoes, the red bandana handkerchief, and the knife with which, when he was caught, their dinner had been eating pie, the company, led by the chief, leaned back from the table and sang:

"We have come to the end of a perfect jay."

FLATTERING

"I don't like these photos at all," he said. "I look like an ape." The photographer favored him with a glance of lofty disdain. "You should have thought of that before you had them taken," was his reply as he turned back to work.

OUR LANGUAGE

"Lize, I hears 'at yoh daughtah's church weddin' was some sho' nuff skrumpshus function."

"I'll say 'twas. 'At 'ere gal oh mine flang a wicked nuptial, ef I does say it myself."

TASTY

Tastes change. Adam fell for an apple, but the modern man is more apt to fall for a peach.

THOMAS B. WALES DEAD

Thomas B. Wales, former secretary of the Holstein-Friesian Association of America, died February 12, at Pasadena, California. Mr. Wales was one of the pioneer breeders of Holstein-Friesians and made a number of importations. One of the animals he owned and developed was the famous imported heifer, Mercedes. *The Breeders' Gazette* offered a challenge cup to the cow of any breed making the greatest amount of butter in thirty days, the competition lasting throughout a year. It was generally anticipated that a Jersey cow would win this and we have been told that the picture of a Jersey was engraved on the cup. The favored competitor was Mary Anne of St. Lambert, a famous Jersey owned by Valancey Full, the feeding expert, but Mercedes, then a heifer, beat out the Jersey cow by a few ounces. The victory of an animal of the "skim milk" breed over what was generally termed the greatest butter producer caused much comment in agricultural papers all over the country and the result was a distinct increase of interest in the black and white breed.

At the Chicago World's Fair Mr. Wales was one of the cattle judges. His original herd was at South Framingham, Mass., but in 1881 he moved to Iowa City, Iowa and started Brookbank herd. For a number of years he has not been active in the cattle business and for a time has lived in California. Mr. Wales was an officer in the Civil War. He recruited Company E, 45th Massachusetts Volunteer Infantry Regiment and served as its Captain. He was born in Boston, Mass., February 14, 1839, was married in 1861 and is survived by two sons and two daughters, T. B. Wales, Boston, Mass., Miss Marie Wales, Brookline, Mass., R. W. Wales, Pasdena and Mrs. A. L. Graham, Fresno, Cal.

Mr. Wales came from a well-known Massachusetts family. Ever since Boston has been a city there has been a Thomas B. Wales in the directory. His father was a sea-captain but also owned cattle which were sometimes pastured on Boston Common.

Cow Testing Association Reports

LIVONIA ASSOCIATION

For the month of January, the high cow in the association was a grade Holstein in the milk division and a purebred Holstein in the butterfat division.

Roy Reed of Hemlock had the high milk cow, his five-year-old grade giving 2,238.2 lb. milk containing 80.6 lb. fat.

The high fat cow is owned by Edward E. Doty & Sons and milked in their Doty & Seaman herd. This heifer, Sunnybrook Dolly Ladoga, gave 2,154.5 lb. milk containing 96.9 lb. fat.

Of the 235 cows milking this month, 120 made over 40 lb. fat. This is quite a contrast to our first report, January 1920, when there were 307 cows milking and only 33 cows produced over 40 lb. fat.

Livonia, N. Y. LOUIS P. ZUMSTEIN.

GOOD IOWA GRADE

A grade cow belonging to the Iowa State Hospital Holstein herd and known as No. 98 led all cows in the Wapsie Valley Cow Testing Association during December. She produced 1,643 lb. milk, 55.86 lb. butterfat in the month. A purebred Holstein, owned by F. H. Pieplow, Aurora, was right on her heels all the month and finished with 54.64 lb. fat to her credit.

The Waterloo Courier in commenting upon the records pays a tribute to the association tester Mr. Walter Rasmussen for his help in advising the members concerning feeds and balanced rations which has done much to increase the milk flow.

GOOD FOR MYERS

A grade Holstein owned by H. E. Myers of Muncy, Pennsylvania, led the East Lycoming Cow Testing Association for the fifth month of its test year. She gave 1,510 pounds milk and made 71 lb. butterfat. Mr. Meyers had two cows that stood next to her on the list as well as number six.

Each one of these gave over 49 lb. fat a month and over 1,200 lb. milk.

The five-year-old purebred Holstein cow, Daisy, owned by Cook & McDonnel was easily the leader of the Eau Claire County No. 1 Cow Testing Association for the month ending January 31, 1922. She made exactly 2,000 lb. milk which tested 3.3% or 66 lb. fat. H. Bosher & Son had a number of grade Holsteins that look well on the reports.

STATE COMPARISONS

A herd of sixteen Holstein cows owned by W. and M. Holdaway of Vineyard, Utah ranked first for milk and fat among forty-four County Cow Testing Associations in Nevada, Colorado, Idaho, New Mexico, Washington, California, Arizona, Oregon and Utah in tests made during January 1922. They averaged 1,638.3 lb. milk, 58.1 lb. fat.

The next highest was a herd of seventeen cows in Arkansas Valley, Colorado, which produced 1,454 lb. milk, 48.2 lb. butterfat, Twenty-two Holsteins of Kings County, California, stood second for fat production with an average of 49 lb. while another herd of twenty Holsteins located in San Diego, California averaged 1,361.6 lb. milk, 47.17 lb. fat.

CHARLIE NEFF

Very few gatherings of Holstein breeders in the Eastern states are complete without the presence of Charlie Neff, the Ubiko feed salesman and all-round booster for Holsteins and dairy interests. The territory assigned to this gentleman is Pennsylvania and states immediately south, but that does not prevent him attending sales and meetings in other states, and he spends his spare time and much of his spare cash when

CHARLES NEFF.
Harrisburg, Pa., Holstein Booster and all around good fellow.

the lovers of the black-and-whites get together.

Mr. Neff, with his wife and daughter, makes his home in Harrisburg. Quiet and unassuming in appearance, he is still a hustler, and he certainly gets the orders. While he has never been an owner of a Holstein cow, either purebred or grade, he is just as full of enthusiasm and puts forth just as much effort to boost Holsteins as if he owned the largest herd and the best equipped dairy in the country.

BARTON AGAIN LEADS

For the third month the fourteen-cow registered Holstein herd of Sam Barton & Sons, Gering, Neb., led in the Scotts Bluff Cow Testing Association with an average of 48.5 lb. fat, 1,443 lb. milk. Second came the herd of J. L. Moore, also of Gering, with an average of 1,072 lb. milk, 47 lb. fat. The purebred herd of Prof. L. R. Wright was third with 1,285 lb. milk, 41.7 lb. fat.

The leading individual producer was "Jennie," of the Barton herd, a three-year-old who made 2,361 lb. milk, 87.4 lb. fat. Another member of the herd made 75.8 lb. fat, and a third cow in the same herd made 69 lb. No wonder that Sam Barton believes that purebred cows are the best.

During the thirty-day period ending January 13, there were 273 cows on test, of which 45 produced over 40 lb. fat, and 17 of them more than 50 lb. The average production was materially increased over last month, there being a gain of 140 lb. milk and 7.3 lb. fat per cow. Four unprofitable cows have been sold and two registered bulls bought by the members of the association.

GOOD GIRL, ADA

A majority of the members belonging to the Central Wayne, Pennsylvania, Cow Testing Association own registered stock, and there is quite a little rivalry among the various herds. Of the leading ten records made in January, eight were made by registered cows. The leader was the registered Holstein, Ada Signet, owned by C. O. Blake, who had two others in the honor list. The leader made 1,690 lb. milk, 77.7 lb. butter fat. E. E. Kinsman owned a thirteen-year-old registered Holstein, Lucretia, that made 1,677 lb. milk, 58.9 lb. butter fat in a month. One hundred seventy cows were in milk; 21 made over 40 lb. fat, 12 over 50 lb., while 22 produced over 1,200 lb. milk.

HOME MIXED RATION

Fifty-six cows exceeded forty pounds of butterfat during December in the McLean County Cow Testing Association. Second and third and fifth were Holsteins owned by Guy Hilton of Yuton who had five on the honor roll of which three made over 60 lb. fat.

One made 1,739 lb. milk, 68.1 lb. fat another 1,761 lb. milk, 66.6 lb. fat, and the third 1,438 lb. milk, 63.4 lb. fat.

Their feed consisted of 45 lb. corn silage, six lb. alfalfa hay, and seventeen pounds of a grain mixture, consisting of 300 lb. corn and cob meal, 400 lbs. ground oats, 100 lbs. bran, 100 lbs. cottonseed meal and 100 lbs. oil meal.

SOME LITTLE PET

The December report of the Colorado Cow Testing Associations, shows that Little Pet, a grade Holstein, owned by C. W. Henry, Greely, made the high milk record for the month and Princess Johanna Hope, owned by E. J. Lindquist of Denver, was a close second. The high record herd is the Lindquist Holsteins,

twelve in number. Nevada leads the nine western states for fat production and Colorado is second. Out of the 17,000 cows tested, Lady Segis, owned by Whowell and Polly, Johnstown, Colorado stands in third place; Josie owned by Charles Ewing, Fort Lupton, Colorado, fourth place; Abbie Johanna De Kol Pontiac, owned by Model Dairy, Holly, Colorado, sixth place, and Ismay, owned by M. L. Harper of Boulder, Colorado, fifteenth place.

IN WISCONSIN

Mabel, a grade Holstein, owned by Robert Weier of Dodgeville, Wisconsin, produced 1,757 lb. milk, 75.55 lb. fat and thus led the Dodgeville Cow Testing Association for the month of January. She is only a four-year-old and as a two-year-old in the same association and with another owner made 55 lb. fat in a month. The Weier herd was high with an average of 951 lb. milk, 35.38 lb. fat.

There were 40 cows above 40 lb. fat in this association during the month of January.

ALL HOLSTEINS

There were 37 cows that made over 40 lb. butterfat in the Dodge County Testing Association during the month ending January 31st. Nineteen cows made over 50 lb. butter, 6 made over 65 lb., and 3 made over 70 lb. each. The high cow is a registered Holstein, owned by Sam Andrist of Mantonville, Minn. She made 87.91 lb. butterfat.

Seventy-five per cent. of the cows making more than 40 lb. of fat were Holsteins. The high herd average was 43.28 lb. fat, made by thirteen registered Holsteins, owned by W. P. Mann, of Claremont, Minn. Other herds averaging over 35 lb. fat were:

Hall & Round 15 cows average 41.03 lb.

Wright Parkin 12 cows average 38.86 lb.

Sam Andrist 7 cows average 39.86 lb.

All were Holsteins.

ERNEST E. MILLER, *Tester.*
Dodge Center, Minn.

ONE-FIFTH OVER FORTY

During January there were 391 cows tested in the Delevan-Geneva., Wis., Cow Testing Association, of which 81 cows made over 40 lb. fat. The leader was the purebred Holstein, Josephine Walker Prilly Korndyke, owned by Glenn Nichols. She is a four-year-old, fresh December 12, and made 2,279 lb. milk, 70.7 lb. fat.

The high herd is owned by Mike Duggan. His 16 head of grades and purebred Holsteins averaged 1,222 lb. milk, 41.4 lb. fat. Second was the 11 grade Holsteins owned by B. Conry, which averaged 1,047.7 lb. milk, 38.5 lb. fat.

OWNED BY A LADY

The high cow in the Chetek, Minnesota, Cow Testing Association, for January is the registered Holstein, Aaltje Pontiac Tritomia, owned by Mrs. J. A. Hanson & Sons. She made 1,632 lb. milk, 68.9 lb. fat in the month, and in two months made 3,291 lb. milk and 154.2 lb. fat.

Forty-one cows produced forty pounds or more fat, eleven above 50 lb. Mrs. Hanson & Sons had three cows in the honor roll.

The high herd is Frank Goolsby's herd of grade Holsteins, with 1,283 lb. milk and 44.3 ib. fat. Gustave Olsen's herd of purebred and grades is second with 1,058 lb. milk, 41.7 lb. fat.

Henry Borgen's grade Holsteins are third with 1,121 lb. milk and 40.9 lb. fat, while the herd of purebreds and grades, owned by W. F. Barber & Sons were fourth with 1,026 lb. milk and 38.5 lb. fat.

HOW TESTING HELPS

Frank Taylor, of Whitewater, has both high cow and the second high in the Fort Atkinson, Wisconsin, Cow Testing Association for January. Long Distance produced 2,471 lb. milk, 93.4 lb. fat, and Jack produced 1,798 lb. milk, 68.3 lb. fat.

Henry Lalk's Spot, who was third in November, has the same place this month with a credit of 2,024 lb. milk, 66.7 lb. butter fat. All three are grade Holsteins.

During the month 499 cows produced 445,577 lb. milk containing 16,378 lb. butter fat valued at $7,550.27. Their feed cost alone amounted to $4,393.95, leaving each member an average of $95.66 for his labor and other expenses.

One hundred and thirty-two cows in 28 herds have over 40 lb. of fat to their credit in the month, 43 of them having over 50 lb.

One herd of 15 cows during the past nine months has averaged 225 lb. of butter fat. Dividing them into three groups, the five high cows averaged 276 lb., the next five 229 lb., and the low five 170 lb., or a difference in production of 106 lb. of fat and a feed cost only $5.50 higher for the high five than the low five. It's easy to see which are the cows the owner will build his future herd from and which are the ones he will dispose of. This is only one of the ways that the cow testing associations are proving their value to the farmer.

IN CALIFORNIA

C. J. Pelanda, of Salida, Cal., has a two-year-old grade Holstein that made 71.8 lb. butter fat during January. She was by a purebred sire, and the state dairy extension division are holding her up as an example of what can be accomplished by the use of purebred sires in grade dairies.

During the month 907 cows were tested in the Modesto Association; the average milk production was 676 lb., and the average butter fat production 26.4 lb.

W. L. Looney had a Holstein taking third position and a Simon Newman Co. cow took fourth.

No less than 100 cows in the association made over 40 lb. fat in the month. The Six Brothers Dairy of Keyes, had the high herd average of 39.1 lb. fat on their seventeen Holsteins. The 360 cow-dairy of the Simon Newman Co. averaged 22.9 lb. fat, 673 lb. milk, while the 160 Holstein cow dairy of F. L. Hogue, Modesto, averaged 27.6 lb. fat and 718 lb. milk.

* * *

Honors for the January test in the Kings County (Cal.) Cow Testing Association were won by a purebred Holstein in the herd of Arthur & Maxfield. She produced during the month 113 lb. of butter fat. This herd consisted of twenty-five milkers and made an average for January of 51 lb. All boarders have been weeded out and the enterprising owners are undertaking to build a herd the equal of any in the state.

IN WISCONSIN

Both high cow and high herd in the Colby, Wis., Cow Testing Association were owned by Walter Wurthman. The leader made 1,931 lb. milk and 75.3 lb. butter fat in January, and in December made 2,131 lb. milk and 78 lb. fat. She is milked twice a day and receives fifteen pounds of grain daily with thirty pounds of silage and all the hay she can eat.

This nine-cow herd averaged 1,021 lb. milk, 37.6 lb. fat. All were grade Holsteins.

* * *

The high herd average in the Oconto County, Wis., Cow Testing Association was made by the herd of Walter M. Holtz, which consists of twenty grades and registered Holsteins. They averaged 1,147 lb. milk and 37 lb. fat.

* * *

West Salem, Wisconsin, Cow Testing Association was led for the month of January by the Holstein herd of John Labus, with an average of 36.65 lb. butter fat, 1,100 lb. milk. There were forty-six cows that produced over forty pounds butter fat in the month, which was the banner period of the first six months of the association. There were sixty-seven cows sold to the butcher since the association started.

IN OLD VIRGINIA

During the month of January a Holstein cow owned by William Axsell, Richmond, Va., produced 101 lb. butter fat, the highest amount ever produced by any cow in any testing association in Virginia. She is five years old and freshened January 1. The high herd average in the Henrico Cow Testing Association was taken by the 24-cow Holstein dairy of W. H. Sanders, of Dumbarton. The official tester, J. F. Garner, reported 631 cows tested in January, of which 85 made over 40 lb. fat and 27 over 50 lb.

A pure-bred Holstein leads the Bernalillo County, New Mexico, Cow Testing Association for the month of January. She is owned by J. L. Philips and produced 1,891 lb. milk, 67.1 lb. fat.

CONNECTICUT CLIPS

Polly Pietertje Colantha, owned by the Storrs Agricultural College, has produced 97 lb. milk in a day and over 2,600 lb. in thirty days at just five years old. This is the highest record ever made in the college herd. She is a granddaughter of Colantha Johanna Lad, and her dam is an untested daughter of the 24-lb. cow, Polly Pietertje Wayne.

* * *

When Robert Buell went to Maaikenshoff he took with him a number of good animals, including Colantha DeKol Creamelle 4th. She has just made 35.68 lb. butter in seven days, milking 100 lb. a day for the first 21 days. She gave 96 lb. milk in a day, 650 lb. in seven days as a senior three-year-old. As a junior two-year-old she made 500.4 lb. milk, 22.14 lb. butter in seven days, and 88.79 lb. butter in thirty days. In her first lactation period she produced 935 lb. butter and 21,921 lb. milk. She is a daughter of Sir Korndyke Pontiac Artis, Jr., and her dam is a daughter of Colantha Johanna Lad, with 31.32 lb. butter, 665.4 lb. milk in seven days, to her credit. She has a full sister, Colantha DeKol Creamelle 2d, that as a senior three-year-old made 501.8 lb. milk, 31.03 lb. butter in a week.

* * *

One of the most enthusiastic Connecticut Holstein men is Lyman Keeler, of Danbury. He is vice-president of the Connecticut Holstein Breeders' Association. Besides being a breeder and showman Mr. Keeler does a little auctioneering and is in request when black and whites are being sold in his territory. One of the animals formerly owned by Mr. Keeler was Mabel Segis Korndyke, the first animal under full age to make 40 lb. of butter in a week, and the foundation animal of the famous Bell herd.

* * *

Rye Hill Korndyke Königen, owned by the City Farm, Bridgeport, Connecticut, at two years, three months old, made 593 lb. milk and 18.59 lb. butter in seven days; 1,175 lb. milk and 37.48 lb. butter in fourteen days, and 2,427.3 lb. milk and 75.67 lb. butter in thirty days. She was in charge of M. R. Cahill, who is now the City Farm herdsman. This great heifer is still on test and is running 80 lb. milk in a day right along. She is a granddaughter of Ormsby Korndyke Lad.

* * *

BOONE SEGIS AGAIN

Boone Segis, owned by Cleland & Williams, Hiattville, Kansas, for the second successive month led the Bourbon County Cow Testing Association, during the month of January, she made 1,513 lb. milk, 60.5 lb. fat.

Augusta, a purebred Holstein, owned by E. E. Johnson, was second with 51.5 lb., and a grade Holstein, Spot, owned by Arthur Towles, was third with 51.1 lb.

Second to Boone Segis for milk production stands the grade Holstein Sadie, owned by H. H. Mosher, who produced 1,339 lb. milk. The purebred Holstein, Godman, was third with 1,327 lb. milk. Seventeen of the 22 cows attaining the honor roll are purebred Holsteins, thirteen are grades of this breed, one is a grade Jersey, and one a not designated.

The supervisor, Mr. Trull, says the H. H. Mosher herd was overlooked in the December report. Four cows should have been added to the honor roll, three of which were grades and one a purebred Holstein.

PARONTO'S PRIDE

A grade Holstein, Pride, owned by Arden Paronto, of Mosinee, Wis., led the Wausau-Marathon Cow Testing Association for the month of January, making 73 lb. fat. Twenty-nine animals made more than 40 lb. fat.

The Paronto herd leads the others with an average of 869 lb. milk, 35.3 lb. fat—pretty good for a ten-cow dairy.

The Jake Hunter herd of six grade Holsteins is second with an average of 856 lb. milk, 33.7 lb. fat.

A grade Holstein owned by Hiram Bowe took first honors in the Eagle Point Cow Testing Association for the thirty-one days ending January 14, with a production of 60.63 lb. butter fat and 1,410 lb. milk. The Bowe herd was first with an average of 43.1 lb. fat. G. H. Polzin's herd was second with an average of 33.1 lb. fat. Both herds are Holsteins. During the month 471 cows were tested, making more than 40 lb. fat. Fourteen of the leading fifteen consist of black-and-white cattle.

OHIO STATE LEADER

During the month of January, a Holstein cow, owned by J. Gillett, of Athens County, Ohio, led the state for production of milk and butter fat, making 2,210 lb. milk, 83.1 lb. fat. Another Holstein in the same herd made 2,160 lb. milk, 74 lb. fat. A registered Holstein enrolled in the Muskingum County Association made 2,018 lb. milk.

GILLIS GAINING

Frank Gillis had thirteen of his cows in the honor roll of the Dunn County (Wis.) Association No. 2, during January. Six of the animals were purebreds and "Princess," a registered cow, led the association with 2,328 lb. milk, 82.8 lb. fat. Five of these animals in this herd made over 60 lb. fat in the month.

IN IDAHO

Almost 1,000 official tests were supervised by the Dairy Department of the University of Idaho in the departmental year ending December 1, 1921. The twelve Holstein breeders represent 305 tests, 16 Jersey breeders had 610 tests, 4 Guernsey owners ordered 76 tests, and the one Ayreshire breeder to make records had twelve animals tested.

INDIANA MEDAL WINNERS

Among the winners of the four gold medals given Indiana dairymen for having seven or more cows that produced at least 500 lb. butter fat in a year, is C. M. Bottema & Sons, of Indianapolis, with nine purebred Holsteins that qualified.

Three herds won silver medals for eight or more cows in the 400-lb. class. Two of these three herds were Holsteins. One herd is owned by Morgan Bros., Chesterton, with 15 head, and the other is owned by Dan Haxton, Hobart, with ten.

Bronze medals were awarded herds containing ten or more cows, each producing more than 300 lb. fat. Ten herds won bronze medals, and among these are the Holstein herds of George Lute, of Hobart, and Marcene Haxton, Valparaiso, each with eleven head.

The average Indiana cow production is right around 160 lb. butter fat and 2,500 lb. milk. The average of all animals enrolled in the Indiana Cow Testing Associations is 268 lb. butter fat and 5,647 lb. milk annually. Better breeding stock, better herd management, and better feeding are the great reasons for this difference.

The ten highest cows under test during the month of January in the Rural Cow Testing Association which operates around Titusville, Pennsylvania, produced from 1,190 lb. to 2,117 lb. milk, 49.7 to 65.5 lb. butterfat. All were Holsteins and the leader was a purebred from Maple Grove Stock Farm. Another member of the herd made 1,866 lb. milk, 527 lb. butterfat.

WISCONSIN AS A DAIRY STATE

"Wisconsin is the premier dairy state. She has a grand total of 3,000,000 dairy cattle which includes 80,000 pure-bred Holsteins, 20,000 pure-bred Guernseys, 8,000 pure-bred Jerseys. Wisconsin has more of each of these breeds than can be found in their original homes and in addition 2,000 pure-bred Brown Swiss and 1,700 pure-bred Ayrshires.

"The state now has 90,000 silos, 2,700 cheese factories, 800 creameries, 70 condenseries, and her annual dairy output is valued at $300,000,000. Wisconsin is the home of the largest coöperative cheese marketing company in the United States—the Wisconsin Cheese Producers' Federation, which will handle this year 7 per cent. of the nation's entire cheese production."—*A. J. Glover, at the Dairyman's Jubilee Celebration.*

Now is the time to clean the accumulated manure and debris from the barnyard. A little work now will result in the yard being dry and clean a little later on because it enables the water to run off instead of soaking in the ground.

TENNESSEE CHAMPIONS

In our list of the Tennessee champions appearing on page 113 February 22nd issue there were several mistakes which need correction. The milk of King Pontiac Calypso Rockwell, champion in the mature seven-days division should be 529.6 instead of 548.6; her butter record of 32.03 is correct as given. This cow is owned by the Highland Rim Holstein Co., Inc., of Winchester. The seven-day record of Knapp Korndyke Hengerveld Johanna, junior two-year-old, owned by the Knapp School of Country Life, Nashville as given is 15.98 lb. butter which should be 17.23 lb.

The figures given for butter production in the yearly division should in each instance be read as butterfat. We received from Professor C. Elmer Wylie, head of the Dairy Division of the Tennessee College of Agriculture. All the year record champions were owned by the Tennessee Experiment Station, Knoxville, Tenn.

The figures given in terms of 80% butter are:

	Lb. Milk	*Lb. Butter*
Mature Violet Houwtje Lady,	14,470.1	612.90
Sr. 4 Winona Colantha 2d,	11,261.2	545.95
Jr. 4 Winona Colantha Lass,	11,598.8	528.11
Sr. 3 Violet Houwtje Lady,	15,408.6	785.56
Jr. 3 Winona Colantha Lass,	9,858.2	440.10
Sr. 2 Lady Woodcrest Colantha Lad,	13,293.6	630.66
Jr. 2 Houwtje Pietertje DeKol Lady,	8,788.3	397.48

SOY BEANS

The Soy Bean is a Leguminous plant grown in this country to a considerable extent during the past 15 years as a forage and seed plant. It is an erect annual, 1½ to 3½ feet high, with branching hairy stems and heavy foliage resembling in appearance that of the common field bean but generally more hairy. The seed is of various colors ranging from white to green and black, and rather small and spherical or elliptical in shape and compressed. It is a native of China and Japan and has been cultivated there for centuries as human food.

The soy bean plant matures seed in 75 to 130 days from planting, depending on the variety; it is somewhat more resistant to frost than garden beans, and may be grown as far north as Indian corn.

The dry beans are a highly nutritious feeding stuff and rank with linseed meal, gluten meal and cottonseed meal in feeding value for steers, dairy cows, calves, hogs and other stock. The meal has the same laxative effect as linseed meal, and when fed to dairy cows tends to soften the butter.

As a soiling crop for dairy cows soy beans have given excellent results from the standpoint of milk and butter production. They are especially valuable when mixed with such crops as corn and sorghum. The silage made from soy beans is very satisfactory. The late varieties yield heavily; the crop is easily ensiled, and the quality of the silage is even more satisfactory than soy bean hay and considerably more economical to make. The Connecticut Storrs Station recommends that the crop be ensiled with corn, putting the two down in alternate layers. This makes a more balanced ration than either alone.

THE MASTER OF BRENTWOOD

The most-talked-of man in Holstein circles this month is William G. Davidson, the genial owner of Brentwood Farm. The coming Brentwood sale is the third event of its kind. The two previous sales have been bright spots in Holstein sale ring history, and Mr. Davidsons asserts that the 1922 event will be fully as good as either of its predecessors. Despite the fact that values have gone down and that a dollar will purchase more than it would in March, 1920 and 1921, Mr. Davidson is wagering that the sale of this month will average fully as high as did either of the previous affairs. May he be right.

W. G. DAVIDSON.

Owner of Brentwood Farm and Manager of the Brentwood show and sale, March 20 to 23, 1922.

The Troutlake Holstein-Friesian Association, located at Granger, Wash., purchased 15 head of purebred Holsteins for distribution among its members. One of the heifers cost $385. More than fifty dairy cows have been shipped into the White Salmon Valley this winter.

IS THERE ANOTHER HERD LIKE IT?

Having passed a second Federal test since becoming fully accredited, the Bellwood Herd (Bridgeport, Pa.) is unquestionably a herd of healthy Holsteins. In periodic tests conducted during the past four years the herd has not shown a single case of reaction.

Every one of its forty members has a distinguished record dam. The records of these dams are not ordinary they are quite above the ordinary, though not phenomenal. It takes cows of very superiod quality to make records of 25 to 32 lb. butter in a week and year's records up to nearly 19,000 lb. milk, and that is what these dairy matrons in the Bellwood herd have been doing.

Every female in the herd old enough to be in milk has made a creditable A. R. O. record—without a single exception.

A 32-lb. son of King of the Pontiacs and fourteen of his daughters and a senior three-year-old grandson of May Echo Sylvia and a dozen of his daughters, the latter mostly from daughters of the first-named sire, constitute two outstanding groups either of which would be a credit to any herd. Either of these groups alone would afford the material for as fine a herd as could be selected for foundation purposes.

The herd throughout is made up of show animals. When I saw the herd a considerable time ago I was quite of the opinion that this was the finest herd of its numbers that I had ever visited, and I understand that since that time the Bellwood outfit has been constantly growing better.

I fully realize the tendency of a sale manager to speak in exaggerated terms of the quality of any herd he may be called upon to provide sale service for. This I try to avoid but I believe the Bellwood herd in respect to individual quality, health of its members, capacity to produce and record performance and backing has no superior among herds of its size in America to-day, and in making this comment I fully expect that all who attend the Bellwood dispersal sale on March 24 will agree that I have not over-described the Bellwood Holsteins.

Mr. Davidson's consignment I have not personally inspected but everybody knows that Brentwood quality is always up to standard.

E. M. Hastings.

Pulaski, N. Y., February 25, 1922.

HOME FOR REACTORS

Many good breeders are reluctant to subject their animals to the tuberculin test. This is not because they do not favor the Accredited Herd Plan, nor that they fear a large percentage of reactors in their herds. The reason was that, along with the Accredited Plan there has been no satisfactory provision made for the breeder, who breeding along family lines, might be so unfortunate as to lose the very nucleus of his

herd. Such misfortune might easily spell ruin for the owner who had not the means to isolate his animals in order to retain them as breeders.

Realizing this and how it has hampered T B eradication work we conceived the idea of a coöperative tubercular breeding herd where accredited breeders and others having high class producing reactors, too valuable to destroy, might place them in a segregated area to be bred and cared for properly under the laws governing such action. Working upon this idea we established and started to operate such a Bang herd a year ago. As it was to be a mutual proposition only good, straight well-bred, producing females were to be furnished by the owner and only good, well-bred bulls were to be used for service. Both parties to the agreement share equally in the value of the offspring.

In an endeavor to select male blood which would harmonize well with most of the popular breeding of to-day we decided that something which would combine and intensify the blood of Pontiac Korndyke, King Segis, Colantha Johanna Lad, and Hengerveld De Kol would probably be the best. Hence we selected for senior sire King Segis Pontiac Paul, a proven sire, with one daughter above 31 lb., a three-fourths brother to "Count" and "Königen." As junior sire we choose Monarch Rag Apple. His sire is the Mighty Monarch and his dam a 1,000 lb. year record daughter of Segis Fayne Johanna. Both sires are good individuals and their calves prove their transmitting qualities.

As to results we are pleased to say that the idea has proved a success. The usefulness of many good cows is being extended and the herd is proving the solution to questions which have troubled many breeders. Holstein breeders of today are looking into the future and are beginning to realize as never before that the need is not for more cows but for better cows.

Bonnie View Farms, Inc.

H. G. Abbott, *Secretary.*

BIG CALIFORNIA DEAL

When Fred Hartsook purchased sixteen yearling heifers from the Maxwell Farms, he consumated one of the most notable transactions ever known in California Holstein circles. All his heifers are daughters of Tritomia Pietertje Ormsby, the 1922 National Dairy Show grand champion. The get of Tritomia Pietertje Ormsby have made a name for themselves in California, winning first at Riverside and San Francisco against strong competition.

Among the heifers was a daughter of J. S. P. Lily McKinley, 37.56 lb. butter in seven days and a daughter of the thirty pound cow Carrie Beets Segis. The young bull that will head this herd is Tritomia Panzie Ormsby, whose dam, Buffalo Parthenia Skylark, made over 1,000 lb. butter in a year. This young bull was first prize junior calf at the San Francisco show and was a prize winner at three big shows in California last fall.

MINNESOTA FIELD SECRETARY.

The new secretary of the Minnesota Holstein-Friesian State Association is Robert Geiger. Mr. Geiger has had a long training that has fitted him for the duties of his new position. He is a graduate of the College of Agriculture of the University of Minnesota; was a teacher of agriculture in several Minnesota high schools; for four years he

was county agent in Scott County and he had experience as a practical farmer. He started his new duties February 1, in fact, he assisted the association during January in their membership drive.

PROVEN SIRE CHANGES HANDS

The well-known sire Dutchland Governor Sir Colantha has been purchased by Ralph Tuttle of Walla Walla, Washington, from Arthur G. Miller, Oconomowoc, Wisconsin. This good old sire was dropped April 19, 1911 and is therefore nearly eleven years old. He is a son of Colantha Johanna Lad and Pontiac Latona, a 22 lb. daughter of Hengerveld De Kol. Volume 32 of the Blue Book credits Dutchland Governor Sir Colantha with 32 A. R. O. daughters of which three are above thirty lb. butter in seven days, as four-year-olds. One daughter of this sire, Von Heim Ormsby Mechthilde made 896.57 lb. butter in a year from 20,655.9 lb. milk while other daughters of this bull have made large year records as heifers. This book credits him with only two daughters tested at full age, one of which made over 28 lb. butter in a week, averaging over 80 lb. milk a day and the other 29.55 lb. butter in a week from nearly 600 lb. milk.

Dutchland Governor Sir Colantha will be remembered as the sire of Pietertje Prospect Colantha, the son of Segis Pietertje Prospect, consigned to the 1921 Brentwood sale, purchased by Mr. Davidson and sold back after a short period of service in the Brentwood herd to the Carnation Farms.

INTER-MOUNTAIN SHOW

The Fifth Annual Inter-Mountain Live Stock Show will be held at North Salt Lake, Utah, April 3d to 6th inclusive.

Besides the usual dairy and cattle exhibits there will be a seventy-two hour dairy test open to all breeds. The prizes in the regular show are quite liberal and should draw exhibits from many parts of the great inter-mountain district.

The chairman of the educational staff of the Inter-Mountain Show is J. E. Dorman, who is in charge of the western office of the dairy division of the United States Department of Agriculture. Mr. Dorman was appointed chairman February 2d, at a meeting of the Live Stock Committee of the Salt Lake City Commercial Club. The educational staff has charge of the lecture program, judging contests and other educational features of the show.

Among the special prizes is a Holstein bull calf, a son of the champion bull at the 1921 Utah State Fair. This is donated by L. Scott Bringhurst of Murray, Utah. The Utah Holstein-Friesian Association is expected to show a state herd and other entries are promised by Gilbert Thatcher, Professor Hinckley, J. I. Atkinson, Jr., Ancel Hatch, Nelson Brothers, Scott L. Bringhurst, Utah School for Deaf and Blind, Earl G. Lloyd, Ray Fixton, W. F. Wood, A. H. Stone, and Ben R. Eldredge.

Despite the fact the valuable prizes are given, admission is free and there are no entry fees charged.

LATHROP

The Holstein establishment at Montrose, Pa., formerly known as the Locust Grove Farm will henceforth be called the Lathrop Farm. The name Lathrop has been reserved as a herd prefix.

The Lathrop Farm and the Lathrop Herd are owned by the Lathrop estate. The late Mr. W. A. Lathrop was a noted Holstein breeder in earlier days but the purebred herd had been sold and for some ten years there was a grade herd of Black and Whites on the farm. After a period of war service Dr. L. M. Thompson, the present manager, took hold of things, sold out the grades and set about gathering foundation animals for the present purebred herd which is of high quality.

The present herd sire, King Valdessa Pontiac Homestead, is from Joyce Fobes Korndyke, daughter of the Pennsylvania state Champion, Kayewood Joyce Korndyke. The three nearest dams of King Valdessa Pontiac Homestead have seven day official records which average 37.9 lb. butter.

The Lathrop herd is fully accredited. They started with clean animals and there has never been a reactor in the herd.

PRODUCERS

Mr. E. H. Troup of Port Gibson, New York, recently made a number of creditable records. Maple View DeKol Lyons Korndyke made 492.8 lb. milk, 23.11 lb. butter in seven days as a three-year-old. Maple View Lady Hengerweld dropped twin calves at two years and 10 days old, and then made 393.1 lb. milk, 16.72 lb. butter in a week. Souvenir Rag Apple Korndyke as a junior four-year-old also dropped twin calves and she made 472.7 lb. milk and 22.33 lb. butter in the week. Maple View Beatrice Clothilde made 21.39 lb. butter and 488.2 lb. milk in seven days as a senior two-year-old.

TO HAWAII

Seven head of Holsteins recently left Seattle on the steamship Manukai, bound for the Hawaiian Islands. These animals are consigned to the Hilo-Onomea Dairy at Hilo, Hawaii and will form the foundation of a purebred herd which this company, one of the largest in the islands, is establishing.

In the shipment were three young cows, three heifers and an eight months bull, Colantha Walker Posch. This young fellow is related to Segis Pietertje Prospect, the world's milk champion and also to Matador Segis Walker, the great sire heading the Carnation herd.

IN BOSTON

A teacher told the class to rewrite the sentence, "A wink is as good as a nod to a blind horse," in their own words, but to retain the meaning. The teacher became unconscious when she read the following production from bright Willie: "A spasmodic movement of the optic is as adequate as a slight inclination of the cranium to an equine quadruped devoid of its visionary capacities."

"And you say you lost control of your car?" "Yes, I couldn't keep up the instalments."—*Judge.*

COMING HERD

King Minterbrook Sylvia Matador is the young herd sire recently purchased by C. M. Seeley of Seattle from the Carnation Stock Farms. This bull is a son of Carnation King Sylvia and his mother is Beauty Pietertje Segis Walker, a three-fourths sister of the famous world's milk champion, Segis Pietertje Prospect.

The Seeley herd will be known as "Minterbrook" and is located on Minter Creek in Kitsap County. There are 140 acres of bottom land in Minterbrook and, besides the Holstein herd there is a herd of registered Chester White hogs, a flock of nearly 2,000 White Leghorns and a ten-acre vineyard.

Mr. Seeley has been a liberal bidder at a number of northwestern Holstein sales and was a purchaser at the Pacific International sale at Portland last November. He has registered the name "Minterbrook" as a trade-mark as well as a herd prefix. The herd is under state and federal supervision.

SHOWY AND GOOD

Three good records were made during January in the herd of J. V. Weker at Republic, Ohio. The seven-year-old Lula Lyons Mercçdes Korndyke milked 89 lb. in a day, 556.9 lb. in seven days and made 30.03 lb. butter. Daisy Pontiac Posch Lyons freshened at four years, thirteen days old and produced 26.32 lb. butter, 530.7 lb. milk in a week. The four-year-old Ophelia Royal Lyons made 24.1 lb. butter, 493.2 lb. milk in seven days, four and one-half months after freshening. This cow took first premium at the 1921 Seneca County Fair.

UXORIOUSLY COMPETENT

Solomon was the wisest man.
He was, assented Miss Cayenne.
He knew how to manage a very large number of wives without a single divorce scandal.—*Washington Star.*

BE CHEERY

Dere ain't no use in grumblin'
When all yo' plans go wrong;
Jes keep right on a-stumblin'
And raise yo' voice in song.
Dere ain't no use in frettin'
An a-stewin' all de day
'Bout troubles yo's a-gettin'
Jes smile. Dey'll go away.

Dere ain't no use a-feelin'
Bad and mopin' wid de blues;
De sun'll soon come stealin'
Through de clouds wid better news.
Jes whis'le in yo sorrow,
Bar yo' burdens wid a smile,
An' mebbe by to-morrow
Yo' can res' a little while.

SWEET WORDS

"There are some words, the sweetest words,
In all of human speech—
More sweet than all the songs of birds
And pages poets preach.
The words that cheer the saddest days,
'I love you?' wrong, by heck!
'Tis, 'Send your paper right along,
Enclosed find check.'"

It may interest many to know that the veteran Holstein breeder, George F. Comings of Eau Claire, Wisconsin and the Wisconsin Lieutenant-Governor Comings are one and the same person. Mr. Comings joined the National Association in 1906. He is an energetic booster for the breed and is in request as a speaker at meetings when lovers of the black-and-whites gather together.

SPORTY WOMAN

"Not many women care much for outdoor sports, do they?"

"Oh, I don't know. Did you ever see one who did not like to hunt bargains, fish for compliments, be in the swim, play a love game, make a hit with her clothes—"

"Senough? I was wrong."—*Brooklyn Eagle.*

CRESTMONT DUCHESS ORMSBY

One of the most sensational records ever made in the state of Pennsylvania was recently credited to Crestmont Duchess Ormsby, 463.132 the property of Harry C. Gates, of Canton.

Crestmont Duchess Ormsby was born August 28, 1917, and made her record as a junior three-year-old. The record, as reported by her owner, is 18,438.9 lb. milk, 823.11 lb. butter in 305 days. It is not yet known whether this heifer will be credited with a world's record or not as while she surpasses the Washington heifer Pietertje Mutual Fobesm, who made 818.4

CRESTMONT DUCHESS ORMSBY
18,438.9 lb. milk, 823.11 lb. butter in 305 days. Owned and bred by H. C. Gates, Canton, Pa.

lb. butter in the same length of time, there is another Western heifer that finished a larger record, right around 850 lb. butter, about the same time.

Crestmont Duchess Ormsby freshened at three years, three months, 17 days old and at that time made 562.3 lb. milk, 22.85 lb. butter in seven days. She is a daughter of King Pontiac Alcartra Wayne and Fairmont Duchess Ormsby and her present owner is also her breeder. She carried calf 180 days of the time she was on test.

WHO AM I?

I am the fellow that Milks with

"Mehring's Milker"

It makes me smile when I see poor guys pulling away by hand. Buy a Mehring Milker and you can smile too. It was the first practical milker and still has the lead in speed, efficiency and cheapness of operation and repair. Send for a catalogue and be convinced. It will milk one or two cows at once. Price $80 cash or $85 on trial. Also engine power milkers.

W. M. MEHRING, Keymar, Maryland

LIVERPOOL GLEANINGS

The largest consignment in the sale came from the herd of R. J. Melvin, whose daughter Miss Harriet assisted him in keeping things moving. We understand Miss Melvin is very much interested in auctioneering, etc.

Ward W. Stevens, of Liverpool, New York, is feeling jubilant owing to a sale of eight nice heifers which will be shipped to Porto Rico right away. These animals are good individuals, backed by producing lines of breeding and brought a very satisfactory price.

An innovation that might with advantage be copied at many Holstein meetings and sales was seen at the Breeders' Select Classic Sale, managed by R. Austin Backus at the Liverpool Sale Pavilion, February 22 and 23. During the afternoon a number of good looking young ladies passed around the crowd and sold glasses of milk. They were liberally patronized. The assembled breeders certainly appreciated a draught of Holstein milk.

R. J. Stevens was telling around that six daughters of Sir Pontiac Waldorf Pietje at an average of two years three months were averaging seventy pounds milk a day. Their butter records ran from 20 to 25.22 lb. in a week and one of them produced 2225 lb. milk, 105.7 lb. butter in thirty days. They are under the care of Pete Krog who now fills the position recently vacated by Jim Gillet.

The great record being made by Highland Burke Joh within a very short distance of the Livingston Sale Pavilion was the leading topic of conversation whenever two or three Holstein men gathered. The Hawley and Murphy barn is directly opposite the trolley stop on the south side of the Sale Pavilion and so many of the visitors stopped to look over the cow that it became necessary to prohibit any one going in the barn with the exception of the testers, the Holstein-Friesian Association representative, and the regular attendants. Mr. Murphy did make an exception in favor of the representative of the HOLSTEIN BREEDER AND DAIRYMAN.

H. A. Moyer believes that purebred Holsteins are more profitable than grades, production alone considered.

He will sell his entire herd including Empire Segis in the Hastings April Sale. He has arranged with Wm. Simpson who for a number of years has been in charge of the cattle in Moyerdale, to place twenty head of purebred Holsteins on the farm. These animals are selected for apparent producing capacity without regard to blood lines. Their bull calves will be killed at birth and the female sold when a few days old at a low price so that the entire milk output will be sold as a fluid product. Mr. Moyer has figured out the probable expenses and receipts and believes that both Mr. Simpson and himself can make more money this way than they could with grades.

KORNDYKE WINONA DEAD

The death is announced of the well-known Korndyke Winona. She was owned by Dr. W. J. Nichols of Ashbury, Mo. The cause of death was a piece of bailing wire which she had evidently swallowed with her food and which worked through the walls of the stomach and pierced the heart. Korndyke Winona was twelve years old at the time of her death. She was regarded as one of the handsomest daughter of Pontiac Korndyke. Under the care of Charles Cole she was tested when eight years and twenty-three days old and records were placed to her credit on the Association books of 42.16 lb. of butter, 750.6 lb. milk in seven days, 148.03 lb. butter and 2,657.6 lb. milk in 30 days.

NEW CHURCH HOLIDAY

Mr. Callahan was discovered standing before a window displaying a large sign, "Nut Sundae," and was heard muttering reflectively: "Ash Wednesday, Shrove Tuesday, Good Friday—say, this is a new wan on me."—*De Laval Monthly.*

SMILE

It's easy enough to be cheerful and gay,
When drinks flow around good and strong,
But the man worth while
Is the man with a smile
When every last drop of it's gone.

Worth Looking Over

Don't you think a herd of 70 head, none over 5 years old, is worth looking over? One member of this herd is now making 28 lb. butter a week.

Plum Spring Farm Copia

heads this herd. His nearest dams, none below 31 lb., have seven day records averaging 32.35 lb. butter, 613.3 lb. milk

Starrucca, Pa.

SELF-MADE WOMEN

Muggins—"The world certainly admires a self-made man."

Buggins—"How about the self-made woman?"

Muggins—"Oh, most women are that, so they are so plentiful as to excite no comment."

AND THEN THERE WAS SILENCE

"Jim," she said, as he settled down for a comfortable smoke, "I've got a lot of things I want to talk to you about."

"Good," said her husband, "I'm glad to hear it. Usually you want to talk to me about a lot things you haven't got."—*Cincinnati Enquirer.*

John and Mary were talking, and their young aunt overheard the following conversation:

"I am glad that they have such good things to eat in heaven," said Mary.

"You silly, they don't eat at all up there," objected John.

"I guess they do, John Marten," answered 8-year-old Mary, with dignity. "It says in my catechism, 'The Lord makes preserves and keeps us.'"—*Harper's Magazine.*

One of the effects of prohibition is that, while the booze may not be as lively as it used to be, it is twice as deadly.

CHEESE IN KANSAS

There is a grocer in Leavenworth, Kan., named Herman Witt, who has had a good scheme to boost the consumption of dairy products. Every year he has a large cheese made to order either in Green County, Wisconsin, or Herkimer County, New York., both famous for the manufacture. These cheeses are ordered some time ahead and are shipped to him just when they are at their best. The large cheeses are placed on display in the window. Orders are taken and it is only a day or so before there is not enough left to feed a mouse. Last year he had two four-hundred-pound cheeses which were all sold out in a day.

I'm a little carpet tack,
Lying here upon my back.
Nobody cares to tread on me,
For I'm as sharp as I can be.

I'm a little hornet yellow,
I've buffaloed the other fellow
No one cares to monkey with me—
Scared to death of my stingaree.

I'm a stick of dynamite,
When you hold me—hold me tight,
Nobody cares to play with me,
I might blow myself by gee!

Joe Bellinger, assistant agricultural agent for Dinwiddie County, Va., announces that he has secured, for use in Dinwiddie County dairy communities, the Holstein bull that won first prize at the 1921 Petersburg fair. Mr. Bellinger evidently believes that a county agent should not only advise his farmer-patrons to do things but also should do things himself.

Mistress—"Is your husband a good provider, Jemima?"

Jemima—"Pervider? Why the onlies' thing that niggah eve' pervides me with is argument 'bout when does we eat."—*Wayside Tales.*

Mrs. Talkalot—"My husband hasn't spoken to me for nearly two weeks."

Miss Caustique—"Can't even get in a word edgeways, eh?"

Two souls with but a single thought,
May mean the slip 'twixt lip and cup.
The single thought is that they ought
To double up.

The Providence County Farm Bureau is authority for the statement that when Fairmont Meta Ward Piebe, owned by A. W. Steere of Greenville, made 611.1 lb, milk in seven days she established a new state record for Rhode Island. Her best day was 93.7 lb. and her butter record 27.68 lb.

Mrs. Jones—"Yes, Larry stayed over in England after the war. He works in a butterine factory now and gets thirty pounds a month."

Mrs. Sylvester—"Thirty pounds a month? What does he do with it? he can't eat it all."

"Cheer up!" said the optimist gay with a shout,
"A man may be down, but never is out."
"He may never be out, but he can be all in,"
Said the pessimist, with a mild, sheepish grin."

"I have come for the hand of your daughter," said the earnest suitor. "All right, my boy," replied the conscientious parent, "but it is only fair to remind you that she has two hands."

You never can tell. The philanthropy of some men consists of a willingness to pass the hat.

FROM HOLLAND TO MICHIGAN

About twenty-three years ago John Buth came to Michigan from Holland and a little later his brother, Peter, then eighteen years old followed him. After a time, John and Peter rented a farm and started in the dairy business, continuing for seventeen years. During that time three other brothers, Martin, Dan, and Dick also joined forces with them. All five of the brothers as well as one that stayed in Holland are owners of Holstein-Friesian cattle. Some two years ago the herd of Peter and Martin was disposed of at public auction, the sixty head of cattle bringing $44,300. Peter Buth has been very successful as a cattle-breeder. One of his cows made over 700 lb. milk, eight produced over thirty pounds of butter in seven days. He was one of the first growers of alfalfa in his community and is a progressive farmer.

There has been no fancy buildings on the Buth farm; the cattle are clean and comfortably stabled; everything is judged from the standpoint of utility rather than show.

THE RAILROAD BULL

The Michigan Central Railroad owns a Holstein bull which is kept near Gladwin, Mich. For three years it has been on the farm of W. H. Nash and has just been transferred to the establishment owned by Albert Grier. The bull is a grandson of the King of the Pontiacs. His dam made 20.45 lb. butter in 7 days as a two-year-old, and her dam is a 28-lb. cow. In addition to this he is a real good individual and is producing some fine calves.

This bull with a number of others is loaned by the Michigan Central Railroad Company to farmers in Northern Michigan who appreciate the help of a good sire in raising superior stock. The agricultural department of the railroad claims that dairying is the basis of successful farimng in Gladwin County, that only good cattle are profitable, and that the only way to get good cattle is through the use of good sires, therefore they are coöperating with the county agent in placing well-bred bulls, free of charge, in the hands of such farmers as are anxious to raise superior herds of cattle.

BEST FOR BABIES

Dr. A. J. Ritter, of Ross, Cal., owns hospitals at Ross, San Rafael, and Novato. To supply food for his patients he has rented a couple of ranches, on one of which he has placed 60 head of purebred Holsteins, and has placed a smaller herd on a ranch at Novato, where he expects to erect a childrens' hospital. Dr. Ritter believes that Holstein milk is the best for children and invalids.

Poor fool, he's always on the go,
Of work he never does a stroke;
His giddy pace takes lots of dough,
And where he'll finally go is broke.
—*Cincinnati Enquirer.*

WAR COSTS

Uncle Sam is spending $1,000,000 in cash every day in payments to disabled ex-service men and their dependents, and will spend in the year 1922 more than $500,000,000 for soldiers' relief, which is a greater sum than the entire expenses of all the departments of the United States Government in any year prior to 1897.

That's one of the legacies of the late war, and a reminder of Kaiser Bill's disposition to lick the world. The world was staggered at the cost of war when Russia and Japan were engaged, at an expense of $1,000,000 a day to both nations, and we are paying the same price in times of peace.

ADVERTISING

Once on a time there was a Holstein breeder who wanted to sell his place—wanted a change, was sick of the old farm,—so he placed the matter in a real estate agent's hands and waited. After reading the "ad" in the next week's paper, the farmer called at the agent's office and said, "Say, I read your description of my place in the paper, and as near as I can figure, that's exactly the kind of a farm I've been looking for—I'll keep it myself."

And there are some folks who don't believe in advertising.

Blooblud—"My great-great-grandfather came over and grew up with the country."

Sillicus—"Where was he planted?"

Registered Holsteins That Are Naturally Hornless

KEYSTONE BEAUTY PLUM JOHANNA

Her work has NEVER been equalled, age considered
Nearly every animal in the herd related to her Origin Herd

25,787.5 lb. milk, 1,294.71 lb. butter in a year as a senior four-year-old. A world's record in class for more than six years; still the world's record for strictly official test. The year before she made 22,496.6 lb. milk, 1,081.88 lb. butter, as a junior three-year-old.

THE DAIRYMAN'S WARNING

Old Bossie was a loafer cow;
She stood around all day
Waiting for the corn and oats
To be shoveled down her way.

She ate as much as other cows,
She did not reason why,
But when it came to giving milk
She was a little shy.

She did not come from dairy stock;
She showed a trace of beef,
Her mother and her sister Ann,
Like she, both came to grief.

She loafed along for many years
And did not realize
That she was being tested,
And her owner getting wise.

One day the butcher came around
With halter and a gun,
And led her to the shambles
At the setting of the sun.

Take warning all ye loafer cows,
Take heed to what I say!
You'll surely be found wanting,
For the tester's on the way.

—Denver Record-Stockman.

A recent news item reported that the "Armourdale Christian church was burned in the presence of the Sunday school class last Sunday." No expense is being spared nowadays to make Sunday school attractive to young people.—*Dodge City Globe.*

MONTGOMERY HERD MAKES THREE STATE RECORDS

The herd of V. M. Montgomery, of Spartanburg, S. C., has been attracting considerable attention of late, owing to the splendid records animals of this herd are making. The senior three-year-old state championship for seven and thirty days' butter production as well as the thirty-day championship for junior three-year-old and senior two-year-olds, all were won by animals in this herd on test during the month of November.

Katie Paul Sadie Vale made 26.96 lb. butter in seven days, 111.78 lb. butter in thirty days as a senior three-year-old. The junior two-year-old Polly Fellinga Posch made 85.78 lb. butter in thirty days, and Copia Spring Farm Esther, 85.42 lb. butter in a similar period as a junior three-year-old. There were five animals in this herd on test and their records are so creditable that we are giving them in full:

	Seven Days		*Thirty Days*		
	Milk	*Butter*	*Milk*	*Butter*	*Age*
Katie Paul Sadie Vale, ...	648.9	26.96	2,672.4	111.78	Sr. 3
Strickland Farm Ella Pontiac, ..	547.2	23.60	2,261.4	85.69	Jr. 4
Copia Spring Farm Esther, ...	446.6	21.71	1,811.5	85.42	Jr. 3
Polly Fellinga Posch, ...	471.6	21.66	1,947.0	85.78	Sr. 2
Princess Nell Ormsby, ...	505.2	21.56	2,032.4	84.29	Jr. 3

GO TO DIXON

A number of good cows are being shipped from different parts of Illinois to the Illinois Holstein-Friesian Association testing plant at Dixon. French Brothers have sent two. Irving Isenberg sent a cow that made 28 lb. butter in 7 days and is starting to make a nice yearly record. Waubonsie Farms sent Florentine Dorcas Veemen DeKol and William Ohlhaver sent Senic Pieterje. Florentine Dorcas Veemen DeKol made 29.96 lb. butter and is still milking over 70 lb. a day. One of John K. Rathburn's cows is milking over 100 lb. a day right along.

The Holstein bulls are picking up,
The cows are selling fine;
So let's cheer up—dispel all gloom,
And all prepare to dine.

—De Pere Democrat.

Mexico is still buying registered Holsteins, a car load being rceently shipped from Monroe by the Hoesly-Babler Co. They went by express, consigned to Baron Con Schroeder of Mexico City.

Soon after a man learns to drive his car he wonders why the trains don't heed the "Stop, Look and Listen" signs at the crossings.—*Baltimore Sun.*

The Third

Brentwood National Sale

has been made possible through the tireless energy of one man deeply interested in the black and white breed.

Many breeders have supported it by their willingness to consign high class animals, and accept the opinion of the purchaser as to their real value.

The Holstein buying public have the opportunity of a lifetime to purchase richly bred animals for foundation purposes at their own figures, and will no doubt show their appreciation by furnishing a large attendance.

The SUMMIT FARMS consignment consists of eight young heifers from one to five years of age. Five of these finished long time tests in December or January, and are ready to "carry on" again. Look them over at the Commercial Museum, Philadelphia, on

March 20, 21, 22, and 23rd.

Public Sale Announcement

Bellwood Holsteins---The Herd De Luxe

Second fully accredited herd test just completed without a suspicious temperature.

A Show Herd The Bellwood Herd of some forty head comprises three remarkable groups:—

A Fully Accredited Herd **GROUP 1.** King Pontiac Pondyke (32 lb. son of King of the Pontiacs) and 14 of his daughters, one 25 lb. at four yr., several above 20 lb. at 3 yr.; these daughters include 3-yr-olds with year milk records up to nearly 17,000 lb. and a yearling with 15,483 lb.

A Herd that has not had a Reacting Animal in four years. **GROUP 2.** King Sylvia Model, born April, 1918 (grandson of May Echo Sylvia, his 11 nearest dams average 33½ lb.) and 12 of his daughters from such dams as appear in—

GROUP 3. Cows with 7 day butter records of 25, 27, 31 and 32 lb. and year milk records up to nearly 19,000 lb.

Every Female in Milk has a Good Record and Every Animal in the Herd has a Distinguished Record Dam

The Bellwood Herd will be dispersed at Bellwood Farm, Bridgeport (near Philadelphia,) Pa., on MARCH 24—the day following the Brentwood Sale.

In the sale will be a consignment from the Brentwood Herd which will include a yearling heifer whose three nearest dams average 33½ lb.

CHARLES W. BRAY, Owner, Bridgeport, Pa.
Gue & Baxter, Auctioneers

E. M. Hastings Co., Sale Managers, Pulaski, N. Y.

SCHILLING SPEAKING

Mr. W. L. Schilling, well-known Minnesota Holstein breeder, has made an extensive tour speaking in the interest of dairying. He spoke to the Holstein breeders during farmers' week at Perdue University, Indiana, and was at the annual meeting of the Indiana State Dairyman's Association.

From there he went to New York State, where he addressed gatherings of dairymen at Malone, Canton, Utica, Rochester, Buffalo, Jamestown, Howell, Norwich and at Wellsboro and Troy, Pennsylvania. From there he went to Maryland and Virginia for the Milk Producers' Associations of those states, addressing gatherings at Washington and Frederick, Md. Returning home he addressed the Chamber of Commerce at Columbus, Ohio, and three large gatherings at Evansville, Ind.

IN ALBERTA

Daisy Alcartra Segis, in the dairy herd of the provincial demonstration farm at Stony Plain, Alberta, has completed a 305-day milking period during which she produced 15,604 lb., or an average of 51 lb. a day. When freshened she made a high provincial record of 422.4 lb. milk, 23.59 lb. butter in seven days.

Hengerveld Pearl Nephile 5th made 18,421.3 lb. milk in 365 days as a two-year-old. When fresh she made 514.5 lb. milk, 23.12 lb. butter in seven days. The six-year-old Vrouke Mercedes has produced in 289 days 20,426.7, while another six-year-old, Creamelle Abberkerk Korndyke, has made 10,712 lb. milk in 139 days.

ENCOURAGING DAIRYING

The First State Bank of Keenesburg, Colo., has agreed to invest $50,000 in Holstein cows which will be distributed among the farmers of southeastern Weld County. The stock is to be distributed without any initial cash payments; the bank will be paid out of cream checks on a long-term plan. A herd sire will be owned by the bank and will be kept at the farm of Mr. F. M. Harter, one of the bank directors who is in charge of the project. The first four carloads consisting of 80 cows and heifers arrived at Keenesburg, February 10th.

WILLIAMS FARM DISPERSAL

The dispersal sale of the Williams Farm herd of Holsteins, held at Lynn, Pa., February 14, was a great success. Fine weather contributed its favorable influence. Forty-four animals, including 17 under a year, were sold for a total of $12.220, an average of $275 per head. The 27 animals over one year of age brought $8,995, or $333 per head; 19 animals sold for $300 or over, averaging $388 per head.

The highest price paid was $1,000, by J. B. Whitlock, of Pittston, Pa., for Ridge Farm Mary Segis Rag Apple. She is a daughter of Tobe Rag Apple Korndyke and from DeKol Hengerveld Burke, a 32-lb. daughter of King Segis Hengerveld DeKol Burke. Ridge Farm Rag Apple Clothilde, by the same sire, sold for $700, to W. E. McMeen, of Port Royal, Juniata County, Pa. Adams & Fettig, of Mifflintown, Juniata County, bought the heifer calves from both these cows, paying $365 and $400. Eugene Davenport, of Plymouth, paid $690 for a daughter of King Hengerveld Hartje.

Well informed people said this was the best sale held in the East for several months. Certain it is, that people were present from all over the East and as far west as Wisconsin. They were attracted by the health conditions of the herd and the liberal retest privileges offered by R. Bruce Williams, the owner. The individuality and breeding of the animals together with the efficient work of Colonel George W. Baxter as auctioneer and E. C. Brill as pedigree expert, were other factors making this sale a success.

SALE BOOSTER

One of the most loyal supporters of the sale ring is James Male of Solvay, New York. There are very few sales held in New York State at which Mr. Male is not a bidder and usually a buyer, and he can generally be counted upon to consign if requested. Mr. Male usually buys low priced animals but occasionally varies this by getting a real good one. No matter how the sale goes, Jimmy, as he is generally called by those who know him, never lets his good natured smile pass from his face. We have never known him to raise his voice above a conversational tone.

The Male herd consists of nearly five hundred head. The herd sire is Christmas Belle King, a son of Pietertje Hengerveld Segis and Otego Valley Christmas Belle, 651.2 lb. milk, 40.51 lb. butter in seven days.

A former herd sire of the Male herd was King Burke of the Pontiacs, a son of the King of the Pontiacs and Burke De Kol Pohlcrest 32.51 lb. This cow made two different seven day records above 32 lb.; made 29.36 lb. in seven days as a four-year-old; 28.82 lb. as a three-year-old; and 26.63 lb. as a two-year-old. There are many of her descendants in this herd.

The dairy cow's the cow for me;
She pays the grocery bills.
She lifts the mortgage, keeps me free
My life with pleasure fills.

SCOTT'S SOY BEANS

This is the year to plant Soy Beans. The price has never been lower. Sure to produce a profitable crop and this is needed as never before.

Soy Beans are excellent for *Hay - Pasture - Hogging Off with Corn-Forage and Silage.*

Nothing surpasses Soy Beans for Soil Improvement.

Write to-day for prices and a description of the various kinds.

BACKUS CLASSIC SALE

The weather hoodoo that seems to exert its baneful influence over the Liverpool Sale Pavilion was again in evidence at the Breeders' 1922 Select Classic Sale, February 22d and 23d.

On the first day of the sale, rain fell a number of times and froze as it fell. The roads were a glare of ice and many who had signified their intention to come, stayed away fearing accidents. While the weather was better on the second day, yet there were occasional squalls and one time during the afternoon there was a driving rain storm.

The sale was managed by R. Austin Backus. George Baxter was auctioneer with Roscoe Lee in the ring. The trio worked hard with the small attendance but it was difficult to get up any enthusiasm. In all, 130 animals were sold for $23,065, an average of $177.42.

The sensation of the sale was King Walker Lyons Joh, consigned by Hawley & Murphy. This was quite a good-looking bull, nicely and evenly marked. His dam, Highland Burke Joh, had freshened again as a senior four-year-old and was on test at the time of the sale, running at a forty-pound gait. At every testing the telephone was busy until those who were acquainted with Mr. Murphy found out what she had milked and how she had tested. When the young bull was led into the sale ring on the afternoon of the second day, she had 22 milkings in and had 25,713 lb. fat to her credit or 32.14 lb. butter, a 41 lb. gait. That noon she had milked 21.3 lb. and tested 5.3%. The representative of the National Association, Mr. Howard Judd was present and the re-test supervisor arrived during the sale. H. A. Moyer started the excitement with a bid of $500 and this was rapidly raised until a three-cornered duel between R. J. Stevens, H. A. Moyer and George Page of Cuyler, N. Y. resulted in Baxter striking off the bull to Mr. Page for $1900.

Mr. Page also purchased the highest priced female, Canary Prilly Walker consigned by Fairbank Brothers of East Syracuse. She was straight as a line on the back, a light colored cow just fresh with a bull calf by her side. Her dam, Betsy Lamb Prilly, is in the Morris herd at Woodland, California and it was announced that she had just made 25.056 lb. milk and nearly a thousand pounds butter in 10 months, thereby making a new world milk record for that length of time. She is one of the greatest show cows living and had won a number of grand championships at large fairs, including the California State Fair. While we doubt the daughter will ever be as good as her mother yet the price of $500 was real low for her.

Albion Sylvia Pietertje consigned by R. J. Stevens went to George Abbott of Cortland, N. Y. She was a very straight, light colored animal sired by Inka Sylvia Beets Posch and was therefore a sister to May Echo Sylvia. She was fresh February 15th with a heifer calf which was not sold with her. She had no record but Mr. Abbott thought so much of her that he paid $450 for her.

Pelletier Pontiac Daisy was a big three-year-old consigned by R. C. Melvin. Her dam, Dairy Thrysa DeKol had a seven-day record of 32.98 lb. and her sire was by Spring Farm King Pontiac 5th from the 35 lb. cow, Woodcrest Dora DeKol. J. T. Perry of Amboy, N. Y., obtained her for $450.

The names and addresses of the purchasers and names of the animals bringing $150 or more are as follows:

DOTYFARM

Dotyfarm is the herd prefix used by Edward E. Doty and Sons, Incorporated of Geneseo, N. Y. The Doty herd is one of good quality. One heifer in this herd, Sunnybrook Dolly Ladoga, headed the Livonia Dairy Improvement Association for January making 96.9 lbs. fat, 2,154.4 lbs. milk during the month. She is a grandaughter of Prince Echo Sylvia who is the sire of Madam Pauline Sylvia, 30.52 lb. butter in seven days, 126.38 lb. butter in 30 days at four years and 27 days old.

The herd sire at Dotyfarm is Carnation King Pontiac, a son of Carnation King Sylvia and Wilda Pontiac Ormsby. She has a seven-day record of 30.12 lb. butter, 665 lb. milk, and a yearly record of 18,944 lb. milk and 788 lbs. butter.

STUDYING HERDSMANSHIP

The Herdsmen's course at the Iowa State College is being taken by 40 students from nine different states besides England and Mexico. One of the students is C. E. Overstrud of Northfield, Minn., a member of the Board of Directors of the Minn. Holstein Breeders' Association.

HERE AND THERE

Three daughters of the Canadian sire Maplecrest De Kol Champion have recently made good records near East Elgin, Ontario, owned by three different men. The four-year-old, Queen Calamity Ormsby made 31.43 lb. butter, owned by Eugene L. Sweet of Belmont; the five-year-old Woodland Banostine Schuling made 27.88 lb. for George Van Patter of Dunboyne and the four-year-old Banostine Baroness made 26.44 lb. for Lloyd K. Laidlaw of Aylmer. Seven daughters of this sire now have seven-day butter records that average 30 lb.

They are sending Holstein cows to prison in the state of Washington. No! it isn't as bad as it first appears. The Western Washington hospital at Steilacoom is shipping twenty-two heifers, half grade and half purebred, to form the foundation of a dairy herd for the Walla Walla penitentiary. The plan is to raise all the purebred female calves and gradually sell off the grades until the herd is all purebred. A high-class bull will be placed at the head of the establishment.

The Idaho Home Owners' Company of Jerome recently purchased twenty head of purebred Holsteins from the Hart herd at Wendell and have placed them with Harold Vining on a 50-50 basis. They also bought eleven other registered cows at Montpelier and have placed them on the J. L. Walker farm, near Jerome. This company plans to do all it can to populate the district with dairy cattle and is obtaining the financing through the War Finance Corporation.

A fire near Hagerstown, Maryland, February 9th, did damage estimated at between $40,000 and $50,000 and incidentally destroyed some fifty head of registered Holsteins including a $1,000 bull, on the farm of J. Forney Young, tenanted by Chester Stouffer.

A state record for Alabama is claimed for Anselica Colantha De Kol 2d, No. 484,750 for producing 102.4 lb. milk in a day and averaging more than one hundred pounds a day for five days. She is owned by P. S. Hain of Selma and is said to be the first cow that ever made 100 lb. of milk in a day in official test in the state of Alabama.

Lady Miller Colantha, owned by Dr. W. T. Phy, of Hot Lake, Ore., has just made 633.7 lb. milk and 33.5 lb. butter in seven days as a five-year-old.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Continued from page 169)

KAYEWOOD DISPERSAL

Owing to the quality of the herd, the dispersal sale of the well-known Kayewood herd at Walworth, Wisconsin, February 22, was expected to bring buyers from long distances. The weather conditions were very unfavorable at sale time; rain fell most of the day, freezing as it fell, and the roads were covered with ice. The fifty-four head brought $14,625, an average of $270.83. This includes three cows over ten years of age, several small bull calves and several cows with defective udders.

As was expected, the herd sire, Sir Echo Sylvia Leeds, topped the sale, being struck off for $2,525 to A. G. Russell, Janesville, Wisconsin. This bull had quite a show record. He was sired by Champion Echo Sylvia Pontiac and his dam was Lady Pontiac Allie, a 26.38 lb. cow, sired by Woodcrest Sir Clyde, from a 32-lb. daughter of King Pontiac Artis Canada.

Dakota Johanna Korndyke Ormsby was highest priced female. She was a granddaughter of Sir Piertertje Ormsby Mercerdes 38th and was from the 33-lb. cow, Rilla Korndyke Ormsby. Mr. Russell purchased this cow for $625. W. H. Wilson of Stevens Point gave $525 for the twice 30-lb. cow, Kayewood Jessie Colantha. J. A. Craig, Janesville, paid $410 for the two-year-old heifer, Kayewood Gertrude Echo Sylvia, a daughter of the herd sire from a strongly bred Kayewood cow. Kayewood Gwendolyn Pontiac went to D. A. Menzies, Janesville, for $400, while W. J. Funk, Avalon, paid $405 for Kayewood Gwendolyn Ollie, a ten-months-old daughter of this cow, sired by Iowana Sir Ollie.

This herd was one of the most noted in Walworth County and nearly every animal of it had several generations of Kayewood breeding behind it.

The auctioneers were Haeger and Mack, with J. G. Voss as pedigree man. The herd was accredited and the cattle was sold with a sixty-day retest privilege. Nearly all the cattle stayed in Wisconsin but some went to Illinois and Missouri.

The animals bringing $200 or more with the names and address of their purchasers follow:

	Sir Echo Sylvia Leeds, 3 yrs., A. G. Russell, Janesville, Wisconsin.	$2525
1	Kayewood Bettina Korndyke, 11 yrs., D. A. Menzies, Janesville, Wisconsin.	240
4	Kayewood Bettina Echo Sylvia, 1 yr., D. A. Menzies.	270
5	Kayewood Maud Korndyke, 10 yrs., Lee Kyburz, Lake Beulah, Wisconsin.	225
6	Kayewood Whisper Pontiac, 3 yrs., W. S. Libbey, Zenda, Wisconsin.	285
7	Kayewood Maud Pontiac, 5 yrs., D. A. Menzies.	325
9	Kayewood Queen Korndyke, 10 yrs., A. G. Russell.	200
10	Kayewood Doris Pontiac, 3yrs., Neil McLean, Elkhorn, Wisconsin.	240
12	Kayewood Thankful Pontiac, 1 yr., A. G. Russell.	225
13	Kayewood Highland Colantha Queen, 7 yrs., Lee Kyburz.	350

46	Kayewood Gwendolyn Pontiac, 4 yrs., D. A. Menzies.	400
47	Kayewood Gwendolyn Ollie, 10 m., W. J. Funk, Avalon, Wisconsin.	405
53	Kayewood Erma Echo Sylvia, 2 yrs., D. A. Menzies.	320

PRIZEWINNER AND PRODUCER

At the National Dairy Show held at Columbus, Ohio, 1918, W. H. Byron of Bartlesville, Oklahoma, took a fancy to a yearling heifer exhibited by M. R. Evans of Hinckley, Ill., who was showing a few members of his herd. The heifer was K. S. P. Beets Lillian, a daughter of King Segis Pontiac, and she won first prize in her class. Mr. Byron, after you have known him ten minutes you will be calling him "Bill", is naturally a farmer but became interested in oil and devotes most of his time to that business. He paid a good long price for the heifer, took her back to Oklahoma, and for a time had her kept around at different dairies around Bartlesville but finally took her to his own little place. She freshened lately and was put in official test which was supervised by Professor Carter of the State Agricultural College and the principal of Copan high school. She made just a little better than 22 lb. butter in seven days and 41½ lb. butter in two weeks. Mr. Byron claims this is the best record ever made in the state of Oklahoma. There are higher record cows in the state but they made their records before they were purchased by Oklahoma cattlemen. The heifer is being used as demonstration lesson to students in the Agricultural College of the Copan high school.

FIRST IN COUNTY

The first accredited herd certificate given in Sioux County, Iowa was awarded to George Brewster of Grant Township. The Brewster herd is the second purebred Holstein herd in the Sioux City district, which consists of twelve counties, to get on the accredited herd list.

At the present time there are thirty herds on the waiting list in Sioux County.

Four pounds of butter a day for a month is announced as the performance of a Holstein cow owned by William Axsell of Richmond, Va. It is planned to show this great producer at the Made-in-Richmond Exposition and make her the main feature in the exhibit of the Milk Producers Association.

FINDERNE STOCK FARMS

WHERE WORLD CHAMPIONS ARE BRED AND DEVELOPED

HOW FINDERNE CATTLE LOOK IN PASTURE

But come and see them in the barn, examine them carefully and you will see the reason why this herd produced such world champions as Finderne Pride Johanna Rue—1,470.58 lb. butter in a year; Finderne Holingen Fayne, 1,395.06 lb. butter as a junior three-year-old; and Finderne Mutual Fayne—1,200.63 lb. as a junior two-year-old. To head your herd you need a bull of FINDERNE QUALITY, sired by King Valdessa, whose two nearest dams average: 7 days—Butter, 43.036 lb.; Milk, 640.25 lb. 30 days—Butter, 167.894 lb.; Milk, 2,625.15 lb.

FINDERNE STOCK FARMS, BERNHARD MEYER, Owner **Finderne, New Jersey**

Merryall Farms

Cattle from this establishment make good wherever they go.

A cow bred in this herd is LILITH GEM KOLKLUFF 22,247 lbs. of milk; 851 lbs. of butter, 365 days.

We sold her to the Pennsylvania State College and there she made her great records.

Cattle of this kind make money for those who buy them.

Come and look over our stock.

LACKAWANNA COUNTY HOLSTEINS

The herds of Lackawanna County consist of stock directly descended from cattle imported direct from Holland in early Holstein days by old time Lackawanna County breeders —pioneers of the breed.

These men were capable judges and selected their animals for type, individuality and producing capacity; desirable characteristics readily apparent in the present cattle of the county.

Lackawanna cattle are healthy—many of the herds are under Federal supervision.

Quotations will be cheerfully given on single animals or carloads—and it is a pleasure to show the goods.

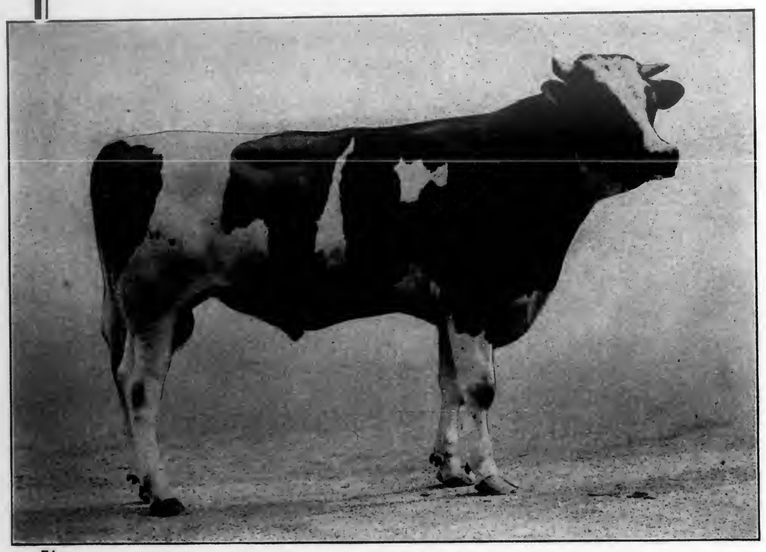
FOUR GREAT PRODUCERS OF THE HILLSIDE HERD
WILKES-BARRE, PENNA.



THE 1922 SALE

Syracuse Sale Pavilion April 11 and 12

The Continuation of a Series begun in the Spring of 1913 whose offerings have proved generally satisfactory to the buyer, a sixty-day guaranty sale of unblemished animals.

THE ENTIRE MOYERDALE HERD, consisting mainly of two-yr-old and three-yr-old heifers and headed by the young sire, Empire Segis will be a feature of the sale.

EMPIRE SEGIS, born Mar. 26, 1919 is a son of the 33-lb sire, King Joh, which makes him a brother to the new 40-lb senior4-yr-old, Highland Burke Joh—a heifer that traces to King Segis six times and to Prilly three times. Empire Segis is a Prilly-bred bull, tracing directly to King Segis not less than four times. The new California World's Record 40-lb junior 3-yr-old, Louise Alcartra Prilly, likewise represents the King Segis-Prilly combination, and so does the wonderful 37,000-lb cow, Segis Pietertje Prospect. The King Segis-Prilly cross is a combination that gets results. Empire Segis is bred right. His dam is a 33.63-lb daughter of King Lyons and her dam is a 29.24-lb 3½-yr-old daughter of Judge Hengerveld DeKol.

In this sale of around 200 head will be an unusual proportion of large producing cows soon due to freshen--cows of extra size and capacity, deep-bodied, rugged, level of udder, and of pronounced capacity. One consignment represents the pick of over 400 head. Most of the entries are from herds under Federal supervision. In the sale are many daughters of 30-lb sires of note and daughters of excellent record dams--up to 35.36 lb, also several young bulls from 30-lb dams.

THE SPRINGDALE HERD

Built up during the past sixteen years on a basis of profitable production and re-production

Present Herd Sire

WOODMONT ECHO SYLVIA CHAMPION

His sire, Sir Pietje Echo Sylvia, is by Champion Echo Sylvia Pontiac and is therefore a brother to Eco-Sylv Belle, 31.15 lb. as a junior two year old, the present World Champion in her class.

His dam, Butter Boy Empress, made 30.27 lb. butter in seven days, has milked 100 lb. in a day and was first prize aged cow, first in the A. R. O. class and Grand Champion at the 1921 New York State Fair. Judge Haeger says she is one of the three best cows shown last year.

Most of our young animals are by

KING TWEEDE SPRING FARM

His sire is Spring Farm King, full brother to the former World Champion and first 44 lb. cow; regarded as one of the best young sires of the breed.

His dam, Dressie Lady Pontiac, has a record of 30.04 lb. butter, 614.8 lb. milk made in seven days and is full sister to the 33.98 lb. cow Dressie Princess Pontiac. Their sire is Spring Farm King Pontiac. Daughters of KING TWEEDE SPRING FARM now in test are making a splendid showing under real dairy conditions.

Our older cows are daughters of

TOBE RAG APPLE KORNDYKE

Son of Christmas Tobe, 2d, 31.66 lb. butter in seven days and former World Champion ten year old. She is also the dam of Lady Tobe De Kol, 36.59 lb. butter in a week, 141.24 lb. butter in thirty days as a senior four year old, both being World Records when made. She in turn is dam of Geraldine Rag Apple Korndyke, 30.21 lb. butter in seven days, also as a four year old. Here is large production, generation after generation.

Animals from this herd will make good anywhere

VOL. I. HARRISBURG, PA., MARCH 22, 1922 No. 6.

HILLSIDE FARMS

HILLSIDE Farms is one of the oldest and most famous Holstein breeding establishments in the country. The Hillside and Springbrook Farms, which are really one establisment, are located at Trucksville, just outside of Wilkes-Barre, Pa., and are owned by J. N. Conyngham, a business man of that city. Mr. Conyngham joined the National Association in 1904 and at one time was honored by being elected director.

The Hillside herd furnished the first cow in Pennsylvania to average four pounds of butter a day for a week of official test. She was Vander Lei Superb 2d, and made 28.91 lb. butter in the seven days. The first Pennsylvania thirty-pound cow, Hillside Annette, 30.29 lb., was bred and made her record in this herd and some of the present members of the herd to-day are her decendants. Another famous member of the herd was Hillside Esther, the first cow to have five A. R. O. daughters, each with a seven-day butter record above twenty-one pounds.

A number of splendid sires have spent their lives in this herd. Partly because they did spend all their time in the Hillside herd is the reason that more is not known of them. If they had changed hands several times and did service in a number of herds they would have had more daughters and so would have been better known to the rank and file of Holstein breeders. One of the earlier sires, Sir Count Arthur, is credited with eleven daughters away back in volume 25 of the Blue Book and if you will look these up you will see that no less than nine or 82%, have seven-day records above 20 lb. When these records were made, an equal percentage of twenty-pound daughters could not be shown for any sire with ten or more daughters in the official list.

The greatest imported cow known to breeders of to-day is Pietje 22d who is the only cow imported from Holland that has made a thirty-pound official seven-day butter record. At time of importation she had been bred to the Holland bull, Mazeppa, and in due time dropped a son which was named Woodcrest Pietje, and this bull stood for a number of years at the head of Hillside herd. The older members of the herd consist mainly of daughters of this bull. Hillside Saxon with 32.29 lb. butter, 628.7 lb. milk and Hillside Pietje Mary, 30.29 lb., butter are two sired by him.

Another good bull with several daughters in the Hillside herd is Dutchland Sir Lyons Hengerveld, by Colantha Johanna Lad from Blanche DeKol Hengerveld, a 32.2 lb. daughter of Pietertje Hengerveld's Count De Kol. Pietertje Hengerveld's Count DeKol has ninety-nine A. R. O. daughters and another tested daughter in the Canadian herd book, while everyone knows that Colantha Johanna Lad has been a century sire quite a number of years.

The present herd sire is King Pontiac Maple Knoll Ormsby, a son of King of the Pontiacs and Maple Knoll Helen, a 33.16 lb. daughter of King Korndyke Hengerveld Ormsby. This bull is a very handsome, long bodied, dark colored fellow and is certainly bred in the purple. There are a number of his heifers in the herd that look as though they would make splendid records when the right time comes. A son of this bull, Hillside Pontiac Korndyke, born April 9, 1921, is nearly ready for service and is a very straight, handsome animal. Hillside Farms own an interest in his full brother, Hillside Ormsby Pontiac Korndyke, who stays part of the time in the herd of Alex Murdock and Son at Wyoming. The dam of these two full brothers is Hillside Saxon, 32.29 lb. butter, 628.7 lb. milk in a week, daughter of Woodcrest Pietje and of Hillside Annette, Pennsylvania's first thirty-pound cow. Another young bull that may be kept for service is a son of Hillside Pietje Honora. This cow made 29.77 lb. butter in a week, her milk averaging 7.05% butter fat. Hillside Pietje Honora as a four-year-old produced 104 lb. milk in a day and while making a seven-day record of 27.85 lb. butter, milked 635.3 lb., averaging over ninety pound of milk a day. Superintendent Honeywell's pet diversion is figuring out how much butter this cow will make if he ever manages to get her milking as she did as a junior four-year-old and testing as she did at eight years old.

The highest record ever made in the Hillside herd was made by Hillside Saxon two years ago, at which time she made 628.7 lb. milk, 32.29 lb. butter in a week. Last spring this cow made 124.58 lb. butter, 2,568.7 lb. milk in thirty days but did not quite reach her previous best seven-day record. She is a very milky cow of high class individuality and is the dam of Hillside Lady Saxon, a 23 lb. two-year-old and one of the herd's show animals. Thirty-six cows were tested at this establishment during the 1921 season and of these, 26 averaged over 4% butter fat when making record. There are no long time records made but the herd average as shown by private milk records, is 18,000 lb.

Four of the great producers developed at Hillside Farm are shown in the illustration adorning the front cover of this issue. Reading from left to right they are Hillside Lady Saxon, Pocono Constance Pietje, Hillside Pietje Honora and Hillside Saxon.

Hillside Lady Saxon No. 48,153 is a daughter of Dutchland Sir Lyons Hengerveld and Hillside Saxon. At two years four months and two days old she produced 23.77 lb. butter, 496 lb. milk in seven days, 96.83

lb. butter and 1,843.1 lb. milk in thirty days. Both her seven- and thirty-day butter records were Pennsylvania State records in the junior two-year-old class at time of making.

Pocono Constance Pietje No. 463,475 as a senior two-year-old produced 24.87 lb. butter, 526.8 lb. milk in seven days; 101.25 lb. butter 2,233.9 lb. milk in thirty days. Her thirty-day butter record was the state record in her class at time of making. She is a daughter of Hillside Pender Pietje and Pocono Constance 2d, who has just made 574.6 lb. milk 30.39 lb. butter in seven days as a five-year-old.

Hillside Pietje Honora No. 187,905 is another daughter of Woodcrest Pietje and her records have already been given. Her fat test of 7.05% has, never been equalled in official test by any other Pennsylvania Holstein.

Hillside Saxon No. 207,478 is the dam of Hillside Lady Saxon and is a daughter of Woodcrest Pietje and

HILLSIDE PIETJE HONORA

29.77 lb. butter in seven days at 8 years, average test 7.05%, 104 lb. milk in a day, 635.3 milk in seven days at 4 years old. Owned by Hillside Farms, Wilkes-Barre, Pa.

Hillside Annette, the first Pennsylvania thirty lb. cow. She has demonstrated her producing qualities several different years. As a two-year-old she made 23.13 lb. butter in a week averaging 63 lb. milk a day. Tested again as a seven-year-old she made 628.7 lb. milk, 32.29 lb. butter in a week; 2,477.6 lb. milk and 117.53 lb. butter in a month, and she increased this last spring to 124.58 lb. butter, 2,568.7 lb. milk in the thirty day period.

There are 400 acres in the Hillside and Springbrook Farms but at least 100 of this is timberland. The herd consists of 125 head of which 35 are Jerseys and 90 are Holsteins. The milk is sold in Wilkes-Barre and is retailed as grade-A milk at twenty cents a quart, while the cream brings $1.20. The bacterial count is kept very low. On January 26th of this year there were four samples tested in Wilkes-Barre, the lowest showing a count of 500 and the highest was only 1,600. Four samples were taken February 2d, and these ranged from 1,000 the lowest to 4,500 the highest, or away below the required minimum. Superintendent Honeywell attributed part of this small bacterial showing to the liberal use of the disinfectant "Sterilac" but we are inclined to think that a great deal of the credit is due to Mr. Honeywell and his efficient corps of assistants.

D. P. Honeywell, the superintendent of Hillside Farms is well-known to breeders of Holsteins, in fact, to cattlemen everywhere, as he has been in charge of high-class exhibits at big eastern fairs for many years and for ten years was in charge of the great Carpenter show herd. He owned a small herd of his own but took charge of the Carpenter herd whenever it was exhibited. For the past four years he has been in full charge of Hillside Farms. Sometime we are going to try to get Mr. Honeywell to tell our readers some of his show ring reminiscences.

The buildings at Hillside, while large and spacious, are not at all pretentious. The floors are concrete but the most of the barn is wooden and similar buildings can be seen on many farms. Pennsylvania hills are famous for their beautiful scenery and Hillside Farms is surrounded by its share. Sometime we plan to be there in the summer and enjoy the hospitality of Hillside to the limit.

Signs of the Progressive Farmer

SPEAKING before the breeders, farmers and students attending the herdmen's course at the Oklahoma A. & M. College, E. N. Wentworth, livestock specialist with the great packing firm of Armour & Company, said:

"Ten years ago, the University of Illinois showed that, on 577 dairy farms, farmers using purebred bulls secured an annual labor income of $862; farmers using grade bulls secured an average annual labor income of $486; while farmers using scrub bulls secured only $170. Farmers using grade bulls were making only a little better than the average hired man's wage.

"The sign of the progressive farmer who is a benefit to his community and who contributes definitely to its upbuilding is the purebred sire.

"At the present time, approximately 50 per cent of all cows in America are bred to scrub bulls. Only 3 per cent of cattle, 1.3 per cent of sheep and 3.5 per cent of swine are purebreds. Scrub livestock cost American producers above $1,000,000 annually because of failure to transform farm produce economically into meat and milk, and because of their additional failure to produce products meeting the standard of consumer demand.

"The cost of the sire is seldom 10 per cent of the cost of the calf at birth, yet many breeders hesitate to increase this cost slightly when the income from the improved offspring will doubly or trebly pay the difference in the first crop."

"Marie is so modest she puts her pet dog out of the room while she is changing her gown!"

"The idea!"

"Well—it's a Pekingese."—*Washington (D. C.) Times.*

Waiter—Sorry, sir, it must have slipped in when they were shaving the ice.—*Wisconsin Octopus.*

America has two-third of the world's telephones and four-fifth of the world's wreng numbers.

City Operated Milk Plant

WELLINGTON, a city of 125,000 people in far-away New Zealand, owns its own milk supply, and plans not only to own and run the pasturizing and distributing plant but also the farms and cows from which the milk comes. The story was told recently by the dairy municipal manager, Henry A. Ward to Dean H. E. Van Norman, president of the World's Dairy Congress Association, while Mr. Ward was in Washington, finding out what he could about the scope of and plans for the coming World's Dairy Congress. Mr. Ward has been in this country since October, studying American milk machinery and methods of milk distribution.

New Zealand is noted for its socialistic experiments and so it was natural that a number of her forward-looking citizens accepted the leadership of the City Councilor, C. J. B. Norwood, when he proposed that Wellington go into the milk business. The milk situation was bad. The distributors purchased their supplies where they could and for the best prices they could, deliveries were uncertain in the winter time and the methods of handling were unscientific.

Through the latitude allowed it under the war regulations, the City Council took control of the milk situation on January 1, 1919, and invited Mr. Ward, then manager of the Wellington Dairy Farmers' Coöperative Association, to head the new venture. He had had 25 years' experience in dairy management to fit him to become the first general manager of the first city milk department in history.

To begin with he did three things. He arranged to make contracts with all the farmers who looked to Wellington as the market for their milk. He established a pasturization plant to treat the milk and he established a creamery fifty miles from town to convert the surplus milk into butter and cheese.

There was a small deficit in 1919, but the results were in all other respects so satisfactory, that the City Council decided to get a bill through the New Zealand legislature before the war regulations were abolished to enable it to continue and expand its activities in the milk field. This bill was passed in November, 1919, and went into effect the following January 1.

This bill gave the City Council a monopoly of the milk business in its own limits, with permission to license farmers who were producing milk within two miles. The Council was authorized to buy out the tangible assets of the 60 or 70 city distributors, but not their good will. So, it placated them by licensing them for 3 years. However, it zoned the city and grouped the dealers into a few companies. Their licenses expire next July, when the city will take over the delivery.

Mr. Ward came to America to prepare for the developments scheduled for next July. He explained that the profits which the city has made in the three years of its experiment not only cover the original cost of the undertaking, but are providing for extensive improvements. In July, the old two-wheeled delivery carts are to go into the scrap and their places are to be taken by up-to-date milk wagons; milk cans for ordinary deliveries are to give way to pint, pint and a half and quart bottles. Between now and July, the ground floor of the central pasturization plant will be remodeled and machinery installed to fill, cap and wash the bottles. Most of this new machinery will come from America.

A feature of his plan will be a novelty to American milk dealers. He expects to use tokens (metal slugs) in the sale of milk. The tokens will be of three sizes and will be sold at central agencies—grocery stores, etc.,—usually in sets of ten. Milk is now selling for about 14 cents a quart. When a change in price is required, it will be thrown on the lots of ten. This will allow for fractional changes without affecting the price of a single quart. Again, drivers will handle no money, and mechanical machines that will sort and count the tokens will simplify the city's book-keeping.

The next step contemplated by Wellington is to buy up dairy farms. The average holding of the New Zealand dairy farmer is 75 acres. Grass—fresh—or dried—is the staple fodder for the cattle. Now, the small farmers have to divide their attention between dairying and fodder-raising. The City Councilmen figure that big economies can be effected by the consolidation of a number of the small farms and they have the right under their bill to purchase and conduct dairy farms. This step would presumably lead to cheaper milk for the people. In discussing Wellington's experiment, Mr. Ward said:

"In taking over the milk business, we realized that, unless the city's milk supply was centralized, it could not be properly inspected. Under the old method, our inspectors took samples of milk from the cans at the railroad station and elsewhere; but it was obvious that the samples did not represent one per cent of the day's supply of milk distributed in the city. Now, through having all milk brought to our central pasturization plant, we can inspect and treat every gallon. Since we have been doing this, there has been a notable decrease in infant mortality. Our contracts with the milk producers—farmers and associations—which run from September to September, insures us an adequate and uniform supply of milk. The producers are permitted a monthly fluctuation of ten per cent. When a farmer falls below in his deliveries, we fine him the value of half a gallon for every gallon he is short. When he delivers too much, we try to divert the surplus to our creamery and save him loss.

"What we have done in Wellington could be done in any city, providing a practical man was put in charge with as free a hand as I have had."

"Well, are you making your bride happy?"

"I dunno. She seems to like me, but I make no hit with her dog."—*Judge.*

A bull calf born on the Arthur and Maxfield ranch near Hardwick, Cal. the latter part of January, weighed 142 lb.

lb. butter and 1,843.1 lb. milk in thirty days. Both her seven- and thirty-day butter records were Pennsylvania State records in the junior two-year-old class at time of making.

Pocono Constance Pietje No. 463,475 as a senior two-year-old produced 24.87 lb. butter, 526.8 lb. milk in seven days; 101.25 lb. butter 2,233.9 lb. milk in thirty days. City Operated Milk Plant

WELLINGTON, a city of 125,000 people in far-away New Zealand, owns its own milk supply, and plans not only to own and run the pasturizing and distributing plant but also the farms and cows from which the milk comes. The story was told recently by the dairy municipal manager, Henry A. Ward to Dean H. E. Van Norman, president of the World's Dairy Congress Association, while Mr. Ward was in Washington, finding out what he could about the scope of and plans for the coming World's Dairy Congress. Mr. Ward has been in this country since October, studying American milk machinery and methods of milk distribution.

New Zealand is noted for its socialistic experiments and so it was natural that a number of her forward-looking citizens accepted the leadership of the City Councilor, C. J. B. Norwood, when he proposed that Wellington go into the milk business. The milk situation was bad. The distributors purchased their supplies where they could and for the best prices they could, deliveries were uncertain in the winter time and the methods of handling were unscientific.

Through the latitude allowed it under the war regulations, the City Council took control of the milk situation on January 1, 1919, and invited Mr. Ward, then manager of the Wellington Dairy Farmers' Coöperative Association, to head the new venture. He had had 25 years' experience in dairy management to fit him to become the first general manager of the first city milk department in history.

To begin with he did three things. He arranged to make contracts with all the farmers who looked to Wellington as the market for their milk. He established a pasturization plant to treat the milk and he established a creamery fifty miles from town to convert the surplus milk into butter and cheese.

There was a small deficit in 1919, but the results were in all other respects so satisfactory, that the City Council decided to get a bill through the New Zealand legislature before the war regulations were abolished to enable it to continue and expand its activities in the milk field. This bill was passed in November, 1919, and went into effect the following January 1.

This bill gave the City Council a monopoly of the milk business in its own limits, with permission to license farmers who were producing milk within two miles. The Council was authorized to buy out the tangible assets of the 60 or 70 city distributors, but not their good will. So, it placated them by licensing them for 3 years. However, it zoned the city and grouped the dealers into a few companies. Their licenses expire next July, when the city will take over the delivery.

Mr. Ward came to America to prepare for the developments scheduled for next July. He explained that the profits which the city has made in the three years of its experiment not only cover the original cost of the undertaking, but are providing for extensive improvements. In July, the old two-wheeled delivery carts are to go into the scrap and their places are to be taken by up-to-date milk wagons; milk cans for ordinary deliveries are to give way to pint, pint and a half and quart bottles. Between now and July, the ground floor of the central pasturization plant will be remodeled and machinery installed to fill, cap and wash the bottles. Most of this new machinery will come from America.

A feature of his plan will be a novelty to American milk dealers. He expects to use tokens (metal slugs) in the sale of milk. The tokens will be of three sizes and will be sold at central agencies—grocery stores, etc.,—usually in sets of ten. Milk is now selling for about 14 cents a quart. When a change in price is required, it will be thrown on the lots of ten. This will allow for fractional changes without affecting the price of a single quart. Again, drivers will handle no money, and mechanical machines that will sort and count the tokens will simplify the city's book-keeping.

The next step contemplated by Wellington is to buy up dairy farms. The average holding of the New Zealand dairy farmer is 75 acres. Grass—fresh—or dried—is the staple fodder for the cattle. Now, the small farmers have to divide their attention between dairying and fodder-raising. The City Councilmen figure that big economies can be effected by the consolidation of a number of the small farms and they have the right under their bill to purchase and conduct dairy farms. This step would presumably lead to cheaper milk for the people. In discussing Wellington's experiment, Mr. Ward said:

"In taking over the milk business, we realized that, unless the city's milk supply was centralized, it could not be properly inspected. Under the old method, our inspectors took samples of milk from the cans at the railroad station and elsewhere; but it was obvious that the samples did not represent one per cent of the day's supply of milk distributed in the city. Now, through having all milk brought to our central pasturization plant, we can inspect and treat every gallon. Since we have been doing this, there has been a notable decrease in infant mortality. Our contracts with the milk producers—farmers and associations—which run from September to September, insures us an adequate and uniform supply of milk. The producers are permitted a monthly fluctuation of ten per cent. When a farmer falls below in his deliveries, we fine him the value of half a gallon for every gallon he is short. When he delivers too much, we try to divert the surplus to our creamery and save him loss.

"What we have done in Wellington could be done in any city, providing a practical man was put in charge with as free a hand as I have had."

"Well, are you making your bride happy?"

"I dunno. She seems to like me, but I make no hit with her dog."—*Judge.*

A bull calf born on the Arthur and Maxfield ranch near Hardwick, Cal. the latter part of January, weighed 142 lb.

INTENTIONAL SECOND EXPOSURE

Holsteins For the South

THE South has but recently taken up dairy farming on a large scale and the tendency among Southern feeders has been toward underfeeding rather than liberal feeding. The Holstein cow is adapted to rather level rich pastures, and where liberal feeding is practiced. Given these conditions she will produce more milk on the average and at less cost than any other dairy breed.

The Holstein cow is a heavy consumer of roughage and as the South can raise roughage and pasturage more months out of the year than many other sections of the United States she meets the conditions required by the South. As Southern feeders compete more and more with the feeders of the other dairy sections, then the feeding of cattle will cease to be an irksome chore and be considered an interesting science. When this time arrives the slogan, "Holsteins for the South," will be on every tongue.

Holstein cattle are noted for their vigor, strength of constitution breeding qualities, and high production; in fact this breed holds nearly all world records. The Holstein breed can show more 1,000 lb. cows, that is, cows that have produced a 1,000 lb. or more of butter fat in a year than can any other breed.

What Holsteins are able to do in the South can best be shown by what they have done in Tennessee during the past year. The first registered Holstein cow in the state to be put on semi-official test by a private breeder was started on her year's work on Dec. 5, 1920, in Blount county, Tennessee. Others were put on test in this county during the succeeding months. For the first six months of 1921, the Holsteins in Blount County led all the cows on semi-official test in the state of Tennessee; both for milk and butter fat production; although some months there were nearly 300 cows of other breeds, there never were more than eight Holsteins on yearly test.

The first Holstein cow to be put on year test in the state completed her year's work with 17,760 pounds of milk and 578.27 pounds butter fat, which is a state record for her age over all breeds, she being a three-year-old. The remarkable part about this record is the fact that the other breeds have been carrying on semi-official year testing in the state for a long time, and then the first Holstein cow put on year test takes the state record. It only goes to prove that the Southern Dairymen's slogan should be "Holsteins for the South."—*Savannah Georgia News.*

Suggested Amendments

MR. F. G. JOHNSON of Columbus, Ohio, in accordance with the by-laws has sent to the Sectary of the Association, notice of amendments that he wished incorporated in the call for the 1922 annual convention which will be held at Kansas City next June. Mr. Johnson believes that the change in transfer fee, if adopted, would not only result in more money being turned into the coffers of the association but would have a tendency to deter by-bidding or running up at public sales or fixing fictitious prices at private sales.

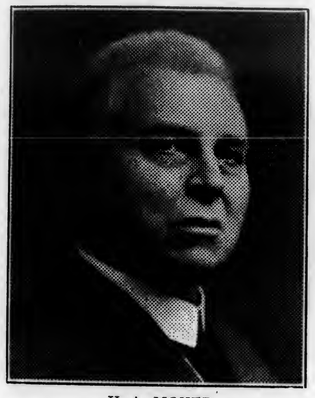
Any amendment enacted by the delegates should have the full approval of the members. Mr. Johnson suggests that the readers of THE HOLSTEIN BREEDER AND DAIRYMAN express their opinions on such amendment in its columns. We should be pleased to print any letters for or against the proposed amendment or any suggestions where the proposed amendment can be changed or improved. In this connection we may also say that our columns are open to any of our readers who wish to express opinions on any matters that are likely to come before the delegates at the forthcoming annual meeting.

Mr. Johnson's proposed amendments are:

TO AMEND ARTICLE 4, SECTION 47, TO READ AS FOLLOWS:

Fees for Transfer.—A register of transfer of ownership of any animal registered in the Herd Book will be made on application of the owner; if made by members of the corporation the charge will be fifty cents for all animals that sell for one hundred dollars or less; for all animals that sell for more than one hundred dollars the fee shall be increased twenty-five cents for each one hundred dollars or fraction thereof, and if made by a non-member the fee for each transfer will be one dollar for all animals that sell for one hundred dollars or less; for all animals that sell for more than one hundred dollars the fee shall be increased fifty cents for each hundred dollars or fraction thereof, provided the application is received within six months of date of sale; if after that, the charge will be one dollar for all animals that sell for one hundred dollars or less, and for all animals that sell for more than one hundred dollars the fee shall be increased fifty cents for each one hundred dollars or fraction thereof to members and two dollars for all animals that sell for one hundred dollars or less; for all animals that sell for more than one hundred dollars the fee shall be increased one dollar for each hundred dollars or fraction thereof to non-members. Each application for transfer shall state the selling price of the animal and any person misrepresenting the selling price shall on conviction thereof be debarred from all the privileges of the association in the future, also the selling price of the animal shall be put on the transfer certificate, the said certificate of transfer to remain the property of the owner when the said animal is again sold. The form of the transfer shall remain as in the past with the above mentioned changes.

TO AMEND ARTICLE FOUR, SECTION 66, TO READ AS FOLLOWS:



Transfers. To Members.—If filed within six months of date of sale, fifty cents for all animals that sell for one hundred dollars or less and for all animals that sell for one hundred dollars or more the fee shall be increased twenty-five cents for each one hundred dollars or fraction thereof; if filed after six months from date of sale, one dollar for all animals that sell for one hundred dollars or less, for all animals that sell for over one hundred dollars the fee shall be increased fifty cents for each one hundred dollars or fraction thereof.

Transfers. To Non-Members.—If filed within six months of date of sale one dollar for all animals that sell for one hundred dollars or less and for all animals that sell for over one hundred dollars the fees shall be increased fifty cents for each one hundred dollars or fraction thereof; if filed after six months from date of sale two dollars for all animals that sell for one hundred dollars or less and all animals that sell for more than one hundred dollars the fee shall be increased one dollar for each one hundred dollars or fraction thereof.

Moyerdale—A History-Making Holstein Herd

BY E. M. HASTINGS

IT was thirty-seven years ago when H. A. Moyer bought the farm that has since become widely known as the Moyerdale establishment. Fifteen years later the foundations were laid for the Moyerdale herd of Holsteins. At one of Hunt's sales Mr. Moyer was sitting beside T. A. Mitchell and on Mr. Mitchell's judgment bought the cow, Hartog DeKol. Later he added Pleasant Valley Kate to the herd. In the early days of A. R. O. tests a number of A. A. Hartshorn's cows made records that attracted wide attention, and Mr. Moyer, ambitious to make a right start, visited Mr. Hartshorn and bought some of the animals that were destined to become famous at Moyerdale. This purchase included such cows as Prilly and Lillian Walker, both comparatively undeveloped and at that time unknown to the general Holstein public. In the dispersal of the Averill and Gregory herd, Mr. Moyer paid $1,600 for the cow, Segis Inka—a price almost unheard of in auction sale history up to that time. The cow proved as valuable a purchase as Mr. Moyer could have made, because it was a daughter of this cow that became the dam of King Segis, the bull that is thought of whenever Moyerdale is mentioned and the bull that in the opinion of most breeders ranks as one of the three or four greatest sires of the breed. Grace Fayne 2d's Homestead made her 35.55 lb. world's record at Moyerdale, and here was developed the Blanche Lyons family with its 33-lb. and 34-lb. members. During recent years Moyerdale has been conspicuous on account of the A. R. O. work of its younger members, descendants of the King Segis, Prilly, Lyons and other noted foundation animals comprising the earlier herd.

H. A. MOYER.
Syracuse, N. Y. King Segis and Moyerdale made him famous.

Mr. Moyer's success as a Holstein breeder is not due entirely to his ability in judging and selecting foundation animals and his exceptional skill in breeding and developing them to advantage. The Moyer reputation rests on a foundation of integrity and fair dealing that has been worth everything in the building up of the Moyerdale structure. The same thorough, painstaking, conscientious methods that made the Moyer wagon and the Moyer automobile dependable, were applied in the cattle business, and it is only natural that everywhere the Moyer product is recognized as quality goods. The Moyer brand stands for reliability.

A number of years ago Mr. Moyer, at the request of the breeders concerned, took charge of the arrangements for a national sale to be held in connection with an annual meeting of the Holstein-Friesian Association, and he did his work with such efficiency that the series was continued for some years under his direction. Without making the claim of elevating the public sale or undertaking to establish an already accepted theory that the best animals of the breed might profitably be sold in the auction ring, he conducted a number of sales that outclassed by far any that had ever before been held, in respect to quality of animals offered and prices realized; and by example if not by word Mr. Moyer demonstrated the value of honest salesmanship as applied to the Holstein auction industry.

In some of his later sales, Mr. Moyer closed out a considerable part of the Moyerdale herd, leaving in his stables only the younger animals which with some additions by birth comprise the present outfit—a herd made up mainly to-day of two-year-old and three-year-old heifers. The present herd sire, Empire Segis, is a typical Moyerdale product, being a son of the 33-lb. sire, King Joh and from a 33-lb. daughter of King Lyons (next dam 29 lb. at 3½ years). Empire Segis in appearance closely resembles King Segis—to whom he traces directly not less than four times. He is large for his age (he will not be three-years-old until the 26th of March), long-bodied and straight as a line. Of the females in the herd individual mention can hardly be attempted, but as an illustration of Mr. Moyer's atten-

MOYERDALE
The home of H. A. Moyer, and where King Segis made his reputation

tion to detail, the following which I quote from a letter regarding certain of his animals is characteristic,—"Number 11 (referring to a daughter of Empire Segis) is a remarkably bred animal, as you will note after you have tabulated her pedigree. She has seventy cows in her breeding which average over 30 lb.....She represents twenty years of my breeding, twenty years of A. A. Hartshorn's breeding, and fifteen years of Avondale Farms' breeding."

It may not be generally known but it is a fact that Mr. Moyer is credited with having originated, with the assistance of his friend, Mr. Averill, the idea of publishing a year-book containing lists of record animals classified by sires—an idea that was successfully carried out in the publication of the Blue Book.

Dairyman Develops Oregon Champion

THE sensational work of the Oregon cow, Stanhope Belle Johanna, has attracted a great deal of attention both in her native state and throughout the entire country. One reason is that she is owned by a working dairyman who was the breeder of both this cow and her dam, another reason is that Oregon is preeminently the Jersey state of the Union and Holsteins are very much in the minority in that section. Consequently the work of this cow was noted by agricultural writers in all sections of the United States and the publicity received was far more than it would have been if it had been sent out by a press agent. But let us tell the story of this animal and her work in her owner's own words.

"In the first place I wish to impress upon your mind the fact that I am just a small breeder and making a strong effort to get a reasonable start, but I believe I have laid the start for a good foundation and barring accidents and trouble, shall have a good start in a few years.

In 1910 I purchased a cow named Lunde Stanhope Belle who in due time dropped me three calves, among them one heifer. This heifer in turn dropped her first calf on June 27, 1914 which was named Stanhope Belle Johanna 282,677. She is sired by Model Paul Johanna 103,308, her dam's name being Crystal Brook Stanhope Belle 213,128. All these cows were splendid producers as well as good individuals, but unfortunately, I did not own the two older ones very long.

Previous to the work just completed Stanhope Belle Johanna had never received any development nor was she ever fed for heavy production. But in my own mind I was satisfied that she was a producer and capable of making a good record, but since I had never done any official record work, I was slow and timid about making a start. Not since 1918 had the cow stood dry neither was she in prime condition at the time of her last calving. As the cow was going onto seven years old I was urged and, about two weeks before freshening, finally decided to give her a seven-day record.

Stanhope as we call her, freshened on February 5, 1921, she was then six years, seven months and eight days old. She started on a seven-day test, making during this time 761.6 lb. milk and 29.38 lb. butter. However she continued to increase in production so that I called for a retest,which was started on the 9th of March and continued for thirty days during which time she made 859.7 lb. milk and 34.22 lb. butter in seven days and 3,560.6 lb. milk and 128.32 lb. butter in thirty days.

Her thirty-day record was started 32 days from the time she freshened and her best seven-day period began 44 days from freshening. She won $44.75 on these records in the Association tests. Her seven- and thirty-day milk records were exceeded only by one other cow in the tests of last year. Her seven-day milk record won me $24.50 and she was awarded the 20th prize of $20.25 on her seven-day butter record.

The highest 24-hour production during the thirty-day official work was 138 lb. milk. Since the short time

STANHOPE BELLE JOHANNA

32,453.8 lb. milk, 1,242.44 lb. butter in 365 days; 859.7 lb. milk, 34.22 lb. butter in 7 days; 3,560.6 lb. milk, 128.32 lb. butter in 30 days; Bred, developed and owned by H. G. Mullenhoff, Gresham, Oregon.

records were so gratifying I decided to continue the cow on yearly work which she finished on the 8th day of February 1922 with the following unofficial figures; 32,453.8 lb. milk, 1,242.44 lb. butter.

Unfortunately the cow strained a tendon in her left front leg, becoming very lame, which lasted for about five months. There were times when it was hard for her to stand up long enough to be milked. However, she finished her record milking 80 lb. per day where she started with only 74 lb.

I fed and cared for the cow myself for the first five months after which she was milked and cared for by Miss Hilda Stafanson, a young lady who certainly proved herself a good dairymaid. Miss Stafanson became much attached to the cow and took entire charge of her, consulting me occasionally when she thought it necessary.

The cow was fed on a commercial test feed together with a little oats and bran, coming through in wonderful condition. Her average daily grain ration was 24 lb. per day together with beet pulp, corn silage, kale and clover hay. She had a small barn lot in which to exercise.

Different people have told me that Stanhope would have taken first place as a producer had she had the care and advantages some others have had. However, I feel very proud of this cow, more since I bred, raised and developed her myself.

With a son of this cow as my present herd sire, I am expecting good results from my herd for he is sired by Segis Walker Matador, the Carnation herd sire.

Stanhope's production is not as yet officially reported but the following is her record as I have it:

				Milk	Fat

H. G. Mullenhoff, *Gresham, Oregon.*

Good Work, Mr. Jones

When Hugh Jones, the recently elected secretary of the Pennsylvania Federation of Holstein-Friesian Clubs, saw the Kansas City convention sale schedule he noticed that Pennsylvania was allotted only seven animals. This would debar the Keystone State from competing for the state herd prizes which require a minimum exhibit of eight animals. This was manifestly an injustice as Pennsylvania with 1,751 members of the National Association, ranks third as a Holstein state. Mr. Jones immediately filed a protest with W. H. Mott, of the National Sales Committee and the committee increased the Pennsylvania quota to eight. So now everyone is happy.

Monthly Comparison of Association Business

During the month of February the earnings of the Secretary's office fell short $316 of the January receipts but during the month more registration certificates and practically 2,000 less transfers were issued than there were in the previous month. There were 133 membership applications against 144 for January making a difference of $275, quite a little less than last year or two years ago. The most serious thing brought out by the Secretary's statement, a copy of which is appended, is the difference in the number of transfer certificates written in 1922 against the corresponding month of the two previous years, although perhaps it is only what we should expect considering the general business conditions.

WRITE OR WIRE FOR TERMS AND DATES

Girl Cow Tester

FAIRFAX County, Virginia, has the only woman cow tester in the Old Dominion State. She is Miss Olive McEnally of Herndon and she supervises the Fairfax County Association in which 522 cows are enrolled.

Miss McEnally took up her duties in wartime when her brother went into service. So well has she done her work that she still holds her position despite the fact that the Dairy Division of the Department of Agriculture is not in favor of woman cow testers, saying that they are not, by inborn aptitude or training, qualified to instruct farmers as to the details of feeding and dairy management, although the Division gives them full credit for cleanliness, neatness and accuracy.

Miss McEnally first attended the rural schools of her state, then took a course of Home economics in the Harrisonburg Normal School and later on enrolled for a special course given prospective cow testers at the Blacksburg Agricultural College. After being a tester for some time she enrolled for a short course at the Virginia Agricultural College for the purpose of gaining further knowledge that would help her in her work, as test supervisor. Her patrons subscribed a purse for defraying her expenses while she was fitting herself to be of further service to them.

That a test supervisor can be of great use to the dairyman of Virginia is shown by the fact that the average annual production of Virginia cows is estimated at around 4,000 lb. milk, and 150 lb. butter fat. The average testing association cow is credited with an average milk production of 5,670 lb. milk and 230 lb. fat.

There are quite a number of other states that have or have had woman cow testers. Wisconsin at one time had eighteen in the field and it is claimed that a Badger State girl, Miss Bessie Lipsitz was the first girl in the United States to follow this line of work. There are very few woman cow testers at the present time but one that will undoubtedly hold her job as long as she cares to is Olive McEnally, the official cow tester of Fairfax County, Virginia.

Free Seeds Again

ON March 9th the House put back into the Agricultural Appropriation bill the $360,000 item for free seeds which had been cut out by the committee which framed the measure. As a compromise, Chairman Anderson suggested that the amount be reduced to $240,000, claiming that the price of seed had dropped, but the majority would have their own way. The vote was 145 to 63.

There is no good real reason for this form of petty graft which costs the country practically a thousand dollars a day annually and is just a cheap sop thrown by congressmen to unthinking voters. The better city papers are nearly all against it or else laugh at the givers.

The Harrisburg *News,* a paper which circulates almost exclusively among city dwellers, has this to say while criticizing the local representative:

Action by the House which has put back in the agricultural appropriation bill the item for $360,000 for free seeds will revive other hearts that beat in the same type of politician. There are many of them in the House, small men with leather lungs, possessing a knowledge of some words and a sublime ignorance of the needs of the people. To this class the spreading of a layer of seeds over a congressional district brings the same self-satisfaction and ease of mind that accompanies the application of a sample of corn cure on the afflicted toe of a miser. The spreading costs nothing personally and may bring results.

Showers on Dairy Cows

DR. F. F. Showers, who is in charge of the Carleton Farms, Chowchilla, California, spoke at the Boosters' lunch, Merced, February 6th. In the course of his remarks, he said there are 21,000,000 dairy cows in the United States, of which one-third were kept at a loss averaging $7.25 a year, the second 7,000,000 were kept at a gain of $7.85 a year each, and the third 7,000,000 at an average annual profit of $26.82. He pointed out how necessary it is for the success of the dairy industry that dairymen should get rid of the cows on which they were losing money or else by better handling put them into another class.

He displayed charts showing the value of dairy products as compared with other foods. One chart showed how a ten dollar bill should be divided. He claimed that out of the ten dollars, $4.40 should be spent for milk, cheese, butter and ice cream. He told of the carrying of a large number of students at Carleton college through the flu epidemic without loss of life and he attributed this to the fact that they consumed large quantities of milk.

The Carleton Farms are owned by the Carleton College, Carleton, Wisconsin. Dr. Showers has been manager of the Carleton Farms since October last. It is planned to keep on these farms two hundred pure-bred Holsteins. The farm contains 800 acres and already 60 acres has been made ready for alfalfa.

Now is the Time

SPEAKING of the decrease in the number of dairy cattle in the state, the *Maine Farmer* says:

With the certainty that permanent success in agriculture rests upon some phase of livestock, the threatened reduction of dairy cows should not be allowed. The conditions underlying the dairy industry are going to be worked out to the betterment of every true dairyman. What is wanted is a stop to the use of bogus butter products in farm homes because it is not to be compared with pure butter in food value. Then there is opportunity for a stirring campaign for pure milk as against all substitutes. Never were the herds of Maine so free from disease as at the present time and it needs only that the food value of good milk be appreciated by consumers for the demand to increase. Advertise pure milk, guarantee pure milk, keep the food value of pure milk before the public. It is to-day the cheapest food product known and one of the very best. Now is the time to preach this gospel at every turn of the road and keep it up.

Munn on the Dairy Industry

AT the recent Dairymen and Dairy Manufacturer's Convention held in Saginaw, Mich., Hon. M. D. Munn, president of the American Jersey Cattle Club and of the National Dairy Council, made a number of important statements regarding the importance of the Dairy industry.

"The country is just beginning to realize," he said, "How its vitality, its manhood and its leadership in trade depends on proper diet and nutrition of its people, especially the children, and how much milk, butter and cheese, ice cream and other milk products contribute to the national health. The fact that 150,000,000 more pounds of creamery butter and about 50,000,000 more pounds of dairy butter were made in 1921 than in 1920, is an illustration of this realization by the country, even though the reduced prices of milk and its products in 1921 tended to stimulate consumption in some degree."

Judge Munn then showed by government reports that the average farmer received forty-two per cent more for dairy products in 1921 than during the five-year pre-war period. Beef cattle brought seven per cent more and hogs eleven per cent more than in the five year pre-war period; but corn, oats and barley, when sold in the open market, brought eleven per cent less. These grains when fed to dairy cows brought thirty-two per cent more in 1921 than in the pre-war period.

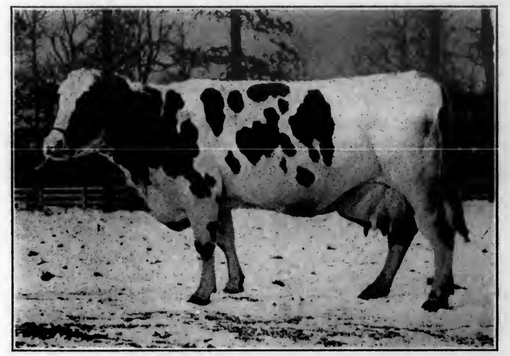
Warning to Livestock Owners

FOOT and Mouth Disease has been prevalent in continental Europe, and intermittently in England, for several years. The disease has again broken out in England and has spread into Scotland. Official advices indicate that with thousands of cattle infected with Foot and Mouth Disease in England and Scotland, those countries are confronted by the most serious outbreak experienced in thirty years.

While the Federal officials are maintaining a strict embargo against importations of animals and exposed materials from the infected countries and are making every possible precaution to prevent the introduction of Foot and Mouth Disease into the United States, there is always the danger of it being brought into our country through other channels.

Therefore, it is very essential for veterinarians, county agents, stockmen and others who come in contact with livestock to be on the lookout for any sign of Foot and Mouth Disease and to report promptly all suspicious cases coming under their observation.

Cattle, hogs, sheep or goats with sore mouths or feet should be regarded as suspicious and reported promptly to your veterinarian's office or to the nearest agent of the Bureau of Animal Industry.



Please pass the word along and thus help keep the country free from this devastating disease.

T. E. MUNCE.
State Veterinarian of Pennsylvania.

While wiring the residence of Contractor Henry Herman, Upper Mauch Chunk, Pa., a petrified cat was found in the framework of Lewis Meyers, an electrician.—*Harrisburg Evening News.*

Pennsylvania Milk Champion

Frenesta Creole Pontiac No. 331,613 is the holder of the Pennsylvania state record for both seven- and thirty-day milk production in the senior four-year-old class. She has a number of other good records. Her first appearance in the official list was made at the age of three years, eight months and ten days, at which time she produced 23.66 lb. butter, 549.3 lb. milk in seven days making 1,060.2 lb. milk in fourteen days. In ten months she produced 581.57 lb. butter, 14,921.6 lb. milk. She freshened again in a year and as a senior four-year-old made 30.89 lb. butter in seven days, 121.36 lb. butter in thirty days. Her milk records were 708.5 lb. for the week, 2,819.2 lb. for the month, both of which are state records for the class. Frenesta freshened again in just about a year at five years, nine months of age, and this time made

FRENESTA CREOLE PONTIAC

708.5 lb. milk in 7 days; 2,819.2 lb. milk in 30 days as a senior four-year-old; Pennsylvania state records. She has made more than 30 lb. butter and over 700 lb. milk two consecutive years.
Bred, developed and owned by F. R. Babcock, Gibsonia, Pa.

31.19 lb. butter, 718.6 lb. milk, thus becoming one of the few cows to make official records of over thirty pounds butter and over seven hundred pounds milk at two consecutive freshenings.

She was bred, developed and is still owned by F. R. Babcock, Chestnut Hill Farms, Gibsonia, Pennsylvania, and is one of three daughters in this herd of King Pontiac Hengerveld Ormsby that each made thirty-pound seven-day butter records.

Her dam, Frenesta Creole Queen 3d, has an official record of 18.47 lb. butter, 426 lb. milk. Her sire is by King Korndyke Hengerveld Ormsby, and his dam was Kip Jeweline, a twenty-eight pound daughter of the King of the Pontiacs with a record of 828.82 lb. butter in a year as a senior two-year-old. Her dam was Pontiac Jewel, a thirty-pound daughter of Hengerveld DeKol with a year record of 992.11 lb. butter, who with her full sister, Pontiac Artis, at one time were the only pair of full sisters with year records averaging over 1,000 pounds.

"A sense of humor is that which makes you laugh at something that happens to somebody else which would make you sore if it happened to you."

"When she married him he was a struggling young man."
"Yes, but he struggled in vain—she got him."

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

MARCH 22, 1922

The Holstein Breeder and Dairyman **was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.**

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Successful?

THERE is a general lack of knowledge among the members of the Holstein-Friesian Association of America regarding what is being accomplished by the State Associations under the Paid Secretary plan. Glowing reports, prepared "press agent style" with a view of conveying the impression that the Paid Secretary movement is meeting with success, are continually being circulated. Yet in these reports, no tangible facts are given whereby the breeders can draw their own conclusions. There is a decided lack of specific knowledge as to the number of breeders in each state who are identified with the State Associations and what percentage of such members are also members of the National Association. Many of these reports do not embody an itemized account of the receipts and expenditures or whether the Association's accounts show a deficit or credit.

In the March 11th issue of the *Holstein-Friesian World* appears a report of the Ohio State Association submitted by the State Secretary, Mr. H. C. Barker. In Mr. Barker's report he fails to give an account of the number of members in good standing in the Ohio State Association, or how many of these members are members of the National Association and he submits no financial statement as to how much money was received in dues and from other sources, or how such funds were disbursed or whether the Association's account shows a deficit or a credit.

He does, however, give some very interesting facts relative to employing a paid solicitor.

He states that a paid solicitor was employed and secured 394 members from seven different counties. These new members agreed to pay a total sum of $2,631.50 per year for a three-year period. He did not state just how much of the $2,631.50 was collected by the solicitor but he does state that it cost 13% per year for three years or 39% of the $2,631.50 to defray the expenses of the paid solicitor. He further itemizes the expense of soliciting as that paid by the county, $496.18, and that paid by the State Association, $739.16 or a total expense to the county and state associations of $1,235.34 which is practically one-half of the $2,631.50 received by the solicitor in funds or pledges for the first year. Mr. Barker in his report even states that this plan is successful.

Notwithstanding the fact that the expense of the solicitor in the State of Ohio was about fifty cents on every dollar of the money that was paid or promised for the first year, the solicitor who did the work must have been more efficient or had a more fertile field than had the solicitor who was employed in the State of Maine under the auspices of the New England States Association as reported in *The Holstein-Friesian Register*.

The report of the work accomplished in the State of Maine reveals that for every six and a fraction dollar subscribed or paid for the first year, five and a fraction dollars went towards paying the salary and expenses of the solicitor. He was able to collect in funds or pledges $602.75 to be paid yearly for three years at an expense of $503.75 or leaving a balance of $98.99 to go into the treasury of The New England States Association.

The Ohio solicitor was even a little more efficient than our former $12,000 per year President and his corps of promoters and organizers. Their campaign conducted in New England in October and November 1920 cost the National Association in traveling expenses and salaries over $5,400 and they were able to extract from the New England breeders in money and pledges some $6,800 to be paid yearly for three years.

One remarkable feature about this organization work is, that in spite of the fact that the breeders are signed up on a three years' basis, the performance is repeated every year.

In Secretary Barker's report he mentions the Ohio State Guaranty Sale, The National Sale, Public sales, Private sales and Other sales. He gives an account of the number of letters received and written, days spent in the field, number of meetings held and addressed and brings out the fact that he traveled 25,232 miles, during the year, seventy miles per day for every day in the year, or a distance equal to the circumference of the earth. Mr. Barker is evidently some "globe trotter." But *nowhere* in his report does he state the number of members in the Holstein-Friesian Association that are members of the State Association or give any tangible evidence as to whether the Association has been managed economically financially, or whether its accounts show a deficit or a credit.

As there is an effort being made by some of the State Associations to fasten the expense of the State Associations in part or in whole upon the National Association by increasing the transfer fee, we believe that the membership in the National Association are entitled to a more frank statement of facts than is set forth in Mr. Barker's printed report.

Important Notice

THE By-Laws require that thirty days' notice of the substance of any proposed amendments to the constitution or by-laws be given in the call for the meeting which is published thirty days previous to such meeting. Any member of the Holstein-Friesian Association of America, any official of the same or any secretary of any club or organization affiliated with the National Association, who have in mind presenting amendments to the by-laws, to be considered at the annual convention which will be held at Kansas City, Mo., June 7th, or those persons desiring to present resolutions or topics for discussion or action by the Convention, should file notice containing the substance of such proposed amendments or topics with Secretary F. L. Houghton, of Brattleboro, Vt., not later than April 15th in order that proper notice thereof may be given in the call for the Convention which will be sent to all members of the Association.

It is of the utmost importance now that the delegates alone can vote on matters brought before the Convention, that all suggested amendments and topics for discussion should be in the hands of the Association members and should be thoroughly discussed before the convention in order that the members may instruct their delegates how to vote.

Iowa's Strong Appeal

WE wish to call the attention of the members of The Holstein-Friesian Association of America to a published report appearing in *The Holstein-Friesian World*, on page 767 of the March 11th issue, under the head, "Iowa Breeders Adopt Resolutions on Transfer Fee." This article states in part that, "The Iowa breeders at a meeting at Ames, February 1st, adopted a resolution regarding an increased transfer fee." And in the last paragraph of the same article we read that, "On account of the comparatively small attendance at this meeting the election of officers for the ensuing year was postponed."

You will note in the article that it states, "Iowa Breeders" so there must have been at least *two present*. In this connection we wish to call the breeders' attention to the fact that, the state of Iowa was the first state to employ a paid secretary.

World Champion at Bonalevo

A NEW world's record in the junior two-year-old class of the 305-day division has been made by Colantha Quality Belle No. 501,935, owned by the Bonalevo Farms, Batavia, N. Y. Calving at two-years and twenty-eight days, Colantha Quality Belle produced 16,257.9 lb. milk, averaging 3.92% butter fat, equivalent to 810.84 lb. butter. She displaces Pabst Virginia Johanna 770.5 lb. When Colantha Quality Belle was first fresh she was put in official test and made 20.50 lb. butter and 325.5 lb. milk in seven days. She kept on increasing her production and was again tested 47 days after freshening at which time she made 21.36 lb. butter and 454.4 lb. milk in a week. She was given an official test 294 days from freshening and at this time gave 16.42 lb. butter and 253 lb. milk in a week. Colantha Quality Belle carried calf for 224 days while making her record. Twenty supervisors have checked her work and she was under official supervision for 72 days or nearly a quarter of the time. In the ten months she was retested no less than nine times on account of her high production. She finished her ten months' test in first class condition.

Colantha Quality Belle is a daughter of the great Bonalevo herd sire Colantha Johanna Lad 8th. Her dam is Bonalevo Walker Quality Belle, a daughter of Czar Walker from Bonavelo Quality Walker Belle. It is hardly necessary to state that Bonavelo Farms is owned by R. E. Chapin and Son and that G. R. Ogilvie is the manager. Messrs. Chapin have every reason to be gratified with the performance of their great heifer for she was not only bred at Bonalevo Farms but her dams for several generations back are all of Bonavelo breeding. A picture of the new champion will appear in an early issue.

Notice to Record Makers

Notice is hereby given to owners of Holstein-Friesian cattle making official tests that the official testing year 1921-22 closes on Friday, March 31st, the present testing year being an eleven-months' year, and that entries to the 33d volume of the Advanced Register Year Book (Blue Book) close on the same day. All certified reports of official test that may be received from any state agricultural college bearing the mailing postmark of April 1st, will be accepted, provided they reach this office promptly and are complete in all respects, which will place all breeders everywhere on the same basis. Breeders should remember that many state agricultural colleges hold up reports of tests for the conduct of which bills remain unpaid and should act promptly in the making of payments in order that the reports of their tests may be included in the 33d volume of the Advanced Register Year Book.

Each year breeders forget that no report of official test is complete until such time as it has been certified by the Superintendent of Official Testing in the State in which the test is made, and that when such incomplete reports are sent to this officer direct they cannot be accepted until such time as they have been returned to the state agricultural college for certification; and that the sending of such incomplete reports actually delays their acceptance instead of hastening it. In many cases such reports are not returned to the Advanced Registry Office in time for inclusion among the entries of the year and have to go over to the next year; and I would here remind our breeders that reports can only reach this office through the office of the Superintendent of Official Testing in their own States. Do not send the reports to this office incomplete thinking you can thereby get them into the 33d volume, but send them in good time to your state agricultural college so that you may be sure they will reach this office in time for such entry.

Owners with cows on long-time test that complete their tests during the present month should send final monthly milk reports as fast as the cows close their tests, seeing to it that the colleges are asked to forward the certified reports of monthly official test periods, so that those reports may also reach us before the close of the month. No cow in the ten-month's division is supposed to have completed her test until such time as she may freshen; and it will not be necessary to hasten the reports of cows completing the 305-day period where those cows do not freshen prior to April 1st. Since at the close of the testing year the whole force of clerks handling long-time tests is employed in the closing up of the tests that are completed during the testing year, the reporting of the January credits will have to be postponed until such a time as these closing cows have been taken care of; and the reporting of the January and February credits will be taken up as soon after the close of the testing year as possible.

MALCOLM H. GARDNER,
Superintendent of Advanced Registry.

Junior Department

Robert's School Work

Part of the Agricultural Course of Robert Bonham, Park Rapids, Minn., consists of keeping complete records on four registered Holsteins in the herd owned by his father E. E. Bonham. The record from January 1, 1921 to June 1st of the same year shows a total expense of $385 on four cows for the six months period. This includes feed. The income from the quartette is $709, leaving a profit of $324.

To show a monthly profit of $53.83 on the four cows or $3.46 a month per animal, the milk, butter and the manure are counted but no credit is given the animals for the production of four purebred calves. The total production of butter fat of the four cows for the six months is 1,532.03 lb.; 255.34 lb. per month, which is practically 60 lb. for each cow per month. The average production for the six months period was 10,343 lb. or 57.4 lb. milk a day.

In December a new account was started on the entire herd. Robert coöperates with his school agricultural department, which makes tests on the herd twice a month. Of the ten cows now milking, tests show an average milk production of 1,337.5 lb., or 43.2 lb. daily; an average of 3.59%; the butter fat average is over 48 lb. and the average profit per cow is $8.83, not including the calf.

The cows are milked three times a day; their rations consist of four parts bran, four parts oats, one part cottonseed meal, one part corn meal, one part oil meal; together with clover hay, silage, beet pulp, and mangels.

The course has proven of great value to the students in the agricultural class of the Park Rapids high school. Every student is required to keep a record on some project that was studied in the school and receives credit for the work done.

Edwin Tells Experiences

Edwin Seitz, who lives at Lee Center, Illinois, is twelve years old and he and his brother William are members of the Lee County boys' and girls' dairy calf club. Both boys were awarded gold pins for successfully completing a year of calf club work. Edwin won a blue ribbon and eight dollars in cash with his calf in the boys' and girls' club exhibit at the Lee County Fair. He also won one of the special prize trips to the International Livestock Exposition in December.

This is what Edwin says about his experiences:

As I belong to the Lee County Dairy Calf Club I believe it is my duty as a member to give a written report of my past experiences.

I purchased my calf for one hundred dollars on the Hill Den Farm near Dixon, Illinois. She was delivered to me on July 18, 1921.

The Lee County Fair was to be held about a month later so it was necessary to put her in the barn and start feeding her. Good care was also essential. Her feed consisted of a mixture of grain and from three to five pounds of hay to a feed. The grain ration consisted of fifty pounds of ground oats, thirty pounds of bran, ten pounds of oil meal and ten pounds of ground corn. This makes a hundred-pound ration. I fed about three pounds of this ration to a feed while maturing my calf before the Fair. I gave her plenty of bedding and kept her as clean as possible. As it grew nearer the Fair, I kept her blanketed night and day. I brushed her twice a day and washed her with tar soap about every three days. The day before the Fair I washed her with bluing water to whiten her coat. By this time she had a very pretty coat.

I got up early the next morning and took her to the grounds. She was in her stable by ten o'clock. The calves were judged about three o'clock that afternoon. I had three calves to compete with. Their owners were my brother, William Seitz, Sylvan Long and John Finch. My calf took first prize, Sylvan Long's second, John Finch's third and William Seitz's fourth.

I left my calf on exhibition till the Fair was over. I had a chance to send her to the State Fair at Springfield, but I didn't on account of the conditions. I took my calf home again after the Fair. I kept her in the same home, giving her about the same care as usual. She is in good condition at present.

I can say that I like the calf club very well.

EDITOR'S NOTE: Now some of you boys and girls tell of your pets and what success you have had with them. THE HOLSTEIN BREEDER AND DAIRYMAN will gladly publish the letters. If you have a good picture of yourself and animals send that along.

City or Country

The Overseer of the Ohio State Grange in conversation with a State College professor, learned that 80 per cent of all the ministers and 75 per cent of all men teachers were born on farms. The same day a probation officer of one of our large cities told me that over 80 per cent of the people that come to want in the big cities and ask for relief are from the country. These are people that are not heard of when the successes that some achieve are heralded back to the folks at home. There is more chance for success and happiness in the rural districts to-day than there is in the urban centers. And this will be truer and truer as the days of the future go by.—*Pennsylvania Grange News.*

"Well, well," exclaimed the young husband as he tackled her first meat-pie, "where did you get this?"

"I made that out of Mrs. Merrill's cook book," replied the bride.

"Ah!" he broke in, "this leathery part is the binding I suppose."

A man rushed into a barber shop that was noted for its talkative barbers and said bluntly, "Cut the whole three short."

"What three?" said the barber.

"The hair, the beard and the conversation."

"And throw that rope away."

"Look here! I don't often give a quarter for a cigar, but when I do—"

"You get twenty cents change."

CLUB ACTIVITIES

PROSPECTS NEVER BETTER

Dairymen from Essex, Passaic and Bergen Counties assembled at the Colonial Inn, Singac, N. J., February 9th, and formed a tri-county association to be officially known as the Metropolitan Holstein-Friesian Club of New Jersey. Morris County was represented at the meeting and it is possible that the Morris County Club may affiliate. John Arfmann, of Middletown, N. Y., told of his start as a Holstein breeder some twenty years ago. "Prospects for the purebred industry were never better," he said. "Dairymen who stick to grade cattle will lose out; the man who can produce the quantity with a small herd which his neighbor produces with a large herd is sure to be the winner."

A board of directors, consisting of two members from each county, was chosen. Those representing Essex County are Herbert Francisco, of West Caldwell, and C. E. Baldwin, of West Livingston; Bergen County, H. A. Davidson, Ramsey and A. G. Muller; Patterson and Passaic County, James Missnia and Arthur Winters, both of Preakness. These directors will organize under direction of the State Holstein-Friesian Association.

Farm Demonstration Agent Harold Wettyen, of Passaic County, will act as treasurer until the organization is completed.

Irvin T. Francis, Essex County Farm Demonstrator, reported that there was a meeting of the members of the three purebred Holstein-Friesian bull associations at the home of Lester Genung, in West Livingston. These associations decided to pool their interests in one body and to exchange bulls after a period of two years so as to avoid too close breeding. Officers chosen were as follows: President, C. E. Baldwin; vice-president, J. R. Crance, and secretary-treasurer, Lester Genung. The new body is to be known as The West Livingston Purebred Holstein-Friesian Bull Association.

LONG GIVES ADVICE

The Lake County Holstein Breeder's Association held a meeting in the Farm Bureau office at Libertyville, Illinois, February 25th.

Field Secretary C. M. Long advocated the growing of soy beans and alfalfa as a means of adding cheaper protein to the ration. He advised the disposal of cows that are not paying for their feed, first as a means of lowering the cost of production and second for the purpose of cutting down the milk surplus to the point where it would not flood the market. He also explained the Dixon A. R. O. testing plant and as a result six more Lake County Holsteins, making thirteen in all, will go to Dixon to be tested.

Dr. J. J. Lintuer told of the progress in the eradication of bovine tuberculosis in Illinois. The demands were far in excess of the funds available. Several counties have a county-wide campaign to free the herds of the disease. He urged that men first clean up their herds, and to keep them clean by care in ventilation and sanitation. A speaker from Dr. Lintuer's department talked on sanitation, and recommended pressure drinking cups and urged the importance of keeping the mangers clean.

Dr. Sievert Eriksen said that the prevention of contagious abortion is largely a matter of sanitation and of keeping suspicious or infected animals isolated and thoroughly disinfected before restoring them to the herd.

GEIGER'S PROGRAM

The Waseca County Holstein Breeders' Association held its annual meeting February 27th at the creamery, Waseca, Minn. About twenty-five were present.

The principal speaker was Robert Geiger, secretary of the State Association. He called attention to the importance of Minnesota as a dairy state, mentioned the number of thousand pound cows in Minnesota, and urged the breeders to encourage the use of purebred sires. He said that in Scott County where he was county agent before he was elected secretary, there were about 75 registered sires in 1918, at present there are about 250. He emphasized the need of keeping records of the cost of production, and said that boys' and girls' calf clubs should be backed by the County Associations. He said that in the past the Minnesota State Association had been promoting purebred sales as one of its main projects, but hereafter the organization plans to extend its aid to breeders along other lines. One of the things he has planned to do is keep a record of all purebred herds in the state so that they can put prospective buyers in touch with stock that is for sale.

Three directors were elected for two years to take the place of those whose time had expired. Those elected were Oluf Liane, New Richland; E. B. Hecht, Waseca; and W. J. Clark, Elysian. The report of F. D. Scholljegerdes, secretary, showed the association is in good standing with nearly $125 in the treasury. The main projects promoted during the past year consisted of circulating material as publicity for the breed and in conducting a sale of grade females.

WOULD BAR UNTESTED CATTLE

The Jackson County Holstein Breeders' Association held its annual meeting February 23d at Jackson, Mich. It was decided to offer a registered calf as a prize to the boy or girl winning first prize in the Holstein class in the 1922 county fair. The Association will coöperate with the state Alfalfa and Dairy campaign; will get together a county show herd which will be sent to the state fair at Detroit next fall and will make an effort to standardize blood lines in the county by establishing community herd sires.

An effort will be made to have legislation enacted to prevent anyone bringing cattle which have not been tuberculin-tested into Jackson County. The Association plans to have Jackson County cattle advertised so that buyers from a distance needing carload lots will be attracted. The officers for the ensuing year are: Corey J. Spencer, President; Harry Boardman, secretary and treasurer. Members of the executive committee elected as follows: George Bretherton, Arthur Perrin, Emmett Noon, W. W. Wycoff, Verne Wheeler and Rev Edward Parrot.

JUDGES FOR WISCONSIN FAIR

The Wisconsin Holstein-Friesian Breeders' Association met in the Republican House, Milwaukee, Wisconsin, March 4.

They made plans for selecting a Wisconsin delegation to the national Holstein-Friesian convention at Kansas City; they selected alternates and judges of Holstein cattle for the 1922 Wisconsin Sate Fair and discussed a plan to raise a $10,000 budget for advertising and publicity.

As nominees for judges at the State Fair, the board selected: W. S. Moscrip, Minnesota, and Owen E. Mullen, Watertown, Wis., as first choice, and H. H. Kildee, Iowa, and Frank Everson, Lake Mills, as second choice. A resolution was passed asking Wisconsin breeders to confer and send eighteen head of cattle to the sale held in connection with the national convention.

AT MILWAUKEE

Holstein breeders of Milwaukee County, Wisconsin, have perfected the Milwaukee County Holstein Breeders' Association. These directors were elected: Arthur Rust, West Allis; Swan, Wauwatosa; Dr. W. F. Malone, Milwaukee; Dr. B. O. Nobles, Milwaukee; E. E. Swan, Wauwatosa; Fred Rust, West Allis; H. Froemming, Hales Corners; A. Conrad, West Allis; T. H. Campion, Wauwatosa.

The directors elected as officers: President, Arthur Rust, West Allis; vice-president, E. E. Swan, Wauwatosa; secretary-treasurer, T. H. Campion.

BRATTLEBORO BUSINESS

During the week ending February 18th, thirty-six applications for membership were received; at the office of the secretary, 2,884 certificates of registry were issued; 2,136 female and 748 male; 1,887 certificates of transfer were issued, 1,178 female and 709 male.

For the week ending February 25th, thirty applications for membership were received; 2,938 certificates of registry were issued, 2,186 female, 752 male; 1,786 certificates of transfer were written, 1,180 female, 606 male.

During the week ending March 4th, forty-five applications for membership were received; 2,830 certificates of registry were issued, 2,132 female, 708 male; 1,768 certificates of transfer were written, 1,084 female, 684 male.

The Herd Prefixes reserved for the three-week period are: Airy Crest, O. W. Everly, Columbus, O.; Alfagold, Clair F. Limbeck, McGregor, Iowa; Aborland, F. A. Swanson, Stromsburg, Neb.; Assabet, Clarence E. Buckley, Westboro, Mass.; Bay Valley, David J. Anderson, Pinconning, Mich.; Beachmoor, A. G. Oelke, Princeton, Wis.; Belola, A. R. Shultz, Goodhue, Minn.; Belstein, Oscar Wolf, St. Louis, Mich.; Booda, Floyd E. Fisher, Ashville, N. Y.; Brier Rose, W. J. LaBelle, White River Jct., Vt.; Camp Royal, A. I. Campbell, Middlebush, N. J.; Canniffdale, W. A. Canniff, Watertown, Wis.; Catalpa Creston, John P. Miller, Guys Mills, Pa.; Cedar Lodge, G. E. Walls, Kingston, Mich.; Clover Acres, Harry J. Brink, Newark Valley, N. Y.; Clover View, A. M. Chrislaw, Rice Lake, Wis.; Cotagil, J. S. Bauer, Montpelier, O.; Deanland S. S. Judson, Utica, N. Y.; Dickinson, The Brown Dairy, Ormanzo A. Brown, Prop., Dickinson, N. D.; Dillonwood, James H. Dillon, De Pere, Wis.; Ehlers, Edwin G. Ehlers, Twin Falls, Idaho; Elm Lea, F. H. Thompson, Prompton, Pa.; Elmlynn, A. R. Graham, Flint, Mich.; Elmvilla, Henry Gluesing, Arpin, Wis.; Faithorn, George F. Nondorf, Dyer, Ind.; Fernia, Elias Johnson & Sons, Dover, N. J.; Fourbe, William D. Bancker, Basking Ridge, N. J.; Grahamvale, A. H. Graham & Son, Newark Valley, N. Y.; Gray Ledge, Frank Gray & Son, Brier Hill, N. Y.; High Acres, John H. Schmelzle, Cowlesville, N. Y.; Highland Home, John B. Kendig, Willow Street, Pa.; Horizon, T. R. Ethridge, Edinboro, Pa.; Inglecrest, C. A. Bowman, Star City, Mich.; Irvinhurst, John H. Irvin, Winfield, Mo.; Irwinhurst, John H. Irwin, Winfield, Mo.; KilKare, L. L. Oldham, Madison, Wis.; Lavenir, L. L. Fuller, Conewango Valley, N. Y.; Leader, Charles R. Feenstra, Grand Rapids, Mich.; Level View, Christ Klumb, West Bend, Wis.; Linair, Frank I. Linen, Waverly, Pa.; Locust Way, Ed. C. Roecker, West Bend, Wis.; Mascoma, George Moore, West Canaan, N. H.; Merriland, George E. Merrick, Brewster, N. Y.; Minaville, William G. Schuyler, Amsterdam, N. Y.; Oacoma, Archibald G. Campbell, Barneveld, Wis.; Oak Run, George E. Dix, Marshfield, Ore.; Old Mill, Carl E. Rudolph, Deerfield, Ill.; Pepin, G. M. Dwelle, Lake City, Minn.; Pennaroo, Charles Howell Cook, Trenton, N. J.; Pennview, Harry E. Fogelman, Lebanon, Pa.; Picturesque, Dr. E. G. Scammell, Tully, N. Y.; Reserve, S. H. Stauffer, New London, Minn.; Riverby, A. D. Christopherson, Oconomowoc, Wis.; Rohecrott, F. V. Rohe, Dushore, Pa.; Rockburn, Otis W. Lane, Bloomer, Wis.; Rohlfs, Clayton E. Rohlfs, Akron, Mich.; See Far, Charles Edinger, Osseo, Mich.; Sinnissippi, Frank O. Lowden, Oregon, Ill.; Smile Valley, William G. Lindow, Chili, Wis.; Spotswood, S. J. Burton & Son, Worcester, N. Y.; Sprucedale, Elias J. Kopp, West Bend, Wis.; Stevenson, Charles S. Stevens, Tilton, N. H.; Stohofa, C. W. Davis, Pitcher, N. Y.; Straterdyke, R. S. McCornock, Liverpool, N. Y.; Sunnyland, Erwin Basler, Allenton, Wis.; Swanland, Arvid Swanson, Pine City, Minn.; Thorn Ridge, Judson C. Latta, Fdiendship, N. Y.; Towerdale, Frank I. Whitenight, Jerseytown, Pa.; Youngsdale, Fred L. Young, Chehalis, Wash.

F. L. HOUGHTON, *Secretary.*
The Holstein-Friesian Association of America.

ACCOMPLISHMENTS OR POSSIBILITIES

The annual meeting of the Wood County Holstein-Friesian Cattle Association was held February 28th, at Bowling Green, Ohio. Dr. Gooding, of Tiffin, president of the state Holstein-Friesian Association, gave the main address of the day. He talked on the accomplishments of the state Holstein-Friesian club and the possibilities of the organization in the future.

County Club leader R. C. Smith gave a short talk in which he explained the 1922 calf club rules.

Dr. Strow, of Milton Center, was elected president and Loren Nelson, living three miles south of Bowling Green, secretary.

About twenty breeders of Holstein cattle and members of the club were out for the meeting.

ACTIVE IN COLORADO

The Tri-County Holstein-Friesian Association was organized at Johnstown, Colorado, February 23, and includes members from Larimer, Weld and Butler Counties.

H. B. Polly presided and Prof. F. W. Fairbanks, of the Agricultural College, discussed the necessity and advantage of forming such an organization for the marketing, care and improvement of dairy cattle.

Quite a number took part in the discussions, and much enthusiasm was manifested.

Officers selected were: Carl Henry, of Greeley, President; B. W. Fairbanks, of Fort Collins, vice-president; Walter Guerkink, of Johnstown, secretary-treasurer; county agents D. C. Bascom, of Larimer County, and S. D. Yeager, of Boulder County, assistant secretaries; with H. B. Polly, of Johnstown, director for five years; George E. Morton, of Fort Collins, for four years; C. E. Van Meter, of Loveland, for three years; C. D. Chase, of Greeley, for two years, and C. A. Dowell, of Longmont, for one year.

FROST DONATES BULL

The Holstein breeders of Saunder County, Neb., have organized a Holstein-Friesian Bull Association. There will be six or more blocks in the county and two or three circuits. One director was selected for each block and a bull will be provided which will be exchanged every two years.

Mr. Frost, manager of the Woodlawn Dairy, of Lincoln, spoke on the plan. Mr. Frost is donating a purebred bull to the association as this is the first one organized in Nebraska. Credit for the organization is due also to Joel G. Winkler, of the dairy division, and M. N. Lawritson, state dairy extension specialist.

ONONDAGO ELECTS OFFICERS

The Onondago County Holstein Club held its annual meeting in the Syracuse Court House, February 25th. The principal speakers were, C. F. Bigler, president and E. R. Zimmer, secretary of the New York Holstein-Friesian Association. The following officers were elected for the ensuing year. Leroy Munro, president; S. C. Pendergast, vice-president; R. E. Deuel, secretary-treasurer; executive committee, Carl Amos, Harold Hubbs and J. C. Horner. Carl Amos was elected advisory representative to the State Association. A canvass is now being made in the county for new members to the state and county associations.

IN KLICKITAT

The organization of a Klickitat County Holstein-Friesian Breeders' Association has just been completed with 21 members.

The officers are: President, William A. Elmer; vice-president, Sanford Peterson; secretary-treasurer, F. A. Schniche; executive committee, Lois Rasmussen and C. A. Elmer.

FORM HOLSTEIN CLUB

At a meeting of 150 farmers at Hart, Mich., February 28th, a Holstein Club was organized with J. E. Gamble, president and Fred A. Luther, secretary. The meeting was called to promote better cattle in the county. The principal speaker was Prof. O. E. Reed of the Michigan Agricultural College, who urged the use of purebred sires.

LIVE MEETING

The Holstein Club of Pittsville, Wis., met February 19th and outlined its program for the coming year. The members will work for the replacement of scrub bulls by purebreds in the district and will coöperate in supporting the boys' and girls' calf clubs. It was decided to form a cow-testing association and one-third of the dairy farmers in attendance signed up. Eight members of the club have applied to have their herds tested for tuberculosis. It was also decided to have a Community Fair some time next fall. Officers are: D. H. Kilday, President, and F. H. Myers, secretary and treasurer.

OWNERS ENTHUSIASTIC

There are not many Holsteins around Lake City, Minn., but the owners are enthusiastic. On February 18th, 15 dairymen of this community owning only thirty-nine females met and took preliminary steps to organize a community Holstein breeders' association.

JOIN STATE FEDERATION

The Cumberland County Holstein Breeders' Association held their annual meeting in Carlisle, Pennsylvania, February 23d, with forty owners of purebred Holsteins in attendance. Action was taken by the association to affiliate itself with the state organization, the Pennsylvania Federation of Holstein-Friesian Clubs.

The assembled breeders nominated J. H. Raudabaugh, of New Kingston, as their selection for the Kansas City delegates. It is planned to hold a sale of fifty head, March 23d, at Carlisle.

The officers elected were as follows: President, W. S. Kerr, Newville; vice-president, G. Lawrence Strock, Mechanicsburg; secretary, Raymond Shenk, Newville; treasurer, I. V. Otto, Boiling Springs.

KEEPS HIM BUSY

Last week we sold a carload of grade Holsteins from dairies under Accredited Herd Supervision. These cattle were sent to Bucks County. The buyers didn't want to look at anything but those under Federal Supervision. The same morning there were six buyers from Juniata County looking for purebred stuff. They hadn't given me any previous notice so I could take care of only one bunch. I am sure we could have sold some purebreds if I had had time to spend with them. Just where the credit belongs for their coming here I do not know but I am sure advertising is a good thing if we have the right stuff to sell.

JOHN J. JAQUISH,
Wyoming County Agent.

Editor's note: The quarter page ad appearing on the back cover and featuring Wyoming Holsteins may have something to do with the business that is coming to the Holstein owners of Wyoming County.

BRATTLEBORO BUSINESS

For the week ending March 11, thirty-nine applications for membership were received at the office of the Secretary.

During the same period 3,077 certificates of registry were issued, 2,318 female, 759 male; 1,880 certificates of transfer were written, 1,194 female, 686 male.

The following prefixes were reserved during the week:

Aztec, Charles E. Williams, Valparaiso, Ind.
Baldur, Lucy D. Baldwin, Lawrenceville, Pa.
Betheldale, V. J. Carpenter, Cass City, Mich.
Birchvale, Fred A. Person, Hugo, Minn.
Canoe-Ripple, J. A. Patterson, Wilkinsburg, Pa.
Conneaut, H. O. Holcomb, Pres., Conneaut Lake Real Estate Co., Linesville, Pa.
Dodgehurst, George W. Dodge, Avalon, Wis.
Garden Lawn, Pete Yogerst, West Bend, Wis.
Golden View, Mrs. Minnie Miller, Offerle, Kan.
Greenhurst, D. F. Green, Palmerton, Pa.
Green River, Stephen G. Hickox, Williamstown, Mass.
Hazelcrest, Otis Barnes, Crooked Creek, Pa.
Hecks, Heckroth and Heckler, St. Paul, Minn.
Highness, F. G. Spink, Utica, N. Y.
Iawis, E. E. Haman, Monroe, Wis.
Kulpland, Ezra Cattell, McDonald, Pa.
Lava Rock, Edwin G. Ehlers, Twin Falls, Idaho.
Ledyard, J. Kellogg Hall, Norwich, Conn.
Loc-Pine, Jesse E. Kurtz, Carlisle, Pa.
Lounsbury, George H. Madison, Hammondsport, N. Y.
Murdock, F. E. Morlock, Winchendon, Mass.
Pattee Hill, S. W. Currier, West Canaan, N. H.
Scantic, George A. Chapin, Ludlow, Mass.
Scotch Pine, C. V. Town & Sons, Greenville, Mich.
Siletz Grove, G. A. Olin, Siletz, Oregon.
Streamdale, Frank Rusch, West Bend, Wis.
Terra Vista, Henry J. Aden, Flanagan, Ill.
Tresco, L. W. Tresner & Son, Fort Collins, Colo.
Warmhill, T. R. Auker, Mifflintown, Pa.

Cow Testing Association Reports

WISCONSIN

The highest producer in the Oconomowoc Cow Testing Association during January was a purebred Holstein owned by Paul Reid, of Oconomowoc. She made 2,157 lb. milk, 105.7 lb. butter fat. Second to her was a grade Holstein owned by Watson Brothers, with 75.2 lb. butter fat and 1,503 lb. milk. There are twenty-three dairymen in the association and the forty-two 50 lb. cows came from thirteen different herds.

Harvey Peterson, tester for the Spencer Cow Testing Association reports that during December, 328 cows were tested, of which twenty-seven produced more than 40 lb. butter fat. The high cow for the month was a purebred Holstein, owned by Max Nigl, she making 1,318 lb. milk, 61.9 lb. butter fat. This cow was fed a grain ration consisting of corn, bran and oilmeal. The second cow was a grade Holstein owned by Robert Bruesewitz, that made 1,283 lb. milk, 55.2 lb. butter fat.

Sixteen grade and purebred Holsteins, owned by Mr. Bruesewitz averaged 819 lb. milk, 32.3 lb. butter fat and were high herd for the month. They were fed a ration consisting of hominy, oats, bran and oilmeal.

During January 390 cows were tested in the Rudolph Cow Testing Association twenty-nine making more than forty pounds butter fat. The three highest herds were all Holsteins, the registered herd of Charles Imig being first with 1,256 lb. milk, 43.7 lb. fat. The purebred and grade herd owned by William Piltz had 1,181 lb. milk, 42.1 lb. fat, while thirteen grades owned by Joseph Van DeLoop averaged 1,037 lb. milk, 36.6 lb. fat.

The leader a registered Holstein, Iola Johnson Champion, of the Imig herd made 2,263 lb. milk, 72.4 lb. fat. Another member of this herd made 2,083 milk. The third and fourth animals were members of the Piltz herd.

During the month of January 388 cows were tested in the Spencer association. Perl Vanderhoof owns the high cow and high herd. His leader is a grade Holstein with 1,513 lb. milk, 57.5 lb. fat to her credit. As in last month's tests Robert Bruesewitz owns the second cow, a purebred Holstein with 1,335 lb. milk, 56.1 lb. fat. Another animal owned by Vanderhoof made 54.7 lb. fat. The Vanderhoof herd averaged 1,254 lb. milk, 44.9 lb. fat and the Bruesewitz herd 32.3 lb. fat. The high herd was fed corn silage, hay and a grain ration of two parts oats, corn and bran and one part oilmeal.

Two registered Holsteins in the Racine-Kenosha Cow Testing Association have made over 80 lb. fat in January. Harry Nelson owned one and Howard Sheen owned the other. Nelson owned another cow that made over 70 lb. and two above 60 lb.

The high producer for the month was "Molly" a registered Holstein, owned by Roland E. Lee. She made 2,297 lb. milk, 96.2 lb. fat. The Lee herd was high herd with an average of 1,335 lb. milk, 52.1 lb. fat.

A two-year-old Holstein owned by Clinton Skewes produced 8,020 lb. milk, 300.3 lb. fat in five month's and ten days. She is a member of an accredited herd.

No less than 129 cows made over 40 lb. fat in the month. Three herds in this association were tuberculin tested and twelve reactors were disposed of.

During January the Garfield-Alden Association had forty-three cows that made over 40 lb. fat in the month. The fourteen cow dairy of Ernest Nelson, consisting of grade and registered Holsteins, averaged 1,235 lb. milk, 45 lb. fat. The 11 cow dairy of M. B. Christensen averaged 1,060 lb. milk, 40.9 lb. fat. Arthur Jensen is the tester.

The Byron Cow Testing Association during February was led by a registered Holstein. She was owned by E. M. Cowles and Sons of South Byron and made 79.1 lb. butter fat. Second to her was a registered Holstein owned by E. H. Korrer, she making 75.8 lb. fat. Seven other members of the Cowles herd and six others of the Korrer herd made over 40 lb. fat during the testing period. Of the 455 cows tested, 112 produced over 40 butter fat and 39 over 50 lb.

The leaders for milk production in the Beloit Cow Testing Association during February were grade Holsteins owned by Rockwell and Katterhenry. Kit made 2,100 lb. milk, 79.8 lb. fat, milking 89 lb. milk in one day. Queen produced 1,859 lb. milk, 72.5 lb. fat.

IN FAR WYOMING

There are not many dairy cows around Savageton, Wyoming, or in Campbell County but there is great interest in the industry. N. M. Lauby is a rancher with a few cows and is interested in the movement to make Campbell County a dairy region. In the *Gillette News* he gives his experiences which are as follows:

"I thought that it might be of interest to the people of Campbell County to know how much a person can realize from a few dairy cows if given ordinary care. The following report covers a period of 12 months, from Jan. 1, 1921, to Jan. 1, 1922, and is as nearly correct as it can be made.

"On an average I milked 2 2-3 cows per day, one being a heifer coming fresh September 25, 1921.

STATEMENT

Receipts

466 lbs. butter sold av. price 35 cents	$163.10
104 lbs. btr. consumed at home at 35 cents	36.40
182 gallons of milk consumed at home at 40 cents	72.80
365 pints of cream consumed at home at 20 cents	73.00
Value of skimmed milk	24.60
Value of 1 spring and 3 fall calves	50.00
	$419.90

Expenditures

7 tons of cane and Sudan hay at $7.00	$49.00
100 bus. of corn on cob at 50c	50.00
100 acres of pasture at 10c per acre	10.00
500 butter wrappers	3.75
3 blocks of salt	2.70
	$115.45

Receipts	$419.90
Expenditures	115.45
Net receipts, 4 cows	$304.45
Average	76.11

"My cows would sell for about 75 per cent on my investment.

"I was confident that with such an abundance of available pasture throughout the year and with the feed and care necessary during the winter more money could be made here with dairy cattle than with any other stock. Dairy cattle and dairy products have not slumped in price so badly like beef cattle, hogs and sheep. Our sheep earned us 14½ per cent on our investment. Hogs earned us 3½ per cent. The cause of their low per cent of earning was due to the fact that we lost our entire spring litters, also on account of the depreciation in value. I also charge off considerable on value of sheep, over last year, hence the low per cent of earning.

"It is different with my dairy stock account where I deducted only 25 per cent for depreciation. My experience with dairy cattle extends over a period of four years. I shipped in four good Holstein cows when I came to Wyoming. I was advised that they would not stand this cold climate, where the thermometer often registers from 15 to 40 below zero. I was determined, however, not to move on a homestead without cows.

"The fact is this: it's the best investment I made. I am sorry, however, that instead of shipping in only four head I did not ship in four carloads and started into the business right.

N. M. LAUBY."

GOOD LUCK AXLE GREASE

During January, 412 cows were tested in the Wood County No. 3 Association. Of these 48 aged cows produced over 40 lb. fat and 14 two-year-olds over 30 lb. The high cow is a registered Holstein owned by George Baltus, she making 2,344 lb. milk, 93.8 lb. fat. The Baltus herd was high with an average of 1,199 lb. milk, 48.36 lb. fat. It consists of registered and grade Holsteins. The William Schultz herd which also consists of registered and grade Holsteins, averaged 929 lb. milk, 36.19 lb. butter for the first eight months in the association.

J. C. Kieffer & Son have sold five registered Holsteins for $2,950, the highest single price being $800 for a three-year-old that made 26 lb. butter in a week and made a 305-day record of over 700 lb. Grade cows sell in this vicinity from $40 to $75 so it is very easily seen that the owner of registered stock has decidedly the better advantage.

A. C. Schroeder, the tester, says: "The oleomargarine situation here is solving itself. Although there is one store that has it for sale there were only five pounds sold in the past three months. If every community in the state would use no more than this we soon would see a commodity labeled 'good luck axle grease' and not 'good luck oleo.'"

HERD AVERAGES FORTY POUND

The Grays Harbor County Testing Association animals averaged 30.9 lb. butter fat in January according to the report of the official tester L. D. Fairbairn, Montesano, Washington. Last month forty-seven cows each averaged more than 40 lb. fat in the month. The Holstein herd of W. J. Berns of Montesano, Washington were high herd in class one (15 cows or more) with a milk average of 1,111.9 lb. milk, 40.2 lb. butterfat.

ELIMINATING SCRUBS

Members of the Rock County Holstein-Friesian Association met at Emerald Grove, Wisconsin, February 4, and are much enthused over the success of the new calf club. They are offering, through the secretary, bull calves at twenty dollars each, the price being fixed so that farmers are enabled to obtain purebred calves at a low price and raise them to take the place of scrubs.

There is quite a little activity in Rock County Holstein circles. Edward Bingham purchased four top-notch heifers, one was sired by a thirty-three pound bull, another is a granddaughter of Nancy Spofford, Bob Haeger's famous old show cow, and another heifer won the first prize in an exhibit of twelve at the Janesville Fair, where Mr. Bingham's head sire also won first prize.

Other purchasers of Holsteins are Dr. G. W. Post and Harry North. Mr. North will officially test his animals.

Trying to explain a mistake is a waste of time that might be used in making more mistakes.

STATE RECORDS AT BELL FARM

The heifers on the Bell Farm have apparently gone on a spree and are having an orgy of breaking Pennsylvania state records. Hattie Valdessa Pontiac, the junior two-year-old that recently made a new class state record, has increased her seven-day mark to 28.44 lb. butter, and looks like making 117 lb. in thirty days, which will also be a state record. Korndyke Valdessa Pontiac, a junior three-year-old daughter of King Valdessa Pontiac, has made 31.3 lb. butter in seven days which is a state record in class, by a wide margin. She beat Ourvilla Colantha Korndyke Nina with 27.59 lb.

The state records of Pauline Mabel Maid in the senior three-year-old class for both seven and thirty days are seriously challenged by Segis Valdessa Pontiac Champion. Mabel's seven day record is 32.77 lb. and her thirty-day record is 132.18 lb. Segis Valdessa Pontiac Champion is on test with 32.74 lb. butter in a week to her credit and looks like making right around 134 lb. for the month.

The daughters of King Valdessa Pontiac are certainly doing great things this season in the strict official test. We understand it is the intention of the management to run nearly all the daughters of this sire on long time test and something real good may be confidently expected.

CONSTRUCTIVE PROGRAM

The Defiance County Holstein-Friesian Club meeting at Zanesville, Ohio, January 4th, with Ed. P. Partee in the chair, decided to hold four regular meetings during the coming year, the next to be held at Sherwood on April 1st. In addition other meetings will be called if advisable. The following activities were decided upon as a program for the coming year:

1. Tuberculin testing of all herds represented in the club.
2. Publication of a sale list in the Farm Bureau Bulletin and county papers.
3. An exhibit of Holstein cattle at the county fair by the club.
4. Active assistance in forming a second Holstein Calf club and support to the one started last year.
5. Action leading to the eradication of contagious abortion.

SENT TO DIXON

John H. Diehl of Effingham, Illinois, has sent his two-year-old heifer Diehl Ragapple Echo Segis, to the Holstein testing plant at Dixon. She is the first animal to go to the plant from Effingham County. Secretary C. M. Long saw this heifer in the Diehl stables and urged her owner to send her to the association's testing plant.

CATTLEMAN WANTED

Judge says that the man for the job is one who was a bear in the past, will be a bull for the future and who is a horse to work. Evidently a real Holsteiner would fill the bill.

AT ST. OLAF COLLEGE

The Holstein herd owned by the St. Olaf College, Minnesota, has been making some nice long time records. St. Olaf Pauline Wild Rose as a mature cow produced in 365 days 24,731.7 lb. milk and 1,014.29 lb. butter.

Celma De Kol Pietertje made 24,052.7 lb. milk 987.96 lb. butter in a year at full age. The senior three-year-old Traverse Minita Johanna produced 20,273.9 lb. milk and 860.48 lb. butter and the junior three-year-old Fay Pontiac Violet made 18,160.16 lb. milk and 786.35 lb. butter.

Three junior two-year-olds were tested, St. Olaf Pietertje Belle producing 16,358 lb. milk 706.09 lb. butter, St. Olaf Anna Marguerite producing 14,687.2 lb. milk and 645.28 lb. butter and Miss Colantha Hengerveld giving 15,928.4 lb. milk and 679.94 lb. butter.

OHIO MILK RECORD

Hiram Hill Ramous Pontiac, owned by L. N. Nicholas, Garettsville, Ohio, made 747.5 lb. milk, 35.37 lb. butter in seven days. It is claimed that her milk record is the highest ever made in the state. In thirty days she made 3,101.2 lb. milk, 144.15 lb. butter. She was five years ten month old at the time.

The Cynical Bachelor observes that if all our love affairs should result in marriage we would all be Mormons.

Worth Looking Over

Don't you think a herd of 70 head, none over 5 years old, is worth looking over? One member of this herd is now making 28 lb. butter a week.

Plum Spring Farm Copia

heads this herd. His nearest dams, none below 31 lb., have seven day records averaging 32.35 lb. butter, 613.3 lb. milk

Write your wants, or better yet come and see us—if you want good ones at reasonable prices.

A. W. Downton

Starrucca, Pa.

PROFITABLE STATE-OWNED HERD

In the *Dakota Farmer*, E. S. Jones manager of the herd kept at the State Hospital, Yankton, S. D., recently gave a short account of the Holstein herd at that institution for the benefit of Dakota taxpayers.

When production records were first kept at the Yankton State Hospital three-fourths of the cows were grades and were averaging to produce from 20 to 30 lb. milk a day. Any cow that made six thousand lb. milk during the year was judged to be a real good one. By the use of purebred sires on these cows and their off-spring in eight years the production has increased to 18,000 lb. in a year.

A few purebreds were obtained and as they increased in number, the grades were offered for sale. They found ready buyers as animals of their quality always will. The present herd consists of 114 head of which two are herd sires, 104 females of all ages and the balance bull calves. Fifty-eight females are of milking age of which 45 have A. R. O. records and there are 26 cows now on long time test.

Mr. Jones gave some straight talk to South Dakota dairymen telling them to get rid of their grade bulls, buy a purebred Holstein sire and assured them that the first crop of milkers during their first lactation period would more than repay the investment. He advised them to choose the second herd sire with the utmost care, making sure that he will be as good or better than the first one and he closed his advice with the following trite statement:

"Even though a better sire costs more better backing will pay big dividends. Really great producers are never developed by the use of a scrub sire, but by mating better cows with better sires."

A review of the past two years work in the Yankton herd discloses that during the year 1920 eighty-nine cows were milked and produced 638,575.3 pounds of milk. In 1921, 75 cows were milked and produced 698,841.6 lbs. This shows an increase of 60,266.3 pounds over the production of 1920 with 14 fewer cows. However it is well to note that these cows were in all stages of their lactation periods; also that some were heifers and had only milked a few days in the latter part of December, while others were sold or disposed of after milking only a short time.

SOME GOOD RECORDS.

On January 31st of this year, there were 46 cows in milk and the production was 2,296.9 pounds, or an average of 49.9 pounds per cow. A junior three-year-old, Yankton Veeman Gerben, during the year 1921, produced in 323 days 19,621.4 pounds of milk. She freshened again November 1, 1921, and is now on semi-official test. During the month of November her production was 2,169.4 pounds and December 2,844 pounds. She was put on a 7-day test the latter part of December and produced 638.3 pounds of milk containing 17.392 pounds of fat which is equivalent to 22 pounds of butter.

Another junior 3-year-old, Yankton Gerda Pontiac Beryl, (twin) on semi-official test is producing from 95 to 98 pounds of milk per day. She freshened on December 15, 1921, and was put on 7-day test making 611.3 pounds of milk containing 19.016 pounds of fat which is equivalent to 23.77 pounds of butter.

A brief summary will disclose that the first purebred Holsteins, 20 in number, were purchased chiefly with a view of helping produce the milk necessary for the consumption of the inmates and employees. They qualified in this and more, too, as they were the foundation for the great herd of producing Holsteins here to-day. This example may be followed by any farmer and the same results accomplished if he remembers that the chief requisite is "Better Sires."

POCONO

Dr. John Mayock, of Wilkes-Barre, Penna., is a busy man, but finds time to run a nice Holstein herd at his establishment which is called Pocono Farm. He has recently developed a new champion of Luzerne County in Pocono Constance 2d No. 353628 she making 574.6 lb. milk 30.39 lb. butter in seven days, this being the highest record ever made in the county by a five-year-old cow. One of her sisters, Pocono Mathilde 2d, made as a four-year-old 558.3 lb. milk and 31.67 lb. butter in seven days. Pocono Constance 2d is the dam of Pocono Constance Pietje, whose thirty-day record of 101.25 lb. butter from 2,233.9 lb. milk was, until just recently, a state record in the senior two-year-old class.

The Pocono herd is not only one of high producing capacity but it consists of real good individuals and at the Dallas County Fair last fall took many of the prizes including: Bull three-years or over, first; yearling bull, first; senior bull calf, second; junior bull calf, third; aged cow, second; cow three-years, first; two-year-old, first; senior yearling, second; junior yearling, third; senior heifer calf, first and second; junior heifer calf, first; as well as first prize as exhibitor's herd, breeder's young herd, breeders calf herd, Advanced Registry Cow, and produce of cow, as well as second for get of sire and second for four best dairy cows.

AT BORGENVALE

Borgenvale Jaquette Mercedes a five-year-old owned by Ole Bergen and Son of Hillside Dairy Farm of Amherst, Wis., made 30.8 lb. butter, 743 lb. milk in seven days. She is a daughter of Sir Captain Johanna Piebe White and Jaquette Mercedes De Kol.

DESCRIPTIVE

Two sweet young things were talking on the street the other day when a third girl came along. "You look like Helen Brown" said one of the pair to the newcomer. "I look worse than that in white" was the answer.

BULL

An example of the knowledge of the cattle industry possessed by some writers whose effusions appear in agricultural journals is taken from a well known farm paper circulating in the native state of the Associations' recent president.

"A striking illustration of the value of a sire was shown in the herd of T. L. Rae. Old Brownie, as she was called, left two daughters (Brownie by the way was a good old Jersey-*Duroc*). One daughter was sired by a purebred *Duroc* bull, the other by a registered Guernsey bull. The Guernsey grade last year made 498 lb. fat and the other 320 lb.

Pretty good producer that Duroc is, whether grade or purebred.

THIRTY: THREE TIMES

Some fine official records have been made recently at the Crary Farm which is owned by Horton Crary & Co., of Warren, Pa. Meadowside Helena De Kol Burke 3d made 31.38 lb. butter and 520.2 lb. milk. This is her third 30 lb. record and they average 32.34 lb. made at the ages of four, six and eight years respectively. Lady Clothilde Valentine 2d made 27.19 lb. butter 589.5 lb. milk as a seven-year-old. Crary Farms Christiana as a senior two-year-old made 28.26 lb. butter in seven days with 428.2 lb. milk which is a new state record in this class. She is a daughter of Spring Farm King 3d and Meadowside Helena De Kol Burke 3d 34.93 lb. the three times 30 lb. cow.

AT THE OLD FOLK'S HOME

Several good official records have been made recently at the Old Folk's Home at Stoughton, Wis., which is in charge of Rev. B. J. Larson. Queen Bernice De Kol Canary made 27.83 lb. butter in seven days, 568.6 lb. milk while her thirty-day record is 108.38 lb. butter, and 2,233.7 lb. milk. Her sister Ettricka Burke De Kol Canary made 23.33 lb. butter and 536.5 lb. milk.

Piebe Winter Briar made 23.32 lb. butter, 448.1 lb. milk while Mary Porcelain Baker made 20.32 lb. butter in seven days as a four-year-old.

GOOD FOR CLUNY

Moonlight Colantha Pietertje owned by R. Bruce McPherson, Howell, Mich., recently finished a year record of 24,881.7 lb. milk and right around 1,064 lb. butter. She is the third cow to make over one thousand lb. butter and the eighth to make over twenty thousand lb. milk at the Cluny Stock Farm. Two daughters of this cow are now on long time test at two and three years of age and are making good records.

STUDENT WORK

The University of Missouri has a new state champion in Campus Josephine Galaxy that has just made 878.59 lb. butter, 20,510.1 lb. milk in a year. During her test she was milked four times a day for the first eight months. She was in the care of Paul Miller a student in the Missouri College of Agriculture.

THE HOME OF THE HOMESTEADS

BY FRANCIS DARCEY

The Homestead strain which many Holstein men claim is second to none for combined type and production, is one of the good Holstein families founded in Dodge County, Wisconsin.

Dodge County, according to the 1920 Wisconsin Agricultural statistics, has 67,160 milk cows within its limits and 33,065 head of young stock. About five per cent. of all cattle are purebreds, the exact number of all breeds being 5,589. Of these, 5,291 are Holsteins, there are eighty-one Jerseys, eighty-two Shorthorns, sixty-three Ayrshires, fifty-three Guernseys, fourteen Brown Swiss, and five Red Polls. The milk production of the county is figured at 348,936,100 lb.

The Dairy History of Dodge County, the story of the Homestead family, and much of the Holstein history of the state dates back to the founding of two herds belonging to S. B. Jones & Son and E. E. Randall, both of Hustisford. At a time when Holsteins were little known by Badger dairymen, both of these farmers began with a few good cows and good sires. Both men used practically the same herd sires and both developed animals that attracted nation wide attention.

Mr. Randall purchased from Rust Brothers of West Allis two successive herd sires, first Duke of Wild Rose, following him with Aaltje Salo 3d's Tritomia Netherland, the first sire of the breed to have thirty-three I. R. O. daughters.

The leading daughters from this cross were Grace Fayne 2d, Lady Longfield 4th, Jessie Fobes 2d's Tritomia, Jessie Fobes 5th, Jessie Fobes 6th, Jessie Fobes 2d Maud and Lady Oak 2d, all of which either by their own achievement or through their sons or daughters, helped to make Holstein history.

Other sires subsequently employed were De Kol Burke, Netherland Marshall, Lottie Lass Butter King and Pearl of the Dairy's Joe De Kol, a bull whose daughters, granddaughters, and great-granddaughters include some of the greatest producers known both in short and long time test.

Following Joe, Mr. Jones purchased from W. A. Matteson the famous Homestead Jr. De Kol. Seven of this bull's A. R. O. daughters made over thirty lb. butter in a week and one was the renowned Grace Fayne 2d's Homestead, 35.55 lb. A. R. O. world champion as a four-year-old and again at full age. The blood of Homestead Jr. DeKol crystallized the achievements of the sires who had gone before him into the Homestead strain.

Mooie Mutual DeKol followed Homestead Jr. He has 35 daughters in the Advanced Registry. Mr. Randall purchased him from H. A. Moyer. Mated with Jessie Fobes 2d Tritomia, Mooie Mutual De Kol produced Fobes Tritomia Mutual De Kol a mammoth, well conformed animal whose list of great daughters includes no less a celebrity than Jessie Fobes Bessie Homestead, famous show cow, and at one time the only cow in the world to have three seven-day records each exceeding thirty-three pounds.

An outcross in the form of Canary Paul was then introduced. He sired a number of good ones including Cedar Lawn Canary Paul the 1920 National Dairy show champion. Canary Paul, mated with Jessie Fobes Bessie Homestead, produced Canary Paul Fobes Homestead who has a long list of good record daughters and some splendid sons one of which is the famous Iowana Sir Ollie, show bull and sire of prize winners.

Some ten years ago when the Jones and Randall herds were at their best, one could look along a line of seventy tail settings that squared up with wonderful uniformity, made no less attractive by the large, square, snugly hung udders which one might naturally expect to accompany the sort of top lines described.

Naturally other good herds sprang up in the county, off-shoots, one might call them, of these original herds. Homestead sires were employed and as a result the distinctive Homestead type—graceful in outline and radiating quality—is very evident in all sections of the county. What has accounted for the popularity of the Homesteads is, I believe, not alone their marked adherence to type, but the fact that they combine large milk flow with good average butter production.

You'll find this true in old Homestead records, and recent records made in the county have confirmed this belief. I might cite the achievements of O. H. Erdmann of Hustisford during the past few years. Mr. Erdmann has a typical Homestead herd. He has made in excess of a dozen good seven-day records on full age and four-year-old Homestead cows, several above thirty pounds, and has never fallen below 600 lb. milk. Two of his animals made better than 700 lb. of milk in connection with thirty pound records.

Few Homesteads have been tried out in yearly work. About a year ago, however, Mr. Erdmann started seven or eight cows, with the following results in part: Jess Evergreen DeKol completed a seven-day record of 1,266 pounds butter from 27,000 pounds milk, second highest living yearly record cow in the state; her daughter is finishing with better than 1,000 pounds butter from 26,000 pounds milk, and this good cow's daughter in turn has 900 pounds of butter to her credit from 24,000 pounds milk. Mr. Erdmann will also have at least one more 1,000 pound cow, with good prospects for still another in the spring.

Breeders in distant states have appreciated the Homestead breed. The Pabst Stock Farms recently purchased a 34 lb. grandson of Homestead Jr. De Kol and incidentally he is a real show bull, while one of his daughters, a two-year-old, took first prize in her class at the state fair last fall.

The Bell Farms of Coraopolis, Pa., own Joe Oak De Kol Fobes. He formerly headed the Fletcher and Randall herds at Waupun and is a son of Fobes Tritomia Mutual De Kol from Oak De Kol 2d, a 29 lb. daughter of a 31 lb. cow.

The well known Minnesota Judge Moscrip found his Bessie bull in a Dodge County herd and in one of his advertisements he says "Homestead in your pedigree is like Sterling on your silver—it spells quality."

Carlisle, Penna.

NEW PENNSYLVANIA STATE RECORD

The Pennsylvania state records for senior four-year-olds have been broken by Highland Korndyke Lassie 407,872, owned by H. R. Remley, Watsontown. She has produced 33.88 lb. butter in seven days from 666.2 lb. milk and she displaces the former class champion Keystone Beauty Plum Johanna, who has 32.88 lb. Highland Korndyke Lad made 100.7 lb. milk, 5.26 lb. butter her best day. As a three-year-old she made 534 lb. milk, 30.16 lb. butter in a week and as a two-year-old made almost 22 lb. butter from 470 lb. milk, sixty-four days after freshening. She was bred by Harry A. Miller, Williamsport. Her dam is Honsinger Beryl Korndyke and her sire, Dutchland Colantha Hark, is a son of the century sire Colantha Johanna Lad.

Much credit is due the cow for she had no rest period before freshening. She has great vigor and has the capacity to consume large quantities of feed, never missing a meal nor was she off-feed at all during the test. She was not crowded to her limit and was hitting a thirty-three pound clip when the test was stopped. Her records as a three-and as a four-year-old were made under ordinary farm conditions and at her next freshening she is expected to come through with a much greater record. She was developed by her present owner, Mr. Remley.

E. M. Bell,
Official Tester.

STATE RECORDS

Donadora Pontiac Hartog Daw owned by T. H. Gardner of Donadora Farm, Unionville, Ohio, recently completed a seven-day record of 603 lb. milk and 30.3 lb. butter.

Carnation Edith Aaggie owned by H. R. Shoultes of Adna, secretary of the Lewis-Pacific Dairymen's Association is producing 98 lb. of milk a day at the present time. As a two-year-old she has a seven-day butter record of 20.75 lb. Mr. Shoultes has 30 pure-bred Holsteins and is rapidly developing one of the finest herds for its size in the state of Washington.

Pauline Colantha Fayne bred and owned by the Michigan Agricultural College recently established a new state record for a junior two-year-old by producing 19,884.6 lb. milk in a year. Her butter total is 757.86 lb.

EMBARRASSING

"Senator, I know you want to save the Government money."

"To be sure."

"So I must inform you that these statistics my department sends to the Capitol are entirely useless."

"My dear friend, you will oblige me by saying nothing further on that subject."

"Heh?"

"I have a constituent who draws a salary for checking them up."

ORANGES AND HOLSTEINS

Away back in 1914 the supervisors of Orange County, California were confronted with a problem of building a County Hospital and Farm. They looked ahead and purchased seventy-two acres of good land midway between the thriving communities of Santa Ana and Anaheim. On part of this they erected a county hospital and in September 1914, appointed H. E. Zaiser superintendent of the hospital and manager of the farm.

To provide food for the unfortunates who became ill or injured and for those who are no longer able to earn their own living, the land was cultivated. At the present time there are thirty acres set out in Valencia oranges. Beside a good high-class herd of registered Holsteins there are a herd of purebred Poland China hogs. Thirteen acres of oranges are bearing and in 1920 the crop brought $10,000; 1921 returns fell to $4,000 owing to a short crop. The other seventeen acres of oranges are two years old and before very long will be returning profits. The herd of Holsteins is headed by Orange King Segis Pontiac, seven of the cows are milking and while furnishing the hospital patients and inmates with fresh milk, butter, and cream are a source of inspiration to surrounding ranchers and dairymen.

NICE PAIR

The Illiona herd is owned by A. W. Fischer who lives near Elmhurst, Ill. One of his cows, Tyrannena Pontiac Ivy DeKol, made 91 lb. milk in a day and made 28 lb. butter in a week. She has a daughter, Illiona Ivy Pontiac Ormsby, that produced 87 lb. milk a day and made 26.7 lb. butter in a week as a three-year-old. The Illiona herd will be placed under federal and state supervision, with the prospect of going on the accredited list.

THE MEAN THING

A dentist friend of ours says he gets along easier in his work with women than he can with men because women are accustomed to have their mouths open.

MILLS BUYS GOOD ONE

A. C. Mills, of Curtis, Wash., recently purchased Chimacum Molly 3d and her heifer calf from M. P. Frame of Ceres. Chimacum Molly 3d was the junior champion at the 1921 Southwest Washington Fair. Her dam is a daughter of S. V. H. Molly who has a year record of 26,887.2 lb. milk 1,125.28 lb. butter. She recently closed an official test in which she made 693.7 lb. milk 36.13 lb. butter in seven days, and 1,952.3 lb. milk and 102.88 lb. butter in 21 days.

IN PENNSYLVANIA

Victor Guild of Titusville, Pa., has recently purchased from the well-known Holstein establishment Maple Grove Stock Farm at Centreville, a son of King Pontiac Jupiter who was by King of the Pontiacs from a daughter of Hengerveld De Kol. The dam of the new herd sire has a nice official record and has dropped eight calves in eight years, five of them being heifers.

PHEW!

Brentwood week there was an enthusiastic botanist roaming around Philly. He said he came because he heard the Philadelphia Mint had a new cent.

HIS TRANSLATION

"A-u-t-o-c-r-a-c-y," spelled Johnny, reading aloud, and then pronounced it "auto crazy."

And he wondered why his father laughed.

VACANT LAPS

"Marriage means to have and to hold. But some men are queer about their wives."

F'RINSTANCE

Sometimes the dove of peace hides because too many men have clipped her wings to feather their own nests.

Teacher—Johnny, what is steam?

Johnny—Water crazy with the heat.—*Life.*

MISSOURI CHAMPIONS

The list of Missouri State champions, as compiled by Professor C. W. Turner, shows an octet of registered Holsteins, four of which are owned by the University of Missouri, which certainly possesses a real good herd, which must be a source of pride, and at the same time a source of inspiration to dairymen of the state. We have taken the liberty of changing the fat, as submitted by Professor Turner, to the 80% basis as used in Holstein circles. Judging by the rate new champions have been coming in the past few months and the development of Missouri dairying, some of these class headers are soon due to lose their position.

Class	*Name*	*Owner*	*Milk*	*Butter*
Mature	Pontiac Lady Josephine.....	University of Missouri	23,503.4	960.78
Sr. 4	Campus Josephine Galaxy.....	University of Missouri	20,323.0	869.5
Jr. 4	Princess Poniac Carlotta.....	University of Missouri	16,370.7	681.58
Sr. 3	Inka Beauty Barber.....	C. E. Driver, Crescent	9,998.6	398.15
Sr. 3	Marie DeKol Lyons.....	W. O. Johnson, Kansas City	13,286.7	554.95
Sr. 2	Wadmantje Finderne Pride Pontiac.....	Pickering Farm, Belton	22,154.4	861.93
Jr. 2	Sunny Dorothy 2d.....	Frank Buzard, St. Joseph	13,787.9	550.48
Yearling	Princess Pontiac Carlotta.....	University of Missouri	10,507.6	435.42

OWNED BY A LADY

One of the prize herds of Fresno County, California, is the Andon herd of registered Holsteins, owned by Mrs. Annie Donders. This herd was started in 1917 when Mrs. Donders bought five high-class animals at the California Breeders' Sale at Sacramento. From time to time other good stock has been added to the herd until, with the natural increase, it now numbers nearly fifty head.

The first sire used in this herd was Segis Pontiac De Kol Burke Gerben, a son of Segis Pontiac De Kol Burke, who was twice grand champion at the California State Fair and was a son of Riverside Sadie De Kol Burke, former world's champion milk producer. The dam of the old bull is Wilhelmina Gerben De Kol, a thirty-pound cow with a record of 799 lb. butter, 17,450 lb. milk in a year. This bull was a prize winner and has left offspring which are characterized by splendid type and unusual quality. The present herd sire is a son of Dora Walker, a California State Champion.

Dora Walker has a record of 664.4 lb. milk, 24.15 lb. butter in seven days, made as a senior two-year-old. There are a number of other big producers in the herd. Aralia De Kol Pontiac Susie made 114.7 lb. milk in one day, 711.4 lb. milk in seven days, and 2,682.8 lb. milk in thirty days. Another real good member of the herd is Victoria Brunaro Johanna, with official records of 31.48 lb. butter, 625.8 lb. milk in a week; 2,932.6 lb. milk, 123.38 lb. butter in thirty days. Andon Gelsche Walker Susie at her first freshening made 1,870.8 lb. milk, 83.22 lb. butter in thirty days; and Norma Korndyke Cornucopia produced 673.1 lb. milk, 38.42 lb. butter in seven days; 3,113.6 lb. milk, 155.75 lb. butter in thirty days. The seven day record made by this cow won her first prize for butter fat production in the fiscal year 1920-1921 although it was exceeded by two others, but in the thirty day division she surpassed her two rivals and so won a double first.

ONLY ONE-FIFTH

A survey has recently been made of the live stock of Thurston County, Washington, and some five hundred replies were received to letters sent to stock men. The record show 114 purebred sires, beef and dairy, 55 grades and eight scrubs. There are 38 purebred Holstein sires in the county against 20 Jerseys and 11 Guernseys. The county agent received 23 pledges from stock owners who will purchase a purebred sire the coming year. The Thurston county campaign was conducted by the Farm bureau coöperating with the state and county extension workers.

MISSOURI STATE CHAMPION

Wadmantje Finderne Pride Pontiac, a senior two-year-old daughter of Finderne Pride Johanna Korndyke, recently finished a year record of 22,154.4 lb. milk 861.94 lb. butter, breaking the state record for her class for both milk and butter production. She displaces Lewismonte Independence Pontiac owned by C. E. Driver of Crescent, surpassing her by practically eight thousand pounds of milk and 250 lb. of butter.

Wadmantje now holds the state milk record in the senior two-year-old class for all periods from seven days to one year inclusive. Calving at two years and eight months old she produced 538 lb. milk in seven days, 2,154.7 lb. milk in thirty days while her butter records are 20.44 lb. and 82.17 lb. respectively. In the last thirty days of her test she was again in official work and during the month made 1,758 lb. of milk 63.75 lb. butter. She was giving 57 lb. of milk at the close of the year.

Wadmantje and her sire are owned by the Pickering Farms of Belton, Mo. This heifer formed part of Pickering's Farm exhibit at some of the great shows last fall.

SEVENTEEN OFFSPRING

Some twelve years ago Piebe Estata Clothilde No. 69,555 made 469.8 lb. milk, 23.98 lb. butter in seven days, as a seven-year-old. At that time this was one of the largest Wisconsin records. To spare her unnecessary suffering, Piebe was recently shot by her owner, Jake Conrad of Richfield, Wisconsin. She was the mother of seventeen calves.

CAME THROUGH

At the Maryland state fair held at Timonium last fall the first prize animal in the calf club class came from the Eastern Shore. The dam of the calf recently freshened as a senior three-year-old and made an official record of 578.8 lb. milk 24.5 lb. butter.

IN NEVADA

One of the good Nevada herds is owned by H. J. Long of Fallon. A few years ago he attended a number of California sales and bought some good foundation stock. Then he headed the herd with King Ormsby Canary Johanna, a son of Sir Pietertje Ormsby Mercedes and Glen Canary De Kol, 34.59 lb. butter as a three-year-old. This young bull is a full brother to Glen Canary DeKol 2d, 25,590.6 lb. milk, 1,323.36 lb. butter in a year as a junior four-year-old. As might be expected from this combination of blood lines the Long herd sire is a high class individual.

Among the large records in the Long herd is that of Blanar 2d, 31.44 lb. butter, 587 lb. milk in a week. She is a daughter of the 29.50 lb. cow Blanar and was sired by Dutchland Colantha Sir Ormsby, a good transmitting son of Colantha Johanna Lad. Gracia Colantha Burke, another daughter of this sire, became Nevada's first 30 lb. cow when she made 30.08 lb. butter in a week. Carnation Skylark Segis sired by Forward Prince Segis from a daughter of Dutchland Governor Sir Colantha, recently made 30.97 lb. butter and 749 lb. milk in seven days as a four-year-old. Cascade Mary Ormsby, as a three-year-old, produced 28.51 lb. butter from 655.9 lb. milk in a week. Her dam is a 29.9 lb. daughter of Sir Johanna Ruth Fayne. The first daughter of King Ormsby Canary Johanna, recently freshened at two years seven months old. This heifer, Longheath Colantha Ormsby, made 24.24 lb. butter from 461 lb. milk in seven days. As she is the first of 40 sisters to be tested, her record promises much for the future of the herd.

CERRO GORDO

Cerro Gordo Farms is a Holstein establishment located near Mason City, Iowa, and the manager, C. J. Peake, was formerly manager of the Hawthorne Farms of Illinois.

On the Edgemont Farm there is a ten-year-old Holstein named Dresden Friskerina Ormsby, that recently completed a seven-day record of 556.8 lb. milk, 27.24 lb. butter, in one day milking 85.8 lb. She dropped a bull calf that weighed 120 pounds at birth.

The cynical bachelor observes that any man can learn to love a girl if she makes the lessons easy enough.

NEW YORK STANDARD

The Department of Animal Husbandry at Cornell University is desirous of ascertaining the number of purebred and grade sires in use in New York State. In order to get correct figures on the herds enrolled in the Dairy Improvement Associations they are sending each association tester a questionnaire in which to give information as to the herds under his charge. Professor G. W. Tailby Jr., supervisor of the Dairy Improvement Associations, requests that each supervisor return to him one of the questionnaires by April 1st, with whatever information is available at that time. The standard set for New York State is all Associations with 100% purebred sires before the end of the year. May that standard be reached for it will mean many thousands of dollars added to the wealth of New York State dairymen in a few years and much to the purebred industry of the state.

COLOR INFLUENCES

In London, England, there are a number of city dairies, which consist of a small store selling milk, butter, cream and sometimes eggs. In the rear of such stores is a stable containing anywhere from a dozen to fifty cows. All feed is brought in from the country and when the cows fail to return a profit for their feed they are sent to the butchers. Quite a number of these establishments cater to the demands of special milk for infant feeding and a story is told which will be interesting to our readers.

The shop had been closed for the day, when a woman called to ask, as a favor, for some new milk for a baby. This was duly supplied. Shortly after the same person called again and asked: "Can you tell me the color of the cow you took that milk from?" The owner of the establisment said he was not quite sure, but would go and see. He went and returned saying: "It was a black cow, but why do you want to know?" "Well, sir," she replied, "because if it had been a red cow my mistress would have asked you to change the milk, as the baby would then have had red hair, and she does not want that."

TOWN DAIRYING

E. A. Fuller, a hardware merchant in Thayer, Kansas, has made a net profit of $255.07 in eleven months from town dairying with two Holstein cows. His milk sales to regular customers during the eleven months were $408.66 and he received $50 from extra customers, making a total of $458.66. The cost of maintaining the cows during the eleven months was $203.59, this including veterinary services.

One of the cows was under two-years-old at the beginning of the eleven month period, and the other was about six-years-old.

"How now, Tessie?"

"After they have 'em they seldom hold 'em on their laps,"—*Louisville Courier-Journal.*

MISSOURI A DAIRY STATE

There was a gain of 5,000,000 pounds in the butter production of Missouri in 1921 over the production of 1920. The figures for last year are approximately 55,000,000 pounds while the state production in 1915 was only 12,000,000 pounds. State Dairy Commissioner, E. G. Bennett is authority for these figures and he says that dairy conditions in Missouri are steadily improving because purebred and high grade dairy cattle are being brought into the state and are supplanting scrubs. Creamery stations and farmers are taking more pains in handling milk and cream on the way from the cow to the churn which is helping to improve the quality of Missouri butter and enabling it to command better prices.

FAIR ACRE HERD

W. N. Wilkins, Gloversville, N. Y., proprietor of "Fair Acre" has purchased thirteen registered Holsteins from Dr. G. Lentz. This will bring Mr. Wilkins' herd to eighty-one head. When he purchased his three-hundred-acre stock farm last year, he planned to place Hereford cattle on it, bringing this stock from his Montana ranch. He was unable to make satisfactory arrangements and decided to raise Holsteins with the result that he has one of the best herds in the country.

ASSOCIATION BUYS BULL

The Franklin Holstein-Friesian Bull Association of Fayette, Ohio, purchased Mankato Pietertje Ormsby Wayne, a son of Sir Pietertje Ormsby Mercedes 14th, from Marlow & Randall, proprietors of the Mankato Holstein Farms. The members of this association have previously been using two brothers of Sir Pietertje Ormsby Mercedes 14th. The price is said to be $850.

WELL BACKED

A syndicate of breeders of Delaware County, Ohio, breeders consisting of W. P. Smart and Sons, J. R. Smart, A. H. Newhouse, and Edward Slocum, have purchased from the Peter Small herd, Meadow Holm King Ona Fayne, whose four nearest dams have records averaging 1,222.8 lb. butter. He is said to be the only bull in Ohio whose two granddams average over 1,400 lb.

LIBERAL PRIZE

The Canadian Holstein-Friesian Association will offer $1,000 as prizes for Holstein exhibits at the Saskatchewan Provincial Exhibition which will be held in Regina, July 31st to August 5th. The association has recommended that R. M. Holsby, Port Perry, Ontario, be appointed judge.

WELL, RAWTHER

I used to be bashful,
But so good have I grown,
That I can love other men's sisters
As well as my own.

INNOCENCE

Father—Well, Mary, you have a brand-new baby sister.

Mary—Oh, daddy, may I be the first one to tell mamma?

"I say, Pat, that's the worst looking horse I have ever seen in harness. Why don't you fatten him up?"

"Fatten him up, is it? Shure, the poor baste can hardly carry the little mate that's on him now."—*Kind Words.*

Adam (sternly)—"Always keep in mind, woman, that my word is law in the garden."

Eve (sweetly)—"It's one thing to make a law, old dear, and quite another thing to enforce it"—*Buffalo Express.*

Mrs. Timorous—"Are you a careful driver?"

New Chauffeur—"Very careful ma'am. I never hit her up with the old 'bus unless I'm sure I can outspeed the motorcycle cop."

Wife—John, if you keep on, you'll drive me to drink!

Husband—Now Mary, have you got something in the house you're hiding from me?—*American News Trade Journal.*

"Lay down, pup. Lay down. That's a good doggie. Lay down, I tell you."

"Mister, you'll have to say, 'Lie down.' He's a Boston terrier."—*Nashville Tennessean.*

"Dust you off, suh?" asked the Pullman porter.

"With snow on the ground? There's no dust to-day."

"Oh, we keeps de dust in de kyah."

MARKET REPORTS

WASHINGTON, D. C.

For week ending March 15.

HAY.—Hay receipts continue light and the demand generally is good for better grades of timothy and alfalfa. Larger receipts weakening market at Minneapolis. Alfalfa and few cars good grade prairie wanted at Chicago. Fancy alfalfa sold at Kansas City @ $30. Quoted March 15. No. 1 timothy, New York @ $29; Pittsburg, @ $23; Philadelphia, @ $24; Chicago, @ $24; Minneapolis, @ $19. No. 1 alfalfa, Kansas City, @ $22.50; Memphis, @ $26.50; Minneapolis, @ $22. No. 1 prairie, Kansas City, @ $11; Minneapolis, @ $16.50.

FEED.—Feed markets very dull. Offerings of millfeeds freer and prices generally lower. Considerable pressure by mills to sell for 30-day shipment and jobbers offer transit and junction cars of wheatfeeds at discounts under prompt shipment prices. Transit shipments accumulating in East. Cottonseed meal firm, linseed meal steady. Offerings oil meals light. Gluten feed and hominy feed production good, demand fair, prices unchanged. Alfalfa meal steady, offerings light, particularly of better grades. Receipts and movement good, stocks improving. Quoted March 15. Bran, @ $24.25; middlings, @ $25.50; flour middlings, @ $28 Minneapolis. 36% cottonseed meal, @ $40.75 Memphis; white hominy feed, @ $22 St. Louis; @ $22.50 Chicago. No. 1 alfalfa meal @ $19 Kansas Ciy; linseed meal, @ $51 Minneapolis; @ $53 Buffalo.

DAIRY PRODUCTS.—Butter markets firm with price tendency upward. Good demand for all grades. Closing prices, 92 score: New York, @ 40c; Chicago, @ 39c; Philadelphia, @ 39½c; Boston, @ 40c.

Cheese markets firm and prices show but little change from a week ago except on Longhorns and Square Prints which are scarce and higher. Daisies very plentiful. Prices at Wisconsin primary markets March 14: Twins, @ 19½c; Daisies, @ 20¾c; Double Daisies, @ 20¼c; Longhorns, @ 22¾c; Square Prints, @ 23c.

PHILADELPHIA

Receipts of cheese for one week.

ORIGIN	POUNDS
Illinois	49,945
New York	139,906
Ohio	1,250
Pennsylvania	20,434
Virginia	172
Wisconsin	216,277
Total	427,993

ACTIVE TRADING IN CHEESE MARKETS DESPITE PRICE ADVANCES

Supported by the active trading which followed the sharp declines of the previous week, prices on Wisconsin cheese boards advanced on Monday, March 6th. Markets were apparently in a condition to stand the advance however, for regardless of the higher asking prices which dealers in Wisconsin immediately quoted, trading was good throughout the week. Southern trade which has come to be looked upon as a principal outlet was hardly up to expectations but this is partly explained by the heavy business of the preceeding week done with buyers in the south. The steady withdrawal of held goods from storage with the resulting effect which a scarcity has upon prices has served to stimulate and increased demand for fresh goods and practically all markets report that fresh cheese is moving better even in the fact of increasing supplies. At New York consumptive demand responded liberally to the low retail prices established by certain of the chain store distributors and it is said that large quantities of goods went into these channels. One of the largest outlets for fresh cheese in New York continues to be firms which use the goods for grinding purposes. Fresh cheese of the best quality is relatively scarce in the New York market. New York state goods are finding other outlets and Wisconsin prices are so high yet as to practically prohibit shipments. As a matter of fact, Wisconsin prices averaged around 20-21c throughout the week which was as high a level as was reached in the New York City market. About the only styles in Wisconsin which were at all dull were Daisies. Some dealers attributed this to the fact that Daisies are being put on the market now by brick cheese factories which because of the unsatisfactory condition of the brick cheese market have temporarily switched to American types.

WISCONSIN RECEIPTS LIGHTER

Cheese receipts at Wisconsin points for the week ending March 11 were lighter by 88,494 lbs., but still continue to show considerably heavier than for the corresponding week in 1919 and 1920-1921. Current trading stocks increased 110,246 pounds while public and private cold storage stocks decreased 169,082 and 60,632 pounds respectively. Wisconsin's apparent trade output was 3,583,921 pounds. A decrease of 213,527 lbs.

STOCKS AT DISTRIBUTING MARKETS

Receipts at distributing markets for the week increased 1,812,412 pounds while storage stocks were reduced 679,855 pounds. Floor stocks increased at Chicago and Philadelphia and decreased at New York and Boston.

BOSTON, WEEK ENDING MARCH 14, 1922

Dairy and Poultry Products: Butter prices have been unusually low for a number of months, and many dealers had figured that they would continue low for the remainder of the season, but the past week has seen an advance that has brought values higher than they have been at any time this year. Fancy fresh butter has been extremely scarce and active bidding jumped the price from 37c up to 40c for tubs and forced up all other grades corresponding amounts. Print butter has sold easily up to 43c and even dairy goods have brought 32c. Western fresh has advanced to 33-38c and storage has sold more readily @ 33-36c. Cheese prices are little changed from last week but are very firm @ 21½c for fresh and @ 24c for cured stuff.

HOLSTEINS IN BUNCOMBE COUNTY

One of the really good herds in North Carolina is at the Senyah Farms, owned by J. W. Haynes, of Ashville There are forty purebreds in the herd. There are about thirty purebreds and twice as many grades in the Hildebrand herd, while R. Church Crowell has a few registered Holsteins and a large herd of grades as has the Carter Brothers.

The Farm School at Swannanoa, which is operated as a unit of the Asheville Normal and Associated schools, has a herd of purebreds headed by a purebred bull who in 1920 took first prize in the State Fair as a bull calf. A farm near Asheville is run by Drs. Leonard and Shuford, veterinarians, who own several purebred Holsteins and a registered sire. There are quite a number of small herds in the neighborhood. Dr. M. H. Fletcher has a choice herd of nearly thirty head, and the Servier Bros. have a number of this breed, while others are owned by Joe and Claude Wells, of Leicester and the Asheville school. J. Walter Haynes is head of the Buncombe County Association.

APT SCHOLARS

Albert and Arthur Schumacher attended a dairy school which is held at Myrtle, Minn, each Friday night, so they sold a scrub bull for beef and purchased from Carl Lundt, of Hayward, a yearling bull for one hundred dollars. Before action, they talked the matter over with their banker and with the instructor, L. H. Fudge. Banker, school, county agent and breeder have each assisted these young men to improve their own records and by so doing are working towards agricultural advancement.

IN MISSOURI

During January, sixty-one herds consisting of 288 cows were tested. There were 176 Jerseys, 77 Holsteins and 25 Guernseys. The two high record cows for butter fat are both Holsteins, owned by Ingwerson Brothers, of Bowling Green; "Jens" Ingwerson, manager of this dairy farm, graduated from the Missouri College of Agriculture in 1916.

TWO YEARS WITH THE LIVONIA DAIRY IMPROVEMENT ASSOCIATION

In the fall of 1919 there were only a few scattered inquiries throughout Livingston County regarding a Dairy Improvement Association. The County Agent in order to find out to what extent this interest was manifest, called a county wide meeting at Geneseo. It was found at this meeting that the greatest number of dairymen living in any one locality particularly interested in the organization of this project were around the community of Livonia and that portion of territory extending toward Geneseo Village. In order to reach the dairymen of the Livonia community and present the matter to them a meeting was then called in Livonia, at which the dairymen present voted to proceed with the organization. Officers were elected and Mr. Zumstein engaged as testor. From that time forth despite the fact that this organization took place in the midwinter with extremely bad roads to travel, this association made a steady growth until it became the leader in New York State.

During the year 1921 either a purebred or a high grade Holstein has led the association for both milk and butter fat production each month. Five times during the year the cow that led for the month had to give over 2,000 lbs. of milk in order to hold his position. A purebred Holstein owned by Roy Reed of Hemlock, Grace Neptune Korndyke by name, led the association for four months before the honor was taken from her and then by another Holstein.

This friendly rivalry among the different members of the association is one of the great and sound reasons for its growth together with the opportunity that it affords to see and handle the competing animals. There is little effort to make the highest record in the world but every owner believes that he has some of the best cows in the neighborhood and he strives to do his best with his care and feeding.

Every member of this association has a purebred sire at the head of his herd. There are six herds headed with a thirty-pound sire or better. Among those might be mentioned a thirty-pound son of Carnation King Sylvia owned by Edward E Doty & Sons and used at the head of their Doty & Seaman herd; a 33-lb. son of Korndyke Butter Boy owned by Ashley Price; and a 30-lb. son of King Segis Pontiac Paul owned by F. M. Davis & Son. Another very promising bull is used at the head of G. F. Gray & Sons herd. He is sired by Elnoradale King Prilly and is from a dam with a 24-lb. two-year-old record. A good example of the coöperative ownership of a splendid sire is shown in the herds of J. M. Huff and Roy Reed whose farms are close together. They own a son of Maple Crest Korndyke Hengerveld from Bertjusca Pauline 3d, who is a member of the "World's Champion Full Sister Trio" and has a seven-day record of 34.72 lb. butter as a five-year-old.

At the conclusion of the first year's work there were forty-one cows that gave over 10,000 lb. milk during the year and forty-seven that produced over 500 lb. butter. The cow with the high milk production record was a purebred Holstein owned by J. M. Huff of Hemlock. This cow gave 14,620 lb. milk. The next cow in order of milk production was a grade Holstein owned by E. E. Doty and milked in the Doty and Barber herd. This cow gave 14,307.1 lb. milk. This herd also contained the second high butter fat cow, a grade Holstein which produced 717.8 lb. butter.

For the year 1921 the cow that led the association both in milk and butter fat production was a grade Holstein owned by Roy Reed of Hemlock. This great animal produced during the year 18,825.3 lb. milk and 777.6 lb. butter fat. It may be of interest to add that this cow gave milk to the value of $316.20 above the cost of feed. She consumed 3,268-lb. grain which is at the rate of 1-lb. grain for every 5.7-lb. milk produced. The cost of feed that was used came to $117.76 or 72 cents for every hundred lb. milk given.

The breeding of this cow brings out some very interesting facts about her ancestors. Her dam was sired by a purebred bull that was introduced into the community as an association sire a number of years ago by the condensary at Lakeville. Annie, which is the simple name that Mr. Reed calls this cow, was sired by a son of the greatest of all Holstein sires, King of the Pontiacs. This is a very striking example of what two crosses of a purebred sire will do towards improving the native cow.

Mr. Reed had the distinction and honor of winning the silver loving cup given by the Livingston County Trust Co., of Geneseo to the man owning the cow with the highest record of milk production in test in any Livingston County Dairy Improvement Association. The board of directors of this bank, in a desire to coöperate and in recognition of the splendid work being done by these associations, offered two cups, one of them for the high milk record and the other for the high fat record. Mr. Reed's record entitled him to both cups but according to the rules one cow can only be awarded one prize won during one lactation period.

During the year 1921 ninety-six cows gave over 10,000 lb. milk and ninety-four gave over 400-lb. fat, just about twice as many as in 1920. The average herd gain, which is the most remarkable showing made during the year, was 1,351.9 lb. milk and 54.4 lb. butter fat. The table shows the gain made by ten herds, three of which gained over a ton of milk per cow. This was due very largely to better methods of feeding, especially summer feeding.

What the various members and others throughout the county think of the work of this association can be best brought out by citing a couple of examples from the experiences of different members. James Alger, Jr. joined the association as a charter member and his cows were tested in February, March and April. On the advice of the tester, he sold out his entire herd with the exception of two that he kept to provide milk for the family. He told the tester that when he needed him again he would call him on the phone, maintaining his membership during the meantime, from May to November, without having any cows tested at all. He purchased seven more cows and the last time that the tester visited him he had five on the honor roll, one of which headed the association for the month of December with a production of 2,021.2 lb. of milk.

Another testimonial, this time from an outsider, was voiced at the auction in July when E. E. Doty sold out his herd of sixty cows, mostly grades. On this occasion one of the good dairymen in the community remarked to the county agent that he looked the cows over, decided what he would give for each and then paid fifty dollars a head more for knowing what they had done in the past.

MONTHLY HIGH MILK PRODUCING COW

Owner	*Age of cow*	*Breed*	*Months fresh*	*Milk*

KING PIETERTJE ORMSBY PIEBE

The combination of wonderful records in the pedigree and of individuality in the animal is the aim of all good breeders. But there are other objects to be attained before success is achieved. In a herd sire it is transmitting ability, transmission to the offspring of producing capacity and outstanding individuality. No matter how good looking a herd sire is nor how many great sires and tremendous producing dams there are in his pedigree, unless his offspring are possessed of these desirable characteristics he is a failure and he spells disaster to his owners and to the herd he heads.

In King Pietertje Ormsby Piebe, the herd sire of Hargrove and Arnold of Norwalk, Iowa, the aim of the breeder seems to be realized. This bull was born July 18, 1915 on the E. C. Schroeder farms and when six months old became the property of Elliott Brothers. Hargrove and Arnold purchased him July 12, 1918, shortly before the dispersal of the Elliott herd. As is well known, King P. O. P., as he is sometimes called, is a linebred Sir Pietertje Ormsby Mercedes bull, his dam and sires' dam both being daughters of that famous old sire. Both of these cows are noted for their individuality and for their production. The dam, Queen Piebe Mercedes, as a two-year-old made 29.84 lb. butter in a week and 116.74 lb. butter in thirty days. Her seven day record was the Minnesota state record at time of making and her thirty day record had not, at that time, been equalled by any other heifer in the senior two-year-old class. She was run on year test and made 980.21 lb. butter. As a junior four-year-old she made the sensational records of 1,389.45 lb. butter and 30,230.2 lb. milk in a year, a performance which, although made years ago, has never been equalled by a heifer of her age. She has made a number of sensational year records in addition. The sire's dam, Bess Pietertje Ormsby Mercedes is a 33.23 lb. cow with 787.3 lb. milk in a week. She too has a number of big year records and her performance as a five-year-old of 1,235.32 lb. butter and 29,053.2 lb. milk is well known to cattle men while her milk production was world's record at time of making. The dam and sire's dam of King P. O. P. have year records averaging 1,312.38 lb. butter and 29,671.7 lb. milk.

Although King P. O. P. is comparatively a young bull he is already recognized as a famous Holstein sire. His offspring have won blue ribbons for the past three years at some of the greatest shows in the country and an entire herd made up of his offspring were shown at eight state and national shows in 1921. Seven national judging experts awarded them 23 championships, 91 firsts and 43 seconds, besides minor prizes. The get of this sire have brought high prices at both public and private sales and his present owners claim that his offspring, when sold, have averaged better than three thousand dollars, the day of the computation being January 1st of this year.

The Hargrove and Arnold Holstein Co., have ambitious plans for their herd sire and for his get. One plan is putting out one or possibly two complete show herd this fall, every animal of which will be sired by King P. O. P. or his sons. Then, after the season closes, they have in prospect a national King P. O. P. sale which will be open only to direct descendants of their great sire and will be conducted, they say, at actual cost.

No more ambitious scheme of far reaching potentialities has ever been devised by the owners of a herd sire. Not only will they and their customers reap the benefit of such an enterprise but other Holstein owners who have descendants of this bull will have the privilege of putting animals in the sale or if they do not wish to dispose of their stock, will derive benefit from the advertising of the sale and the interest it will create, an interest that will be country-wide.

WYOMING TESTING ASSOCIATION

The highest cow for the month of February is owned by D. M. Barton, of Tunkhannock. She gave 2,478 lb. milk and 79.3 lb. fat. She is a six-year-old Registered Holstein. The second highest in fat and the highest in milk, also was found in his herd. A four-year-old gave 2,487.0 lb. milk and 77.1 lb. fat.

The best herd for the month belongs to Charles Ace. His eighteen head of Holsteins averaged 1,332 lb. milk and 41.5 lb. fat in the thirty days.

In the association 95 cows gave over 40 lb. fat and 24 over 50 lb., while 134 cows gave over 1,000 lb. milk and 72 over 1,200. There are 426 cows in the Association.

R. Bruce Williams, one of the members of the Association sold his cattle at dispersal sale. His herd of 40 head averaged $276.50.

RAY S. SLOAT,
Tunkhannock, Pa., Tester in Charge.

BOSSY

The Boss—What do you mean by such language? Are you the foreman here or am I?

Jim Jones—I know I'm not the foreman.

The Boss—Well then; if you're not the foreman, why do you talk like a blamed idiot?

LOOK OUT, JUDGE

Judge (to prosecutor): "Then you recognize this handkerchief as the one which was stolen from you?"

Prosecutor: "Yes, your honor."

Judge: And yet it isn't the only handkerchief of the sort in the world. See, this one I have in my pocket is exactly like it."

Prosecutor: "Very likely, your Honor; I had two stolen."

Jane—And why does that man always refer to you as his baby girl?

Goldie—Oh, I don't know. I suppose I keep him up so late at nights.

IN VIRGINIA TOO

The report of the Fairfax County Number 1, Virginia, Cow Testing Association shows that there were 453 cows tested for the month of February, with an average production of 785.2 lb. milk, 31.2 lb. butter fat. There were 2 cows that made over 80 lb. fat; 9 making over 60 lb., 38 with over 50 lb., and 104 that made over 40 lb.

The highest producing cow for the month was a grade Holstein owned by Ben Middleton, of Herndon, Va., she gave 2,040 lb. milk and 85.7 lb. fat. The highest producing herd was the herd of F. N. Moehler, of Herndon, which consisted of thirty cows and averaged 1,105 lb. milk, 42.5 lb. butter fat.

INTER-SCHOLASTIC CONTEST

Early in April there will be an inter-scholastic stock judging contest at Pulaski, N. Y. at which teams from the agricultural classes of the local high school and of high schools from surrounding towns will compete. The contest is under the auspices of the Oswego County Holstein club of which Hugh F Whitney, Pulaski, N. Y., proprietor of the Ayrlynn Stock Farm, is president. These contests not only serve to educate the young judges but also inspire emulation which causes the teams and each student to strive to do their best.

A boy's and girl's Holstein Heifer Club is being formed at Morrison, Ill. The age of the club members will be between twelve and twenty and the limit to the number is twenty. The animals will be exhibited at the Whiteside County Fair this season. Should a heifer die, the members *pro rata* two-thirds of the original cost price, the member losing the animal standing one-third.

FISH WON'T BITE "PATIENCE"

To illustrate her point the teacher drew on the blackboard a picture of a small boy sitting on the bank of a stream fishing.

"You see this boy," she said, beaming on her pupils. "He is fishing. He must be prepared to sit and wait. He must have patience."

For a little while longer she dilated on the beauties of being patient. Then came the time for her to test her scholars.

"Now, can any of you boys tell me what we need most when we go fishing?" she invited.

Like one voice came a chorus from the class:

"Bait!"

SLIGHTLY MIXED

A bailiff in a mountain county of one of our Southern States recently posted the following sale notice, written with a carpenter's pencil on brown wrapping paper:

"Notis publick sail I will sell akorden to law on Sattiday next wun buggie and wash pot dubble seeted with wun laig broke off. Also wun red mule for Spott kash with wun eye."

NOT INTERESTED

We understand the tombstone trust intends to lower prices in the spring but, somehow or other, we can't get enthusiastic over it.

Milly—"When a woman marries she loses her maiden name."

Billy—"Oh, well, the man often loses his identity, too."

John Barleycorn may have gone to a watery grave but his spirit goes marching on.

"Did wife say to buy a casserole,
Or did she say a camisole?
Let me think for just a minute!"
"I'll help you buy,"
Was the clerk's reply,
"What kind of a chicken will go in it?"

Sunday school Teacher—"Nancy, why must we be kind to the poor?"

Nancy—"Please, teacher, because in these days any of them might become rich."—*Bulletin Sydney.*

Oct. 21—New Douglas, Ill., Madison County Breeders'.

TORBERT & DALE SALE

At the Torbert and Dale sale held on the farm near Renville, Minn., February 24th, thirty-six head brought an average price of $170. Weather conditions were bad and some of the railroads were blocked, keeping buyers away. However, the sale pavilion was packed when Auctioneer Hanson opened the proceedings by a few remarks on the dairy industry and the Holstein breed. The price realized was $6,135. The buyers and prices they paid are:

TUBERCULOSIS ERADICATION

The January report of the United States Bureau of Animal Industry shows that tuberculosis eradication work is progressing in many states. During the month 177,221 cattle were tested in 13,613 herds and of this number 6,376 animals reacted or a little less than two in a herd.

In number of cattle tested, Missouri leads with exactly 18,000. Wisconsin is second with 12,680 and Michigan third with 10,103. Eight other states had more than five thousand cattle tested in the month and New York falls just short of this number with 4,997. Of the greater Holstein states, Pennsylvania and Minnesota make a splendid showing. Minnesota has 175 reactors out of 8,012 animals tested while Pennsylvania has only 90 out of 3,301. Massachusetts has seven reactors from 450 cattle tested.

Wisconsin holds her position as leader in respect to total herds and total number of cattle on the accredited list, the figures being 1,455 herds containing 33,377 head. Minnesota shows 1,310 accredited herds containing 31,231 head. Little Vermont is third with 16,459 head in 889 herds and Pennsylvania follows with 14,746 accredited animals in 883 herds while Virginia comes next with 14,643 head in 609 herds.

Montana leads in the total number of cattle under supervision having 183,742. New York is second with 136,456 head and Montana third with 133,506 head.

Iowa has the most herds and the most cattle on the waiting list, Indiana being second in respect to herds, Washington third, Minnesota fourth, New York fifth, Pennsylvania sixth, Vermont seventh and Oregon eighth the latter state having exactly 1,000 herds waiting to be tested.

The summary shows that in the United States there are 12,157 accredited herds containing 279,574 head. There are 143,449 herds under supervision and 18,956 on the waiting list.

DUTCHLAND FARMS

The daughters of Dutchland Creamelle Korndyke Lad have been making a splendid showing in recent weeks. Dutchland Creamelle Winana made 35.92 lb. butter in seven days. One of his oldest daughters Dutchland Creamelle Daisy made 30 lb. from 611 lb. milk in the seven days, at three years and six months old. She is the oldest one having the Creamelle and Königen cross. Dutchland Creamelle Lady Denver finished her year with 1,130 lb. of butter and 23,000 lb. of milk with second calf and her running mate, Dutchland Creamelle Cornucopia is making about the same amount, just going by the 1,000 lb. and has nearly two months to go to finish her year.

There are quite a number of his good daughters to be tested very soon. When the season's work is turned in, we have every reason to expect that the daughters of Dutchland Creamelle Korndyke Lad will show up with the best of them. The Königens are doing equally as well. We have just made 34 lb. on Melisse and 701 lb. of milk. We have a three-year-old daughter, Dutchland Königen Tidy Abbekerk that is just on test at the present time, giving about 95 lb. a day, has a little over 27 lb. of butter in the seven days and looks like 30 lb. as a three-year-old. We have just got an outside report that Dutchland Königen has made over 30 lb. in seven days. With the records that the daughters of this bull are making in the long time tests, there are going to be some real good reports come out in the very near future.

We have a cow, Dutchland Aaggie Olive, that is doing wonderfully good work; she just made a seven-day record of over 24 lb. in the eight months after calving division; in fact, she has been in milk about nine months. She looks like about 28,000 lb. of milk and almost 1,200 lb. of butter. She is the oldest daughter of the Dutchland Pietertje Sir Aaggie sire. EARL D. UPTON,
Mgr. F. F. Field Holstein Trustees.

NEW ENGLAND DOINGS

Queen Elsie Ondine, grandaughter of King of the Pontiacs owned by S. M. Buckingham of Watertown, produced 22.18 lb. butter and 567.4 lb. milk in seven days at four years and six months old.

Another granddaughter of King of the Pontiacs, Lady Kayes Pontiac, owned by the City of Bridgeport, has made 26 lb. butter from 675.7 lb. milk in a week. Antrim Pride Bessie a four-year-old owned on the City Farms has made 20.26 lb. butter from 541.5 lb. milk. She is a daughter of Finderne Pride Johanna Korndyke, the Pickering farm herd sire. Robinsdale Katherine Veeman of the same herd as a senior four-year-old made 24.7 lb. butter and 568.8 lb. milk.

They are making some good records in the herd of E. C. Rogers of Putnam. Pauline Fairfax 2d made 22.42 lb. butter and 501 lb. milk in a week. She is a grandaughter of Ormsby Korndyke Lad. Queen Segis Pontiac Posch made 25.35 lb. butter and 475.7 lb. milk. Her sire is King Pontiac Posch a son of King of the Pontiacs from the 30—lb. cow, Roxie Pauline DeKol Posch. The three-year-old Maplewood Butterfly made 23.17 lb. butter from 547.6 lb. milk. Her sire, Prince Pontiac DeKol Hengerveld was from the 33—lb. cow Princess Hengerveld DeKol and was sired by King Pontiac Cardlotta, a well bred son of King of the Pontiacs.

Gladiator Pontiac Pietertje a member of the Rogers herd made 463.8 lb. milk and 18.9 lb. butter in seven days as a junior three-year-old. Her sire is a son of King Pontiac Calypso, one of the many good sons of King of the Pontiacs from a daughter of Hengerveld DeKol. Lady DeKol Segis Korndyke as a junior three-year-old of the same herd made 384 lb. milk and 17.36 lb. butter. Her sire, King Netherland Segis Königen was by the Field herd sire King Segis Pontiac Königen from Lady Netherland Pontiac.

The Nutmeg herd owned by F. M. Peasley, Cheshire, had a remarkably low bacterial count during October, November and December 1921, as shown by the January report of the New Haven Department of Health bulletin. The Nutmeg herd average was 3,500, the closest being 9,500 by the Fairlea Farm and Dairy. Sixty-five herds and eleven dairy stores are mentioned in the report which shows the average bacteria counts of not less than four samples of milk during the period. The bulletin states that a bacteria count of 50,000 is considered good.

The Summit Lumber Co. of Davison, Maine, purchased Iowana Aaggie Sir Fayne from the Iowana Farms, Davenport, Iowa. This bull is a son of the great Iowana sire and show bull, Sir Johanna Fayne and his dam is Edenwold Aaggie Bess, producer and show animal. As a senior two-year-old she made a year record of 15,214.4 lb. milk and 582.65 lb. butter and as a senior four-year-old she made 21,408 lb. milk and 837.17 lb. butter in a year. As a yearling Edenwold Aaggie Bess won first prize and was junior and grand champion at the Minnesota State Fair, first prize and junior champion at the Waterloo Dairy Cattle Congress and first prize in her class at the National Dairy show.

Summit Farms has a splendid herd of producers and are to be congratulated on acquiring such a grandly bred animal. The combination of production and individuality is one all breeders wish to obtain.

Iowana Farms is the property of Colonel Watson French, a director of the Holstein-Eriesian Association of America and one of its former vice-presidents. He became a national figure in Holstein circles when he came to the rescue of the breeders who had their herds quarantined at the Chicago National Dairy show at the time of the last foot-and-mouth epidemic.

Colonel French who is a man of considerable means went security for all the herds and their owners and so prevented the indiscriminatie slaughter of many noted animals of different dairy breeds. One of the animals he was instrumental in saving is the famous Minerva Beets who rewarded his public spirit by winning the championship at following national shows and incidently beating out some of the Colonel's own show animals.

THE PRICE OF TRANSFERS

(With apologies to R. K.)

Now this is the law of the leaders who
sell transfers to you and me,
And the ones who keep it shall prosper,
and others there may not be.
"As paper advances in war times, our
prices we shoot to the sky,
To four times the regular charges and
now we will keep them that high."

Friend—Haven't you gone housekeeping yet?

Newwed—No; we're waiting till we save up enough money to live in keeping with the wedding presents.

ROBERTSON AGAIN

The Robertson herd is continuing to make good records. Pearl Pietertje DeKol Pontiac finished a year record March 12th, making 19,095.7 lb. milk and right around 800 lb. butter as a four-year-old. She is a worthy stablemate to Hill Pine Veeman Silvertip who as a junior two-year-old made 17,910.9 lb. milk, 647.49 lb. butter in a year and to the new Pennsylvania champion Hill Pine Flora Finderne, with 21,031.3 lb. milk, 741.25 lb. butter, the only 20,000 lb. junior two-year-old in the state. Pictures of these great producers which are also fine individuals will appear in an early issue. Their owner is H. E. Robertson, of York, Pa.

TESTING IN ARIZONA

During January, 491 cows were tested in the Tempe Association of Arizona. The average production was 687.3 lb. milk, 26.3 lb. fat. Forty-nine cows made over 40 lb. fat and sixteen over 50 lb. This is the highest number of 50-lb. cows for any month in the history of the association.

Lady Vernon, a Holstein, belonging to M. W. Turley, won individual honors with 2,312.6 lb. milk, 80.9 ib. fat, the best production in the history of the association. Second to her is another Holstein, Johanna, owned by B. Coman with records of 2,185.5 lb. milk, 76.5 lb. fat. The Coman herd is first with an average of 1,239.4 lb. milk, 40.7 lb. fat.

ONE HUNDRED PER CENT HOLSTEIN

The Allenton-Kohlsville Cow Testing Association is a Wisconsin association which consists of entirely all black and white cows part of which are purebred and part are grades. Every herd sire is a purebred. All the herds are tested for tuberculosis and there are drinking cups in every barn. The association stands second for production in Wisconsin being surpassed only by the Cedar Grove association of Sheboygan County.

During November this association had the high herd and second high cow and in December they had the high herd and high cow and only two associations had more forty-pound cows. Forty-seven per cent or 119 of the animals tested in January made over 40 lb. fat. The high cow was a registered four-year-old owned by C. F. Rosenthal. She made 2,362 lb. milk, 89.8 lb. fat. Adam Kohl had the highest milker with 2,418 lb. A two-year-old registered animal, owned by Louis Pamperin made 2,034 lb. milk, 61 lb. fat.

For the third consecutive month the registered Holstein herd owned by Wm. Pamperin led with an average of 1,649 lb. milk, 53.4 lb. fat. Eleven other herds averaged over 40 lb. butter fat; fifty-one cows made over 50 lb. butter fat for the month.

She—Don't you think that talkative women are the most popular?

He—What other kinds are there?

ONE HUNDRED COMPETITORS

The Manitowoc County Holstein essay for rural school children, mention of which was made recently in the columns of THE HOLSTEIN BREEDER AND DAIRYMAN, closed February 28th, with more than one hundred papers submitted. It will take some time to score the papers and find the winner. The prize is a purebred Holstein calf from the herd of M. Geraldson. The only condition attached to the award is that the winner must live on a farm which does not own a purebred bull.

RICHFIELD, WISCONSIN

The registered Holstein Meek Pieb, owned by Adolph Kurtz, Jackson, Wisconsin, led the Richfield Cow Testing Association for the month of January, she making 2,056 lb. of 4.08% milk, or 83.9 lb. butter fat. Second to her is Barbetta, a purebred, owned by J. F. Myer, with 2,545 lb. milk, 81.4 lb. fat, made from three quarters. During the month she made an official record of 575.2 lb. milk, 23.4 lb. butter fat. Another cow in the herd made 25 lb. butter and a heifer made 19 lb. Mr. Meyer has twenty animals with seven-day butter records.

The boys of the Delhi Farm Center, of Delhi, California, are organizing a calf club and have secured nine calves, seven of which are Holsteins. The breeders supplying the black and white calves are, A. M. Bibens, James Gibson and H. E. Cornwell.

Registered Holsteins That Are Naturally Hornless

KEYSTONE BEAUTY PLUM JOHANNA

Her work has NEVER been equalled, age considered

Nearly every animal in the herd related to her Origin Herd

25,787.5 lb. milk, 1,294.71 lb. butter in a year as a senior four-year-old. A world's record in class for more than six years; still the world's record for strictly official test. The year before she made 22,496.6 lb. milk, 1,081.88 lb. butter, as a junior three-year-old.

Production

Hornlessness

Geo. E. Stevenson & Sons, 727 Connell Building **Scranton, Pa.**

HERE AND THERE

George Abbot, noted Holstein breeder, of Cortland, N. Y., has been making a trip around Watertown, Wis., and has purchased a number of good ones, paying a thousand dollars to Arthur Weirhert, of Emmet, for a twenty-nine lb. four-year-old. He also took stock from W. O. Connor and from Spring Brook Farm.

The carload of Holsteins shipped from Modesto, Cal., early in January, went through to Guadalajara, Mexico, in good shape and made a pleasing impression. Word has already been received by the secretary of the Stanislaus County Holstein Breeder's Association that a representative of the buying firm will be back for more.

Dave Williams, of Lake Forrest, Ill., has an order of two carloads of high-grade Holsteins which will be shipped to China. We understand that only animals of high quality will be taken.

A registered Holstein bull calf, a son of Colonel Abbekerk Pontiac Segis will be presented by the Carlton Farms of Chowchilla, Cal., as a prize in the Madera County dairy herd competition, the object of which is to promote better care and feeding of dairy cows. The manager of the Carlton Farms which is owned by Carlton College, Minn., is Dr. F. F. Showers.

Secretary of Agriculture Wallace has cited 110 livestock commission firms, members of the St. Louis Livestock Exchange, to appear before the Federal Court at East St. Louis March 20th. The complaint is under the packer control act, and the firms are charged with boycotting independent commission companies not members of the Exchange.

Carlos Fonts y del Jungo, of Havana, Cuba, is visiting the dairy herds of eastern Tennessee, with a view to making extensive purchases of cattle, mainly Holsteins, for Cuban interests. Mr. Jungo is a prominent lawyer of Havana, and will have C. A. Hutton, dairy specialist, of the Tennessee Agricultural Extension Department to assist him.

At the Sheffer sale at Auburn, Indiana, March 2d, 60 head were sold for an average of $200. H. J. Hunter, of Ossian, paid $400 for one cow.

Rizpah Queen Pontiac, the first prize three-year-old at the Eastern States Exposition 1920 recently completed a record of 23,581 lb. milk and 1,090 lb. butter as a senior four-year-old. She is owned by Dzuris & Son, Pochassic Road, Westfield, Mass.

"May I kiss you, Jennie?" asked the young man, in the parlor.

"Oh" replied Jennie, "mother's in the other room."

"That's all right," replied the young man, "your father can kiss her."

We farmers are seeing some wonderful things these days—even calves clad in silk.

RIPE

First-Class Scout—"I found a little green snake this morning."

Tenderfoot—"Better leave it alone. It might be as dangerous as a ripe one."

ONE REFORMING INFLUENCE

A pair of tight shoes will do more to restrain a man from roaming from his fireside than all the blue laws that can be devised.

NOTHING ELSE TO DO

"What did Bohokus do when he found the doctor wouldn't prescribe whiskey?"

"Got well."

NEARLY THROUGH

"Now, our guests are singing 'Coming Thro' the Rye.'

"Well, they are coming through rapidly. That's my last quart."

Mistress—James, take Fido into the kitchen and amuse him.

Butler—Er—please, mum, I don't know how.

"Stupid, it's quite simple. Roll on the floor and make a noise like a ball of wool."

"Freddy's social career is ruined."

"How's that?"

"The moths got into his evening clothes."

"I have decided to call my homebrew 'frog,'" remarked Nutt.

"Why?" asked Bolt.

"Because it has plenty of hops, but not so much kick," replied Nutt.

"See here," protested the lawyer, "If I'm going to defend you, you'll have to drop that guilty look."

"I can't help it," replied his client. "I'm new in the bootlegging business, and I have such a poor memory for faces, for all I know I may have solicited the judge."

FOR SALE

Two Registered Holstein Bulls

$300.—Lewisdale Sir Pietje Shadeland, No. 225582. Born January 28, 1917. Son of Elnoradale Sir Pietje DeKol and Lady Shadeland Gorter 2d. 456 lb. milk, 19.10 lb. butter in seven days as a three-year-old; her dam 533.9 lb. milk, 19.48 lb. at 4 years.

$150.—Dauphin Ourvilla Shadeland, No. 346871. Born March 21, 1920.

A DAISY

A Scotch preacher had been abroad, and when he came back he was preaching to his congregation on the marvels he had seen, said the Rev. W. T. Dorward, of the Tabernacle, at a banquet.

He wound up with this:

"And the same Creator who made the ocean made the dewdrop. The same Creator who made the mountain made the pebble. Yes, and that same Creator who made me made a daisy!"—*Selected.*

When on his way to evening service the new minister of the village met a rising young man of the place whom he was anxious to interest in the church.

"Good evening, my young friend," he said solemnly, "do you ever attend a place of worship?"

"Yes, indeed, sir, every Sunday night," replied the young fellow with a smile. "I'm on my way to see her now."—*Sunday Visitor.*

The train was going up a very steep grade, and with unusual difficulty the engineer succeeded in reaching the top. At the station, looking out of his cab, the engineer saw the new brakeman and said with a sigh of relief: "I tell you what, my lad, we had a job to get up here didn't we?

"We certainly did," said the brakeman, "and if I hadn't put on the brakes, we'd have slipped back."—*Forbes Magazine.*

At the funeral of a colored man, who hadn't been all he should have been, an opportunity was given to friends to say a word. A brother arose, and said: "We all hopes that Brudder Ephrim is where we thinks he ain't."

A man who was asked to give a recommendation for a patent medicine said, "It is the best medicine I have ever tried. I bought a half dozen bottles for my mother-in-law, who was at the very gates of Paradise when she began taking it and it pulled her through."

A merchant who boasted that he would never sell anything by false representation found that a shoe which he carried did not wear well and was not up to standard, so he instructed the clerk to put a sample in the window and mark it "A shoe fit for a queen" "because," he said, "queens didn't have to walk much anyway."

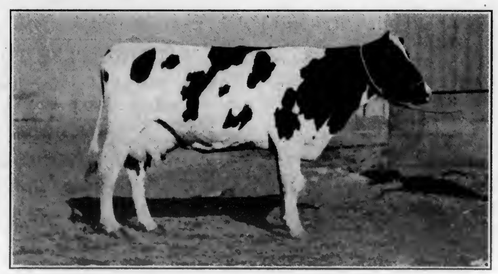
"How's this?" asked the lawyer. "You've named six bankers in your will to be pallbearers. Of course, it's all right, but wouldn't you rather choose some friends with whom you are on better terms?"

"No, judge that's all right. Those fellows have carried me for so long they might as well finish the job."—*American Legion Weekly.*

In the days of the Old Testament it was considered a miracle for an ass to speak; now nothing short of a miracle will keep one quiet.—*Jean Milne.*

DOLLY, THE NEW YORK JANUARY LEADER

The five highest producers in the Dairy Improvement Associations of New York State for the month of December are all black and whites. The leader is a grade, "Mulligan," seven-years-old, owned by Wilbur Ashley of Livonia. She was fresh two months and produced 100.6 lb. butter fat, 1,705 lb. milk. Eli Bodine of Chemung, owned the second animal, a two-year-old, that made 97.1 lb. fat, 1,866.2 lb. milk. Eftie, nine-years-old, owned by Jessie Dalrymple, of Horseheads, stood in third position with totals of 94.1 lb. fat, 2,749.7 lb. milk. Cecile, owned by E. H. Waite & Son of Alexander, was fourth with 83.8 lb. butter fat, 1,906.5 lb. milk, while Hengerveld Pietje Beets Conesus, owned by James Alger Jr., of Livonia, occupied fifth position with totals of 82.9 lb. butter fat, 2,021.2 lb. milk.



During the month, 1,103 of the 9,898 cows in the associations of the state made the Honor Roll, or better than 11%. Of these, 56 produced between 60 and 70 lb. of fat, 18 between 70 and 80 lb. and six exceeded 80 lb. one passing the century mark.

The January champion is a heifer owned by Edward E. Doty & Sons of Geneseo, N. Y., and milked in the Doty & Seamans herd. She made 96.9 lb. butter fat, 2,154.4 lb. milk. Her name is Sunnybrook Dolly Ladoga, No. 619,067. The well-known breeder, George Abbott, purchased her dam, Sunnybrook Dolly Veeman 2d, from Canada. She was in calf by Count Ladoga Sylvius, a son of Prince Echo Sylvia from a 25-lb. cow, and in due time dropped this heifer, which Doty & Son purchased when a yearling.

Dolly is enrolled in an Association where it is a real honor to be the leader. During the month no less than 120 of the 267 cows tested in the Livonia Association made the Honor Roll.

When the January report of the New York Associations went to press, which was February 25th, twenty-four reports were in. Dolly of course, was the leader of her own and of all the associations reporting. The next leader was a Holstein owned by P. E. Trask, of the Hamilton Association with totals of 2,362.2 lb. milk, 82.7 lb. fat. Ralph Tillou owned the leader of the East Aurora Association with totals of 1,972 lb. milk, 80.4 lb. butter fat.

Of the twenty-four association leaders, twelve are given as Holsteins or Holstein-Friesians, seven as grade Holsteins, three as Jerseys and two as Jersey grades, quite a respectable percentage of black and white champions.

SUNNYBROOK DOLLY LADOGA

96.9 lb. butter fat, 2,154.4 lb. milk in January as a two-year-old. January leader of the New York Dairy Improvement Associations. Owned by E. E. Doty & Sons, Geneseo, N. Y..

"She's no longer young, and not what you'd call a good-looker."

"No, but her father is a bootlegger."

FINDERNE STOCK FARMS

WHERE WORLD CHAMPIONS ARE BRED AND DEVELOPED

HOW FINDERNE CATTLE LOOK IN PASTURE

But come and see them in the barn, examine them carefully and you will see the reason why this herd produced such world champions as Finderne Pride Johanna Rue—1,470.58 lb. butter in a year; Finderne Holingen Fayne, 1,395.06 lb. butter as a junior three-year-old; and Finderne Mutual Fayne—1,200.63 lb. as a junior two-year-old.
To head your herd you need a bull of FINDERNE QUALITY, sired by King Valdessa, whose two nearest dams average: 7 days—Butter, 43.036 lb.; Milk, 640.25 lb. 30 days—Butter, 167.894 lb.; Milk, 2,625.15 lb.

FINDERNE STOCK FARMS, BERNHARD MEYER, Owner Finderne, New Jersey

Merryall Farms

Cattle from this establishment make good wherever they go.

A cow bred in this herd is LILITH GEM KOLKLUFF 22,247 lbs. of milk; 851 lbs. of butter, 365 days.

We sold her to the Pennsylvania State College and there she made her great records.

Cattle of this kind make money for those who buy them.

Come and look over our stock.

LACKAWANNA COUNTY HOLSTEINS

The herds of Lackawanna County consist of stock directly descended from cattle imported direct from Holland in early Holstein days by old time Lackawanna County breeders—pioneers of the breed.

These men were capable judges and selected their animals for type, individuality and producing capacity; desirable characteristics readily apparent in the present cattle of the county.

Lackawanna cattle are healthy—many of the herds are under Federal supervision.

Quotations will be cheerfully given on single animals or carloads—and it is a pleasure to show the goods.

THE SPRINGDALE HERD

Built up during the past sixteen years on a basis of profitable production and re-production

Present Herd Sire

WOODMONT ECHO SYLVIA CHAMPION

His sire, Sir Pietje Echo Sylvia, is by Champion Echo Sylvia Pontiac and is therefore a brother to Eco-Sylv Belle, 31.15 lb. as a junior two year old, the present World Champion in her class.

His dam, Butter Boy Empress, made 30.27 lb. butter in seven days, has milked 100 lb. in a day and was first prize aged cow, first in the A. R. O. class and Grand Champion at the 1921 New York State Fair. Judge Haeger says she is one of the three best cows shown last year.

Most of our young animals are by

KING TWEEDE SPRING FARM

His sire is Spring Farm King, full brother to the former World Champion and first 44 lb. cow; regarded as one of the best young sires of the breed.

His dam, Dressie Lady Pontiac, has a record of 30.04 lb. butter, 614.8 lb. milk made in seven days and is full sister to the 33.98 lb. cow Dressie Princess Pontiac. Their sire is Spring Farm King Pontiac. Daughters of KING TWEEDE SPRING FARM now in test are making a splendid showing under real dairy conditions.

Our older cows are daughters of

TOBE RAG APPLE KORNDYKE

Son of Christmas Tobe, 2d, 31.66 lb. butter in seven days and former World Champion ten year old. She is also the dam of Lady Tobe De Kol, 36.59 lb. butter in a week, 141.24 lb. butter in thirty days as a senior four year old, both being World Records when made. She in turn is dam of Geraldine Rag Apple Korndyke, 30.21 lb. butter in seven days, also as a four year old. Here is large production, generation after generation.

Animals from this herd will make good anywhere

Robertson Farms; A Place You Should Visit

A PENNSYLVANIA herd that seems destined to make quite a mark in Holstein history is that owned by H. E. Robertson of York. Mr. Robertson is almost a new comer in the business, having owned his present plant only a couple of years, yet already he has gone a long way. The Robertson Farms consist of 140 acres, situated in the York Valley and

PEARL PIETERTJE DEKOL PONTIAC
19,095.7 lb. milk, 800 lb. butter in a year as a four-year-old.

those acquainted with the territory know that this means some of the best soil in the Eastern States. The locality is historic but at present we will not take time to tell any of the picturesque legends which are told of this locality. We can say however, that a point a few miles of the farm marks the high tide of the confederacy for when the Southern army reached the site of an old bridge crossing the Susquehanna a short distance from the farm, they found the bridge down and the river crossing disputed by a few determined men which delayed them long enough to enable the Union soldiers from the New England States to come as reënforcements, while the Federal Army came up from the South, compelling the Confederate army to turn and march back to meet them. They met at Gettysburg, the Union army coming from the South and the Confederate army coming from the North, a fact that is not generally told in our histories.

Mr. Robertson who is an Ames College man, we believe, was taking an auto trip through the East, following the Lincoln highway, when he took a fancy to the locality and finally bought his present farm. Then he started out to get together the present herd of his individual choice. Before deciding upon King Piebe of York, his present herd sire, he inspected herds in 33 different States.

That King Piebe of York is a good individual, goes without saying. For after looking over the herd, one will acknowledge that Mr. Robertson is a real good judge. The herd made an exhibit at the York Fair which is by far the largest in South-Eastern Pennsylvania. King Piebe carried off the Grand Championship. His get took both the junior championships at the Fair, as well as winning first prize for get of sire, young herd and calf herd. Despite hot competition, this herd won most of the prizes, losing however, first prize in age cow class and senior championship although most present at the ring side say that they should have won these.

There is only one animal in the herd of any considerable age and she is certainly a grand old cow. No less than 20 of the animals will finish year tests during March and at least two State records will fall to their credit. The herd is of exceptionally high individuality. In selecting these animals, this point as well as the promise of production was kept in view, Mr. Robertson believing that he could put year records on his stock cheaper than he could buy them. While seven-day records are made, more importance is stressed on long time work and the standard aimed for at maturity is at least a thousand pounds of butter and 20,000 pounds of milk.

We do not wish to give the impression that Mr. Robertson is a gentleman farmer or that he is a farmer

HILL PINE VEEMAN SILVERTIP
647.49 lb. butter, 17,910.9 lb. milk in a year as a junior two-year-old. State milk record when made.

by proxy, although he does confess to being addicted to trips on which he can inspect famous breeding establishments. He works on the farm and part of the time

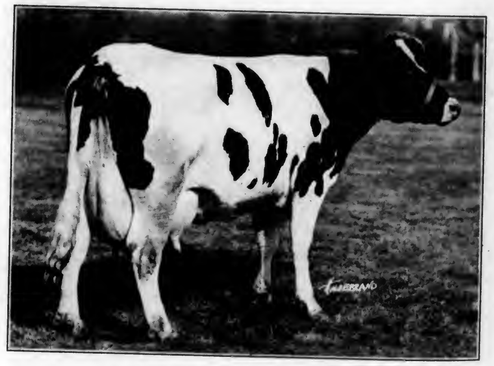
milks his own test cows, we got the impression that he did so whenever Mr. Troat the herdsman was unable to.

There is not much that we can chronicle on the crops grown. When this farm came under the new management, there was no alfalfa, but this will be grown, and a good start has been made. Tobacco has been raised on the farm, in fact, is still being cultivated, but Mr. Robertson plans to give up this crop and devote the entire farm to Holsteins and believes he can make the farm support not only the present herd of 100 but twice and perhaps three times as many, for every foot is

HILL PINE FLORA FINDERNE
21,031.3 lb. milk, 741.25 lb. butter in a year as a junior two-year-old. Pennsylvania state records.

available for farm crops. The herd is under State and Federal supervision. Some idea of the pains taken in feeding and caring for this herd can be gained from the fact that the milk produced is sold in York as food for babies exclusively and brings 18 cents a quart at retail. The bacteria count is therefore kept very low. Mr. Robertson does not operate a milk route, but sells his product to the distributor.

When you go into the Robertson barns you are attracted by the individuality of the animals and particularly the squareness of the udders carried by the animals in milk. That type and production can be correlated is shown by the fact that at least two state records recently have been made by animals in this herd and that others are now making splendid tests.



The outstanding record maker is Hill Pine Flora Finderne, who recently finished a 365 day test with 21,031.3 lb. milk and 741.25 lb. butter. She stands supreme in her class in the state for both milk and butter in the year division. The first day of her test she milked 50.3 lb. and the last day of the year she milked 50.5 lb. and averaged 51 lb. a day for the last seven days. Her high day production was 73.5 lb. Her year record is notable because of the even production. No matter what the weather she seemed to average just about the same as you will note by her monthly report figures.

Month	*Lb.*
March	1,756.4
April	1,988
May	1,969.8
June	1,928.7
July	1,847.4
August	1,775.6
September	1,615.8
October	1,643.1
November	1,605.2
December	1,619.7
January	1,603.3
February (24 days)	1,447.4

Flora is a fine individual, straight and level, has a wonderful mammary system and a well placed udder of good size. She was not off feed a single day during the year. When she began her test she weighed 1,160 lb. and when she finished it she weighed 1,320 lb., a gain of 160 lbs. Her dam is Flora Westview Walker and her sire is Finderne Pride Johanna Korndyke who is the present herd sire of the Pickering Farms and was formerly at the head of the herds owned by R. C. Melvin of Liverpool and Carl Amos of Syracuse, N. Y. As is generally known this bull is a son of the former world champion, Finderne Pride Johanna Rue, 1,470.58 lb. of butter in a year.

During the year Hill Pine Flora Finderne was fed a ration consisting of 30 lb. of distillers grains, 10 lb. oil meal, 10 lb. hominy, 10 lb. cottonseed meal, 15 lb. gluten and 10 lb. wheat bran, the amount being changed according to her appetite and the roughage fed.

Another good one in the Roberston herd is Hill Pine Veeman Silvertip whose production of 17,910.9 lb. milk in a year was a state record in the junior two-year-old class at time of making. Calving at two years one month and eight days old, she produced 647.49 lb. butter. She is a daughter of King Korndyke Wayne Veeman, is a splendid individual, and at the York Fair last fall was first in her class. She is the dam of one of the

DIMETA BURKE DE SPOFFORD
Show cow and producer, now on test in the Robertson herd.

finest young bulls we have had the pleasure of looking over, King Piebe of York 3d; as his name indicates, a son of the herd sire King Piebe of York. This young bull weighed one thousand pounds when he was just 12 months old and has not yet been defeated in the show ring. Not only has he been first whenever shown but was junior champion at the York Fair and was a member of the first prize get of sire and first prize young herd.

An older animal that has just finished a year test is Pearl Pietertje DeKol Pontiac who finished March 12th making as a four-year-old 19,095.7 lb. milk and right around 800 lb. butter.

The only animal of any considerable age in the herd is Dimeta Burke De Kol Spofford and after looking her over you will agree that it will take a great cow to beat her in the show ring. Notice the size and shape of her udder and her beautiful head. Dimeta is certainly a show cow. She undoubtedly will have a good official record by the time this article is in print as she is in very fair shape and is being started in official test as this story is written.

The head of the herd, King Piebe of York is a son of the famous Piebe Laura Ollie Homestead King. His dam, Floa Walker Pontiac Segis is a thousand pound three-year-old. When three years and two months old made a list of splendid records—559.2 lb. milk, 27.15 lb. butter in seven days, a large 30-day record, 18.35 lb. butter in a week in the special tests eight months from freshening and a year record of 20,546.4 lb. milk and 1,032.41 lb. butter. She is one of the best daughters of King Segis Pontiac Count.

Mr. Robertson intends to make his herd and herd sire known to all interested in the breed. A tasty attractive calendar which adorns the wall of THE HOLSTEIN BREEDER AND DAIRYMAN office, carries a nice picture of King Piebe of York, who, by the way, is the only bull in Pennsylvania whose breeding shows the Piebe-Count combination. By the distribution of this attractive calendar, by a moderate use of the advertising columns of the breed papers, by showing at fairs and by making records, H. E. Robertson is endeavoring, in various ways, to make the names of King Piebe of York and the Robertson Farms, household words in the homes of Holstein breeders throughout the Union.

The Wyoming Herd

SITUATED a short distance from the busy city of Wilkes-Barre, is the pleasant village of Wyoming, Pennsylvania, historically famous as the scene of the Wyoming massacre. Located within the boundary of the corporation and nearly facing the monument erected in memory of those who were killed at that time, is the farm of Alex Murdock and Son. It was the privilege of a representative of THE HOLSTEIN BREEDER AND DAIRYMAN a short time ago, to look over the Murdock establisment and visit with Clair C. Murdock who is in charge of the cattle.

The Murdocks do not own the farm. The property is part of an estate and so the Murdocks are tenants. But that they are good tenants can be seen from the fact that they have rented the same farm for twenty-eight years. Owing to the fact that it is a rented property many of the improvements that you would look for in a Holstein establishment are non-existent. The buildings are of wood. The house is of colonial style, a typical old-fashioned farmstead. The wooden barns contain wooden stanchions and no water buckets but there are cement floors and the barns are electrically lighted.

We do not wish to infer that the Murdocks are not progressive. They certainly are but owing to the place being rented and the fact that they are tenants, permanent improvements they would like to make have not yet been made. Scales for weighing grain and for weighing milk, a nice little milk room, the electrically driven clipper and a stack of milk cans show that this is a business dairy and that production is kept in mind all the time.

The Murdock herd contains sixty-one head and we are pleased to say that it is a real show herd. It was started in 1915 by the purchase of a bunch of good heifer calves at the Hand Dispersal Sale by an elder brother of Clair. Unfortunately this brother died and Clair took over the management of the herd. That it is a show herd can be seen by the fact that at the Luzerne County Fair at Dallas last fall one of the herd sires not only won first in his class and grand championship of the breed but was grand champion bull over all breeds and at the Bradford County Fair held at Towanda, the Murdock herd took seventeen out of twenty-two possible first prizes.

One of the herd sires is Hillside Wyoming. He certainly is a good bull and has a number of good looking offspring. He is a son of Dutchland Sir Lyons Hengerveld and Pietertje Vander Lei Superb who has records of 26.83 lb. butter in seven days as a seven-year-old and 25.29 lb. in seven days as a junior four-year-old. She is a daughter of Woodcrest Pietje from a daughter of Vander Lei Superb 2d, who made 29.53 lb. butter, 669.8 lb. milk in seven days at eleven years old, a record we believe that at the time of making was not equaled by any other cow of her age. Dutchland Sir Lyons Hengerveld has a long list of good record daughters and was by Colantha Johanna Lad from Blanche DeKol Hengerveld, a thirty-three lb. daughter of Pietertje Hengerveld's Count DeKol.

The younger herd sire is Hillside Ormsby Pontiac Korndyke who is owned jointly by the Murdocks and by Hillside Farm at Wilkes-Barre. This bull is from Hillside Saxon 32.29 lb. butter, 628.7 lb. milk in seven days a daughter of Woodcrest Pietje and Hillside Annette, Pennsylvania's first thirty-pound cow. King Pontiac Maple Knoll Ormsby, his sire, is a son of King of the Pontiacs and Maple Knoll Helen, a 33-lb. daughter of King Korndyke Hengerveld Ormsby.

In the herd there are a number of attractive family groups. Several of the animals composing them have good records and others will be tested when the right time comes. Aaggie Korndyke Pender as a junior four-year-old made 25.79 lb. butter, 488.5 lb. milk in seven days averaging 4.2% fat and producing 75.4 lb. milk in a day. Her sister, Wyoming Aaggie Korndyke Pender as a senior two-year-old made 296.7 lb. milk, 17.10 lb. butter in a week. There is an old cow, Pietje Daisy with 24.82 lb. butter, 591 lb. milk, in seven days. Her daughter Pietje Artis Daisy has 549.7 lb. milk, 26.28 lb. butter in seven days as a six-year-old and 27.32 lb. butter in seven days as a seven-year-old, 1,155 lb. milk in 15 days. She is the dam of Hanover Napol Pietje Korndyke, 19.19 lb. butter in a week as a junior two-year-old and so it can be seen that there are three

generations of A. R. O. animals in the Murdock herd every animal of which is expected to materially increase her present record. This heifer's son, Napol Prince, is a son of the famous Keystone Plum Johanna 1,052.96 lb. butter, 22,190.7 lb. milk in a year. There is another member of the third generation, a very handsome calf sired by Colantha Johanna Lyons.

Aaggie Korndyke Pender mentioned above has an A. R. O. daughter in the herd, Wyoming Hillside Aaggie Korndyke 19.55 lb. butter, 394.9 lb. milk in a week as a two-year-old.

It is only two years ago that the Murdocks began official work yet a number of good records have already been made and it is planned to give every milker an A. R. O. test provided that enough freshen close enough together to make the employment of an official tester worth while.

Wyoming has been selected as the herd prefix and the name is registered with the Secretary of the Holstein-Friesian Association of America. The younger members of the herd bear names commencing with this word.

The Wyoming herd while possessing high class individuality is one of producers. The Murdocks were milkmen and until the death of the elder son ran milk wagons of their own. We understand the milk produced by the herd is used partly for the local supply of the village and part is sent to Wilkes-Barre. That the Murdocks are really dairymen can be shown when you look around the sheds and see the number of worn out milk wagons and the number of discarded milk cans which evidently in time past have carried to hungry and appreciative consumers large quantities of life-giving energy-producing Holstein milk.

"When you found you didn't have your fare, did the conductor make you get off and walk?" asked the inquisitive man.

"Only get off," responded the literal one. "He didn't seem to care whether I walked or sat down."

"Did the trained nurse take your temperature?" asked the man of his convalescent friend.

"Yes," responded the sick man. "After the surgeons got through with their charges, that was about all there was left to take."

What Others Have Done

FOR several years, at the State Farm Products Show, Harrisburg, Pa., the Agricultural Extension Department of The Pennsylvania State College, coöperating with the State Show committee, has put on an educational dairy cattle exhibit. Various features of dairy cattle improvements have been brought out, such as, cow-testing associations, bull associations, increased milk production, through the use of a well-bred bull and the value of a foundation cow in building up a future herd. These exhibits were striking because in all cases, the actual animals were taken to Harrisburg, where they could be examined by thousands of farmers attending the Show.

Last year, the exhibit was built around King Korndyke Sadie Vale 20th, a Holstein bull owned by the State Hospital Farm, Warren, Pa. He was sired by King Korndyke Sadie Vale and out of a cow that made a very creditable record. This bull was purchased at four weeks of age. At the time of the State Show he had four daughters which practically had completed yearly records as two and three-year-old. Their dams had yearly records as mature cows. This offered a chance for accurate comparison. The State Hospital coöperated with The Pennsylvania State College and this bull, together with his four daughters and their dams, were exhibited.

The average production of the four daughters was 12,200 pounds of milk and 433 pounds of fat, as two and three-year-olds, while the average production of the four dams as mature cows was but 9,445 pounds of milk and 304 pounds of fat. This shows an increase in one generation of 2,754 pounds of milk and 129 pounds of fat, or an increase of 30 per cent in milk production and 42 per cent in fat production. It must be remembered too that the daughters' records were made at two and three years of age while the dams represent mature cows. By estimating the daughters' records as mature cows (adding 20 per cent to three-year-old record) we find an average increase of 55 per cent in milk production and 70 per cent in fat.

The four daughters represent all the daughters of this bull that had practically completed yearly records at that time. The increase is all the more striking when we consider the fact that the dams averaged over 9,000 pounds of milk and 304 pounds of fat. One would expect an even higher increase by the use of a bull like this on ordinary grade or scrub cows.

In conclusion it might be stated that there was considerable improvement in the type of the daughters as compared with their dams.

The following gives the information in tabular form:

Production of Dams (Mature)

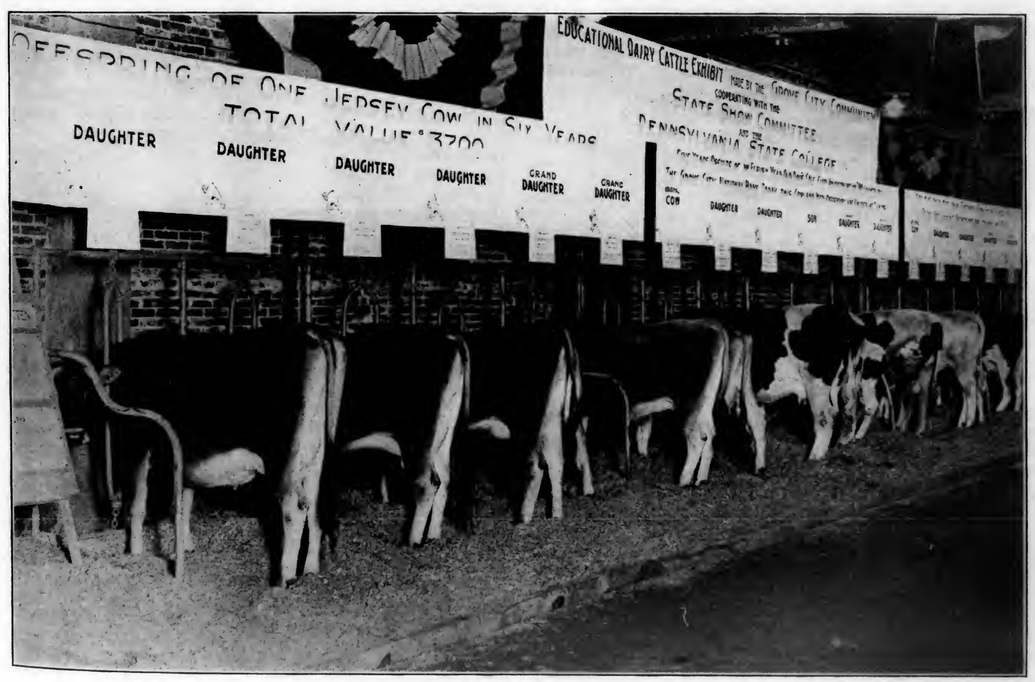
	Milk	*Fat*
Bodora Pauline	9,595 lb.	326.2 (319 da.)
Countess of Warren	8,936 lb.	268.0 (Est.)
Minnie DeKol Clothilde	10 570 lb.	318.0 (305 da.)
Minnonette	8,683 lb.	299.56 (305 da.)
	37,784 lb.	1,211.76 lb.
Average	9,946 lb.	304.0 lb.

Production of Daughters (2 and 3 years. old)

	Dam	*Milk*	*Fat*
Cora Korndyke Sadie Vale	Bodora Pauline	11,992	427.70 (270 da.)
Countess Korndyke Warren	Countess of Warren	12,541	431.85 (223 da.)
Elsie Korndyke Clothilde	Minnie DeKol Clothilde	13,366	468.02 (302 da.)
Minnonette Korndyke	Minnonette	10,703	403.53 (306 da.)
		48,802	1,731.10 lbs.
	Average	12,200	433.00 lbs.

In the dairy cattle exhibit this year the problem worked out was the value of a good foundation cow in building up a herd. Three foundation cows of the Holstein, Guernsey and Jersey breeds were shown together with their offspring. These cattle were selected from herds in the Grove City community. The Grove City Accredited Cattle Show and Sales Association assisted in this exhibit.

The Holsteins were represented by the foundation cow, Silverena Urmagelsche DeKol, with her two daughters, one son and two granddaughters. In 1917, Paul Searing, an eleven-year-old boy of the Grove City Community, joined a Holstein calf club. He purchased the above cow at eight-months-old for $90.00, borrowing the money from the Grove City National Bank. The original cow, together with her offspring are valued to-day at $1,425. This is a result of the original $90.00 investment.



This however, is not all the story. The boy got Mr. Searing, his father, interested in purebred Holsteins. He had ordinary farm cattle, but now has a herd of over twenty purebred animals, which he values at $6,000. The present herd sire is King Pride Fayne DeKol No. 295,955, whose dam has a semi-official record of 19,475 pounds of milk and 970 pounds of butter in 305 days. His sire's dam produced 28,403 pounds of milk and 1,470.59 pounds of butter in a year.

In April 1918, Harry B. Edeburn purchased the Guernsey heifer, Imported Belle of Guernsey Home Farm for $300. Some of his neighbors thought that he was well on the way to bankruptcy. However, he had his herd tested for tuberculosis under the accredited herd plan, and used care in selection of this heifer, and was sure he was not making a mistake. The Guernseys in the exhibit represented the female offspring from this cow he purchased as a heifer. He values them at $1,305, consisting of the original cow, two daughters and two granddaughters. One of the daughters dropped a heifer calf during the Show. Besides the females the old cow dropped two bull calves, which were sold for $50 and $65 each. They are heading herds in the vicinity of Grove City. Mr. Edeburn is now an enthusiastic purebred breeder.

The six Jersey cows exhibited were offspring of Millie's Idelpha No. 358,154, from the herd of W. H. Davis of Grove City. Unfortunately, "Millie" died a month before the Show. Her enlarged picture was placed in the stall she would have occupied. At her death she had four daughters and two granddaughters. Three of the daughters and one granddaughter have Register of Merit records. She also has two sons and four grandsons. The total value of her offspring was $3,700.

It does not require a large investment to build up a purebred herd of cattle as was illustrated by this exhibit. Buy a purebred foundation cow or heifer and let that start your herd. Start in a small way, but be sure you start with something good. One can reasonably expect fifty per cent heifer calves and it won't take many years to build up a herd at a small outlay of capital.

One does not become a breeder in a year, or two years. There is a great deal to learn about the game. Start in a small way and learn as you build up your herd.

THE GROVE CITY COMMUNITY EXHIBIT AT THE PENNSYLVANIA FARM PRODUCTS SHOW

Visible results of what has been accomplished by starting with one purebred female. Three breeds, Jersey, Holstein and Guernsey are represented.

Nominations for Delegates

THE nominations for delegates to the Kansas City convention to be held June 7th, are all in and the list compiled by the secretary. The next step, where there are more nominees than the state is allowed delegates, is for the secretary to make up a ballot for each district, placing thereon the names of all members nominated for that district in the order the nominations were received by him.

On April 8th, sixty days before the convention, the secretary will mail a ballot to each member who should immediately indicate thereon his choice for delegates to the number to which his district is entitled and should mail such ballot to the secretary in the official envelope which will be sent accompanying the official ballot. Ballots must be mailed to the secretary on or before April 28th, who will sort them by districts and hand them to the Credentials Committee who will count and record the votes.

As adopted at the St. Paul special meeting, the resolution bringing into being the delegate system is:

"Each district shall be entitled to one delegate and one additional delegate for every 200 members or majority fraction thereof, residing in said district, as indicated by the list of members in the office of the secretary at the time the secretary sends out notices regarding nominations."

This date was January 20, 1922.

ARIZONA—56 Members, 1 Delegate.

Frank Reed Sanders ..... Phœnix

ARKANSAS—28 Members, 1 Delegate.

V. C. Kays, Trustee State Agricultural School ..Jonesboro

The Brentwood Show

THE show at Brentwood, staged on March 20th, brought out a lot of high-class females, and the judging was eagerly watched by a large crowd of cattle owners from many different states. While the bulls competing were nothing outstanding, there were cows and heifers worthy to carry off the blue at any national show and the class of six first prize winners competing for the female championship called for many expressions of appreciation by those present.

The judge, W. S. Moscrip, came into the ring about 10:30 o'clock, Monday morning. The first class called into the ring was cows in milk, which brought out a number of high-class producers. After considerable sorting, Cascade Pietertje, consigned by Wm. Todd and Sons, Yakima, Washington, was given the blue, with Laconner Pontiac Hartog Lass, owned by Carnation Stock Farms, second, and Doetje Nellie Segis, owned by Aitken Bros., Waukesha, Wisconsin, third. Hubbavale Aaggie Manor Lyons, of the Rancocas Stock Farm, Jobstown, New Jersey, was next to the money.

In the class for dry cows there were a number of outstanding animals. The blue ribbon went to Gerben Colantha Parthenea, owned by Bridgeford Holstein Co., Patterson, California. She was a real cow. S. V. H. Nellie Veeman, owned by W. D. Robens, Poland, N. Y., was second, and Martha Vindetta De Kol 3rd, owned by Brentwood Farms, was third.

The class for heifers between two and three years old in milk finally narrowed down to a battle between Alcyon Maplecroft Banostine Lady, owned by Bloomingdale Farms, and Fairmont Charlotte Alcartra, a daughter of King Segis Pontiac Alcartra, consigned by E. T. Jenkins, Rensslær Falls, N. Y. After a long and careful examination Judge Moscrip awarded the blue ribbon to Alcyon Maplecroft Banostine Lady.

Seven dry two-year-olds faced the judge, and in a very short time there were only three on the shavings. For a long time the judge appeared to hesitate where to put the second and third ribbons, but he finally shifted Beautiful Josephine 3rd, of the E. C. Schrœder consignment, into second position, placing Carnation Matador Tirania, of the Carnation Stock Farms, third, and awarding the blue ribbon to Carnation Matador Pontiac, so that daughters of Matador Segis Walker were in first and third positions. The Carnation heifers were heavy with calf and looked more cowy than did Beautiful Josephine 3rd, who however may make just as good or even a better cow.

CARNATION MATADOR PONTIAC
First Prize Dry Heifer and Grand Champion Female at the Brentwood Sale.

No less than sixteen yearlings were trotted out, and there were certainly some splendid heifers. The judge gradually shifted the number down to four, and then awarded first prize to Winterthur Johanna King Segis Bilm, from the Winterthur Farms. She was a good long heifer, but was not handled as well as was Aaggie De Kol Ormsby Beauty, of the Carnation herd, who was placed second. This heifer was handled to perfection in the ring, but it is the writer's opinion that she had been filled too much before she was shown. The third prize heifer was Winterthur Ormsby Clandina, owned by Winterthur Farms, while next to her was Johanna Deen Pontiac Segis, owned by J. M. Hackney, St. Paul, Minnesota. These were four real good heifers, deep bodied and showing lots of udder development. The third prize heifer was smaller than the others, but any of the four was worth owning and showing.

A nice bunch of heifer calves came next, and the choice of the judge was Lilly Waldorf Pietertje Pontiac, from the Bridgeford Holstein Company's herd. The heifers in this class made a wonderful showing, four daughters of King Segis Alcartra Prilly were as fine a bunch of sisters of nearly equal age as we have ever seen.

Empress Korndyke Pontiac Prilly, one of these four sisters, went to second place with Carnation Pietertje Carlotta, of the Carnation herd third. This heifer is a daughter of Carnation Segis Prospect. Pauline De Kol Prilly Fairmont, another daughter of King Segis Alcartra Prilly, stood next to the prize winners, and for a short time it looked as though the Bridgeford heifers were going to cop all three of the ribbons in this division.

The prize winners in each class were then led out to compete for the championship, and they were certainly a good bunch of females. The choice of the judge lay between the dry two-year-old and the first prize dry cow, and he went over them carefully and hesitated before he awarded the purple rosette to Carnation Matador Pontiac. Practically all at the ringside agreed with him.

After showing this splendid class, the bulls looked rather common, although taken singly, they were not at all bad animals. The championship went to the Canadian bull, Lyons Pontiac Champion, son of the world's record cow, Belle Pontiac, and the writer did not hear a dissenting voice. Second prize went to Eco-Sylv King Lyons, of Avondale Farm.

Manager Davidson had arranged for a long ring extending the full length of the Museum so that everyone could see the animals. The judge made the different classes parade, and if there was a criticism or suggestion, we might offer it is that Mr. Moscrip might have told where some of the animals exceeded others and made the judging even more instructive. It was a show worth going miles to see, and we feel certain that everyone present enjoyed the occasion.

A little girl about six years old was visiting friends. During the course of the conversation one of them remarked:

"I hear you have a new little sister."

"Yes," answered the little girl, "just two weeks old."

"Did you want it to be a little girl?"

"No, I wanted it to be a boy," she replied, "but it came while I was at school."

Resseguie Herd to be Sold

ONE of the good Pennsylvania herds that has produced one or more state champions, is the one at Resegedale Farms which was established 1903 when the proprietor, F. F. Resseguie purchased a young sire from the well-known herd of Henry Stevens and Sons of Lacona, N. Y. The same spring at the Averill & Gregory sale Mr. Resseguie purchased a couple of heifers and from that time to this the Resseguie herd has always been prominent.

Several good sires have headed this herd the most prominent of which are Walker Korndyke Copia and King Pontiac Alcartra Pietje.

It will be a source of regret to many interested in the Black and Whites that Mr. Resseguie has decided to disperse his herd which he will do on the 29th day of April at the farms. Besides the herd sires King Pontiac Alcartra Pietje and Dutchland Konigen Creamelle Boy, there will be 20 daughters of King Pontiac Alcartra Pietje who it will be remembered is a son of the former world champion junior four-year-old, Fairmont Zerma Segis Pietje 35.61 lb. butter in seven days. Among these heifers are three daughters of 30-lb. cows.

The Resegedale herd has been built up by years of careful work. While a number of good records have been made, type and individuality have always been kept in mind and, wherever exhibited, animals of this herd have won their share of th prizes.

Mr. Resseguie informs us that his herd is under state and federal supervision and that his animals will be sold fully guaranteed with a 60-day retest privilege given if desired.

Brentwood

TWENTY-THREE hundred years ago, Charmian, priestess of the temple of Isis, which was located at Thebes, Egypt, died. After the obsequies due one of the daughters of the royal house of Ptolemys, the body was embalmed, placed in a heavy stone coffin and laid to rest. Centuries after, irreligious persons daring the wrath of Ra, the sun god, and of Anubis and his three brothers, gods of the winds, disinterred the mummy of the beautiful priestess and sold it to those who brought it over the Mediterranean and the Atlantic Ocean, and placed it where many could see it—in the Commercial Museum at Philadelphia. Had the breath of life been again instilled into that lifeless form, or if the spirit of the departed beauty, for she was comely as her portrait on her death mask indicates, hovered around the Museum the week of March 20th to 25th, it certainly would have thought that the ancient Egyptian worship of the sacred bull was revived in America, for the bellowings of the great array of Holsteins and the respect paid the animals by the many visitors from a wider, wealthier country than Egypt ever was, would have given ample grounds for that belief.

"Doctor, when do you think a man weighs most?" asked a patient, who was undergoing a course of dietary treatment.

"When he steps on my corns," answered the doctor.

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

APRIL 8, 1922

The Holstein Breeder and Dairyman **was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.**

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

The Score Card and Breed Type

FOR some time there has been an opinion current among exhibitors of show cattle, judges and many cattle owners that the scale of points or score card of the Holstein-Friesian Association of America should be revised. As many of our readers know, nearly every agricultural college in the country uses a score card for student instruction purposes that differs markedly from the one authorized by our Association. The college instructors claim that our scale of points lays undue stress on points that are not of prime importance and underscores points that mean more to the cow and the owner.

In this connection we might suggest that those interested in breed tpye, and what owner of Holsteins is not, should stand at the ringside at one or more of our great fairs and compare the Holstein milkers with Jerseys and Ayrshires in milk, particularly noting the shape and symmetry of the udders and the placing of the teats. We think it will be found that our breed suffers by the comparison, and does not stand as high in this respect as we wish it did. May not this condition be due, in part at least, to the score card or scale of points we have been using.

A score card that allows eleven points for the head and only twelve points for the udder can be criticised, and one that allows ten points for the mammary veins and twelve for the udder is certainly a little out of balance. But when it comes to a comparison of the forehead and the teats of a cow and the placing of equal scores (two points) on these two items, it seems to us that there is an imperative need of immediate revision. In fact, the forehead gets even more than two points for, first of all, it is considered as part of the head, which is allowed two points for perfect, and then it is judged separately for a two-point score. There are very few, if any, handlers of Holsteins, of registered cattle or of plain dairy cows that would concede that the forehead of a cow was of equal importance with the teats.

There are other places where the score card could be criticised. It is not our intention to say any more at this time, but we invite letters from our readers containing either criticisms, recommendations, or a defense of the present score card which, as Secretary Houghton points out, was formulated by those who knew the breed in its native country, men who were instrumental in introducing and establishing it in this country, and who were thoroughly acquainted with the breed type of that day.

Our Cover Illustration

OUR cover illustration of this issue shows three splendid individuals that were prominent at Brentwood. Dairy Maid Prilly on the left side topped the sale for females being purchased by Abner S. Deysher of Reading, Pa. for $4,300. This fine heifer is a daughter of King Segis Alcartra Prilly, sire of Louise Alcartra Prilly the new worlds champion 40-lb. junior three-year-old and of a number of other large record daughters. Judging from the specimens of his get seen at Brentwood, he is a sire of wonderful quality, in fact some have gone so far as to say that he is the greatest sire living and we understand Mr. Bridford had many tempting offers for this bull which he refused to accept. King Segis Alcartra Prilly is a wonderful show bull himself with a record of being undefeated at California fairs.

The dam of Dairy Maid Prilly is the well-known producer Adirondac Wietske Dairy Maid, who has a record of 41.02 lb. butter and 831.7 lb. milk in a week, has four seven-day records above 30 lb., three above 36 lb., has a year record of 1,295.11 lb. butter and 31,899.8 lb. milk and is again in year test promising to make around 1,400 lb. butter and 34,000 lb. milk. It was announced at the sale that in eleven months she had produced 1,325 lb. butter and 32,505 lb. milk.

Beautiful Josephine 3d went to the same buyer for $2,000. She is a daughter of Marathon Bess Burke and her dam is Beautiful Josephine with a year record of 1,093.21 lb. butter and 25,283.3 lb. milk made as a four-year-old. This heifer was grand champion at the Minnesota state fair, first prize senior yearling at the National Dairy show and first prize senior yearling at the Fargo Inter-State fair last season. She was placed second in the dry heifer class at Brentwood.

Carnation Matador Prilly was the first prize dry heifer and later on was awarded the grand championship. She too, has a long record of show ring winnings and was second prize junior yearling at the 1921 National Dairy show, first prize senior yearling at the Pacific International Livestock Exposition and junior champion female at the same show last year. As senior heifer calf she won second prize in the 1920 Pacific International Livestock Exposition. She is a daughter of Matador Segis Walker and her dam is from a 31.96 lb. cow sired by a good son of King of the Pontiacs. Mr. Deysher purchased her for $4,200, making a total of $10,500 for the three animals he purchased.

New World Record

MR. JAMES A. REYNOLDS, of Ohio, has established a new world record for personal achievements in The Holstein-Friesian Association of America. The record shows that he became a member in 1918, was elected director in 1919 at the Philadelphia Meeting, where the famous "Aitken hand picked Board of Directors" assumed office and voted Mr. Aitken a salary of $12,000 per year as president, and Mr. James A. Reynolds fell heir to the chairmanship of the Executive Committee.

Mr. James A. Reynolds was appointed chairman of a committee to revise the Constitution and By-Laws pursuant to a resolution that he introduced at the St. Paul Annual Meeting. This committee caused to be incorporated in the call of the Annual Meeting of 1921 the proposed amendment which reads as follows:

> "The By-Laws of the Association may, from time to time, be altered, amended or repealed by the Board of Directors of the Association as the advisability of such action may become apparent."

The following is a list of some of the vouchers that have been drawn in favor of Mr. Reynolds on the treasury of The Holstein-Friesian Association of America:

July 19, 1919, voucher No. 1,201	$115.45
August 13, 1919, voucher No. 1,219	225.12
September 4, 1919, voucher No. 1,234	32.00
September 16, 1919, voucher No. 1,240	67.41
September 25, 1919, voucher No. 1,243	9.81
October 1, 1919, voucher No. 1,254	46.80
November 5, 1919, voucher No. 1,274	68.70
January 5, 1920, voucher No. 1,303	39.46
January 28, 1920, voucher No. 1,311	5.00
February 19, 1920, voucher No. 1,321	55.60
March 3, 1920, voucher No. 1,330	36.60
April 14, 1920, voucher No. 1,348	34.92
April 14, 1920, voucher No. 1,447	43.15

June 4, 1921, voucher No. 1,616	2,000.00

We do not know how much Mr. James Reynolds has drawn from the treasury since the date of the last voucher above mentioned, but notwithstanding the fact that Mr. James Reynolds has drawn this large sum of money during the short period that he has been a member of The Holstein-Friesian Association of America, and that *Voucher No. 1,413 reads "Services Chairman Executive Committee" and Voucher No. 1,616 reads "Services Chairman Executive Committee,"* he evidently does not class himself as a salaried officer or an employee because our Constitution and By-Laws specifically state in Article III, Section 8, as follows:

> "Members may vote in person or by proxy. Proxies must have been executed within three months of the time of their use and be with power of substitution, *but no salaried officer or employee shall directly or indirectly solicit, receive, or vote any proxy.*"

You will recall that on October 4, 1921, Mr. James A. Reynolds sent letters soliciting proxies to be voted at the Special St. Paul Meeting and voted proxies at that meeting.

As to the previous preparation of making this marvelous record in the short period of three years, we can only cite Mr. Reynolds' letter of October 4, 1921, in which he tells us that he has spent twenty-five years in politics.

Syracuse

I

In the year of our Lord, Nineteen Twenty-One,
Along the first of June, before hayin' was done,
Some real plain Breeders started to see
If they couldn't lower the price of the transfer fee.

II

So they appointed a General from a Connecticut town
And a few good Lieutenants of little renown—
Except that they knew how to follow a plow
And *Knew* what it *Cost* to transfer a cow.

III

And they said a few things to their Breeder friends
About "playin' the middle, against both ends;"
How the old steam roller, running smooth as silk,
Was using the *Cream* and leaving skimmed milk.

IV

They fired their blasts from afar and near,
Told about the graft of twelve thousand a year,
Told about the privilege that power sought,
Told about the furniture that Jimmy bought.

V

And when the storm was over, what a holler,
The transfer fee was no longer a dollar,
Sense took the place of sham and pretense,
And the transfer fee was *Fifty Cents.*

VI

When the question came up and we started to vote,—
How Judge Peasley got poor Jimmy's goat,—
He fretted and fumed, and pawed the air in vain,
But the "little fellers'" votes were there just the same.

VII

And now that he thinks he's got a strangle hold
On the old Association, he's getting real bold,
He starts right out for nineteen twenty-two
By telling us "Little fellers" what he's going to do.

VIII

Jim says the fifty cent transfer is an "auful mistake"—
Like cocking up Alfalfa with an iron hand rake;
He calls us "tail enders" and sadly laments
That he's the only fellow that's got any sense.

IX

Say, Jimmy! he who listens sometimes learns
How true were those words of Bobby Burns:
"Would the Powers the gift gee us
To see ourselves as others see us,
'Twould from many a blunder free us
And many a foolish notion."

"Did the trained nurse take your temperature?" asked the man of his convalescent friend.

"Yes," responded the sick man. "After the surgeons got through with their charges, that was about all there was left to take."

Junior Department

Purebred Sire Competition

When Morton L. Geraldson of Manitowoc, Wis., offered one of his best bull calves as a prize to be competed for by pupils of the high schools of Manitowoc county, he little thought that he and the judging committee would have more than a hundred essays to look over, and he certainly had no idea that the essays which the judges selected as the three best would all be written by girls.

Mr. Geraldson, who is a loyal Holstein booster, wished to get the young folks of his county interested in dairying and informed on the value of a purebred Holstein sire. When offering the prize he had in mind that the competitors when looking up material for their essay and studying statistics would gain knowledge that would stay by them. So many of the young folks signified their intention to compete that Charles Hampke, secretary of the Manitowoc Holstein Breeders' Association, signified his intention of giving a purebred Holstein bull calf as a second prize. It will be remembered that the prizes were to be awarded only to competitors living on farms where there was not already a purebred Holstein sire.

The first prize was won by Miss Helen Vetting of District No. 1, Manitowoc Rapids. Miss Vetting's essay was short but full of facts and good advice.

Miss Norma Gass, District No. 2, Newton, won the second prize. Her essay shows that she has studied cow testing association work to good advantage. The essay of Miss Lillian Schultz of Rockland, District No. 6, shows that she too has studied the matter.

While the committee selected to award the prizes published only three essays, a boy, Theodore Cavanaugh of Reedsville was credited with fourth place.

The subject of the essays was "The Value of a Purebred Holstein Sire" and the students were to keep strictly to this subject. Proof of their essay was to be given in the form of deductions either from cow testing association work or experiment station publications.

THE HOLSTEIN BREEDER AND DAIRYMAN cannot too strongly commend Morton L. Geraldson and Charles Hampke for their generosity and public spirit and will donate a two years' subscription to each of the writers of the essays which the judging committee selected as the four best.

THE ADVANTAGE OF A PUREBRED HOLSTEIN SIRE.

(First Prize.)

In building up a dairy herd, the selection of the sire is the most important factor. It is necessary to get one who will keep up and improve the quality and production of the herd. In choosing a purebred sire one should think of the dairy comformation and producing ability back of him. A prospective buyer will find a great deal of both of these back of a purebred Holstein sire, and will be sure of starting a breed which is very popular with the American farmer.

The cost of producing milk would be lower as they eat more roughage and silage, and not so much grain feeds. He would get more milk and as much fat as in other breeds.

Good evidence of the prepotency of the Holstein bull comes from the Iowa State College where grade Holstein daughters of scrub cows produced 94 per cent more milk and 62 per cent more butter fat than their dams.

In the second generation of grades the productions of milk was 245 per cent over that of their scrub granddams. This shows the great value a Holstein sire would be in building up a high producing herd of cattle.

The future of the Holsteins in America is well assured. Every owner of one is a booster for his breed. They are distributed so thickly over the United States that anyone who wants to start can get a purebred Holstein sire without any difficulty. HELEN VETTING.

Manitowoc Rapids, District No. 1.

THE VALUE OF A PUREBRED HOLSTEIN SIRE.

(Second Prize.)

Wisconsin is the leading dairy state in the union, therefore the people of Wisconsin will want to know how they can improve their herds and increase their profits. The best, quickest and cheapest way to do this is to get a good purebred Holstein sire and grade up the herd.

After taking a cattle census in one of the counties in Wisconsin it was found that many farmers are still using scrub or grade sires. This is a great loss to the state and could be overcome by putting a purebred Holstein sire at the head of the herd.

Cow testing associations reports show that herds that have been bred up by the use of a good sire produce annually from 49 to 85 pounds more butter fat a piece than scrub herds. Even if the increase were only 25 lb. on the 1,200,000 Wisconsin cows that are still bred to scrub sires it would mean an increase of 30,000,000 lb. of butter fat. At 40 cents a pound this would amount to $12,000,000 annually. These facts show that a purebred sire pays.

The old saying that a good sire is half the herd is true when all the animals of the herd are purebred, but as few farmers can afford to have such herds, we may truthfully say that a purebred Holstein sire is almost all of the herd when grading up. In about five years, with the use of a good sire a scrub herd may be graded up so that only a very small percentage of the scrub characteristics will remain at the end of that time. If trying to grade up a herd with a grade sire at the end of five years, about one-fourth of the scrub characteristics would still remain.

The mistake of buying a grade sire instead of a purebred one is often made because the two resemble each other and yet the grade is much cheaper at that time. But in a few years we would see that a purebred sire calf at $300 would be cheaper than a grade at $25. This was clearly shown on many dairy farms, one of which I will tell about.

There were five scrub cows on the farm. A purebred Holstein sire was purchased. The next generation produced 2,338 pounds of milk and 89.68 pounds of butter fat more than the first. The following generation produced 4,741 pounds of milk and 18.66 pounds of butter fat more than the scrub herd. This increase was not due to better care or feed but entirely due to the breeding up of the herd by a purebred Holstein sire.

The average dairy cow in Wisconsin produces 170 pounds of butter fat annually and yet many herds with careful selection and good grading have been brought up to an average of from 400 to 500 lbs.

The question, how to start the dairy industry is asked many times. The answer is always, "Buy a good pure Holstein bred sire." NORMA GASS.

District No. 2, Newton.

THE VALUE OF A PUREBRED HOLSTEIN SIRE.

(Third Prize.)

With any dairyman who depends upon breeding and rearing calves for maintenance of his herd and its improvement, the choice of a sire is a matter of prime importance.

Too much importance cannot be placed upon the selection and use of a purebred and bred-for-production sire.

The sire is referred to as the head of the herd and that saying, "The sire is half the herd," should never be forgotten. Every calf added to the herd takes half its blood from the sire. Often this is the more important half. The sire contributes his character to all calves born into the herd while the cow contributes her character to only a single calf each year. The sire, therefore, exerts as much influence on the future herd as do all of the cows combined. The sire is always the main dependence for raising the average quality of the herd and should be chosen with this object in view. This is especially true if the cows are grades and grading up is in process.

If the sire fails, or proves a poor sire, the entire increase of a year may be lost. In getting a sire, get the best, or at least approach that standard as nearly as possible. A common error among dairymen is to use immature sires and to dispose of good ones before their merit as sires have been fairly proven.

From the financial point of view purebred sires are more profitable. There is better market for breeding purposes for cattle whose ancestors were purebreds.

In round numbers the grade and scrub dairy sire is costing the farmers of Wisconsin in lost butter fat, $42,500,000 yearly. Approximately, 100,000 of Wisconsin farms are devoted to dairying. If this loss could be checked at once, and the money converted into purebred sires there would be an allowance of about $425.00 per dairy farm. This represents a sire value per farm of nearly four times their present value.

Every good dairyman is becoming a breeder. The day is not far distant when there will be a purebred sire of merit on every farm in America where cows are kept. There is practically no limit to the improvement in production which can yet be made in the quality of dairy animals. A good producing animal occupies no more space, and requires practically the same care as a poor one. Hence the most expensive cow in the world to keep is a scrub.

The publicity that a good sire and dairy herd received is worth consideration. The organization of Holstein men made the world sit up and take notice of Wisconsin. There is now a large demand for Wisconsin Holsteins. Let us try to make people notice Manitowoc county because of the purebred Holstein cows it has.

District No. 6, Rockland. LILLIAN SCHULTZ.

MISTER HOP-TOAD

Howdy, Mister Hop-Toad! I'm glad to see you out!
Bin a month o' Sund'ys sence I seen you here about,
Kind o' bin a-layin' in, from the frost and snow?
Good to see you out ag'in, it's bin so long ago!
Plows like slicin' cheese, and sod's loppin' over even;
Loam's like gingerbread, and clod's softer'n deceivin'—
Mister Hop-Toad, honest-true—Spring-time—don't you love it?
You old rusty rascal you, at the bottom of it!

Oh! oh! oh!
I grabs up my old hoe;
But I sees **you**
And s' I, "Oooh-ooh!
Howdy, Mister Hop-Toad! How-dee-do!"

Make yourse'f more comfo'bler—square round at your ease—
Don't set sagging slanchwise, with your nose below your knees.
Swell that fat old throat o' yourn and lemme see you swaller;
Straighten up an h'ist your head!—**You** don't owe a dollar!—
Hain't no mor'gage on your land—ner no taxes, nuther;
You don't haf to work no roads, even ef you'd ruther.
'F I was you, and **fixed** like **you**, I railly wouldn't keer
To swop fer life and hop right in the presidential cheer!

Oh! oh! oh!
I hauls back my old hoe;
But I sees **you**
And s' I, "Oooh-ooh!
Howdy, Mister Hop-Toad! How-dee-do!"

'Long about next April, hoppin' down the furry,
Won't you mind I ast you what 'peared to be the hurry?—
Won't you mind I hooked my hoe and hauled you back and smiled?—
W'y, bless you, Mister Hop-Toad, I love you like a child!
S'pose I'd want to 'flict you any more'n what you air?—
S'pose I think you got no rights 'cept the warts you wear?
Hulk, sulk, and blink away, you old bloat-eyed rowdy!—
Haint you got a word to say? Won't you tell me "Howdy"?

Oh! oh! oh!
I swish round my old hoe,
But I sees **you**
And s' I, "Oooh-ooh!
Howdy, Mister Hop-Toad! How-dee-do!"

—JAMES WHITCOMB RILEY.

One of our good ladies on being called on the wrong phone ring was asked: "Is this Mrs. Blank?" "No, I'm not," she replied, "but I might have been."—*Jewell (Kan.) Republican.*

Nurse—"Why, Bobby, you selfish little boy. Why didn't you give your sister a piece of your apple?" Bobby—"I gave her the seeds. She can plant 'em and have a whole orchard."—*Kingston Standard.*

"Mamma," said Freddie, "does sugar ever cure anybody of anything?"

"Why do you ask, my boy?"

"I thought I'd like to catch it."

"Albert," said the visitor, who was endeavoring to impress a moral lesson on the young man's mind, "have you read the books in your Sunday school library?"

"Some of them," he replied, rather doubtfully.

"Can you tell me what happened to the boy who went fishing on Sunday?"

"Yes. He caught three catfish and an eel."

"How do you know that?"

"'Cos I was him."

BUTTER PRODUCTION SHOWS INCREASE

Much anxiety has been expressed by many interested persons recently over the volume of imported butter from foreign countries particularly Australia and New Zealand. An examination of the statistics relative to these importations received at the port of San Francisco show that there was only a very slight increase over that of the previous year and that the storage holdings of butter at the end of 1921 as compared with 1920 varied but little. The apparent increase of supply on the butter market is due in reality, not to importations, but to increased production in the middle West where hard times has forced the farmers to dairying as a means of securing ready cash. But with even this increased production there is no real cause for alarm if we maintain a sense of relativity between the increase in production and the actual consumptive needs of the populace.

The total importation of butter to San Francisco during the year of 1921, if consumed entirely in the state of California, would be but one week's supply! As a matter of fact, but little of it was consumed here! Large amounts of it were sent to eastern markets, and as a supply for the people of the United States would not meet the requirement of a single meal.

It is said that production in the middle West has increased one hundred million pounds and when we think of it as a large bulk of butter, it is sufficient to destroy the confidence of buyers in the butter market who, unless they think of it in terms of consumptive demand, will be bound to expect the price to go down and will therefore limit their purchases, thereby momentarily releasing demand and causing an actual drop on the market. Thus, their suspicions are confirmed and fearing further decrease, purchases are curtailed and prices drop until active demand forces them up again. When we stop to think of it an increased production of one hundred million pounds means less than one pound of butter to every person in the United States which, in the course of a year's time, should be readily absorbed without materially affecting the price were it not for the psychological element involved.

In order that panicy markets and low prices may be avoided and prosperity in business stabilized, let us maintain our sense of relative proportions and not permit ourselves to be frightened by a report of what appears to be bulky importation or abnormal production, when in reality the amount in comparison to the demand for the product, is after all, a small consideration.

STUART HONORED

While at Brentwood, Mr. E. A. Stuart, president of the Carnation Farms Co., received word that he was elected president of the Pacific International Livestock Fxposition, in the place of the late F. S. Stimson, who died suddenly last Thanksgiving Day.

PIEBE AGAIN

Henry Nieman, of Avoca, Ia., is determined that world records should be made in his herd and recently announced that one of his registered cows dropped a bull calf weighing 161 lb. at birth. This adds another to a long list of world records claimed for the King Piebe family.

WESTERN TESTING

Forty-two Cow Testing Associations, representing the testing of 19,218 cows, reported to the Western office of the United States Dairy Division. The Utah County Association, with 155 cows, leads this month with an average production of 38.8 lb. fat, and 61 cows that each made over 41 lb. butter fat. This Association also had the highest producing herd, which consisted of 20 Holsteins, owned by Holdaway Bros., Vineyard, Utah, with an average of 1,586.6 lb. milk, 59.3 lb. fat. The fifteen cow dairy of M. Harper, Boulder, Colo., led in herds of fifteen cows or less. This registered Holstein herd averaged 1,719 lb. milk, 65.8 lb. fat. Sixteen grade Holsteins owned by Green Mt. Dairy, Lamar, Colo., averaged 1,629 lb. milk, 53.4 lb. fat. The well-known Holstein dairy of Arthur and Maxfield Hanford, California, is third. These 25 cows averaged 1,444.9 lb. milk, 51.3 lb. fat; 42 Holsteins, owned by J. D. Hoffman, Pasadena, was in fourth position with 1,201 lb. milk, 48.8 lb. fat. Seven of the leading herds in the ten highest average associations are Holsteins, nine of the first twelve and fifteen of the first twenty.

The leader of the 19,218 cows tested is Princess, a registered Holstein, owned by E. J. Lindquist, Denver, Colo., with 2,852 lb. milk, 122.6 lb. fat. Pietertje Mutual Fobes, owned by T. J. Owens, Kirkland, Washington, is second with 3,190 lb. milk, 118 lb. fat. Six different cows are reported as producing over 100 lb. fat in a month, of these, five were registered Holsteins.

BRATTLEBORO BUSINESS

For the week ended March 18th, thirty-five applications for membership were received at the office of the secretary.

During the same period 2,764 certificates of registry were issued, 1,984 female, 780 male; 2,485 certificates of transfer were written, 1,621 female, 864 male.

The following prefixes reserved during the week; Blue Stem, Henry C. Tegtmeyer, Beecher, Ill.; Edgevale, J. H. McBride & Sons, Milton, Wis.; Evergreen Knoll, Mrs. Mary Henze, Granton, Wis.; Fair Elms, Henry Gluesing, Arpin, Wis.; Glenbucket, Archie Reid, Jr., Janesville, Wis.; Grassland, Caniff & Nehring, Rolling Prairie, Wis.; Hartwig, Walter C. Hartwig, Elba, Mich.; Kennecook Farms, Co., Inc., Readfield, Me.; Moose Brook, L. H. Ruggles, Furnace, Mass.; Orchard Slope, Chester S. Harrington, Alvion, Pa.; We-ke-pa, Fred B. Hoffman, Pound, Wis.; Windrift, Hawley J. Bean, Echo, Oregon.

THE HOLSTEIN-FRIESIAN ASSOCIATION OF AMERICA.
F. L. HOUGHTON, *Secretary.*

NORTHWESTERN KANSAS HOLSTEIN BREEDERS MEET

The Holstein-Friesian Association of Northwest Kansas met in Phillipsburg, March 13th. Thirteen new members were added to the association. Enthusiasm was the key-note of every discussion. We found a fine bunch of wide-awake dairymen in this part of our territory.

The association voted to have the secretary take the necessary steps to put every herd in Northwest Kansas under Federal supervision for Tuberculosis. We propose to have every cow a clean cow and every bull a registered one, in our territory.

It was decided that the Association should hold a fall consignment sale, the time and place to be set by our sale committee, of which Col. J. B. Heinen of Cowker City is chairman.

C. L. McCoy, *Secretary.*

IOWA BREEDERS ELECT OFFICERS

The Annual Meeting of the Iowa Holstein Breeders' Association was held March 15th, the evening preceding the sale. A representative crowd was present and plans for the year were talked over. It is the general opinion that now is the time to begin real promotion work.

Z. C. Thornburg, Des Moines, was reëlected president. A. A. Hansen, Olewin, was elected vice-president. A. Hatch, manager of Iowana Farms, Davenport; L. Pape, Dyersville and C. W. Newell, Marion, are the new directors. J. P. Eves, Dairy promotion man for the state is to act as secretary.

Bertillon System For Cattle

WILL we, in the future, identify cows by their nose-prints and will future secretaries' offices contain rogue's galleries with photographs and nose-prints of cows that have not made good? On first thought, this seems ridiculous but no less an authority than R. M. Gow, the talented secretary of the American Jersey Cattle Club, suggests the possibility.

While traveling to the 1920 National Dairy Show, Mr. Gow, and a friend were talking over the duties of the Secretary's office when this friend, Mr. O. H. Baker, suggested that cows might be identified in a somewhat similar manner to that by which persons are identified, but by noseprints instead of fingerprints. Mr. Gow thought the idea worthy of investigation and he and his friend obtained a nose-print of the Jersey cow, Lucky Farce, by smoking a piece of glass with a lighted candle and then pressing it against the cow's nose. On examination of the noses of the other cattle in the herd it was seen that the lines were different. The piece of glass having the imprint was taken to New York, the print fixed by floating varnish over it and it is still preserved.

Nothing further seems to have been done for a year until Mr. Baker, the father of the idea, Mr. Gow and Professor W. E. Peterson, of the Minnesota Agricultural College, met at the 1921 National Dairy Show. The idea was broached to the Professor and the three gentlemen inspected the noses of a number of cattle at the show, examining various breeds and they failed to find any two that appeared alike. Professor Peterson experimented with the animals in the Minnesota College herd by using an ordinary stamping pad for smearing the noses and using ordinary mimeograph paper for taking the prints. Professor Peterson had a supervisor take prints of the M. D. Munn and the George Taylor herds and so far has failed to find any two alike, although he has on file some 250 prints from different animals.

It will take time to tell whether nose-markings change during an animal's lifetime but it is possible and even probable that the markings are permanent from calfhood to old age for it is well-known that human fingertip patterns d not change and are the surest way of identifying anyone throughout life.

Coming from such a well-known authority as Secretary Gow the idea of indentifying cattle by using the Bertillon system is full of interesting possibilities, particularly to owners of the solid color breeds. It is possible in the future that Jersey and Aberdeen-Angus animals may be as clearly identified by their noseprints as Holstein-Friesians are now by sketches of their color markings. The nose-print system of cattle identification is worthy of scientific investigation.

"John," whispered the wife, "there must be a burglar downstairs. He has just knocked against the piano and hit several keys."

"I'll go down," said John promptly.

"Oh, John," she begged, "don't do anything rash."

"Rash?" said John in surprise; "I'm going to help him. He can't get that piano out of the house alone."

Cow Testing Association Reports

WASHINGTON COW TESTING

By Frank W. Kehrli, *Assistant Extension Dairy Specialist, W. S. C.*

The best possible proof that cow testing association members in the State of Washington are making real progress in placing dairying on a more efficient and profitable basis is indicated by the fact that cows on test in February 1922 show an average increase for the month of 56 lb. of milk and 3 lb. butter fat over the average of all cows on test in February 1921.

The 2,430 cows tested in nine associations during the month averaged 732 pounds milk and 29.8 pounds butter fat. Of this number 419, or 17% produced above 40 pounds of fat each, 148 were over the 50 lb. fat mark, and 38 over 60 pounds fat each. The Pierce County association averaged highest in butter fat production, 189 cows tested averaged 33.9 pounds fat. Clallam County again leads in number of cows tested, with 444 recorded.

The highest producing cow was a four-year-old registered Holstein owned by Thomas. J. Owens, of Kirkland. Her production for the month was 2,803 pounds milk and 92.5 pounds butter fat. From the herd of Mr. Owens comes also the second high cow, Leona Gerben Bracelet, with 2,408 pounds milk and 81.9 pounds fat. The highest grade producer was Fillers, a Holstein owned by Charles W. Orton of Sumner, with a yield of 1,668 pounds milk and 75.0 pounds fat, closely followed by another Holstein in the herd of William Wyatt of Auburn, with a production credit of 2,412 pounds milk and 74.7 pounds fat. In four of the nine Associations, black and white cows distinguished themselves by furnishing the leader.

Snoqualmie Valley—R. C. Wintermute, tester, reports 376 cows tested average 765 pounds milk and 30.9 pounds fat; 85 honor cows. High herd owned by Henry Rosen, of Tolt, 6 cows average 1,085 pounds milk and 39.3 pounds fat. High cow owned by Thomas J. Owens, a purebred Holstein produced 2,803 pounds milk and 92.5 pounds fat.

Thurston County—L. D. Fairbairn, tester, reports 138 cows tested average 662 pounds milk and 25.7 pounds fat; 16 honor cows. High herd owned by O. E. Ferguson, of Olympia, four cows average 669 pounds milk and 40.5 pounds fat. High cow a purebred Holstein owned by R. J. Kegley produced 2,433 pounds milk and 60.8 pounds fat.

White River Valley—S. C. Shoultes, tester, reports 314 cows tested average 862 pounds milk and 32.4 pounds fat; 70 honor cows. High herd owned by J. Ham of Thomas, 17 cows average 1,188 pounds milk and 42.2 pounds fat. High cow a grade Holstein owned by W. Wyatt produced 2,412 pounds milk and 74.7 pounds fat.

Pierce County—S. C. Shoultes, tester, reports 189 cows tested average 837 pounds milk and 33.9 pounds fat; 40 honor cows. High herd Pierce County Farm, of Sumner, 11 cows average 1,173 pounds milk and 40.9 pounds fat. High cow a grade Holstein owned by Charles W. Orton produced 1,668 pounds milk and 75.0 pounds fat.

SUCCESSFUL YEAR

The Westfield Cow Testing Association which operates in Lawrence County, Pa., completed the second year's work the 1st of March, 1922. During the year there were 26 herds tested, comprising 340 cows. Some very good records were made by the cows in this Association. Of these 340 cows, 76 produced over 300 lb. of butterfat and 21 produced over 10,000 lb. milk during the year.

The Association the past year made an increase in both butterfat and milk, as shown by the following figures:

Average production of milk per cow, 1921	6,596 lb.
Average production of milk per cow, 1920	6,018 lb.
Increase	578 lb.
Average production of butterfat per cow, 1921	274.3 lb.
Average production of butterfat per cow, 1920	243.0 lb.
Increase	31.3 lb.

This shows that the keeping of records and the better handling of dairy herds has increased the production of milk and butterfat in these 26 herds by 196,520 lb. milk and 10,642 lb. of fat. This increase in production has meant about $4,000 greater return to the farmers by reason of the Cow Testing Association.

Pauline, a 14-year old grade Holstein, owned by Alford Bros., New Castle, led the Association during the past year in both milk and butterfat. Her record in milk production for the year was 15,320 lb. and butterfat 505 lb. Her highest daily production was 71 lb. of milk and her highest monthly production of fat was 71 lb. She also led the Association last year.

The average of the 10 highest cows in milk was 13,164 lb. The average of the 10 highest cows in butterfat 446.3 lb. The following are the 10 highest cows in milk, in the order of production:

Alford Bros., Pauline, Grade Hol., 14 yrs., 15,320 lb.

Alford Bros., Houston, Grade Hol., 7 years., 14,217 lb.

McMillin and Son, Maplecroft Superb, Reg. Hol., 7 yrs., 13,490 lb.

Alford Bros., Coxy, Grade Hol., 8 yrs., 13,091 lb.

Alford Bros., Daisy, Grade Hol., 7 yrs., 13,002 lb.

Alford Bros., Rag Colantha Fayne, Reg. Hol., 3 yrs., 13,011 lb.

Alford Bros., Zeppy, Grade Hol., 4 yrs., 12,795 lb.

Alford Bros., Mollie of St. Ann Segis Pieter, Reg. Hol., 3 yrs., 12,455 lb.

J. B. Elder, Bessie Canary Vale 2nd., Reg. Hol., 8 yrs., 12,106 lb.

J. B. Elder, Falls Brook Segis Pietertje 2nd., Reg Hol., 3 yrs., 11,977 lbs.

The following are the 10 highest cows in butterfat:

Alford Bros., Pauline, Grade Hol., 8 yrs., 505 lb.

N. E. Sampson, Sally Duchess, Reg. Jersey, 10 yrs., 434 lb.

Alford Bros., Daisy, Grade Hol., 7 yrs., 481.4 lb.

Alford Bros., Houston, Grade Hol., 7 yrs., 450.3 lb.

Alford Bros., Zeppy, Grade Hol., 4 yrs., 436.7 lb.

J. B. Elder, Bessie Canary Vale 2nd, Reg. Hol., 8 yrs., 432.4 lb.

McMillin and Son, Maplecroft Superb, Reg. Hol., 7 yrs., 427.5 lb.

Alford Bros., Coxy, Grade Hol., 8 yrs., 422.1 lb.

Alford Bros., Mollie of St. Ann Girl Segis Pieter, Reg. Hol., 3 yrs., 416.2 lb.

Alford Bros., Rag Apple Colantha Fayne, Reg. Hol., 3 yrs., 408 lb.

Average of three highest herds in milk production:

Alford Bros., 11,076 lb. milk, 394 lb. fat—Holstein.

J. B. Elder, 10,103 lb. milk, 338.2 lb. fat—Holstein.

C. M. Hartzell, 9,207 lb. milk, 284.6 lb. fat—Holstein.

Average of three highest herds in fat production:

Alford Bros., Holstein, 394.1 lb.

N. E. Sampson, Jersey, 384.4 lb.

Curtis Lipp, Guernsey, 317.9 lb.

The following is a comparison of the records of the Association for 1920 and 1921:

	1920 lb.	*1921* lb.	*Increase* lb.
Average production of milk per cow	6,018	6,596.0	578.0
Average production butterfat per cow	243	274.3	31.3
Highest cow in Association in production of milk (Holstein)	11,382	15,320.0	3,983.0
Highest cow in Association in production of butter-fat (Grade Holstein)	424	505.0	81.0
Average 10 highest cows in milk production	10,497	13,164.0	2,667.0
Average 10 highest cows in butterfat	385	446.3	61.3
Leading herd in milk production (Holstein)	8,851	11,076.0	2,225.0
Leading herd in butterfat	342	394.1	52.1

C. M. Jordon, *Testor.*

WESTFIELD, PA.

During the month of February, 1922, 26 herds were tested in the Westfield Cow Testing Association, which operates in Lawrence County, Pa. Under the supervision of C. M. Jordon, tester, three of the cows produced over 1,200 lb. milk, 10 over 1,000 lb., one over 50 lb. butterfat, and fourteen over 40 lb. butterfat. There were 382 animals tested. The ten highest cows averaged 1,205 lb. milk and 44.1 lb. butterfat. The leader was a Holstein owned by Alford Brothers of Houston. She was a seven-year-old, was fresh in November, and in the month made 1,938 lb. milk and 54.2 lb. fat.

SOUTH CAROLINA TESTING

The February *Monthly News Letter* issued from Clemson College, South Carolina, states that during the month 105 animals were tested, of which 47 were Holsteins, 40 Guernseys, 18 Jerseys. Forty-five of the 105 made the honor roll, of which 29 were Holsteins and 16 Guernseys. Just what happened to the Jerseys is not stated but none of them attain distinction. The black and whites certainly distinguished themselves this month for the highest record was more than double the highest Guernsey record from the point of milk production and in fat production the Holstein exceeded the highest Guernsey by exactly 23 lb. The Holstein cows making the honor roll averaged 1,692.9 lb. milk, 57.5 lb. fat.

The feature of the month's report is the splendid work of eleven animals in the herd of V. M. Montgomery, of Spartanburg. Every one of these eleven exceeded the highest producer of any other breed. So sensational is this showing that we are reproducing the report on this herd in full. Korndyke Marvel Pontiac led with 81.4 lb. fat, 2,327.6 lb. milk. The highest milk producer is the junior three-year-old K. K. S. V. Rosamund Veeman with 2,458.4 lb. milk.

St. J. A. Lawton, Charleston, has five cows on the list headed by Segis Alcartra Korndyke, 1,164.8 lb. milk, 69.4 lb. fat. The South Carolina State Hospital at Columbia has three honor cows headed by Edith Maple Crest Pontiac Artis with 2,226 lb. milk, 68.9 lb. fat. J. T. Willard, of Sparatanburg, has three honor cows; H. D. Jordan, Ridge Spring, has six. The senior two-year-old, Queen Ona Bernardo, of Clemson Agricultural College made 1,243.2 lb. milk, 47.7 lb. fat in the four months of her lactation period.

The Montgomery herd of eleven animals and their production follows:

	Milk	*Fat*	*Age.*
Korndyke Marvel Pontiac	2,327.6	81.4	M
Lady Ruth Pietertje	2,273.6	74.7	Sr.4
Bertha Korndyke Ponto	2,326.8	73.4	M
O. K. L. Mamie	2,261.0	67.4	Jr.4
Strickland Farm Segis May	1,821.4	66.2	Sr.2
Mona Ormsby Jane Pontiac	2,347.8	65.8	Sr.3
K. K. S. V. Veeman	2,458.4	64.5	Jr.3
Princess Lola Pontiac	1,761.2	62.8	Sr.2
Katie Paul Sadie Vale	1,902.6	60.6	Sr.3
Princess Nell Ormsby	1,705.2	59.7	Jr.3
Strickland Farm Ella Pontiac	1,715.0	55.3	Jr.4

GOVERNMENT AIDS TEST ASSOCIATION

The annual report of a cow testing association is a summary of the year's work and should never be neglected, for it can be made very valuable to the members. This is not only interesting to the herd owners, but conclusions can be drawn that will be valuable to the whole industry, if the associations will make the records available.

The United States Department of Agriculture at Washington, D. C., has tabulated the records of dairy cows in many different ways, such as breed, age, weight, time of freshening, etc. These tabulations show that cows freshening in the fall of the year make a higher production than those freshening in the spring, and that the large cows of each breed are the best producers; that highest production is reached during the sixth and seventh years, and many other important factors concerning production is brought to light through the examination of these records.

The Department has gone to the expense of furnishing record books and blanks for the convenience of the associations, with the understanding that records would be furnished in return for that service. The response has been so meager during the past year that the question of discontinuing the service is now under consideration. If the associations wish to have it continued, an effort should be made to send in yearly records of their associations. Blanks that will reduce the work of making the records available will be furnished free by the United States Department of Agriculture as the Department is glad to coöperate with the dairymen and test supervisors.

J. E. Dorman.

ILLINOIS TESTING ASSOCIATIONS

The ten highest producing cows enrolled in the Illinois Cow Testing Association during February were all Black and Whites. The first, second and fifth were grade Holsteins. The report does not say whether one of the others was grade or purebred, but the rest were registered Holsteins. Number two and five were in Jo Daviess Co. No. 1; number three and seven in DuPage Co.; number one in Adams County; number four and number six in McHenry County. The leader is a grade Holstein that made 1,316 lb. milk, 102.6 lb. fat, and was owned by B. Terstriep. Harry Flack owned second cow, who had 2,106 lb. milk, 90.6 lb. fat; A. W. Fischer had a purebred Holstein that made 1,954 lb. milk, 87.9lb. fat and R. W. Stewart had another that made 2,103 lb. milk, 83.9 lb. fat. Mr. Stewart owned one that made 2,089 lb. milk, 79.6 lb. fat, while Mr. A. W. Fischer had one that made 1,669 lb. milk, 78.5 lb. fat. Nine different cows made over 76 lb. fat in the month.

The highest producing herd was one of thirteen cows, purebred and grade Holsteins, owned by Sidney Benton of the Jo Daviess County No. 1 Association. These averaged 1,385 lb. milk, 50.4 lb. fat, and thep revious month averaged 46 lb. fat. W. C. Pappelendam had four purebred Holsteins that averaged 1,691 lb. milk, 49.4 lb. fat. Holstein herds occupied nine of the leading ten positions, a purebred Jersey herd being in seventh place.

The leader of the twenty cow testing associations were in sixteen instances Black and Whites. No less than ten of the leaders being purebred Holsteins, four were stated to be grades, and two were given simply as Holsteins. A Jersey headed one association, a Brown Swiss another, a grade Jersey another, and a purebred Guernsey another. In other words four-fifths of the leaders in the twenty associations were cattle of the Black and White breed. The highest producer was a grade Holstein owned by B. Terstriep, Adams County Association, that averaged 1,316 lb. milk, 102.6 lb. fat. She was the only cow that produced over 100 lb. fat in February in the state. Every one of the leaders made over 51 lb. fat and one-half of them over 70 lb. The Sydney Benton herd led in the Jo Daviess Co. No. 1 Association with the highest average. These thirteen purebred and grade Holsteins averaged 1,385 lb. milk, 50.4 lb. fat. Nineteen associations reported the breed, and of the highest producing herds, in sixteen instances Holsteins, either purebred or grades, were in the lead.

MISSOURI COW RACE

During January 276 cows located in fifty-eight different herds underwent official test in the state of Missouri. There were 165 Jerseys, 50 Holsteins and 27 Guernseys; in addition 32 Holsteins were in seven-day tests and two were retested.

The Missouri Dairy Cow competition which has been in progress for the past eighteen months closed on March 31st. The contest has been a success from the start in increasing the number of breeders making official tests in their herds. At the start of the contest there were 42 herds on test while at one time there were 76 herds or almost double the number there were at the start.

The January leader is Dutchess Chemacqua Hengerveld, owned by the Bellefontaine Farms. She is credited with a production of 2,350.7 lb. milk, 85,094 lb. fat. The Pickering Farm of Belton, owned the next three animals U. S. Beauty Aaggie Grace has 2,443.1 lb. milk, 80.89 lb. fat; Dora May Talmana 2,090.3 lb. milk, 80.665 lb. fat, and Kiatta

Finderne Pontiac, 2,224.7 lb. milk, 80.022 lb. fat. As the Pickering Farm do not accept prizes the second prize passes to Fobes Homestead Reuwerd owned by S. L. Lindsey, with 1,964.8 lb. milk, 77.805 lb. fat. Three Jerseys follow these five, then two more Pickering Farm cattle and then a Jersey, owned by the Longview Farm and then follows Lewismonte Pontiac Alban, owned by Geo. L. Burrell, with a production of 2,038 lb. milk, 71.88 lb. fat, which gives her the third prize although she stands in twelfth place on the list.

The Pickering Farm, the University of Missouri and the Longview Farm waive their right to prizes won. In the first eighteen animals on the list there are no less than twelve Holsteins, the Black and White cows holding the five first places.

During the month Campus Josephine Galaxy, a Holstein bred, owned and tested by the University of Missouri broke the senior four-year-old Missouri State record by producing 20,510 lb. milk, 702 lb. butter fat. She is a granddaughter of Missouri Chief Josephine who, eleven years ago completed a record of 26,861 lb. milk and 740 lb. fat. This was one of the greatest records of the breed at that time. Josephine and her production was featured by every agricultural journal and by newspapers and magazines of all kinds throughout the country, Many of these periodicals carried her picture and she effectually advertised Missouri and Missouri Holsteins.

MILK POWDER ORDER

A New York firm recently ordered 3,000,000 lb. milk powder from the Whatcom County Dairyman's Association. The amount of this order was $200,000, and the goods are to be delivered by midsummer.

GOOD PRICE

Milk in Miami, Florida, is retailing for twenty-five cents a quart. It seems as though a Holstein dairy around that city would return a big profit to its owner.

PUREBRED AND GRADE

The highest cow in the Watertown Cow Testing Association for the month of February is owned by Henry Grimm and Son, of Waconia, Minn. She gave 2,030 lb. milk and 79.1 lb. fat. She was four years old and is a purebred Holstein.

The highest herd average for the month belongs to Ferdinand Breher. His eleven head averaged 1,497 lb. milk and 50.1 lb. fat in 28 days. All were grade Holsteins.

Seventy-five cows in the Association gave over 40 lb. fat. There were 364 cows on test during the month.

P. Strong, *Tester in Charge.*

DUTCHLAND PIETERTJE VALE

Dutchland Pietertje Vale, whose great year record is reported by Superintendent Gardner, is of Dutchland breeding for a number of generations, and has made a number of records that are a credit to her breeding to those who have had charge of her and to her owners. She first freshened at two years, four months and eighteen days old, and in official test made records of 465.5 lb. milk and 25.37 lb. butter in seven days, and 2,210.9 lb. milk and 100.87 lb. butter in thirty days She was put on long time test, but also again put in strictly official test 253 days from freshening, at which time she made 286.1 lb. milk and 18.65 lb. butter in a week. In the full year she made the magnificent record of 21,309.2 lb. milk and 967.10 lb. butter.

When she was four years and eighteen days old she was again officially tested at which time she made 464.8 lb. milk and 27.66 lb. butter in a week, 2,215.8 lb. milk and 107.58 lb. butter in a month. In this lactation period she was in test 305 days, and carried calf 198 days of this time. Her ten months' record is 20,122.1 lb. milk and 866.12 lb. butter. She freshened again at the age of five years and one month and seven days and when fresh made the splendid record of 749.2 lb. milk and 35.17 lb. butter in seven days, 3,034.6 lb. milk and 138.83 lb. butter in thirty days, and in the full year she made 1,263.02 lb. butter and 27,939.2 lb. milk, as reported by Mr. Gardner.

Her sire, Dutchland Sir Pietertje Hengerveld, has a long list of good record daughters, and was by Pietertje Hengerveld's Count De Kol from Changeling 29.23 lb. A. R. O. the first cow to give one hundred pounds of milk in a day and to have a daughter make 110 lb.

The dam of Dutchland Pietertje Vale is Dutchland Colantha Vale, a cow with a long list of large official and semi-official records. As a junior two-year-old she made 857.43 lb. butter and 22,750.2 lb. milk in a year, her milk record being the world's record in class the time of making. As a six-year-old cow she made 30.42 lb. butter, 750 lb. milk in seven days, 124.08 lb. butter and 3,103 lb. milk in thirty days. In the full year she made 1,082 lb. butter, 27,625 lb. milk. She was a daughter of Colantha Johanna Lad, and her dam is the famous Creamelle Vale, 1,155.85 lb. butter, 29,591.4 lb. milk in a year, the latter being the world's record the time of making, while the dam's dam, De Kol Creamelle, was the first cow to make over 26,000 lb. milk in a year, in a modern supervised test. This is a wonderful instance of capacity to produce being handed down generation after generation.

GOING AND COMING

A number of representatives of New England manufacturers went before the Ways and Means Committee of Congress and asked for a tariff on boots, shoes and leather, and at the same time requested that foreign hides be admitted free. Evidently they intended to get the farmers both ways. And then the big city dailies criticise the Agricultural Bloc and its members.

"Then you were disappointed in the western cowboys you saw?" "Yes, their dialect was not like the novels and their costumes were not like the movies."—*Louisville Courier-Journal.*

NEW ENGLAND DOINGS

A record of 31.31 lb. butter in seven days has been made by Avalon Pearl Beauty owned by E. D. Curtis, of Bantam, Connecticut. Avalon becomes the Connecticut champion in the junior four-year-old class. She nearly reached 100 lb. milk in a day. She displaces Black Korndyke Pansy, 30.02 lb. butter.

There are some real good cows in the Dodge Farm herd. Six different animals have produced from 96 to 119 lb. milk in a day, and the number of those on long time test have made a great showing. Belle Wera DeSpofford made 29.12 lb. butter, 646.6 lb. milk in a week as a mature cow. Dodge Farm Orpha Belle Butter Boy made 26.18 lb. butter, 581.5 lb. milk in seven days as a senior four-year-old, and the junior two-year-old Dodge Farm Farsedo Alsama Gelos made 17.53 lb. butter, 318.8 lb. milk.

Polly Pietertje Colantha 381908, owned by the Connecticut Agricultural College, has made 101.3 lb. milk in a day, and during January made 2,605.9 lb. milk, the highest record ever made in the college herd. She was bred by the Estate of E. D. Reynolds, of Brockton, Mass., and was purchased in November, 1920, from H. B. Morris, of Westerly, R. I. She freshened soon after this purchase, and in 305 days produced 13,244.4 lb. milk, 557.89 lb. butter. She freshened again December 27, and made 544.6 lb. milk, 27.84 lb. butter in a week. The previous high record cow of the college herd is De Kol Hubbard Pietertje 2nd, with 2,535.5 lb. milk. The day record was held by Fay M. 2nd with 98.2 lb. Polly Pietertje Colantha was milking 85 lb. a day when she went out of official test, and is bound to make a credible year record.

The City of Bridgeport Herd is still doing good things. Woodcrest Ormsby Walker made 20,556.5 lb. milk, 764.6 lb. butter in 343 days. Geraldine Walker Twisk made 12,730.5 lb. milk, 515.8 lb. butter in a year as a senior two-year-old. She is a daughter of King Walker Prilly Spofford, the present herd sire at the Hayland Farms, Milford, Connecticut. Mercedes Segis Coral De Kol, a junior two-year-old, made 12,789 lb. milk, 533.75 lb. butter in a year.

At the Sagdahoc Farms, South Portland, Maine, several very good records have been made. Princess Dinah Lotona made 567.5 lb. milk, 24.81 lb. butter in seven days, and three month after freshening made 2,325.6 lb. milk, 96.86 lb. butter in thirty days. Lydia Wayne Bleeker as an eleven-year-old cow made 657.9 lbs. milk, 27.88 lb. butter in a week, and 2775.7 lb. milk, 114.77 lb. butter in seven days. Lydia is quite an old girl. Agricola Creamelle Betty Rauwerd made 716 lb. milk, 29.48 lb. butter in a week, and 2,946.9 lb. milk, 117.01 lb. butter in seven days. She wins the Maine State Championship for milk production. The manager of the Sagadahoc Farms is Myron C. Peabody, who is vice-president of the New England States Holstein-Friesian Association, representing the State of Maine.

Connecticut retains an interest in the great Maaikenshof Farm heifer, Colantha De Kol Creamelle 4th, who has made a number of splendid records. In seven of days she produced 701 lb. milk, 104.5 lb. her best day, while her thirty day record is 6,243.1 lb. In seven days she made 35.68 lb. butter, and in thirty days 142.6 lb., which represents one of the highest records in her class.

FORCE IN HIS COMMUNITY

A Michigan breeder, who is doing a lot of good in his community is Corey J. Spencer, of Jackson. Mr. Spencer is the owner of Grand Rapids Stock Farms, which consists of 4,272 acres. At the head of the herd is Model King Segis Glista, a young sire whose daughters are making a good showing, one, Barbara Pontiac Segis Glista, a two-year-old, has recently completed a record of 21.61 lb. butter in seven days, and a number of others have done nearly as well, while sons and daughters of this bull have won honors in the show ring. Mr. Spencer is prominent in his county Holstein affairs, is president of Jackson County Holstein Breeders' Association, and secretary of the Jackson County Improved Live Stock Breeders' Association.

MALLORY HERD DISPERSAL

The coming dispersion of the Mallory herd will afford breeders the opportunity of looking over a great herd which contains more of the blood that produced May Echo Sylvia than does any other herd in the world. Many years ago Mr. Mallory and his father purchased from Henry Stevens and Son the bull Count Echo De Kol, which was bred by Uri Porter, whose farm adjoins that of Henry Stevens.

Count Echo De Kol sired May Echo, who as a mature cow eleven years old, we believe, made 23,707 lb. milk, 1,042.05 lb. butter in a year, and was the dam of May Echo Verbelle, who in turn was the dam of May Echo Sylvia. All three of these great cows were products of the Mallory herd.

GOOD MILK PRODUCER

A very fine two-year-old milk record was made by Rosa Helena Spofford, a Canadian bred heifer owned by Benjamin R. Leavens, Bloomfield, Ont. This senior two-year-old made 24.56 lb. butter in seven days from 645.7 lb. milk, an average of over 92 lb. milk in a day. She was continued on test for 21 days, in which she produced 1,882 lb. milk.

"I want to reduce." "Then you must choose the least fattening foods." "But I don't know what they are." "You can read up on them in a couple of hours." "Aw, I knew there was a lot of work attached."—*Judge.*

READY FOR SERVICE

Young bulls from A. R. O. dams with records up to 23 lb. butter and 600 lb. milk in 7 days.

PRICED FOR QUICK SALE

Some by King Pontiac Alcartra Pietje, son of King Segis Pontiac Alcartra and Fairmont Zerma Segis Pietje, 35.61 lb. butter, former World Champion junior four-year-old.

Others by Dutchland Konigen Creamelle Boy, son of King Segis Pontiac Konigen and Dutchland Creamelle Colantha Vale, 21,552 lb. milk, 881.79 lb. butter in a year. The four direct dams of this sire have year records averaging 26,262 lb milk, 1,030 lb. butter.

F. F. RESSEGUIE,
South Gibson, Pa.

A Grand Young Bull

BORN Feb. 12, 1922. His sire is King Pietertje Ormsby Piebe 16th, whose dam and sire's dam have yearly records averaging 28,283.55 lb. milk and 1351.37 lb. butter.

Dam has A. R. O. records of 557 lb. milk, 23.1 lb. butter for 7 days and is a show cow, was a 1919 Grand Champion Prize Winner.

Price only $200, which is far below his value. He is nicely marked, carries the splendid type of his sire and dam and is bred to make a great herd sire.

CLUB ACTIVITIES

WASHINGTON STATE MEETING

At the meeting of the Washington State Holstein-Friesian Association at Seattle, March 7th, thirty-nine delegates were recognized by the Credentials Committee. President H. C. Davis called the meeting to order.

During the past year there has been some confusion in the state regarding the $5.00 annual membership fee which some claimed was in addition to the annual dues of $2.00 per head for herds of twenty-five or less, $2.50 per head for herds between twenty-five and fifty and $3.00 per head of 100 head or more. The intention of those framing the constitution was that this should be an annual fee but there was so much misunderstanding that it was decided to change the constitution making this a lifetime membership fee to be paid at the time of joining the Association. This suggestion passed unanimously. To reduce expenses, the number of delegates was reduced so that in the future one delegate will represent ten members instead of five. The membership voted unanimously to coöperate in all possible ways with the extension department in their efforts to eliminate scrub sires.

Three men, Thomas J. Owens, John L. Smith and William Bishop were nominated for President. Mr. Owens withdrew and Mr. Bishop was elected. H. C. Stimson, son of the late F. S. Stimson was elected vice-president by acclamation and A. B. Winter of Everett was chosen treasurer. The directors for the coming year are: A. E. Smith, H. C. Davis, E. A. Stuart, J. L. Smith, Alexander Todd, H. R. Scholtes, Thomas E. Lockhart. The Association's nominees for delegates to the Kansas City convention are E. A. Stuart, William Bishop, George Gue, Alexander Todd, Thomas J. Owens and J. L. Smith, three to be chosen. Although Stanley V. Butchart, the field secretary, handed in his resignation before the meeting, a new field secretary was not appointed in his place at the meeting, but will be selected later by the executive committee.

MONTGOMERY BREEDERS MEET

In annual session assembled in the old Court House. Fonda, N. Y., the Montgomery County Holstein-Friesian Association elected officers and approved of a regular program of activities for 1922. Vice-President J. Rutishauser opened the meeting, there being present 27 Holstein breeders, well representative of this county. Lee Dygert, secretary, in reading the minutes, presented an interesting and successful report of the Association for 1921.

H. O. Wilkie, of Amsterdam, was elected president, to succeed N. V. Lasher. John Ingersoll, Fultonville, was elected to succeed J. Rutishauser, vice-president, and Lee Dygert succeeds himself as secretary and treasurer.

The aims of the Association for the coming year are: To promote a better sires and better stock campaign; increased membership; junior project calf club; and a drive to eradicate tuberculosis. The Association will work with the Agricultural Society for the erection of large, permanent cattle barns on the Fair Grounds for exhibition purposes.

Social functions of the Association will be given a prominent place this year, in order that the members may enjoy getting acquainted. During the spring a banquet will be held, followed by other get-togethers of a similar nature, primarily to discuss more fully the manner of carrying out the projects.

A resolution was adopted that the Farm Bureau make a survey of the livestock interests of the county and assemble such data for the best use to the associations.

The Board of Directors is composed of a member from each town as follows: Lewis Waterstreet, Amsterdam; J. Rutishauser, Canajoharie; R. B. Veeder, Charleston; Raymond Youngs, Florida; I. Newton Voorhees, Glen; Russell Dillenbeck, Minden; Charles L. Gros, Mohawk; Albert Kilts, Palatine; A. H. Pollock, Root; Aron Failing, St. Johnsville.

After luncheon, Dr. E. Moore, of Amsterdam, spoke on the present status of assistance forthcoming from the State and Federal Department for the eradication of tuberculosis. He advocated steady effort to eradicate this dreaded disease.

E. R. Zimmer, secretary of the State Holstein-Friesian Association, spoke at considerable length on the present growth and strength of the organization now represented in 34 counties, and forming a strong bond of loyalty throughout the State. One of the strong assets to the Association, Mr. Zimmer announced, was the constantly growing confidence that the public was showing in the Association at all its sales.

Chester M. Austin, county agent, dealt upon the program which the Association had adopted for 1922, elaborating upon its significance in promoting future growth to the local assocation. Specific suggestions were made in systematically carrying out the projects, also in making use of the county survey which the Farm Bureau will conduct later.

The State Association is composed of 12 regional districts, R. D. Schafer, of Cobleskill, is the local regional director. Mr. Schafer dwelt upon the work of the regional, and how it helped to weld a stronger bond of service from one part of the State to the other.

C. F. Bigler, president of the State Association, presented very interesting information on the present growth and development of the Holstein interests of the State. He stated that the present views held by the Association are for progress, satisfaction to all their patrons at the public sales, and a square deal to all. Upon this platform he looks for unprecedented growth in 1922.

The Lathrop Herd

headed by

KING VALDESSA PONTIAC HOMESTEAD, whose three nearest dams average 37.9 lbs. butter in 7 days, offers to discriminating breeders a few young bulls sired by this great young sire, also a few yearling heifers and several foundation cows in calf to this show bull. His daughters are not for sale.

And please note:--

The Lathrop Herd is fully accredited. We started clean and have never had a reacting animal in the herd. Come and see us, please, for we are proud to show visitors the herd.

Letters to the Editor

MONTANA BREEDER ON TRANSFER FEES

TO THE BREEDER AND DAIRYMAN:

I have read with no little degree of interest the article on transfer fees by George E. Stevenson in your current issue.

In so far as the receipts for additional transfer costs are sought to be apportioned to state associations, and through those associations used in promoting public sales in which an almost negligible per cent of breeders take part, or receive benefit, and to which Mr. Stevenson objects, I fully agree.

I am for an increase in the transfer fee, but for constructive purposes, and quite in divergence to the reasons advanced by Mr. Stevenson in his opposition to an increase.

Competition in all lines of commercial endeavor is becoming every day more keen.

We as producers of an essential food, and breeders of the source of that food product, cannot afford to wait upon the public's option to use the usufruct of our endeavor.

We must put the necessity of the use of our product before the public. It must be done in an attractive and compelling way. It must be done by propaganda through advertising.

With the dairy product sufficiently in demand the breeder's argument will be automatically taken care of, though a little vigilence in connection with the greatest fountain source of that supply—the Holstein cow—may not be out of place.

Who would know anything about Jell-o, Hebe, Heinze's fifty-seven varities and hundreds of other manufactured, fabricated and transmuted food products whose value as food is in less comparison than a rush light to the dazzling sun, alongside the appetizing, healthgiving, nourishing and vital value of milk, cream, butter, cheese, etc., if not for the efficient and liberal advertiser?

It is for extension work in putting our article of production before the public in such a way as to double its present demand that I would favor an increase in the transfer fee. The revenue produced from this increase comes from a source which is able to pay, and which, through collateral transactions, will derive the greatest benefit from the use of the money if spent as indicated.

We must not be narrow, selfish, or aggrandizing, as breeders, in the expenditure of this money. We are all dairymen first and breeders second. If not we have no argument. We dairy for the manufactured article. We breed to produce that article in the greatest quantity at the smallest expense. Every dairyman with grade cows wants to improve his production. This will come through purebred dairy stock. That demand will be met from the nurseries of the breed. The breeders are amply able to do their own advertising. They are doing it and liberally. With twice the demand for dairy produce there would be four times the demand for producing purebreds.

But to attempt to advance the demand for dairy products through the breed papers would be throwing the money down a well. The consuming public does not read the breed papers. It reads the daily papers and the magazines. The public is gullible. It likes to be gulled. It is gulled. We all know of great successes in gullibility. But the public never flinches. It is always on the surface to take new bait—red yarn raveling, hook, line, sinker and pole. It soon detects the delusion. It tries something else. It is always after the millennium in some form or other and always will be.

We Holstein dairymen and breeders have the only real simon-pure, dyed in the wool, yard-long, one hundred per cent millennium—the millennium of the stomach—practically unknown to the children of men, and because of injudicious parsimony in raising money to put it to the front, will allow it to go down, "unheralded, unhonored and unsung."

And when the public for the first time finds it is getting a *quid pro quo*, I hate to think of the degree of opulence which will be the portion of dairymen and breeders of the uncomparable black and white cow.

We must advertise in season and out and everlastingly. This is an age of advertising. Three-f urths of the things we use, and many of the non-essentials, we use as a result of the continual hammer, hammer, hammer of advertising.

Advertising will do for us what it has done, is doing and will do for others.

If we think that milk and cream and butter and cheese is good, wholesome, healthful, nourishing and economical food, we should shout it from the house tops to all the world.

If the state associations want their pro rata portion of the increase in transfer fees let them have it, but first let the National Association, by legally adopted resolutions, tell how it shall be spent.

I agree with Mr. Stevenson that a large floating surplus in our treasury is in danger of exploitation. But that danger is removed by the enactment of mandatory provisions stating just how that surplus shall be spent.

It must be done by men above a common bribe, by men whose promotion of the whole Holstein industry is a fetich.

I for one am willing to make the experiment up to a dollar, or even two dollars, on the transfer of every animal I sell.

If the Holstein-Friesian Association thinks money raised by this method would be playing the game of the Jersey, Ayrshire, Guernsey and other dairy breeds, it can be used with them in a gigantic pool.

MARK HUNT.

Rose Glen Farms, White Sulphur Springs, Montana.

HOLSTEIN AND JERSEY RECORDS

TO EDITOR OF THE HOLSTEIN BREEDER AND DAIRYMAN:

Inclosed you will find a newspaper clipping on which I would like some help. There has been quite a lot of comment among the breeders in my county.

OTTO GRESCH.

Antigo, Wisconsin.

The clipping in question is taken from a local paper. The writer, who signed himself "Old Subscriber," said that the world's record for a yearling was made by a Jersey; that the only cow in the world that had made two successive year records of 1,000 lb. butter fat is Vive La France; that the cow holding the world's record for persistency on long time tests is Sophia 19th of Hood Farm; that a Jersey has held the highest record in the cow testing associations for two years; (evidently this refers to a local association); that Jerseys make good under any and all climatic conditions, mentioning the extreme cold of Canada and of Maine; that Jersey milk brings the highest prices in all milk markets.

ANSWER BY EDITOR:

It is true that a Jersey yearling made 800 lbs. of butter fat in a year, which for a time was a world's record, but this record has been surpassed by Daisy Aaggie Ormsby 3d, who produced 22,151.3 lb. milk, 870 lb. butter fat in a year, calving at twenty-three-months-old. She is a product of your state and is in the John Erickson herd.

The statement that Vive La France is the only cow in the world to make two successive year records *each* above 1,000 lb. of fat is also true but the total of the two years is not as high as that of the two consecutive year records made by the Canadian cow, Bella Pontiac. In other words, Bella Pontiac and not Vive La France holds the world's record for two consecutive years production of butter fat. The first year she made 20,129 lb. milk, 815 lb. fat as a four-year-old and as a five-year-old she made 27,191 lb. milk and 1,268 lb. butter fat. She is again on test and in five months and eleven days has made approximately 12,700 lb. milk, 580 lb. butter fat.

The third statement that Sophie 19th of Hood Farm has made nine long time records that exceed nine made by any other cow is true, but there are several Holsteins that have beaten Sophie for four and five years consecutive butter production and we believe it is only a matter of time when there will be quite a number that will surpass her, so fast is long time testing growing in the Holstein breed.

You will notice that we have mentioned butter fat production only. In point of milk production, Jersey cows and heifers no matter what their age do not even have a look in and if the Holstein breeders had devoted their time to making long time records instead of seven-and thirty-day records, we believe this statement would be true also for butter fat production.

Another statement in the article, that Jersey cows make good under any and all climatic conditions is true also of Holsteins. One offshoot of the Holstein breed can be found in Russia within the Arctic Circle. And Holstein record-makers can be found just as far north in Canada as can Jersey record makers.

The Cow Testing Association record for milk and butter fat in New York State, in fact in the United States, is held by a Holstein cow. If "Old Subscriber" will look up the Wisconsin Cow Testing Association Reports, he will see that Holsteins lead at least twice as many times as all the other breeds combined.

We do not wish to belittle the Jersey cow. All dairy breeds are good and some wonderful animals have been developed by Jersey breeders but we are confident that the Holstein cow, purebred or grade is more profitable for the everyday dairyman than is the Jersey unless market conditions enable the Jersey dairyman to get a special price. Yet in many parts of the country, Holstein milk sells at a premium, especially for the use of babies and invalids, on account of its digestibility and ease of assimilation.

FAVORS STATE SECRETARY

If I disagree at any one point with what seems to be your editorial policy it is on the State Secretary idea as I favor it unreservedly and cannot see where county clubs can accomplish much in a State way unless under a State Secretary and if he puts enough time in to really do anything he should be paid.

I believe the National Association will work out some plan whereby most of the increased transfer fee (if it is increased) goes back where it came from. RALPH ASH.

Ada, Ohio.

MISSES THE MARK

We like your paper, THE HOLSTEIN BREEDER AND DAIRYMAN very much and think it is just what we need at this time—more Holstein literature. We think your views in regard to the proposed raise of the transfer fee are o. k. From personal observation we would say that some of the extension work of our association does not hit the mark, that is, going to different towns, giving talks on value of purebred sires, etc., that nine out of every ten persons who hear it are those who already have purebred herds or at least purebred sires.

MRS. OTTO BUELL.

Buello Stock Farm, Sherburne, N. Y.

What Is a Bull Worth?

IN dairying no bull should be used whose dam and paternal granddam were not capable of producing at least 300 pounds of butter fat in a year. All bulls that are purebred are not good bulls. Study the ancestry of the animal.

The first cost of a good dairy bull that may seem unduly high is far outweighed by the greater value of his progeny. Such a bull used on common cows should increase the average annual production of his progeny by 1,000 pounds of milk or 40 pounds of butter fat. One Holstein bull used in the Ohio Experiment station herd increased the average annual production of his seven daughters 1,299 pounds of milk and 40 pounds of butter fat per year above that of their dams. Forty pounds of fat per year for six years (average producing period) by each of seven cows would be 1,680 pounds of fat. This at 30 cents a pound amounts to $594. This bull cost $100 when a calf.—*County Agent L. S. Stallings, Breckenridge, Minn.*

RESEGEDALE FARMS

King Pontiac Alcartra Pietje

senior herd sire, son of King Segis Pontiac Alcartra and Fairmont Zerma Segis Pietje, 35.61 lb. butter in 7 days as a junior four-year-old, World's Record when made.

Dutchland Konigen Creamelle Boy

junior herd sire, son of King Segis Pontiac Konigen and Dutchland Creamelle Colantha Vale, 21,552 lb. milk, 881.79 lb. butter in a year. The four direct dams of this bull have year records averaging 26,262 lb. milk, 1030 lb. butter.

Oct. 21—New Douglas, Ill., Madison County Breeders'.

THE THIRD BRENTWOOD SALE

The cattle entered in the third Brentwood Sale were as good, or even better, than those of the previous years, but business conditions were reflected in the prices realized. There were 186 animals sold, this includes a young calf, a few days old, and the average was $791.51. The amount was $147,965, and by calling the calf and its mother one consignment, as is frequently done when figuring averages, the average of the third Brentwood Sale would be over $800. No less than 34 animals brought $1,000 or more, the top price, $5,000, being obtained for Carnation Pietertje Colantha, the son of Segis Pietertje Prospect. H. S. Seward, of Petersburg, Virginia, obtained this bull at the first bid. Lyons Pontiac Champion, the son of Bella Pontiac, consigned by John E. Glasser, Goshen, N. Y., went to the bid $3,500, of L. A. Barron, of Brantford, Ontario. This is a real nice bull, very good at the rump though not as large as he might be. Mr. Barron, it will be remembered, owns Bella Pontiac, who is reported as being again on year test with a production of 725 lb. butter, 12,700 lb. milk in five months and eleven days. It was told around that Mr. Barron did not even know of the existence of this bull until after he had made at least one year record on the dam, as this animal was born before Mr. Barron purchased the dam.

The top price female was Dairy Maid Prilly, an eleven-months-old daughter of King Segis Alcartra Prilly and of Adirondac Wietske Dairy Maid, who is again on test promising to excel her great record of last year for both milk and butter. Abner S. Deysher, of Reading, Pa., bought her for $4,300, and he also paid $4,200 for Carnation Matador Pontiac, the Grand Champion of the show.

As the stock was of such high quality, we are giving full details of all the animals sold, and in addition are publishing a table showing where the animals went, the number bought by consigners, the number bought by non-consigners, and the total amounts of the purchases of the seventeen different buying states and the province of Ontario.

Owing to the illness of the Washington auctioneer, George A. Gue, R. E. Hæger with George W. Baxter were the auctioneers, with Wood as pedigree man.

One pleasurable incident connected with the sale was the presentation of a beautiful silver cup to Mr. and Mrs. William G. Davidson as a token of appreciation for their treatment of the consigners, and for their efforts in getting together such a high-class aggregation of Holsteins. Ex-President Aitken made the presentation speech.

Oct. 21—New Douglas, Ill., Madison County Breeders'.

THE THIRD BRENTWOOD SALE

The cattle entered in the third Brentwood Sale were as good, or even better, than those of the previous years, but business conditions were reflected in the prices realized. There were 186 animals sold, this includes a young calf, a few days old, and the average was $791.51. The amount was $147,965, and by calling the calf and its mother one consignment, as is frequently done when figuring averages, the average of the third Brentwood Sale would be over $800. No less than 34 animals brought $1,000 or more, the top price, $5,000, being obtained for Carnation Pietertje Colantha, the son of Segis Pietertje Prospect. H. S. Seward, of Petersburg, Virginia, obtained this bull at the first bid. Lyons Pontiac Champion, the son of Bella Pontiac, consigned by John E. Glasser, Goshen, N. Y., went to the bid $3,500, of L. A. Barron, of Brantford, Ontario. This is a real nice bull, very good at the rump though not as large as he might be. Mr. Barron, it will be remembered, owns Bella Pontiac, who is reported as being again on year test with a production of 725 lb. butter, 12,700 lb. milk in five months and eleven days. It was told around that Mr. Barron did not even know of the existence of this bull until after he had made at least one year record on the dam, as this animal was born before Mr. Barron purchased the dam.

The top price female was Dairy Maid Prilly, an eleven-months-old daughter of King Segis Alcartra Prilly and of Adirondac Wietske Dairy Maid, who is again on test promising to excel her great record of last year for both milk and butter. Abner S. Deysher, of Reading, Pa., bought her for $4,300, and he also paid $4,200 for Carnation Matador Pontiac, the Grand Champion of the show.

As the stock was of such high quality, we are giving full details of all the animals sold, and in addition are publishing a table showing where the animals went, the number bought by consigners, the number bought by non-consigners, and the total amounts of the purchases of the seventeen different buying states and the province of Ontario.

Owing to the illness of the Washington auctioneer, George A. Gue, R. E. Hæger with George W. Baxter were the auctioneers, with Wood as pedigree man.

One pleasurable incident connected with the sale was the presentation of a beautiful silver cup to Mr. and Mrs. William G. Davidson as a token of appreciation for their treatment of the consigners, and for their efforts in getting together such a high-class aggregation of Holsteins. Ex-President Aitken made the presentation speech.

	Consigned by George Abbott, Cortland, N. Y.

(Continued on page 236.)

WILLIAM G. DAVIDSON

and the cup presented to Mrs. Davidson and himself, as a token of appreciation by the consignors to the third Brentwood Sale.

BREEDER THIRTY YEARS

The veteran Holsteiner, Jacob Todd, Jr., was in evidence at Brentwood, and was passing out to many intereste, advertising blotters which carried some good words for the Brentwood sale and its manager, and then told that Mr. Todd was celebrating his thirtieth year with Holsteins as breeder, salesman, secretary, etc.

Jones—"Isn't your mother going to ski this afternoon, Joyce?" Joyce—"No Mummy's going to tell Mrs. Cook that Mr. Cook broke his poor leg this morning." Jones—"But why should she have to do that? She doesn't know the Cooks, does she?" Joyce—"No, but you see Mummy's on the amusement committee." —*Punch.*

ABNER S. DEYSHER

of Reading, Pa., holding his $4,200 purchase, Carnation Matador Pontiac, grand champion female of the Brentwood Show.

INTENTIONAL SECOND EXPOSURE

HAEGER A CHICKEN FANCIER

Despite the fact that Bob Hæger dispersed his herd, keeping only one or two of his "pets" like Minerva Beets and Paul Calamo Korndyke, he cannot keep out of the show business. It is well known that Mr. Hæger was an acceptable judge at a number of large fairs for the past two years but it might not be as well known that as a chicken fancier Mr. Hæger has made a great reputation. We have been told that his introduction to showing was made when he was a mere boy. In company with J. H. DeLancey of Elgin, Illinois, Mr. Hæger traveled with a flock of poultry of many breeds and showed them at a number of fairs with considerable success.

His present love is the Speckled Sussex, a breed famous in England but comparatively unknown in this country. Mr. Hæger, during the past three years has exhibited at ten of the largest shows in this country and success has crowned his efforts. His flock is headed by Chicago Wonder, first prize at Madison Square Garden, 1920, and sire of the first prize cockerel and pullet of the 1922 show.

We wont take the space at this time to tell of the many winnings of the Hæger flock but know that his many friends will wish him success.

LARGE RECORD ON TWO QUARTERS

Two years ago Carl Borgeson, of St. Peter, Minn., purchased a Holstein cow from Marlow and Randall, of Mankato, that milked from only two quarters. This cow has never milked but on two quarters, as at her first freshening it was impossible to get the milk from the other two.

This is the only purebred cow Mr. Borgeson has, but after milking her the first lactation period he decided that he would like to run her on official test. Therefore when she freshened this time. bringing a nice heifer calf, he decided to test her, and she made the exceptional record of 19.16 lb. butter and averaged 55.5 lb. milk per day.

Mr. Borgeson states that she is holding her own with the other grade cows in his herd. As there are scarcely any purebreds in Mr. Borgeson's section of the country he believes that this sample as to what a really good cow is capable of doing, even though laboring under a big handicap, will get other farmers - terested in breeding better cattle.

BRENTWOOD VERSION

Mary had two little calves,
Quite shapely, you must know.
And naughty eyes would follow them
Wherever they did go.

"I want to do some shopping to-day, dear," said a fond wife. "That is, of course if the weather is favorable. What is the forecast?" He consulted the paper and promptly chanted off: "Rain, hail, snow, thunder, lightning and floods." —*St. Paul Dispatch.*

DOING THINGS AT SHESHEQUIN

They are making a number of good records in the herd of Sheshequin Valley Farm of which Chas. S. Chaffee of Ulster, Pa., is proprietor. Hengerveld Inez De Kol as a senior three-year-old made 613.5 lb. milk and 31.18 lb. butter in seven days, and in thirty days produced 2,478 lb. milk and 120.9 lb. butter averaging 3.89 per cent during her thirty-day test. She is a daughter of the great show bull Hengerveld De Kol 5th. Crestmont Model Segis Princess, a daughter of Model King Segis Butter Boy, made 372.5 lb. milk and 15.8 lb. butter in seven days, and 1.540.1 lb. milk and 64.6 lb. butter in thirty days, averaging 3.37 per cent. fat for the week and 3.35 per cent. fat for the month.

They have two others on test at the present time, one of which is a grand daughter of Pontiac Korndyke, and she looks like making a thirty pound seven day butter record.

KNOWLES HEIFERS DOING WELL

They are making some good records in the herd of F. P. Knowles of Auburn, Mass. Highland Rosewood, No. 548120, a daughter of Aaggie Cornucopia Sir Colantha, as a junior two-year-old is making well over 21 lb. butter in seven days and so is Blanche Margo Pontiac. These animals will be kept for thirty days in official test and then run for a long time record. They are both show animals and their performance is another indication that, in the Knowles herd at least, production and individuality can be combined.

DOUBLED HERD PRODUCTION

To nearly double the average production of your dairy in ten years is quite an accomplishment, especially when your cows averaged nearly 6,000 lb. to start with. Yet this is the accomplishment of A. H. Poston and Sons, of Spokane, Washington.

In the year 1911 they had an ordinary herd of grade cows, diverse in color and nondescript in breed. After attending several farmers and dairyman's meetings, and talks by representatives of the State College, they decided to get a purebred sire. They purchased a grandson o King Segis, an eight-months'-old bull calf from a good cow with producing lines of breeding. The price was $150.00. It seemed a tremendous figure at that time. They managed to pay it by making a deposit and paying $10.00 per month. This was the best investment Mr. Poston and Sons ever made. Every one of his heifers gave more than her dam and some of them gave twice as much. Just see what the Poston's say about the result:

"The average milk production of our herd was 5,818 pounds before his purchase. This last year our herd will average very close to 10,000 pounds, or nearly twice as much in 1921 as in 1911.

"Since the purchase of our first purebred bull, we have used nothing but registered sires with good milk and butterfat records, and our herd is gradually increasing in production."

SEIZING AN OPPORTUNITY

Eric Carlson, an Illinois tester reports to the Department of Dairy Husbandry that a picture film entitled "Out of the Shadows" was shown in his county. This picture has caused both dairymen and dwellers in the villages to seriously consider the problem of tuberculosis in cattle. One member of the Testing Association whose cows were tuberculosis free has the product of his dairy made into prints and wrappers that advertise the fact that the butter was made of cream from cows that were free of disease. So great was the demand that he was unable to supply all of it.

New York is talking of tearing down its elevated tracks, razing L, so to speak. —*Life.*

PEDIGREES

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Continued from page 237.)

THE IOWA HOLSTEIN SALE

By Special Representative.

The Annual Guaranty Sale of Holsteins put on by the Iowa Breeders' Association at Waterloo, March 16th, was an event that points toward more prosperity for the men who believe in dairying and in this breed in particular.

The sale was managed by Mr. Eves, secretary of the organization and the offerings were bargains right through. It was a splendid day to buy foundation stock. All the purchasers save one were Iowa men and many of the names are those of men who are just turning to this breed. They see what can be accomplished in stimulating bank accounts by selling the crops to cows rather than on the open market.

Sixty-three animals brought $14,695, an average of $233.25. Males averaged lower than females. Eleven bulls were sold, the highest price being $350 which was obtained for two animals, one a January calf, sired by Fayne Bessie Homestead from Alcartra Pearl, a 27.2 lb. cow with 683.7 lb. milk in a week, was consigned by the Cass Farm Company and purchased by Edward Eitel & Son of Hawkeye, Iowa. The other was a young bull born December 1920, sired by King Aaggie Hengerveld from Lillian Buttermaid, a young cow with good long time records made both as a two and three-year-old. This bull was consigned by Paul B. Stewart of Maryland and purchased by L. H. Pape of Dyersville, Iowa.

Alcartra Pearl herself, went for $625 to L. H. Gleim of Arlington, Iowa. She was the highest priced female in the Sale. Wildare Pietertje Norinne, a five-year-old daughter of King Segis Pontiac Neta was consigned by LeGrand Gleim and went to Clooz Brothers of Webster City, Iowa for $410. Picadee Concordia, consigned by Cass Farm Company and cataloged as the only tested daughter of Flush Concordia Cornucopia Lad, went to Hubert Stuckart of Raymond, Iowa for $400.00.

The majority of the consignors came from herds owned by younger breeders who have done very little official testing. Despite this, thirteen of the fifty-one females brought $300 or more. J. E. Mack was the auctioneer with Bert Scott as pedigree man.

The animals bringing $200 and more with the names and addresses of the purchasers and the prices paid follow:

Consigned by Cass Farm Company, Sumner, Iowa.

1	Alcartra Pearl, 5 yrs., T. G. Gleim, Arlington, Iowa.	$625
2	Bull calf, 2m., Edward Eitel & Son, Hawkeye Iowa.	350
3	Alcartra Pink Johanna, 3 yrs., J. S. Dice, Cedar Rapids, Iowa.	350
5	Millercrest Vera Beets, 4 yrs., W. S. Kneif, Westgate, Iowa.	240
6	Center View Johanna Neta, 5 yrs., Closz Brothers, Webster City, Iowa.	360
7	De Kol Clothilde Alcartra, 6 yrs., Hubert Stuckart, Raymond, Iowa.	250
8	Glitka De Kol Walker, 6 yrs., Hubert Stuckart.	375
9	Ida Nicolo Fayne, 3 yrs., H. W. Gleim, Webster City, Iowa.	275
10	Johanna Pontiac De Kol Fayne, 6 yrs., Closz Brothers, Webster City, Iowa.	355
11	Pietertje Jewel Parthenea, 6 yrs., Edward McGrath, Independence, Iowa.	235
12	Lady Burke Lyons, 6 yrs., Peck Brothers, La Porte City, Iowa.	200
13	Posch Korndyke Colantha Paywell, 1 yr., O. J. Sime, Scarville, Iowa.	275
14	Pauline Prince De Kol, 3 yrs., Gottlieb Moses, Sumner, Iowa.	240
15	Picadee Concordia, 4 yrs., Hubert Stuckart.	400
17	Sadie Fobes Homestead, 4 yrs., Gottlieb Moses.	300
18	Segis Nicola Pontiac, 2 yrs., H. E. Gleim.	285

Consigned by Bailey Brothers, Marshalltown, Iowa.

21	Allie De Kol Johanna 3d, 10 yrs., William F. Hill, Ionia, Iowa.	200
22	Corwin De Kol Merceded, 5 yrs., J. S. Dice, Cedar Rapids, Iowa.	245
24	Grassland Lady Pontiac Ormsby, 4 yrs., James B. Mosher, Prophetstown, Ill.	215
28	Rag Apple Pietertje Mercedes Segis, 3 yrs., Victor Hueneman, Garner, Iowa.	245

Consigned by Dickman & Schrank, Sumner, Iowa.

29	Rose De Kol Echo, 4 yrs., W. C. Kneif, Westgate, Iowa.	225

Consigned by LeGrand Gleim, Arlington, Iowa.

30	Sir Cornucopia Homestead, 1 yr., W. J. Frost, Jesup, Iowa.	205
32	Wildare Pietertje De Kol 2d, 3 yrs., Closz Brothers.	350
33	Wildare Pietertje Norinne, 5 yrs., Closz Brothers.	410

Consigned by C. J. Hamer, Waterloo, Iowa.

35	Belle Inka Konig Pondyke, 7 yrs., Edward McGrath.	200
36	Jean Ruby De Vries, 2 yrs., John Cunningham, Waterloo, Iowa.	205

Consigned by O. L. Hamer, Waterloo, Iowa.

38	Ormsby Belle Netherland DeKol, 4 yrs., Harry A. Stern, Waterloo, Iowa.	305

Consigned by Hanson & Sauerbry, Oelwein, Iowa.

39	Colantha Katie, 2 yrs., C. W. Patti, Des Moines, Iowa.	220
40	Ninon Ormsby 2d, 5 yrs., J. S. Dice, Cedar Rapids, Iowa.	285
41	Sadie Pontiac Pet, 6 yrs., H. S. Nieman, Manchester, Iowa.	300

Consigned by Iowana Farms, Davenport, Iowa.

44	Iowana Bangor Lady, 4 yrs., M. E. Lindskoog, Idebalb, Iowa.	240

Consigned by Reck Brothers, La Porte City, Iowa.

49	Beaver Valley Filled De Kol Birdie, 2 yrs., R. V. Neville, Laurens, Iowa.	255
51	Mercedes Aaltje Johanna, 6 yrs., G. M. Parker, Jesup, Iowa.	265

Consigned by F. W. Seeley, Arlington, Iowa.

52	Bonnibel Concordia Skylark, 5 yrs., F. W. Seeley.	200
55	Sadie McVale 6th, 6 yrs., H. C. Nieman, Manchester, Iowa.	200

Consigned by Paul P. Stewart, Maryland, Iowa.

56	Bull Calf, 15 m., L. H. Pape, Dyersville, Iowa.	350

Consigned by Hubert Stuckart, Raymond, Iowa.

58	Beauty Segis Pontiac Neta, 3 yrs., J. S. Dice.	355

Consigned by Henry C. Nieman, Manchester, Iowa.

61	Light Dawn Pontiac, 7 m., R. G. Fratzke, Jesup, Iowa.	205
62	Almeda Luecke Hengerveld 4th, 7 yrs., Closz Brothers.	315

SECOND NEW JERSEY SALE

The New Jersey State breeders held their second annual sale at the Trenton Sale grounds March 25th. The field secretary J. W. Bartlett was sale manager with George Baxter as auctioneer and Wood as pedigree man. The sale was representative of present day consignment sales. There were some real good animals. There were a number of others that were not advertisements for the breed, yet taking everything into consideration there was a good lot of animals offered. The cattle came from 22 herds many of which were accredited and practically all under State and Federal supervision. There were a few present that had attended the Brentwood sale and the Bray sale, so that the day of the New Jersey sale was the fifth sale day of that week. With the exception of the Thorsen Farm of Ellsworth, Maine, and M. H. Keeney of Laceyville, Pa., all the buyers were from within the state and many of the animals went in the immediate vicinity. The 76 head brought $17,235 an average of $226.78.

The top price was $600 which Albert Winter of Mahwah, N. J. paid for Johanna Pontiac Don Pedro, a 31-lb. cow consigned by W. H. Higgins. She was a real good animal and averaged 82 lb. milk a day for thirty days. Rancocas Farms bid $500 for Pohlcrest Kenwood Hijlaard a 24-lb. four-year-old consigned by Blossom Hill Farm. She was a real nice animal but she had one hock slightly swollen when she was in the ring. She was on long time test and in 136 days had produced 460 lb. butter and 9,526.7 lb. milk.

The highest price for a male was $500 which G. M. Rymen of Whitehouse, N. J., paid for Champion Segis Hengerveld Elgin, a very handsome young bull from the Meyer herd. He was eleven-months-old, and was by Grand Champion Segis 2d. His dam, Elgin Belle Segis Hengerveld, as a junior four-year-old had records of 31.56 lb. butter, 566.1 lb. milk in seven days, and had good records made as a junior three-year-old and as a junior two-year-old. She was a daughter of King Segis Hengerveld who was by King Segis from the 33-lb. cow Blanche Lyons De Kol.

The sale was held in the judging pavilion on the sale grounds. A substantial lunch was served by a local ladies' organization called Wellesly-Vassar and during the afternoon good looking young ladies went among the crowd selling small boxes of ice cream which were in great demand. The Scudder Farms, Mrs. C. H. Scudder owner, had a novel advertising stunt. Two bulls, apparently just a year old, were yoked and were hitched to the front wheels of a wagon. The equipage carried a big placard "Wellesly-Vassar Lunch." The turnout was a source of both interest and amusement and the caretaker of the animals had to answer many questions.

The animals bringing $200 or more, with the name and addresses of the purchasers are:

Consigned by Blossom Hill Farm, Lebanon, Pa.

1	Blossom Hill Alcartra Fayne, 1 yr., State Home for the Feeble Minded, Vineland, N. J.	$415
2	Pohlcrest Kenwood Hijlaard, 6 yrs., Rancocas Farms, Jobstown, N. J.	500
3	Model Rosalie Korndyke, 2 yrs., W. R. Everett, Somerville, N. J.	235
4	Canary Walker Calamity, 4 yrs., State Home for Feeble-Minded.	240
5	Blossom Hill Francy Ormsby, 5 m., Robert N. Simpkins, Yardville, N. J.	210
6	Pietertje Mechthilde Lass, 4 yrs., L. L. Harris, Lambertville, N. J.	210

Consigned by James L. Haver, South Branch, N. J.

8	Zereta Korndyke Sadie Vale, 6 yrs., G. Brokaw, Neshanic Station, N. J.	200

Consigned by Walter S. Garrison, Roadstown, N. J.

12	Emma Pauline 5th, 7 yrs., Albert Winter, Mahwah, N. J.	250
14	Cress Lawn Segis De Kol Pontiac, 4 yrs., Thorsen Farm, Ellsworth, Me.	285

Consigned by J. Frank Newkirk, Bridgeton, N. J.

24	Cumberland Clothilde Ruble De Kol 2d, 8 yrs., E. P. Drake, Trenton, N. J.	265

Consigned by Bloomingdale Farms, Somerville, N. J.

25	Dutchland Konigen Ladoga, 3 yrs., Stephen M. Trimble.	550
27	Bloomingdale King Segis De Kol, 8 m., Walker Gordon Co., Julestown.	280

Consigned by J. V. D. Bergen, Belle Mead, N. J.

29	Finderne Beryl Fayne 2d, 7 yrs., E. P. Drake, Trenton, N. J.	310

Consigned by Arthur S. Farr, Belvidere, N. J.

32	Johanna Ormsby Lass, 5 yrs., Mrs. Hattie Green, New Brunswick, N. J.	225

Consigned by Rancocas Stock Farm, Jobstown, N. J.

34	L. P. Dottie Alcartra, 2 yrs., A. I. Campbell & Son, Middlebush, N. J.	225
35	K. P. B. Waitske, 4 yrs., Thorsen Farm.	470
36	Roycroft Bessie, 3 yrs., B. Meyer, Finderne, N. J.	225
37	Tackora Napol Korndyke De Kol, 4 yrs., Thorsen Farm.	275
38	Madam De Kol Pontiac, 4yrs., Thorsen Farm.	325
39	Rancocas Hengerveld, 1 yr., Thorsen Farm.	310
40	Rancocas Daisy, 1yr., M. H. Keeney, Laceyville, Pa.	225
41	L. P. Clothilde Abbekerk, 3 yrs., George C. Hendrickson, Trenton, N. J.	200
43	Lovell Park Casselena, 1 yr., W. F. Hoffman, Birmingham, N. J.	250
45	Una Keyes Aaggie, 4 yrs., L. G. Thompson, Allenwood, N. J.	225
46	Edith Pontiac Marcena, 4 yrs., Thorsen Farm.	325

Consigned by A. B. Brokaw, Neshanic, N. J.

47	Corinda Fayne Alcartra, 2 yrs., E. P. Drake, Trenton, N. J.	265
48	De Goede Johanna De Kol Lady 2d, 8 yrs., C. H. Cork.	215

Consigned by Tranquility Farms, Allamuchy, N. J.

52	Tranquility Soldene Trtntje, 4 yrs., Albert Winter.	340
54	Fayne Nydia Model, 2 yrs., W. P. Bainbridge, Trenton, N. J.	275

Consigned by Joseph S. Bell, Monroeville, N. J.

57	Mollie Dimple De Kol, 2 yrs., Thorsen Farm.	250

Consigned by B. Meyer, Finderne, N. J.

60	Champion Segis Hengerveld Elgin, 1 yr., G. M. Ryman, White House, N. J.	500
61	Finderne Blanche Valdessa, 3 yrs., L. G. Thompson.	225

Consigned by Frank Coleman, Elmer, N. J.

63	Lady Mercedes Rag, 5 yrs., Bloomingdale Farms, Somerville, N. J.	250

Consigned by Forsgate Farms, Jamesburg, N. J.

66	Rag Apple Delta Greenview, 3 yrs., L. L. Harris.	310
68	Forsgate Model Hengerveld, 2 yrs., L. L. Harris.	400

Consigned, by A. J. Campbell & Son, Middlebush, N. J.

69	Valdessa Ormsby Hengerveld Lady, 2 yrs., Forsgate Farms, Jamesburg, N. J.	275

Consigned by C. M. Quick, Montague, N. J.

72	Beauty Clarion Korndyke, 4 yrs., J. H. Thompson, White House Station, N. J.	270

Consigned by William H. H. Higgins, North Branch Station, N. J.

75	Bowen Segis Pontiac, 6 yrs., Albert Winter.	325
76	Johanna Pontiac Don Pedro, 5 yrs., Albert Winter.	600

Consigned by H. H. Hastings, Neshanic, N. J.

79	Aaggie Pauline Lilith Cornucopia, 4 yrs., Albert Winter.	275
80	Princess Napol Aaggie, Albert Winter.	300
82	Mercedes Segis Hengerveld 2d, 8 yrs., George G. Brokaw, Neshanic Station, N. J.	230
83	Susan Segis Homestead, 5 yrs., Albert Winter.	320

Consigned by Scudder Farms, Trenton, N. J.

85	Five-year Cow, Henry Davis, Hamilton Square, N. J.	200
86	Cow, L. Thompson.	230

THE BELLWOOD HERD DISPERSAL

The dispersal of the Bellwood Herd, owned by C. W. Bray of Bridgeport, Pa., took place on the farm March 24th, the day after the Brentwood sale. There were a number that took in both sales but practically all the buyers were men who did not bid at Brentwood.

There were exactly fifty animals sold, this includes bull calves a month old. The total was $12,080, an average of $241.20. Three of the animals were from the

(Continued on page 240)

FROM MANKATO TO MONTANA

A remarkably well bred bull has been sold by Marlow and Randall, of the Mankato Stock Farms, to E. S. Smith & Co., of Lewiston, Montana. He is a grandson of Glen Canary De Kol 2nd, second highest butter record daughter of Sir Pietertje Ormsby Mercedes with 1,323.30 lb. butter in a year. The next dam on the sire's side is Bess Pietertje Ormsby Mercedes, the second highest milk record daughter of Sir Pietertje Ormsby Mercedes with over 29,000 lb. milk and 1,235 lb. butter in a year.

The dam of this young bull has a 20 lb. two-year-old, record, and is by Duke Segis Cornucopia, whose first two tested two-year-old daughters both produced over 20 lb. butter in seven days, and who has two 30 lb. two-year-old sisters. Her dam is a 24 lb. four-year-old from a 21 lb. three-year-old.

The Smith herd comprises 24 head of purebred cows at the present time besides the young stock. Mr. E. S. Smith writes that their cattle have gone through the winter in very fine condition, and will have access this year to an abundance of alfalfa, timothy and clover and native grass pastures, all of which are watered by springs.

The ranch itself is one of the most ideal for dairy purposes in that section of the country. It is the ambition of E. S. Smith & Co. with the start they now have, to breed up a herd that in quality and breeding will be the very best.

Their females are sired by some of the well-known sires of the breed, among them being Aaggie Cornucopia Pauline Count, Pledge Spofford Calamity Paul, Korndyke Hengerveld Butterboy, and King Segis. We predict that the Smith herd will be one of the noted herds in Montana in the coming years.

The junior member of the firm is now attending the State College of Agriculture, and is making an intensive study along the lines of breeding and developing dairy cattle.

WOULD BE MORE CAUTIOUS

Neighbor—Well, Patrick, I'm glad your master is dead. He was an old skinflint anyway.

Patrick (indignantly)—Faith, and I bet if he wor alive, you'd not be after saying you wor glad he war dead!

Mr. Dairyman

If you are in the market for a number of producing Holstein cows, purebreds or grades, or a car of real choice yearlings or two-year-olds.

Write me,

G. H. GOODFELLOW,
Eastview Farm,
Lancaster, Ontario, Canada.

Life experience in buying dairy cattle.

PUREBREDS PROVED PROFITABLE

For ten years Vernon E. Clough, of Tompkins, Michigan, tried to dairy with scrub cows, but was unable to make much progress. He sold off nearly all he had, and with the proceeds purchased three purebred Holsteins and with a few of the grades which he had kept continued his dairy. Seven years after his original three head had grown to twenty-five and the grades were all gone. In the same period he realized over $1,500 from the sale of purebred stock, and the cows paid for themselves and returned a profit on the cost of feed.

That the Clough herd is one of producers is shown by the County Cow Testing Association record from January 15 to February 15. This herd averaged 1,174 lb. milk, 43.4 lb. butter. Since the introduction of purebred cattle to the farm new buildings have been erected and improvements made, and it hardly looks like the same place.

Exhibits were made at the county fair, two first were won in 1920 and one in 1921, in competition with good herds from Lenawee county and the Pontiac state hospital herd. In addition, two seconds were taken each year as well as two thirds and four fourths in 1921. The present head of the Clough herd is a son of Model King Segis Glista, who heads the herd at Grand Rapids Stock Farms owned by C. J Spencer.

LIFE SAVER

She keeps us off the county
She keeps us on the farm,
She doesn't cost a bounty
She never does much harm.

She is the farm's life saver
The pocketbook's main stay,
When on her best behavior
She surely pays her way.

When all else sorely fails us
She's on the job, somehow
Oh. many a time she saves us
The good old dairy cow.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Continued from page 239)

Davidson herd and deducting these, the forty-seven Bray animals brought $11,830 an average of $251.50. Neither of the herd bulls were sold, Mr. Bray generously donating King Pontiac Pondyke, to the M. B. C. Orphanage Home at Center Valley, Pa. This splendid son of King of the Pontiacs was from Hengerveld Pondyke Pietertje, 32.58 lb., a twice 30-lb. daughter of King Hengerveld Pondyke, he by King of the Pontiacs. There did not seem to be anyone greatly interested in King Sylvia Model, and Mr. Bray withdrew him although he had the bull led into the ring and offered to put him up for auction if anyone insisted upon it. This bull, who was by Champion Echo Sylvia Pontiac from Belle Model Pietje 2d, a 28-lb. daughter of King Pontiac Artis Canada and Belle Model Pietje, 36.13 lb., three times over 33, lb. her dam, the twice 37-lb. cow Belle Model Johanna 2d, is as good a son of "Champ" as we ever had the privilege to look over, and his offspring showed that he has the makings of a great sire.

The Bray herd was a real good one from the standpoints of both individuality and production. Despite the fact that so many animals were sold the three days previous a few miles away, eight animals exceeded the $400 mark and no less than seventeen brought $300 or more. George Baxter was auctioneer and E. M. Hastings was pedigree man, the E. M. Hastings Company being the sale managers. Pennsylvania buyers took every animal, nine of the first ten sold going within the home county which shows the confidence of his neighbors in Mr. Bray and his herd.

The Bray herd was fully accredited, has been tested for four years without finding a reactor, and was sold fully guaranteed.

The top price was $550, which Stephen M. Trimble of Concordville, Pa., paid for Dutchland Konigen Ladoga, a daughter of King Segis Pontiac Konigen. She was a real good one. William Kolb Jr. of Phœnixville, paid $425 for King Pontiac Pondyke Segis, a nine-months-old son of the senior sire and Grace Segis De Kol Boon a 31.65-lb. daughter of King Segis. This great old cow, now twelve-years-old, had lost a quarter and went for $200. Mr. Bray said that years ago, at the Stevens dispersal sale, he purchased this cow for $2,025, and she had had six calves for him, all bulls, four full brothers and one half-brother to King Pontiac Pondyke Segis, and he had sold these five bulls for $4,000, so that the six brought him $4,425.

The animals bringing $200 or more with the names and addresses of the purchasers follow:

3	Bellwood Pontiac Segis Aaggie, 4 yrs., A. K. Rothenberger, Norristown, Pa.	$300
4	Bellwood Pontiac Annie Segis, 4 yrs., A. K. Rothenberger.	400
6	Bellwood Jewel Segis Fayne, 6 yrs., H. D. Alleback, Trappe, Pa.	375
7	Bellwood Pontiac Jewel, 4 yrs., H. D. Allebach.	400
9	Bellwood Sylvia Jewel, 1 yr., H. T. Allebach.	250

WILHELM DISPERSAL

At the dispersal sale of the C. H. Wilhelm herd, which was held March 23, 1922, at Meckville, Pa., 22 animals brought $3,745, an average of over $170. The top price was obtained for the herdsire, King Korndyke Ruth Sadie Vale, a son of King Korndyke Sadie Vale and of Ruth Pontiac Veeman Korndyke 34.16 lb. butter in seven days, a daughter of Sir Korndyke Pontiac Artis from Stella Veeman, she a 27.79 lb. daughter of Sir Veeman Kengerveld. At the Philadelphia National sale this bull was purchased by Messrs, Lebo, Wilhelm and Beckel, of Rehrersbury, Pa., for $1,600, and in this sale Mr. Beckel purchased him for $510. He had been used in three herds, and his daughters sold at public sale and brought $2,400, with one crop yet to hear from. The two-year-old, Pietje Echo Natoye, a daughter of Sir Riverdale May Echo Lyons, was struck off to Thomas Lengel, of Pine Grove, Pa., for $235. Otto Rehrer of Pine Grove, paid $233 for Hesseltje Pontiac Korndyke, a three-year-old daughter of Korndyke King Aaggie, and Marvin Bennetch, of Myerstown, gave $250 for the four-year-old Golden Segis Pietje Prilly, a daughter of Golden Segis Netherland Korndyke.

The sale was managed by R. Austin Backus, of Mexico, N. Y., who officiated as pedigree man.

WINGERT DISPERSION SALE

The herd of J. H. Wingert & Son was dispersed on the home farm of Caneadea, N. Y., on March 9. The auctioneer was Colonel Glenn R. Meade, of East Aurora, N. Y., and the box expert was R. Austin Backus, of the Backus Brothers Pedigree Company. The total realized was $6,155, an average of better than $150 for the 41 head of all ages. None of the animals were officially tested nor did they have any official records on the dam's side of the pedigree, they were just good everyday producers backed by good bloodlines.

The top price was $265, which C. A. Gere & Son of Cuba, N. Y. paid for Quality Belle Wayne De Kol Walker, a four-year-old sired by King Quality Wayne Walker who was by King Quality from a 21.4 lb. daughter of Admiral Walker Pietertje. The daughters of this sire brought the highest prices. The principal buyers were G. R. Cripps of Belfast, Gere & Son and Ward Wilday also of Belfast.

The animals bringing $150 or mor,e with the names and addresses of the purchasers and the prices paid are:

2	Quality Creamelle Queen, 3 yr., G. R. Cripps, Belfast, N. Y.	$175
3	Quality Wayne Lakeside Queen, 3 yr., G. R. Cripps	155
4	Frances Quality Queen, 5 yr., G. R. Cripps	150

51	Magla Oakview De Kol, 6 yr., Ward Wilday	155

TRI-COUNTY BREEDERS SALE

The sale of the Tri-County Breeders' Association was held in the Merril-Soule barns at Arcade, N. Y., March 10. Sixty-seven animals of all ages, including several young bull calves, brought $8,275, an average of $123.51. All the buyers were from New York State. Glenn R. Meade and Harry Scott were auctioneers with R. Austin Backus as pedigree man. The sale managers were an appointed committee, consisting of E. M. Peckham, Roy Yule and C. H. Newman. The large number of young animals brought down the sale average.

The top price was $380 for Era Baby Maxie, a daughter of King Maxie De Kol Segis from a 17.9 lb. two-year-old daughter of the Bonalevo herdsire, Colantha Johanna Lad 8th. This heifer, a yearling, was consigned by Francis A. Myers of Java., NY., and was purchased by Ernest Holms of Strykersville, East Side. Farm Velma Fayne, also a yearling, brought $335. She was by King Pontiac Fayne Butter Boy from a 24.6 lb. daughter of Changeling Butter Boy. Myers also consigned her, the buyer being M. L. Scripter of Arcade,

The animals bringing $150 or more, with the prices paid and the names and addresses of the purchasers follow:

	Consigned by Yule and Manion, Arcade, N. Y.	
5	Arcade Princess Perfection, 6 yrs., Roy O. Yule, Arcade	$150

HELPFUL ADVICE

Doctor (to patient): "It's nothing to worry about—just a little boil on the back of your neck. But you must keep your eye on it."—*The American Legion Weekly.*

"Waiter, can you bring me a nice chicken smothered in onions?"

"No, suh. We don' kill 'em dat way, suh. We wrings deir necks."

"What is this weighty volume on the hall seat?" asked the visitor. "That's pa's minute book," said little Thomas Twobble. "His minute book?" "Yessum. When ma tells him she'll be down in a minute pa reads two or three chapters in it."—*Birmingham Age-Herald.*

Wiseman—"A poor excuse is better than none." Witts—"Yes; even a poor excuse may have some rich relations."—*Answers.*

HE WAS ACCOMMODATING

At a barbecue a woman who had a great horror of the tobacco habit said to a farmer to whom she had just been introduced, "Do you chew tobacco, sir?"

"No, ma'am," he replied, "but I can get you a chaw if you want one."

EXPERT

A boy of 12 years, dining at his Uncle's, ate such a good dinner that his aunt observed:

"Johnny, you appear to eat well."

"Yes," replied the urchin, "I've been practicing eating all my life."

MARKET REPORTS

THE MANUFACTURED MILK MARKET

Despite the continued effort of the manufacturers to increase sales, condensed and evaporated milk markets still occupy a position which the trade generally do not yet consider satisfactory. Following the cuts in prices which were made by some manufacturers the past month or so, some increases in sales were realized which in itself served to restore a degree of confidence, but on the whole no material change of much consequence has occurred nor is looked for in the immediate future. Relief buying at New York has continued to be a factor of importance, although it is reported that with the calls for bids on 75,000 cases of evaporated late in February the supplying of this demand is nearing completion. Few of the trade anticipate much export demand unless prices continue to go lower, for European countries are said to be getting back to a pre-war basis of production and will be competing for this business. The recent price declines on manufactured goods were partly made possible by lower raw milk costs, but the consensus of opinion seems to be that unless butter prices show material reductions milk prices will not go much below their present level until the Spring drop comes later on. Just now butter markets are maintaining a steady tone under an apparent decrease in production and the consequent falling off in receipts at the markets, also because imports of foreign butter have for the time being ceased to be a factor of influence on account of firmer markets abroad. Some condenseries are still closed, others are making butter, and most of those which are condensing are said to be working on the lowest production possible in order to avoid accumulated stocks, in some cases it having been necessary to cancel contracts with producers or accept only part of the milk contracted for.

JANUARY SHIPMENTS 40 Per CENT LESS THAN IN 1921

January export figures show an increase of over a million pounds, in the exports of condensed milk, but the reduction of over 5,000,000 pounds of evaporated as compared with the previous month. The combined January exports of condensed and evaporated goods were nearly 12,000,000 pounds less than in January 1921, during which month shipments totaled 30,191,000 pounds. Of the 10,340,000 pounds of evaporated milk exported in January of this year over 4,750,000 pounds went to Germany, but it is probable that part of this amount was for Russian relief, shipped via Hamburg. Further heavy shipments of milk purchased for Russia relief during January were made during February on account of clearances not being obtainable in January. Much of this is said to have gone via Hamburg also, although some was to have gone direct.

NOT NOISY

First Darky—Say, brother, Ah got a car, boy, with a big horn on it, and when Ah pass through the town all Ah gotta do is blow that siren and everybody hops outta the way.

Second Darky—Ah gotta car, too.

First Darky—What kind a horn is yo' car got?

Second Darky—Mah car ain't got no horn. All the people in town is gotta look at is mah radiator, and it says "Dodge Brothers!"

BUILDING

W. C. Wharton of Rose Hill, Iowa, is steadily adding to his herd and recently purchased two cows and three heifers from John Mittmann of Muscatine one of the oldest breeders in the state. The Wharton herd now numbers thirty, nearly all heifers; one two-year-old is now giving sixty pounds at two milkings a day.

NEW ENGLAND DEMAND

There is a great demand for Holsteins in the New England States. L. E. McIntire of East Waterford, Maine, reports selling a nice bunch to Connecticut parties at satisfactory prices.

A GENTLE HINT

He (gently)—My dear, a man was shot at by a burglar and his wife was saved by a button which the bullet struck.

She—Well, what of it?

He (meekly)—Nothing only the button must have been on.

BOVINELY SPEAKING

Hotel Guest: "Has Mike Howe registered here?"

Clerk: "What do you think this is, a stable?"—*Oral Hygiene.*

THE EDITORIAL "WE"

"Ma," said a newspaperman's son, "I know why editors call themselves 'We'."

"Why, son?"

"So the man that doesn't like the article will think there are too many to tackle."

First Girl (in store)—"I say, Mabel, if we aren't going to buy anything, let's look at something more expensive."—*Boston Transcript.*

London is planning rubber streets. We don't have any, but there is a good deal of rubbering on the streets.—*Reading News-Times.*

Worth Looking Over

Don't you think a herd of 70 head, none over 5 years old, is worth looking over? One member of this herd is now making 28 lb. butter a week.

Plum Spring Farm Copia

heads this herd. His nearest dams, none below 31 lb., have seven day records averaging 32.35 lb. butter, 613.3 lb. milk

Dispersal Sale of Entire Purebred Herd

BROOKSIDE STOCK FARM, TROY, PENNA.

between Williamsport and Elmira, on Pennsylvania Railroad. Included in the sale will be

PRIDE KLAARE DE KOL KORNDYKE

Sixty-Five Head

May 11, 1922

The champion four-year-old milk cow of the State, 111 lb. milk in one day, 3,034 lb. in 30 days.
Also a year old son of this cow by a 33 lb. sire, as well as three or four good females by the same sire.
Several cows with 20 lb. to 28 lb. records, good enough to go in any man's herd.
No question but what these cows will sell around price of grade cows in other localities. Price of 3% milk here is only $1.25 per 100 lb. Within six to 10 miles on the same line railroad it is fifty to sixty cents more per hundred.

Forty Milkers, Many Bred to Freshen this Fall, Balance Young

Watch Next Issue **D. B. YORK, Owner**

THE SPRINGDALE HERD

Built up during the past sixteen years on a basis of profitable production and re-production

Present Herd Sire

WOODMONT ECHO SYLVIA CHAMPION

His sire, Sir Pietje Echo Sylvia, is by Champion Echo Sylvia Pontiac and is therefore a brother to Eco-Sylv Belle, 31.15 lb. as a junior two year old, the present World Champion in her class.

His dam, Butter Boy Empress, made 30.27 lb. butter in seven days, has milked 100 lb. in a day and was first prize aged cow, first in the A. R. O. class and Grand Champion at the 1921 New York State Fair. Judge Haeger says she is one of the three best cows shown last year.

Most of our young animals are by

KING TWEEDE SPRING FARM

His sire is Spring Farm King, full brother to the former World Champion and first 44 lb. cow; regarded as one of the best young sires of the breed.

His dam, Dressie Lady Pontiac, has a record of 30.04 lb. butter, 614.8 lb. milk made in seven days and is full sister to the 33.98 lb. cow Dressie Princess Pontiac. Their sire is Spring Farm King Pontiac. Daughters of KING TWEEDE SPRING FARM now in test are making a splendid showing under real dairy conditions.

Our older cows are daughters of

TOBE RAG APPLE KORNDYKE

Son of Christmas Tobe, 2d, 31.66 lb. butter in seven days and former World Champion ten year old. She is also the dam of Lady Tobe De Kol, 36.59 lb. butter in a week, 141.24 lb. butter in thirty days as a senior four year old, both being World Records when made. She in turn is dam of Geraldine Rag Apple Korndyke, 30.21 lb. butter in seven days, also as a four year old. Here is large production, generation after generation.

Animals from this herd will make good anywhere

The Holstein Breeder and Dairyman

VOL. I. HARRISBURG, PA., APRIL 22, 1922 No. 8.

HOLSTEINS FOR THE SOUTH

By James V. Hopkins

I SUPPOSE I am violating literary procedure in using the above heading, for I have already written one article with this title, but I ask you to overlook this fact for the above phrase has become so much a part of my daily thought that I cannot think of Holsteins but what I think of Holsteins for the South. If I can say it often enough to enough people, it may be turned around and read, "The South for Holsteins."

JAMES V. HOPKINS
Tennessee Holstein Lover.

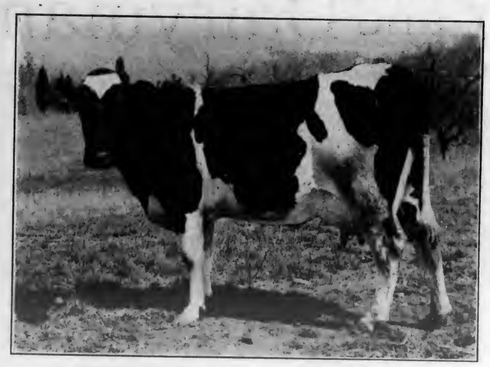
I became a Holstein enthusiast while attending the University of Tennessee from which institution I graduated. During my last two years in the University of Tennessee, I specialized in dairying and picked the Black and Whites as the best dairy breed on earth.

In the summer of 1916, I formed a partnership with my uncle, Mr. J. L. Clark, under the name Bellwood Dairy & Stock Farm Company. We went to Michigan and brought back the first purebred Holsteins ever brought into Blount County, Tennessee. Many people would have discouraged us on the selection of this breed, for Tennessee is primarily a Jersey state and is noted for her Jerseys, but we pinned our faith on a breed that we believed could win out anywhere on their merits and we have not been disappointed. Since we brought the first Holsteins into this County there have been six car loads shipped in and we have some of the best breeding in the country in our own county.

Our original shipment was a small one, consisting of eight heifers and one bull calf; we wanted to grow in knowledge of Holsteins with our herd. In the fall of 1919 we went back to Michigan and purchased seventeen head of purebred Holstein heifers, which makes our total purchases twenty-six head to date. We have sold over $9,000 worth of cattle and have thirty head in our herd at the present time. We decided early in the game that we would have to test our cows and demonstrate the production of our breed to the people of Tennessee. We conducted the first official test ever made in our County and we put the first two cows on yearly test in the State, with the exception of the University of Tennessee: And we now have several breeders doing official testing and have five state records in our county. The first two cows we put on year test finished and are State Champions over all breeds for their ages. The following are the test records we have made in our herd:

Ypsiland Katherine De Nijlander, senior four-year-old. Milk, 491 lb., butter 25.56 lb. in seven days.

Winona Pietertje Colantha, junior three-year-old. Milk, 17,760.6 lb., butter 723.15 lb. in 365 days.



Ypsiland Princess De Nijlander, senior three-year-old. Milk 19,667.7 lb., butter 850.75 lb. in 365 days. This is the highest record ever made by a Holstein cow on year test in Tennessee.

HEIFERS AT BELLWOOD DAIRY FARM
They will freshen this fall.

During the time the above cows made their records, there were never more than ten Holsteins on year test in the State and there were as high as 350 cows of other breeds. This shows that Holsteins will win out no matter how great the odds.

I would like to say, a breeder of purebred cattle never makes a mistake in testing his cattle, for I believe that you can learn more about cows by putting them on yearly test than in any other way. The man who has

WINONA PIETERTJE COLANTHA NO. 514816
17,760.7 lb. milk, 722.84 lb. butter in 365 days at 3 years, 23 days. Champion Tennessee junior three-year-old over all breeds. Fresh and now in year test, milking 80 lb. a day.

enough interest in his cows to put them on test naturally wants to see them do their best; seeing that they do their best calls for all the knowledge of cows that the breeder has at his command. So I say to the breeder just starting and who wants to get ahead as fast as he can, put your cows on yearly test and the things you don't know you will learn. The cow demands extra care for an extra production and you will have to do your best if you expect the cow to do her best. But it is the most interesting work I have ever done.

We are only small breeders, but we have a large field and we proved what Holsteins could do in Tennessee by making them State Champions in the face of overwhelming odds, and then we adopted as our motto, "Holsteins for the South."

After we selected the above slogan, we wrote a letter to the County Agents in every County in five southern States, and asked them for the names of men who might be interested in Holsteins. Nearly every one of them sent us a list of names, so we have quite a mailing list which we try to keep in touch with, always spreading the doctrine "Holsteins for the South," with the result that the fame of this wonderful breed is spreading through the entire Southland. But what we need is a closer coöperation with the large breeders. Holstein population has spread North, East and West. You Breeders in these sections have your State and County organizations to boost you, we are the ones who

YPSILAND PRINCESS DE NIJLANDER
19,667.7 lb. milk, 850.75 lb. butter in 365 days, as a senior three-year-old. Tennessee State Champion over all breeds. Owned by Bellwood Dairy & Stock Farm Co., Maryville, Tennessee.

need the extension work. Help Holsteins across the Mason and Dixon Line. Bring the next National Convention to the South, for we say to you that the "South is the Land of Opportunity."

Conference of Judges

THE judging conference called at the time of the Brentwood Sale may have more influence on the future of the Holstein breed than the sales themselves. In fact, there is almost no limit to its possible influence on the breed. There has been considerable dissatisfaction or criticism of judging, or rather, the way different judges interpret the scale of points, and it was to clarify this situation that Secretary F. L. Houghton suggested a conference.

Colonel Fred Pabst presided and opened the meeting by explaining why it was called. A. C. Oosterhuis, of Oconomowoc, Wis., spoke on his observations as a teacher and as a lecturer in Carnation dairy extension work. Mr. C. L. Blackman, of Springfield, Mass., and Mr. Pabst said a few words, and it was suggested that the present score card be revised. Secretary Houghton said that the score card was made by Mr. Hoxie and others who knew the breed in Holland and were instrumental in establishing the breed in this country, that it had been slightly revised once and he was decidedly against any change. He was backed up by W. B. Barney, Des Moines, Iowa, who also spoke from many years' experience. While no vote was taken, it was apparent that many of those present, particularly the younger faction, believed that some change should be made in the score card. B. F Jones, South Montrose, Pa., vigorously criticised the card in use at the present time. Mr. Pabst said the meeting was not called to go into details at this time, and asked Mr. Jones to reserve his criticisms and suggestions for a later meeting. R. E. Hæger, of Algonquin, Ill., was called upon and said that judging was largely comparison, and that it was very difficult to use a score card at large fairs and shows. W. H. Standish, well-known Ohio judge, and Professor Fitch, of Kansas, also spoke.

The speech of the evening was made by Axel Hansen, Savage, Minn., who said the score card should be revised. He pointed out that under the present system of discredits it was impossible to score an animal less than 72, while there were many animals that should not score anywhere near so high. He said the opinion of exhibitors at the great shows was that the present "get of sire" class should be changed. Mr. Hansen had sent questionnaires to many well-known cattlemen in the West. We believe the owner dwelling farthest East was R. E. Hæger, of Algonquin, Ill., so that the answers to the Hansen questionnaires are only representative of the states of the center West, with possibly one or two on the Pacific coast. Among the questions brought up by Mr. Hansen was that of temporary lameness, in which he quoted decisions of noted judges; whether an exhibitor could demand a milk-out or not if the judge did not order one; whether the present A. R. O. class should be changed. It was the general opinion that some system should be worked out so that awards in the A. R. O. classes should be known either at the ringside or before the show was over, and Mr. Hansen suggested that a certificate should be obtained before the show from Secretary Gardner, showing the number of points that the record of the cow entitles her to. Senator James Reynolds moved a sub-committee should be appointed to meet several days before the Kansas meeting. Ward Stevens suggested that the sub-committee should meet right away, and said that they would find as good or even better cows at the Brentwood sale than they might find in Kansas City. The committee consists of W. S. Moscrip, Lake Elmo, Minn.; R. E. Hæger, Algonquin, Ill.; W. H. Standish, Lyons, Ohio; A. C. Oosterhuis, Oconomowoc, Wis.; Axel Hansen, Savage, Minn.; T. E. Elder, Mt. Hermon, Mass.; Ward W. Stevens, Liverpool, N. Y., and Professor H. H. Kildee.

Canadian Testing

DURING February the records of sixty-three cows and heifers were accepted for entry in the Record of Merit. The leader is Grace Fayne Aaggie, owned by the Experimental Farms, Ottawa, Ontario. In seven days she made 668 lb. milk, 34.12 lb. butter. It will be remembered that this great cow was the winner of the championship at the Ottawa Winter Fair Dairy Test of 1921, and has recently completed a ten months' record of 787.5 lb. butter. Next to her in the mature class is Miss Lou, 605.3 lb. milk, 30.68 lb. butter.

An old friend, Glen Alex Queen De Kol 3rd, appears in the senior four-year-old class. It will be remembered that this heifer was the Canadian record senior two-year-old until beaten by Echo Sylvia Laura, whose performance is not yet officially reported. This time she makes 666.4 lb. milk, 31.60 lb. butter in seven days, and 2,655.9 lb. milk, 129.35 lb. butter in thirty days. She is from the Hardy herd. Second in the class is Queen Calamity Ormsby, 493.4 lb. milk, 31.44 lb. butter. She is owned by E. L. Sweet, of Belmont, Ontario.

Richfield Korndyke Goldie is highest senior three-year-old, with 26.03 lb., followed by Bell Veeman Pauline with 25.46 lb. Among the junior three-year-olds Maggie Calamity Hartog is best with 25.60 lb., Rose Clyde Burke has 24.05 lb., and Sylvia Artis Johanna 22.42 lb.

In the senior two-year-old class Rose Helena Spofford stands first with 24.56 lb. butter from 645.7 lb. milk; Maple Range Faith comes second with 24.03 lb., and Ruby Walker Sylvia Model third with 23.76 lb. Pioneer Snow Toitilla is highest junior two-year-old with 24.76 lb., followed by Beaverland Pietje Pauline with 21.43 lb. and Pioneer Calamity Toitilla with 20.04 lb.

In the year division a number of great records are shown. Eight mature cows making over 20,000 lb., eight over 800 lb. butter, and three over a thousand pound. The thousand pound animals are: Annie Abberkerk Wayne 2nd, 23,016 lb. milk, 1,075 lb. butter; Sunnybrook Inka Mercedes, 23,257 lb. milk, 1,041.25 lb. butter; and Johanna Pietertje, of Avondale, 24,076 lb. milk, 1,027.50 lb. butter; she is owned by W. C. Houck, of Chippawa, Ont.

The four-year-old leader is Ruth Danforth, with 15,577 lb. milk, 677.50 lb. butter. But it is in the three-year-old class that the sensation of the report is uncovered. This is Lady Roberts Colantha, owned by J. B. Hanmer, of Norwich, Ontario. At the time she began her year record she was three years and 353 days old, for it must be remembered that the Canadian way of computing ages in the long time records figures the exact number of days instead of the months and days as does the American advanced registry. This great heifer is reported with 26,433 lb. milk, 1,468.75 lb. butter, which not only gives her the Canadian and World's Championships in her class, but makes her stand second to Bella Pontiac and gives her fourth position in the world, she standing next to Finderne Pride Johanna Rue with 1,470.58 lb. butter.

In the two-year-old class, Colony Ena De Kol McKinley makes the great record of 1,032.50 lb. butter from 21,731 lb. milk, standing second in Canada only to her half-sister, Colony Faforit McKinley. Segis Hengerveld Wayne is second with 828.75 lb. butter from 18,149 lb. milk.

In the 305-day division Grace Fayne Aaggie heads the mature class with 787.50 lb. milk, and Alderley Evergreen Pietertje has 582.50 lb. butter from 10,377 lb. milk.

Queen Norine is best three-year-old with 717.5 lb. butter from 17,264 lb. milk, a new Canadian record for her class. Alderley Schuiling Segis is second with 441.25 lb. butter from 9,368 lb. milk.

Hickory's Alcartra Segis Pontiac establishes a new Canadian record in the two-year-old class of this division with 613.75 lb. butter from 1,287 lb. milk. Cobequid Mercena Maid is next with 512.50 lb. butter from 10,792 lb. milk.

An editor was dying, but when the doctor bent over, placed his ear on his breast, and said, "Poor man! Circulation almost gone!" the dying editor shouted: "You're a liar! We have the largest circulation in the county!"

Bettering the Milk Market

THE Baltimore Dairy Council was organized in January, 1921, its object, to teach the public that milk is the best of all foods, and to promote health by encouraging a greater consumption of good milk and other dairy products. It was the outgrowth of a committee which fostered the work of Dr. E. V. McCollum's nutrition work in a few of the public schools. Representatives of the City Board of Health, State Board of Health, Johns Hopkins School of Hygiene and Public Health, University of Maryland, Maryland Tuberculosis Association, Baltimore Alliance, State Federation of Women's Clubs, Federation of Jewish Charities, Women's Civic League and the City School Administration, belong to the council. At the beginning of 1921 a health program was mapped out and presented to the Baltimore Milk Exchange and the Maryland State Dairyman's Association. Both organizations agreed to support the work and to underwrite it to the extent of $20,000.

During the spring period, March 15th till the end of the school year, 148 of the 150 public schools had milk deliveries. A total of 1,537,424 half-pints were delivered to the schools and, of this amount 1,362,688 were paid for and 174,736 or 11.3% were donated by the milk distributors.

In the fall period about 115 schools resumed the milk service and at the end of the year there were between fifteen and twenty thousand children taking advantage of this service in the schools. About 12½% of the milk delivered is given free to the undernourished children, who are unable to pay for it.

The Dairy Council secured the services of an expert nutrition worker and dietitian and she, coöperating with specialists from the United States Department of Agriculture and the University of Maryland, gave short talks to the teachers in nearly all the city schools who passed these on to the children. This was supplemented by circulars, pamphlets and badges. These talks were in demand and created interest in the schools and in various organizations and clubs.

A Poster and Essay contest was started on the subject, "Why More Milk Means Better Health." It is estimated that more than 60,000 children wrote essays and many clever posters were designed by the scholars.

A poster entitled, "Milk for Men" was exhibited on milk wagons and in restaurants, grocery stores and factories. The play, "The Milk Fairies" was given by the children of two different schools and another school presented a sketch "Milk Bottle Fairies" in connection with an evening health entertainment.

Exhibits and demonstrations have been held in the city in coöperation with various community organizations. The council has several attractive mechanical exhibits, as well as the school posters, a wax food exhibit and photographs of Dr. McCollum's rats. Exhibits have been held in coöperation with 53 different organizations.

The book "The American Home Diet" by Dr. E. V. McCollum and Miss Nina Simmons, was donated to all the public, private and school libraries of Baltimore. Reports from schools and libraries indicate the books are in constant demand. The libraries have placed winning posters of the poster contest in various branch libraries and have used milk fairy stories in connection with the children's story hours.

The Movie picture reel, "Milk, Natures Perfect Food" prepared by the University of Wisconsin has been used in schools, churches, factories and before Mothers' Clubs, the council owning a portable motion picture projector which can be attached to any electric light socket. Other films have been used in the schools during the year. Twenty-seven organizations have taken advantage of this activity.

The milk distributors and the Maryland State Dairymens' Association have subscribed to a budget of $10,000 for the year 1922. The Auditors report for 1921 shows receipts of $22,454.54 and disbursements of $22,115.34, nearly $300 of which is for pictures or equipment, leaving a cash balance of $339.20 on hand.

World's Record Junior Two Year Old

I AM advised through preliminary reports and by wire that the Holstein-Friesian heifer, Pietertje Ormsby Mercedes Frisby, No. 624241, has broken the record for fat production in the junior two-year class of the seven day division, by producing in seven consecutive days 452.1 lb. milk containing 26.327 lb. fat. She freshened at the age of two years, five months, eight days. Her sire is Pietertje Ormsby Mercedes Della No 217269; her dam is Colantha Changeling Frisby No 359331. She was bred and is now owned by Mr. Lawrence F. Murphy, Hartford, Wisconsin In the junior two-year class of the seven day division she displaces the heifer Eco-Sylv Belle No. 533992, whose record for seven days is 24.908 lbs. fat from 439.7 lb. milk. The productions for Pietertje Ormsby Mercedes Frisby by days is as follows: 62.2 lbs. milk, 3,380 lb. fat; 66.7 lb. milk, 4,196 lb. fat; 62.2 lb. milk, 4.039 lb. fat; 62.3 lb. milk, 3,794 lb. fat; 66.3 lb. milk, 3.701 lb. fat; 66.4 lb. milk, 3.567 lb. fat; 66 lb. milk, 3.650 lb. fat. The test was thoroughly verified and its conduct personally inspected by Mr. Roy T. Harris, Superintendent of Official Testing ir Wisconsin, who has had twenty years of experience, and by Mr. R. J. Schæfer, an experienced breeder and Director of the Holstein-Friesian Association of America. The conduct of the test has the approval of both gentlemen. Computed on the 80 per cent basis, the equivalent butter claimed for Pietertje Ormsby Mercedes Frisby amounts to 32.908 lb.

MALCOLM H. GARDNER, *Supt. A. R.*

Said a colored man to a white man, "Fo' no reason at all a big Irishman walloped me last night."

"That's impossible. What were you doing?"

"Ah was singing."

"What were you singing?"

"Ah wuz singing. 'Ireland must be heaven, for my mother came from there.'"

Holstein and the California Cow Competition

THE California Cow Competition was started by the California Animal Husbandry Division in September 1920 under the direction of Professors F. W. Woll and Arthur Folger. It has been watched with keen interest by dairy farmers and breeders of cattle in California and other states and by many interested in the advancement of the dairy industry. Over 1,300 cows were enrolled by 71 different dairy farmers. Prizes were given by a number of business firms and by dairy and farm papers, the *California Cultivator* giving 17 monthly prizes of $25 or a silver trophy of equal value. In addition there were 29 cash prizes ranging in value from ten to three hundred dollars, 15 silver trophies, three registered dairy bull calves and some merchandise. The total value of the cash prizes was $2,575 and the aggregate value of all prizes offered in the competition was close to $5,000.

The awards of these prizes have been made by a Committee of dairy breed representatives acting with Professors True and Woll of the California Experiment station.

The first prize of three hundred dollars awarded to any ten-cow-dairy for ten consecutive months butter fat production, was won by the grade Holstein herd of Earl Graham of Compton with an average credit of 642.01 lb. butter fat.

In the class for ten registered Holsteins, Fred Hartsook of Lankershim won the first prize of two hundred dollars with an average credit of 634.89 lb. fat, the Burr Farm of Los Angeles, winning second prize of $150 with a credit of 599.88 lb. fat.

Bessie Snow Ball DeKol a member of the Hartsook herd was the biggest individual producer for ten months, winning her owner a prize of one hundred dollars for a production of 839.83 lb. fat. Miss Aaggie Ormsby Segis of the same herd was second with 799.63 lb. fat, Alta Papoose of the Palo Alto Stock Farms third with 778.67 lb. and Anoakia Walker Pontiac of the Santa Anita Rancho, fourth with 769.97 lb.

In the class for grades, Princess, a grade Holstein owned by the L. A. Co. farm of Hondo won with 799.27 lb. fat. Graham cows took third and fourth prizes the second going to a Jersey grade.

Princess Maida Veeman owned by Earl Graham made the most milk 26,119 lb. in ten months, winning a silver trophy donated by the A. W. Scott Co. The same cow won the silver trophy cup given by the Holstein-Friesian Associations of America with 798.15 lb. of butter fat. Ten grade Holsteins in the Graham herd won the other cup donated by the Association with an average production of 561.82 lb. fat. The Graham herd in October and December 1920 and in February and October 1921 won the *California Cultivator* monthly prize of $25 value for the highest average production of butter fat for five grade cows kept in a herd headed by a purebred sire. The L. A. Co., herd won the prize in November 1920 and January 1921. The competition has created much interest in the state and has been of much benefit to the California Dairy Industry.

Advanced Registry Testing Too Expensive

THE California Jersey Breeders' Association, at its meeting at Davis last month, had a lively discussion on the subject of fees and expenses charged in the supervision of advanced registry tests. The consensus of opinion was that the cost of this supervision and the fees in connection with the testing are unreasonable.

It is a subject that is of equal interest to those interested in purebreds of the other dairy breeds as well as the Jerseys, particularly in this western country of great distances. In the East, where breeders are more concentrated in a geographical way and located nearer to the agricultural experiment stations, which furnish the test supervisors, the cost of supervision may not be felt but out here in California, for instance, it costs a breeder in San Diego or Humboldt County a tidy sum to pay the transportation expenses and per diem of a supervisor all the way from the University Farm at Davis and back. Only a rich breeder or a big breeder can afford the expense, even admitting the advantages that accrue from advanced registry testing.

The demand of the present time upon breeders is for animals backed by advanced registry records. Testing is becoming a big factor in the breeding business and it would be still bigger but for the heavy expense, which prevents many small breeders from testing. The time has come when some change in the system should be made to the end that advanced registry testing may become available to a larger number of breeders, including small breeders and those remote from the headquarters of the supervisors. In at least some of the registry organizations the fees are also excessive and out of keeping for service on the part of the organizations, which is merely a matter of checking up reports. —*The Pacific Dairy Review.*

South Carolina Champions

BY I. R. JONES, STATE SUPERVISOR A. R. DAIRY WORK.

SOUTH Carolina has several new state class leaders which are sufficiently high to be worthy of notice by Holstein breeders. In the junior three-year-old class of the 7-day division K. K. S. V. Rosamund Veeman 510,846, owned by V. M. Montgomery, of Spartanburg, has completed a record of 565.52 lb. milk and 26.293 lb. butter (21.034 lb. fat). This cow was born June 9, 1918, and is a daughter of the great bull King Korndyke Sadie Vale, out of a 30-lb. daughter of Sir Veeman Hengerveld. She is being kept on yearly semi-official test and at present is doing remarkably well. She displaces Valetta Posch 456,339, owned by Mr. H. D. Jordan, Ridge Spring, as state class leader.

Tranquillity Soldene Jennie 404,759, also owned by Mr. Montgomery, took over the state leadership in the senior four-year-old class of the 7-day division with 563.1 lb. milk and 26.745 lb. butter (21.396 lb. fat) made at the age of 4 years, 7 months, 4 days. The former leader in this class was Sunnycroft Butter Girl Corona, 323,616, owned by H. D. Jordan.

Another of Mr. Montgomery's cows, Bertha Korndyke Ponto 266,308, assumed leadership in the mature class of the 30-day division with 2,845.4 lb. milk and 116.180 lb. butter (92.944 lb. fat). This production makes her 30-day champion in both milk and butter. This cow is a twin born April 19, 1914, being sired by Clarissa Pietertje Ponto 73,616 out of Gertrude Korndyke 157,397. She displaces as class leader the cow Pauline Aaggie Clothilde 120,129, owned by H. D. Jordan.

In the ten months division we find two recent changes in leadership. Beets Calamity Segis, 396,775, owned by P. A. Baxley of Blackville, S. C., is the new class leader in the senior three-year-old class with 11,163 lb. milk and 470.966 lb. butter (376.773 lb. fat). This cow was sired by King Segis Pontiac Calamity 143,686, while her dam is Paul Beets De Kol 2nds Lady 2nd 133,569.

In the mature class of the 305-day division Dorothy Beets Korndyke 353,296, owned by H. D. Jordan of Ridge Spring, has taken over the leadership in both milk and butter fat with a production of 16,739.6 lb. milk and 740.910 lb. butter (592.728 lb. fat.). This record makes her state champion in the 305-day division in both milk and butter. Dorothy Beets Korndyke was born June 9, 1915, her sire being Beets Pontiac Korndyke 138,675, and her dam Ormsby Korndyke Dorothy 195,027, is an 840-lb. daughter of Ormsby Korndyke Lad. The old record for this class held by Icy Walker Colantha 254,684, was 16,081.7 lb. milk and 643.012 lb. butter (514.410 lb. fat).

In the junior two-year-old class of the yearly division, South Carolina has a new leader in Beaver Dam Laura Alcartra 478,863, owned by Mr. Jordan. This heifer produced 15,012.1 lb. milk and 673,938 lb. butter (539.150 lb. fat) during the year. She was born March 25, 1917, her sire being King of the Alcartras 164,800, and her dam Beaver Dam Laura 326,759, a daughter of Ormsby Korndyke Lad. The former junior two-year-old leader was Model Fayne Pontiac Beets 2nd 487,248, with 14,651.8 lb. milk and 620.912 lb. butter (496.73 lb. fat).

The rapid change and rise in the level of leadership in the various classes points to the fact that South Carolina has some notable Holstein cows.

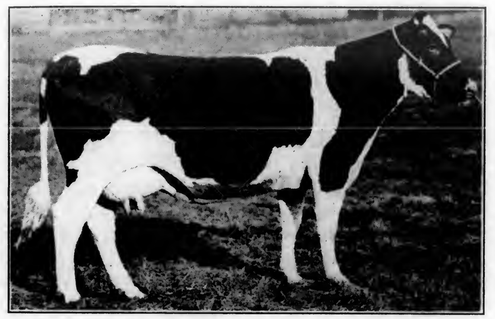
Dutchland Pietertje Vale

I AM pleased to be able to announce that the Holstein-Friesian cow Dutchland Pietertje Vale 333,115 has just closed a long-time test, and is credited with 27,939.2 lb. milk containing 1,010.42 lb. fat in 365 days, thus showing an average of 3.62 per cent fat in milk. She freshened at the age of 5 years, one month and seven days. Her sire is Dutchland Sir Pietertje Hengerveld 48,696; her dam is Dutchland Colantha Vale 132,794. She was bred and is owned by F. F. Field Holstein Trustees, Brockton, Mass. Her best seven days official production is 749.2 lb. milk containing 28.132 lb. fat; while she is credited with 3,034.6 lb. milk containing 111.063 lb. fat in thirty days. At the age of two years, four months and eighteen days she is credited with 20.292 lb. fat in seven days and 80.699 lb. fat in thirty days; while during this lactation she is credited semi-officially with 21,309.2 lb. milk containing 773.68 lb. fat in 365 days, and officially beginning 253 days from freshening with 14.917 lb. fat in seven days. At the age of four years, eighteen days, her seven-day official test shows 22.124 lb. fat; her 30-day test, 86.064 lb. fat and 305 days test 20,122.1 lb. milk containing 692.9 lbs. fat, carrying her calf 198 days. During the test just finished, in addition to a 40-day strictly official period, she had 14 other test periods, of which three were retests. Fourteen different supervisors were employed in the conduct of the test. Her 365-day fat production of 1,010.42 lbs. equivalent to 1,263.02 lbs. butter on the 80 per cent basis, gives her 40th place among cows producing above 1,000 lbs. fat, she being the 47th cow to gain the high honor of producing more than 1,000 lb. in 365 days.

MALCOLM H. GARDNER, *Supt. A. R.*

Heads New Division

MR. L. H. GODDARD, a farmer of Fayette County, Ohio, has been asked by Secretary Wallace to head the new Division of Projects and Programs of the office of Extension work of the States Relation Service, United States Department of Agriculture. He took up his new duties February 20th, and will have charge of work intended to aid in formulating and carrying out those features of the extension program having a national or broad regional significance, and with administrative matters pertaining to the project, plans of work, budgets, and expenditures under the Federal laws relating to extension work.



Mr. Goddard is a native of Ohio and a graduate of the State University. For practically ten years, 1903 to 1913, he was in charge of the Department of Coöperation of the Ohio Experiment Station and in this work carried to the farmers of the state and aided them in applying the results of the research work of the experiment station. He was thus one of the pioneers in extension work. In connection with the above work he made a number of farm management surveys to ascertain the actual conditions of farming and farmers, and in this work coöperated closely with the Federal Department.—*Maryland Extension Service News.*

New Ohio Secretary

Mr. E. M. Clark, of Clark & Rhoades, Belvidere, Ill., has been selected as Ohio Field Secretary to fill the position recently vacated by Howard C. Barker. Mr. Clarke who is farm raised, is a graduate of the University of Illinois and was for four years head of the Dairy Extension Department of the University of Illinois and has been an official of the Illinois Agricultural Association since its organization. Mr. Clarke commenced his duties April 1st and will have his office in Cleveland. Mr. Barker, who is now president of the Ohio Holstein-Friesian Association, has purchased an interest in the Ona Company, which operates at Chardon, Ohio, and owns the great herd formerly the property of the late Peter Small.

Colantha Quality Belle

HOW do you like the new world champion junior two-year-old of the 305-day division? As already stated in a previous issue of the BREEDER AND DAIRYMAN, she is Colantha Quality Belle, No. 501935, owned by the Bonalevo Farms, Batavia, N. Y., of which R. E. Chapin and Son are the proprietors. During the ten months she was on test she produced 16,257.9 lb. milk with an average test of 3.92 per cent fat, making 810.84 lb. butter. She freshened at two years and twenty-eight days old. Seven days from calving she produced in seven days, 20.5 lb. butter, 325.5 lb. milk. But that was not the limit of her powers for, 47 days after, she raised these marks to 21.36 lb. butter, 454.4 lb. milk. She made another seven-day record 294 days from freshening of 16.42 lb. butter, 253 lb. milk.

COLANTHA QUALITY BELLE, NO. 501,935

810.84 lb. butter in 305 days. World Champion in junior two-year-old class. Bred, owned and developed at Bonalevo Farms, R. E. Chapin & Son, owners, Batavia, N. Y.

Colantha Quality Belle was under official supervision 72 days of the time she was making her record, and twenty supervisors checked her work while she was retested no less than nine times. She carried calf 224 days of the time she was on test.

She was born April 8, 1919, so will not be three years old until this issue of the paper is published. She is a daughter of the great Bonalevo herdsire, Colantha Johanna Lad 8th, the only sire with two 800-lb. daughters. Her dam is Bonalevo Walker Quality Belle, a daughter of Czar Walker and Bonalevo Quality Walker Belle, she by King Quality from Flora Belle Walker, so the new champion is a product of the Bonalevo herd for several generations back.

One doctor was bragging about his eyesight and the other about his hearing.

Said the first: "You see that fly walking on the barn way over there?"

The other replied: "No, but I can hear the shingles rattle as he walks along."

Indignant Lady—Sir, when I was your age, a young man would not let a woman stand up in the subway.

Young Man—When you were my age, madam, people still went about in stage coaches.—*Le Journal Amusant (Paris).*

Butchart Resigns

THE new herdsman at Hazelwood Farm, Spokane, Washington, is Stanley V. Butchart, who handed in his resignation as secretary just before the recent meeting of the Washington State Holstein-Friesian Association. Mr. Butchart has the reputation of being a hustler and a good cattleman and the BREEDER AND DAIRYMAN hopes for his success in his new position.

There certainly seems to be something wrong with the State field secretary position. The secretaries for Ohio, Iowa, Washington and Minnesota resigned. The Illinois secretary, Mr. Thompson, while still secretary of the State Association, requested that someone else be appointed field secretary. The Missouri secretary obtained the Illinois position and the Missouri Association voted to dispense with the fieldman for the current year.

If the rank and file of the breeders in the different organized states are back of the paid secretary plan as at present conducted, would there be as many changes?

The Kansas City Sale

To the Holstein Breeders of Pennsylvania:

Pennsylvania has been allowed a quota for the national sale more in proportion to the importance of our state in the Holstein industry, provided we furnish good enough animals. The sale is at Kansas City, Missouri, June 8th and 9th. Pennsylvania should be represented with high-class individuals, with good records, meeting the requirements as advertised in the breed papers of recent dates.

We won second herd prize last year, and we have the goods to win first this year if we will consign the proper animals. We want to give everybody a chance to enter, and are taking this method of reaching you. Arrangements will be made to ship the Pennsylvania consignment together to reduce expense.

Write at once for entry blanks.

W. HUGH JONES, *Secretary.*
South Montrose, Pa.

New South Carolina Champion

SUNNYCROFT Butter Girl Corona, owned by H. D. Jordan, Ridgewood Farm, Ridge Spring, South Carolina, has broken both the yearly milk and butter fat records of all classes in South Carolina. This cow produced 21,305.7 lb. milk, 971.054 lb. butter during the year. She was milked 365 days beginning January 9, 1921, at the age of 5 years, 10 months, and 24 days. Her sire is Spring Farm Butter Boy, who has 19 A. R. daughters, and her dam is Corona Zozo Netherland. The former record in the Mature Class of the yearly division was held by Princess Collie Paul 2d, also owned by Mr. Jordan. She made 21,023.7 lb. milk and 888.35 lb. butter during the year; thus the record of Sunnycroft Butter Girl Corona beats the old record by 82.7 lb. butter.

I. R. JONES, *Supervisor, Dairy Department.*
Clemson College, S. C.

Bob Stevenson Cow Handler

HOLSTEIN breeders have already been informed that the Jersey cow Fauvic's Star has made 20,016 lb. milk in a year which is the highest Jersey milk record and is the first 20,000 lb. milk record credited to any animal of the Jersey breed. This cow is owned by A. V. Barnes of New Canaan, Conn., and she was handled and cared for by Robert L. Stevenson, son of the well-known Holstein breeder, George E. Stevenson of Scranton, Pa. Both Robert and his brother John work for Mr. Barnes. Robert Stevenson was in charge of Keystone Beauty Plum Johanna during part of the time she was making her tremendous official record of 25,787.5 lb. milk and 1,-294.44 lb. butter in a year which is the highest record ever made in strictly official test by a senior four-year-old. Robert Stevenson left the Origin farm when he was only 17 years old and like all of his brothers, served with the colors during the war. Fauvic's Star lacked only 35 lb. of making a breed record for butter fat. Her sire, Fauvic's Prince was first prize aged bull at the 1920 National Dairy show.

Highland Burke Joh

HIGHLAND Burke Joh, an account of whose 40-lb. record formed the leading article in our issue of March 8th, made a nice thirty-day record. Her figures for seven days are 40,325 lb. butter and 577.6 lb. milk, and for thirty days 145.885 lb. butter and 2,570 lb. milk. She produced 97.5 lb. milk her best day and the last seven days of her thirty day test she produced 30.6 lb. butter and 639.7 lb. milk, or an average of 91 lb. a day.

As stated in the article, her sire is King Joh and her dam Walker Woodland Burke. Hawley and Murphy, her owners, were also her breeders, as they were of her full sister, Highland Walker Joh, who at three years, six months, and eleven days, made records of 556.5 lb. milk and 29.873 lbs. butter in a week; in thirty days she produced 2,487.8 lb. milk and 118.541 lb. butter, making 91.2 lb. milk her best day.

These are a great pair of heifers. Highland Burke Joh weighed 1,900 lb. before freshening and Highland Walker Joh 1,700 lb. The records were made under conditions that can be duplicated on hundreds of farms, and show what clean healthy cattle can do with proper care. The Hawley and Murphy establishment is called the Wanhasda Holstein Farms, and the herd has been accredited for the past two years.

Molly Veeman Segis Pontiac

I AM pleased to be able to announce that the Holstein-Friesian cow, Molly Veeman Segis Pontiac 283159, has just closed a long-time test, and is credited with 28,488.2 lb. milk containing 1,019.19 lb. fat in 365 days, thus showing an average of 3.58 per cent. fat in the milk. She freshened at the age of six years, five months, three days. Her sire is King Segis Pontiac Count 93909; her dam is Molly Veeman Artis 2d 182421. She was bred and is owned by J. M. Hackney, St. Paul, Minn. Her best seven days' official production is 718.1 lb. milk containing 28.891 lb. fat. At the age of two years, four months, four days she is credited with 502 lb. milk containing 22.886 lb. fat, and in thirty days with 1,949 lb. milk containing 85.978 lb. fat. Next, freshening at five years, three months, thirteen days, she is credited with 608.6 lb. milk containing 25.984 lb. fat in seven days, and 2,789.4 lb. milk containing 95.412 lb. fat in thirty days. Being continued on long-time test she is credited in this lactation with 22,979.9 lb. milk containing 717.44 lb fat. During the test just finished in addition to a 12-day strictly official period she had 13 other test periods, of which two were retests. Fourteen different supervisors were employed in the conduct of the test. Her 365 day fat production of 1,019.19 lbs. equivalent to 1,273.98 lb. butter on the 80 per cent. basis, gives her 34th place among cows producing above 1,000 lb. fat, she being the 48th cow to gain the high honor of producing more than 1,000 lb. in 365 days.

MALCOLM H. GARDNER, *Supt, A. R.*

Rag Apple Aaggie Colantha Again

THE forty-ninth cow to gain the high honor of producing more than 1,000 lb. butter fat in 365 days, is Rag Apple Aaggie Colantha, who has just closed a long time test with a credit of 25,303.8 lb. milk, 1,010.43 lb. fat, an average of 3.99% fat in the milk. Her sire is Dutchland Sir Pontiac Rag Apple; her dam is Dutchland Colantha Aaggie Cornucopia. She was bred and is now owned by D. W. Field Farm Company, Montello, Mass. At the age of 2 years, 7 months, 14 days, she is credited with 419 lb. milk, containing 17.892 lb. fat, and in thirty days she is credited with 419 lb. milk containing 70.864 lb. fat. Next, at the age of 3 years, 11 months, 3 days, she is credited with 553.2 lb. milk, 27.766 lb. fat, and in thirty days with 2,403.3 lb. milk, 110.764 lb. fat. Then freshening at the age of 4 years, 10 months, 5 days, she produced 713.4 lb. milk, 33.013 lb. fat and 2,851.3 lb. milk, 130.933 lb. fat in thirty days. For the lactation period just closed, her best seven days' official production is 592.6 lb. milk, 26.116 lb. fat, while in thirty days, she is credited with 2,641 lb. milk, 107.671 lb. fat. During this test in addition to a 57-day strictly official period, she had 11 other test periods, of which one was a retest. Eight different supervisors were employed in the conduct of the test.

Through Car Service to Kansas City Convention

Mr. J. D. Lister, Traveling Passenger Agent for the Missouri Pacific Railroad Company sends the following letter which we are printing for the benefit of the members of The Holstein-Friesian Association of America and delegates living in the eastern states that plan to attend the annual convention:

"I am pleased to submit to you the following suggested itinerary for the members of the Holstein-Friesian Association of America, living in New Jersey, Pennsylvania, New England, New York State and territory intermediate to St. Louis for the above meeting:

NEW JERSEY AND PENNSYLVANIA.

Lv. No. Phila., Pa., Via Penna. Lines, 6:41 p.m., Sat., June 3d.
Lv. Harrisburg, Pa., Via Penna. Lines, 9:00 p.m., Sat., June 3d.
Lv. Pittsburgh, Pa., Via Penna. Lines, 2:50 a.m., Sun., June 4th.
Ar. St. Louis, Mo., Via Penna. Lines, 5:00 p.m., Sun., June 4th.
Lv. St. Louis, Mo., Via Missouri Pacific, 10:10 p.m., Sun., June 4th.
Ar. Kansas City, Mo., Via Missouri Pacific, 7:20 a.m., Mon., June 5th.

NEW ENGLAND, NEW YORK STATE AND INTERMEDIATE TERRITORY.

Lv. Boston, Mass., Via Boston & Albany R. R., 2:00 p.m., Sat., June 3d.
Lv. Worcester, Mass., Via Boston & Albany R. R., 3:15 p.m., Sat. June 3d.
Lv. Brattleboro, Vt., Via B. & M. (via Springfield), 2:00 p.m., Sat., June 3d.
Lv. Springfield, Mass., Via Boston & Albany R. R., 4:35 p.m., Sat., June 3d.
Lv. Hartford, Conn., Via N. Y. N. H. & H. R. R., *2:50 p.m., Sat., June 3d.
Lv. New Haven, Conn., Via N. Y. N. H. & H. R. R., *1:50 p.m., Sat., June 3d.
Lv. Albany, N. Y., Via N. Y. Central, 7:34 p.m., Sat., June 3d.
Lv. Syracuse, N. Y., Via N. Y. Central, 10:31 p.m., Sat., June 3d.
Lv. Rochester, N. Y., Via N. Y. Central, 12:08 a.m., Sun., June 4th.
Lv. Buffalo, N. Y., Via N. Y. Central, 11:57 p.m., Sat., June 3d.
Lv. Cleveland, Ohio, Via Big Four Route, 4:55 a.m., Sun., June 4th
Lv. Indianapolis, Ind., Via Big Four Route, 12:10 p.m., Sun., June 4th.
Ar. St. Louis, Mo., Via Big Four Route, 6:08 p.m., Sun., June 4th.
Lv. St. Louis, Mo., Via Missouri Pacific, 10:10 p.m., Sun., June 4th.
Ar. Kansas City, Missouri, Via Missouri Pacific, 7:20 p.m. Mon., June 5th.

*Via Springfield.

You will note the combination of schedules given you leaving the different points on Saturday, June 3d, and Sunday, June 4th permit the parties to congregate in St. Louis for from four to five hours before leaving on our 10:10 p.m. train, June 4, from St. Louis for Kansas City. You can put in this time to a very good advantage in St. Louis by taking some of the numerous drives in and around the residential sections—old World's Fair grounds and parks, which are indeed interesting; also to the wholesale and retail districts which are rated to be among the best in the country. These schedules also give you the greater portion of Sunday, June 4th, traveling through the dairy and farming districts of Ohio, Indiana and the southern portion of Illinois, where there are located some of the best farms in the country; it also takes you through a considerable portion of the corn belt in the states mentioned.

For the return schedule, in the event you leave Kansas City 12:20 noon, daily, you will be given a trip through Jefferson City (the state capital of Missouri), the Ozark Hills of Missouri and a very pretty trip along the Meremac and Missouri Rivers during daylight. We operate four other through daily trains between Kansas City and St. Louis, and in the event that this schedule is not suitable you can arrange to leave on any of the others.

RETURN SCHEDULE.

NEW JERSEY AND PENNSYLVANIA.

Lv. Kansas City, Mo., Via Missouri Pacific Rd. 12:20 p. m., Sat., June 10th.
Ar. St. Louis, Mo., Via Missouri Pacific Rd., 8:30 p.m., Sat., June 10th.
Lv. St. Louis, Mo., Via Penna. Lines, 11:50 p.m., Sat., June 10th.
Ar. Pittsburgh, Pa., Via Penna. Lines, 6:50 p.m., Sun., June 11th.
Ar. Harrisburg, Pa., Via Penna. Lines, 1:50 a.m., Mon., June 12th.
Ar. North Philadelphia, Via Penna. Lines, 4:54 a.m., Mon., June 12th.
Ar. Trenton, N. J., Via Penna. Lines, 5:30 a.m., Mon., June 12th.

NEW ENGLAND, NEW YORK STATE AND INTERMEDIATE TERRITORY.

Lv. Kansas City, Mo., Via Missouri Pacific Rd. 12:20 p.m., Sat., June 10th.
Ar. St. Louis, Mo., Via Missouri Pacific Rd., 8:30 p.m., Sat., June 10th.
Lv. St. Louis, Mo., Via Big Four Route, 10:00 p.m., Sat., June 10th.
Ar. Indianapolis, Via Big Four Route, 7:00 a.m., Sun., June 11th.
Ar. Cleveland, O., Via Big Four Route, 3:55 p.m., Sun., June 11th.
Ar. Buffalo, N. Y., Via New York Central, 9:00 p.m., Sun., June 11th.
Ar. Rochester, N. Y., Via New York Central, 11:00 p.m., Sun., June 11th.
Ar. Syracuse N. Y., Via New York Central, 12:45 p.m., Mon., June 12th.
Ar. Albany, N. Y., Via New York Central, 4:05 a.m., Mon., June 12th.
Ar. Springfield, Via Boston & Albany, 8:08 a.m., Mon., June 12th.
Ar. Brattleboro, Vt., Via Boston & Maine, *11:40 a.m., Mon., June 12th.
Ar. Hartford, Conn., Via N. Y. N. H. & H. R. R., *9:41 a.m., Mon., June 12th.
Ar. New Haven, Conn., Via N. Y. N. H. & H. R. R. *10:41 a.m., Mon., June 12th.
Ar. Worcester, Mass., Via Boston & Albany, 9:45 a.m., Mon., June 12th.
Ar. Boston, Mass., Via Boston & Albany, 10:55 a.m., Mon., June 12th.

*Via Springfield.

We will be very glad, if given this business, to see that every detail is properly arranged and that your party is given the best of service in every way. We will also arrange to run through cars on the overflow basis from Pennsylvania, New England, New Jersey and intermediate points over the Pennsylvania Lines and New York Central Lines in case you have twenty or more in each car.

D. J. LISTER (*Signed*)

If further information is desired regarding details of the plan address:

Mr. E. R. Zimmer, Weiting Block, Syracuse, N. Y.

Mr. J. W. Bartlett, care of New Jersey Agricultural College, New Brunswick, N. J.

Mr. C. L. Blackman, care of Hampdon County Improvement League Massasoit Building, Springfield Mass.

Mr. F. L. Houghton, Secy., Holstein-Friesian Association of America, Brattleboro, Vt.

Mr. J. D. Lister, 811 Brokaw Building, 1457 Broadway, New York City.

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

APRIL 22, 1922

The Holstein Breeder and Dairyman **was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.**

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

A Matter for Consideration

WITHIN a few days of the time this issue of THE HOLSTEIN BREEDER AND DAIRYMAN is in the hands of its readers it will be necessary for members of the Holstein-Friesian Association of America to vote for their choice of nominees for delegates to the Kansas City convention. The date of the closing of the polls is April 28th, so that if this duty has not already been attended to there is no time to lose.

This year of all years it is important that much thought be given to delegate selection. The delegate system is a new thing for our association, the powers of the delegates and the limitations of their powers are not yet defined; some have even suggested that there is no limitation to their power; that they are analagous to a single congressional body not subject to veto power; that any action they may take; any alteration of the by-laws; any action in regard to appropriations, takes force immediately without any possibility of revision. That this is not the wish nor the intention of the members of the association is plainly evident and for this reason if for no other it is all the more important that the members vote only for men who will use their power wisely and reasonably with due thought for the welfare of the great business in which they are engaged.

Plain Fiction

THE old story that a greater proportion of country than of city women become insane is again starting the rounds of city papers and cheap magazines. It is said that the president of the National Association of Rotary Clubs publicly made this statement a short time ago and it is being repeated in many circles. It is a pity that men holding high positions or offices do not take the trouble to have some one look up the truth of statements they spring on the unsuspecting public.

How far this statement is from the truth was shown by no less an authority than the United States Census Bureau which some time ago issued a volume entitled "Insane and Feeble Minded, 1910." There is no greater authority than the Census Bureau and statistics show that instead of the country furnishing a greater proportion of women inmates of asylums, the town actually furnishes *over twice as many as the country in proportion to population.*

In 1910 there were admitted to asylums for the insane in the United States 16,380 town women or 77.5 out of each 100,000 population, while all the country districts of America furnished only 8,769 cases or 37.3 out of each 100,000 population. The same proportion between town and country—two to one in favor of the country—was also found in the case of men. The number of male cases of insanity reported from urban communities in 1910 was 20,274 or 94.3 cases per 100,000 population, while from the country came only 11.673 or 45.2 cases per 100,000 population. The following table shows the figures for the country at large and for each important geographical division:

Cases Per 100,000 Population of Class Indicated

	Males		*Females*	
	Urban	*Rural*	*Urban*	*Rural*
United States	94.3	45.2	77.5	37.3
New England States	111.1	92.7	101.8	91.1
Middle Atlantic States	90.5	49.9	82.3	40.8
East North Central States	96.1	56.9	72.7	49.6
North Central States	83.1	55.0	66.1	43.6
South Atlantic States	110.4	35.2	82.4	31.5
East South Central States	82.8	35.2	52.5	31.0
West South Central States	56.9	28.1	55.1	23.1
Mountain	124.2	44.0	67.3	16.9
Pacific	95.2	53.4	62.8	32.4

The Milk and Butter Prizes

THE proposal to eliminate the association milk and butter prizes is one that will cause considerable controversy and may be opposed on the grounds that the prizes are given to promote test work and so encourage the development of the Holstein-Friesian cow. It was the intention of those who first planned the prize list to so arrange the awards that the man with the few cows would have an equal opportunity to win prizes as would the man or firm with a large herd. But, as with many other things, the plan did not completely work out.

The large herd has a better opportunity to win three prizes in each division than has the small herd on account of numerical superiority. Then, so fast has the knowledge of feeding and cow manipulation grown that it is possible for wealthy men to employ skilled feeders and handlers at salaries beyond the reach of the every-day breeder. Economical production is lost sight of in the race for tremendous records.

Just what opportunity the small herd has in comparison with the large one is shown by an extract from Superintendent Gardner's report to the Holstein-Friesian Association last June, in which he says:

"Prize money amounting to $17,499.50 has been divided among 361 breeders, there being 1,423 prizes; and as I have often mentioned, it now takes a large production to get any place whatever in the prize lists. The largest amount, $372.50, was awarded to the F. F. Field Holstein Company; while the Bridgeford Holstein Company with $363.75 comes second. Then follow R. E. Chapin & Son, $341.30; F. S. Stimson, $329.75; Carnation Stock Farms, $323.25; A. C. Hardy, $297.50; Traverse City State Hospital, $273.50; John A. Bell, Jr., $254.30; Pabst Stock Farms, $248.75; J. M. Hackney, $231.00; Gustave Pabst, $208.00; A. J. Lashbrook, $206.25; Julius Schmid, $202.00; J. G. Dutcher, $201.00; W. D. Robens, $194.00, and others with smaller amounts." Mr. Gardner lists fifteen prize winners of which fourteen each. won $200 or more but small herds make a very minor showing in this list.

There is another angle that is sometimes overlooked. Articles or advertisements will state that a certain animal won a prize of some designated rank but neglect to say that there were several other animals in the same class that produced more but were debarred from winning a prize because the herd had already won three prizes in that division. The claim of superiority is therefore meaningless when the true facts are known. If the prize money awards are done away with, the animals can be placed in the order of the size of their records and the relative claims of the sires, herds and cows figured mathematically.

The glory of ranking high in the record list means more to the owners who have been the consistent winners of the larger amounts than does the sums of money their animals have won. There is little reason to doubt that the awarding of A. R. O. prize money will be eliminated by the delegates in convention assembled and that their action will meet with the approval of the majority of the members of the Holstein-Friesian Association of America.

Discontinue Association Prizes

THE following resolution was adopted by the Executive Committee at the meeting held in Philadelphia, March 21, 1922:

"The Executive Committee in session at Philadelphia, March 21, 1922, have decided, subject to approval of delegate Convention at Kansas City, June 7th, next, to discontinue all prizes for milk and butter fat records for the A. R. O. fiscal year beginning April, 1, 1922."

THE HOLSTEIN-FRIESIAN ASSOCIATION OF AMERICA.
F. L. HOUGHTON, *Secretary.*

To Eliminate the Dividing Line

AT the coming Annual Convention of the National Association at Kansas City, I propose to offer the following amendment:

To amend Section VI of Article III of the By-laws to read as follows:

"The Annual Meeting shall be held on the first Wednesday of June in each year at such place in any state as shall be designated by the delegates assembled in convention at the preceding Annual Meeting, without reference to territorial division. In case the delegates fail to agree and no place is so designated then at such place as shall be fixed by the Board of Directors."

Realizing that the Holstein population of the United States is rapidly advancing westward and that the present By-laws of the Holstein-Friesian Association of America make it mandatory that the Annual Meeting shall alternate east and west of the 80th meridian, I feel that it is a matter of justice that this restriction be removed and that the meeting come less frequently to the well established regions of the industry.

As a matter of tradition each Annual Meeting is accompanied by an Annual Sale which observation teaches us is leaving in that locality some of our very choicest breeding animals and increasing enthusiasm for our breed in that section. With this in view I feel that the time has come for this amendment. C. F. BIGLER,

President, N. Y. Holstein-Friesian Association.
Syracuse, N. Y.

The New Two-Year-Old Champion

THE great Canadian senior two-year-old, Echo Sylvia Laura has completed a thirty-day test and during this period has made a number of wonderful records:

91.9 lb. milk 1 day
505.5 lb. milk 7 days
36.64 lb. butter 7 days
96.9 lb. milk 14 days
69.82 lb. butter 14 days
2,230.5 lb. milk 30 days
141.10 lb. butter 30 days

The ration she was fed consisted of the following:

Distilled Dried Grains	336	lbs.
Bran	200	"
Hominy	112	"
Gluten	142	"
Ground Oats	156	"
Oil Meal	50	"
Salt	10	"
Cotton Seed Meal	50	"
Charcoal	10	"

With the exception of the cotton seed meal, this is the ration used at Avondale where a number of great records have been made.

Mr. Wallace D. Wright, manager of the Wright Farm says that they made one mistake while handling this heifer, and that was, in not feeding her as heavy as they should, as he believes they could have made her milk 100 lb. a day if they had given her a little more to eat, but they were afraid of throwing her off feed and went to the other extreme. In his letter to THE HOLSTEIN BREEDER AND DAIRYMAN, Mr. Wright pays a very graceful tribute to Mr. Lynn of Avondale Farm, who gave them some very useful information which enabled them to defeat Glen Alex Queen De Kol 3d, former Canadian Champion for both 7- and 30-day butter production, one of the great Avondale animals. A picture of the new champion will appear in the next issue of THE HOLSTEIN BREEDER AND DAIRYMAN.

Crookedness never pays in the long run. Look at the corkscrew.—*Burlington News.*

LEST WE FORGET

PREVIOUS to the Syracuse Convention many of the breeders who sent in their proxies to be voted against extravagance and mismanagement of the Association sent letters expressing in no uncertain terms their disapproval of the way the Association had been managed during the years 1919 and 1920.

Hundreds of such letters were received from breeders living in all sections of the United States, men in all walks of life, from the plain breeder and dairyman who often apologized for his inability to express himself in good English, to the lieutenant governor in one of the leading Holstein states.

While those who suffered defeat at the Syracuse Convention by the vote of the proxies have caused to be circulated, propaganda to the effect that the proxies were prostituted. We are printing a portion of these letters so that our readers can judge for themselves as to the truth of the statements that have been made and also get a general impression of the sentiment that existed among the members of the National Association previous to the Syracuse Convention and which we have reason to believe has not changed at the present time.

And further, we do not believe that the membership will submit gracefully to an increase in the transfer fee to embark on another reign of extravagance as is being advocated by the men who were defeated at Syracuse.

"I think you are going to find a pretty stiff fight coming from some of the members at the Annual Meeting, and my only regret is that I'll have to be on my way to California at that particular time. I don't like to say it to you because I know nothing of the personal relations existing between the various members and officers of the Association but I have heard Mr. Aitken's talks and I have in one way or another kept myself pretty well informed, and particularly have I been well informed recently.

"The truth of the matter is that I am in dead-set opposition to the whole administration of our friend from Flint, and of those who are supporting him, and if they are not careful they are going to bust the organization wide open. Of course, I don't use the fine diplomatic language that you do and which I highly appreciate, but what I have heard from a number of members, if only partly true, represents an intolerable situation which I hope will be dealt with savagely if necessary to rectify it at the coming meeting.

"Very truly,
"MARYLAND BREEDER."

ALBANY, N. Y.

"I wish you to have my vote registered in opposition to the proposed amendment, giving the Directors power to make, amend or repeal the by-laws, and in favor of abolishing the office of the Director of extension work. I want you to vote against the reëlection of Mr. Aitken, should he be nominated for President and against his nomination if proposed. Vote it also against the nomination of any of his close friends."

PERRYVILLE, N. Y.

"It gives me great pleasure to execute my proxy and return it to you. I think it is high time for retrenchment in the management of this Association, and I am convinced that we need a new man for President. I have a great admiration for our able Secretary, and Mr. Gardner, Supt. of A. R. Hope you may be able to accomplish what you have undertaken."

FAYETTE, OHIO.

"I sent my proxy to Judge Peasley. I dropped $5.00 in the campaign when that man Pollock came around here. There was nothing to his talk, only to raise money and hire a state Secretary. No one has ever received a dollar's good from it and the whole thing has been very unsatisfactory so far as prices were concerned."

OCONTO RALIS, WIS.

"Have already sent my proxy to Judge Peasley of Conn., and am glad you have the same views as Mr. Peasley expresses. I am in favor of reducing the transfer fee; I am opposed to the buying of an Association Home and I am very much opposed to giving the Directors any more power than they already have. Hope you will be able to carry your program at the Convention.

LAKE GENEVA, WIS.

"It is with great pleasure that I send you my proxy and wish you all success in your efforts to defeat the intentions of those who appear to be planning in their own interests serious changes in the Holstein-Friesian Association. I wish I could be of more assistance than through the mere use of this proxy."

"I received your letter and blank proxy to-day.

"You have diagnosed the disease perfectly and I wish you success at the annual meeting. I have sent my proxy to Judge Peasley, who will vote it in accordance with your ideas I think.

"I have had some experience trying to get some organized help through the president's office and elicited from that source the information that Indiana was not a dairy state, and that therefore not much time could be given us. Northern Indiana is an ideal prospect for developing of Holstein sentiment and with proper help from headquarters we could open up a big market for the breed.

"INDIANA BREEDER."

"I have this day received your esteemed favor of May 10th, and I greatly appreciate the interest you have taken in behalf of our Holstein-Friesian Association.

"I certainly can see danger in such a resolution as was passed at the meeting in St. Paul. Also can see that some one is trying to make trouble for the Secretary and Superintendent, and believe you are perfectly right in bringing this matter to the attention of our members.

"I have this day signed and returned to you the proxy for your use and of course this revokes all previous proxies. In this connection beg to advise if there are any members in our association in either the townships of Plymouth, Northville, or Salem, that have not heeded your letter and sent their proxy, if you will give me their names and addresses together with a few unsigned proxies I will take my auto and give a day's time or more if necessary, in trying to help you out in this situation.

"Yours truly,
"MICHIGAN BREEDER."

JACKSONVILLE, FLA.

"I enclose proxy dated May 25th. I trust the gang that want to let a few men control this Association will be routed."

"Your letter and proxy of to-day was inadvertently thrown into the fire with some other letters, so I am sending a proxy I think is correct, and if not advise me and I will fix it.

"I have a very high regard for Secretary Houghton and his work, and am glad to help in any way to the efforts being made to oust him. I had supposed the sentiment shown was so strong two years ago, that another attempt would not be made so soon.

"With best wishes for the good of the Association,
"WISCONSIN BREEDER."

BANGOR, WIS.

"Have sent my proxy to Mr. Peasley of Conn., but will fill in yours also so that one of you will surely do my wish. I want to keep Mr. Houghton and Mr. Gardner right where they are. There is too much of this extravagant work going on all over the country in many ways and it's high time to call a halt. If some of these upstarts had to build this Association up from where our older members had to, they would see where they had ought to use less money and more brains. So please stick to it and do your best."

(To be continued.)

Cow Testing Association Reports

NEW YORK STATE REVIEW

The March monthly news letter of George W. Tailby, Jr., supervisor of the Dairy Improvement Associations of New Yorok state was issued March 25th and at that time 27 of the 29 Dairy Improvement Associations of the state had reported. The leading cow in twelve of these associations is given as a Holstein-Friesian, in six others as grade Holstein, and in two others just as Holstein. So that Black and White cows lead in 20 of the 27 associations reporting.

Three cows produced over 90 lb. fat in the month. The leader is given as a Holstein-Friesian owned by F. W. Zwilling of the Alden-Akron Association operating in Erie County. She made 96.4 lb. fat and 2,461 lb. milk. In this association 348 cows were tested, of which 75 made 40 or more lb. fat in the month. The Livonia Association furnishes the second highest cow in a grade Holstein owned by Arthur Delaney and making 1916.7 lb. milk and 95.8 lb fat. This association is far in the lead in the number of honor cows, 131, its nearest competitor being the Hamilton Association with 81, closely followed by Chemung with 79. The third highest cow is a Holstein-Friesian owned by E. H. Witter of the West Allegheny Association she making 1,576 lb. milk and 92 lb. fat. The ten cows that exceeded 80 lb. fat in a month are all Black and Whites.

Full January reports for the Dairy Improvement Associations of New York state show that Sunnybrook Dolly Ladoga, featured in the March 22d issue of THE HOLSTEIN BREEDER AND DAIRYMAN, was beaten out by three different cows. When the January report went to press on February 25th only twenty-four local reports were in, leaving five associations yet to hear from. Two cows owned by Maynard Smith, of Elmira, N. Y., and one by H. F. Waite & Son, beat out Dolly who has no reason to feel discouraged in any way for they were all mature cows while she is only a three-year-old heifer.

The leader, Lady Aaggie Alcartra, made 110 lb. fat and 2,048 lb. milk and Lady Concordia of the same herd made 100 lb. fat and 2,523.2 lb. milk. Mr. Smith is a member of the Chemung Association. A six-year-old registered Holstein named Dora, owned by H. F. Waite & Son, of Genesee County, made 99 lb. fat and 2,476.9 lb. milk. Sunnybrook Dolly Ladoga in the Doty and Seeman herd, Geneseo, and enrolled in the Livingston Association, made 96.9 lb. fat and 2,154.5 lb. milk and a five-year-old Holstein owned by P. E. Trask, of Hamilton, of the Madison Association, made 82.7 lb. fat and 2,362.2 lb. milk.

During January 10,915 cows were on test in the 29 Dairy Improvement Associations which are located in 22 different counties. Of this number 1,187 or 10.87% made the honor roll requirements, eight producing more than 80 lb. fat, 17 more than 70 lb., and 67 more than 60 lb. during the month.

A year ago during January, 1921, 5,503 cows were on test in 22 associations operating in 17 counties. 10.35% of these cows made the honor roll requirements.

LIVONIA ASSOCIATION

A grade Holstein owned by Arthur Delaney of Livonia, N. Y., leads the Livonia Association for February with 95.8 lb. butter fat from 1,916.7 pounds milk. J. M. Huff of Hemlock has the highest milk producer in his grade Holstein with 2,206.4 lb. milk and 81.6 lb. fat. Three cows in this association made over 80 lb. fat, nine made over 70 lb., and 15 made over 60 lb Two made over 2,000.0 lb. milk and twenty made over 1,500.0 lb. Several members have been buying purebred Holsteins that had no purebreds before. Twenty members now have purebred cows and all have a purebred buli. Roy W. Reed of Hemlock, N. Y. has no cow in his herd milking less than 10,000 lb. of milk in a year, having just butchered his two lowest producers though these milked over 8,000.0 lb. for the year. L. P. ZUMSTEIN.

ELLINGTON

The leader of the Ellington, Wisconsin, Cow Testing Association for February, was a purebred owned by G. Brandt, of the Northern Farms Company. She made 1,620 lb. milk, 74.5 lb. butter. Next to her was Queen owned by the same company with a total of 1,855 lb. milk, 74.2 lb. fat.

LUCKY LEADS

Two hundred and fourteen cows were tested in the Falls-Wilson, Wisconsin association during the last month. Thirty-three cows produced at least 40 lb. fat and seven of these better than 50 lb.

Lucky, a grade Holstein, owned by A. J. Rammer led for milk and butter production making 2,018 lb. milk, 58.5 lb. fat. Nancy, a registered two-year-old, owned by August Brandt, made 1,646 lb. milk, 56 lb. butter fat. The high herd was owned by A. J. Rammer and the figures were 1,123 lb. milk, 38.9 lb. fat for the fifteen grade and purebred Holsteins.

GOOD FOR GLASS

A Holstein owned by J. T. Glass, Muncy, Pa., led the East Lycoming Association for the sixth month of its operation. She produced 1,484 lb. milk, 56.3 lb. fat. Eleven other cows made over 44 lb. fat and every one were Black and Whites.

WELL DONE STENSRUD

The well-known Holstein herd of Stensrud Brothers of Tunsburg township, Minn., headed the Chippewa Cow Testing Association for the year 1921. The herd averaged 16,239 lb. milk, 524.02 lb. fat. A grade Holstein owned by Stanley Dahleen, averaged 10,236 lb. milk, 380.91 lb. fat. In his report the tester, Lee Brown, says:

Emil Wechwerth's herd of grade and purebred averaged 10,066 lb. milk, 340.2 lb. butter fat and brought an average profit of $110.36.

"Summing up the results of the past two years of testing, the records show that the Testing association has been a great benefit to the farmers. In 1920 all the cows that were tested averaged 190 lb. butter fat each; while in 1921 the average was 273 lb. per cow, or a difference of 83 lb. butter fat per cow. With butter fat at $.40, this amount of butter fat represents a net gain of $33.20 per cow.

"There were 223 cows tested the last year, which means that these cows made $7,493.60 more profit than they would have made if they had not been in a Testing association. We can account for this increase through the fact that the farmers took more interest in their cows, and therefore, took better care of them and fed a balanced ration as near as possible.

"There were at least *One Hundred Boarder Cows* found and disposed of. Besides this, several cows were saved from the block because they proved to be producers when given a chance.

"Of all the cows that were fed grain while on pasture, the average was 279.4 lb. per cow; while those that were not fed grain when in pasture averaged 232.2 lb. This makes a difference of 47 lb. butter fat, or $18.80 with butter fat at $.40 a lb. The grain fed to cows during the pasture months cost on an average of $6 a cow. This leaves $12.80 which represents a net gain per cow that would not have been made if the cows were not fed the grain while on pasture.

"One thing is noticeable. The fellow who has no official or cow testing association butter fat records hasn't much show of selling to out-side buyers unless the cows are priced low enough to induce the buyers to gamble on them."

FOUR-YEAR-OLD LEADER

A purebred four-year-old Holstein owned by Charles Bender of West De Pere, Wisconsin, led the Wrightstown-Greenleaf Cow Testing Association for February. She produced 1,902 lb. milk, 72.3 lb. fat. The high herd consisted of purebred Holsteins, owned by T. H. McGrath of Greenleaf, with an average of 1,230 lb. milk, 43.7 lb. fat. Eight of the ten highest producing cows in this association were Black and Whites. There were 614 cows tested.

WESTERN COW TESTING

Forty associations in which 18,263 cows were enrolled reported their February work to the Salt Lake City office of the United States Department of Agriculture. Utah again heads the list for average production; while Washington moves up from fifth to second place. As spring advances and pasturage becomes available, the Coast associations will gain in production. During the month four cows each produced more than one hundred lb. butter fat, there in California and one in Utah. The highest producing herd was that of Holdaway Brothers Vineyard, Utah, which consists of 22 cows, registered Holsteins and a few Guernseys. This herd averaged 1,555.4 lb. milk, 56.1 lb. fat. A Guernsey herd was second and the Holstein herd of Arthur & Maxfield, Hanford, California, was third with 1,239 lb. milk, 44.18 lb. fat for twenty-seven cows. Fifteen of the high 26 herds of more than 15 cows were Black and White. In the herds consisting of 15 cows or less the leader is a two-cow Jersey dairy with a six-cow Guernsey dairy second. The fifteen-cow dairy of E. J. Lindquist, Brighton, Colorado, is in third place with 1,498.4 lb. milk, 47.6 lb. fat followed by a herd of three grade Holsteins, owned by W. P. Walker, Nohler, Oregon, with exactly the same fat production and 1,087.3 lb. milk.

A grade Jersey leads the list for single cows with 104.6 lb. fat, following her is Segis Sadie, a registered Holstein of the Maxfield Farms, with 2,066 lb. milk, 103.3 lb. fat. A registered Holstein, Utah Aaggie, owned by Holdaway Brothers, Vineyard, Utah, is in fourth place, having produced 2,660 lb. milk, 101 lb. fat. Registered Holsteins, owned by T. J. Owens, Kirkland, Washington; Harry Heath, Lamar, Colorado; E. L. Hall, Reno, Nevada; Arthur & Maxfield, Hanford, California, and Whowell & Polley, Johnstown, Colorado, follow in the order named.

MAGGIE WAS BEST

The Cow Testing Association operating around Fayette, Iowa, had 315 cows located in 27 herds tested during February. Twenty-six cows produced 40 or more lb. fat in the month and eight over 50 lb. The leader was a six-year-old Holstein, Maggie Sr., owned by Fred R. Ross. She produced 1,504 lb. milk, 75.2 lb. fat. The five leading herds are Holstein.

There are 23 purebred bulls in the association and only one scrub sire. The average production of all the cows during the month was 704.25 lb. milk, 24.7 lb. fat with an average test of 3.65%.

JUNE IN FEBRUARY

June the purebred Holstein owned by J. Tyner and Son, led the Lake Pepin, Minn., Cow Testing Association during February, making 1,694 lb. milk, 91.5 lb. fat. The leader for milk was Johanna, a purebred owned by J. M. Dwelle, she making 1,870 lb. milk. Her butter fat production 74.8 lb. was third on the list.

The Tyner herd led with an average butter fat production of 45.8 lb. for the 14 cows and a milk production of 1,234 lb. Fifty-eight cows made 40 lb. or more butter fat during February, of these thirty-three were purebred or grade Holsteins.

IN WISCONSIN

Of the 243 cows tested in the Oostburg Cow Testing Association for the month of February, seventy produced more than 40 lb. fat. There were 23 cows that made over 50 lb. butter fat during the month, of which 19 were purebred and grade Holsteins. The three highest cows were, registered Holsteins and were owned by J. P. Brill, Sheboygan, Wisconsin. The leader, Mary II produced 2,102 lb. milk, 82 lb. butter fat, while the second cow, Roseline, produced 1,680 lb. milk, 65.5 lb. fat.

There were 407 cows tested in the Taylor-Hixton Cow Testing Association for the month of February. Of these, 22 cows averaged more than 40 lb. fat and two averaged more than 50 lb. Fourteen herds averaged over 30 lb. fat and 14 more than 25 lb. The high herd for the month consisted of 13 grade and purebred Holsteins and averaged 1,079 lb. milk, 33.27 lb. fat. They were owned by Fred Woodhull.

During February 303 cows were tested in the Shirley-Denmark, Wisconsin, Cow Testing Association, 30 of which produced more than 40 lb. butter fat in the 28 days. Seven of the ten high cows were black and whites. The leader was a grade Holstein owned by Chris Christensen. She made 1,414 lb. milk, 63.3 lb. fat. The high herd consisted of grade and purebred Holsteins and was owned by Art Davis. This herd of ten cows averaged 980 lb. milk, 37.7 lb. fat. The second high herd, also consisting of ten purebred and grade Holsteins, owned by Harry Hansen, produced an average of 1,022 lb. milk, 34.2 lb. fat.

Twelve of the fifteen cows making the highest records in the Eagle Point Cow Testing Association for the thirty-one days ending February 14th were Holsteins. The leader was a grade Holstein, owned by H. Bowe, with 1,649 lb. milk, 77.50 lb. fat. The high herd was also owned by Mr. Bowe. They averaged 47.5 lb. fat. There were 418 cows tested, of which 47 made more than 40 lb. fat.

A grade Holstein, Fanny, owned by H. C. Mohlenbrink, was the leader in the Bruce County Cow Testing Association for the month ending March 15th. She produced 1,816 lb. milk, 56.3 lb. fat. The second high cow was Peconic, a registered Holstein, owned by John Kostman, with 1,520 lb. milk, 53.2 lb. fat. The high herd average was made by eleven grade Holsteins owned by Mr. Mohlenbrink. Their average was 35.6 lb. butter fat, while the six purebreds owned by John Koster, averaged 32.8 lb.

LASSIE AGAIN

There were 143 cows tested in the Twin Falls, Idaho, Cow Testing Association in the month of February. Ten of the twenty-five cows producing more than 40 lb. fat were black and whites. The leader Sarcastic Mercedes Lassie, a purebred Holstein, owned by E. G. Ehlers, Twin Falls, produced 1,538.5 lb. milk, 66.2 lb. butter. The second high cow was a grade Holstein, owned by William T. Hardin, Buhl, R. I., with a credit of 1,999 lb. milk, 65.8 lb. fat. Five herds averaged over 30 lb. fat in the month: a nine-cow dairy consisting of grades and purebreds, owned by William T. Hardin, Buhl, averaged 1,062.9 lb. milk, 38.864 lb. butter fat; a ten grade Holstein herd, owned by John H. Gott, Twin Falls, averaged 853.5 lb. milk, 34.4 lb. fat.

HOLSTEIN HERDS LEAD

One hundred and eighty-three cows were tested in the Ada County Cow Testing Association during February. The two highest herds tested were black and whites. The eight-cow dairy owned by Thomas Killen, Boise, Nebraska, was first with 1,239 lb. milk, 43.8 lb. fat. The registered herd owned by C. S. and R. H. Musser, Nampa, was second, with an average of 1,273 lb. milk, 42.4 lb. fat.

The leader, a registered Holstein, May, owned by C. S. and R. H. Mussell, produced 1,755 lb. milk, 61.4 lb. fat, while the second high cow also a registered Holstein, Prilly, owned by Thomas Killen, produced 1,570 lb. milk, 61.2 lb. fat. Thirty-four cows produced over 40 lb. fat.

DANDY FOR DILLMAN

The registered herd owned by Walter Dillman of Dowagiac, Michigan, led the South Van Buren cow testing association for production of butter fat for the month of February, and one of the cows in this herd was the highest producer, making 67 lb. fat. The herd average is 51.3 lb. for the twenty-eight days. Four other animals in this herd produced over 51 lb. fat in a month.

In the association out of 179 cows tested, 22 made over 40 lb. butter fat and 13 made over 45 lb.

SCHAAF SUCCESSFUL

Two hundred and forty-two cows were tested in the Westerville, Ohio, Cow Testing Association for the 28 days in February. Twelve of these produced more than 45 lb. butter fat; five more than 50 lb. and two more than 60 lb. The leader was a purebred Holstein owned by John Schaaf Dairy Co., and produced 1,610 lb. milk, 67.6 lb. fat. The second high cow was a purebred Jersey with 64 lb. fat. Three other purebred black and whites belonging to the John Schaaf Dairy Co., produced 57 lb. or more of butter fat during the month.

Traffic laws do not say the pedestrian must jump six feet when the honker honks. It's optional with him.—*Toledo Blade.*

CLUB ACTIVITIES

WASHINGTON GOVERNOR ENTHUSIASTIC

The Governor of Washington, the Hon. Louis F. Hart, is taking an active interest in the dairy herds at the various State institutions, and has been instrumental in starting new herds and adding to those already established. In company with officers of the Department of Agriculture, the Governor recently visited the Washington State Hospital at Medical Lake, and after looking over the dairy suggested that the herd be increased by twelve or fifteen head of purebreds, and that the necessary steps be taken by the right officers to bring this about.

IOWA BULL ASSOCIATION

The annual meeting of the Roland Holstein Bull Association was held in the rooms over the Farmers Savings Bank, Roland, Iowa, March 11th. The association contains five blocks and at present there are fifteen members, a few having discontinued farming and thus dropped their membership. Each block has a purebred bull to head their herds and the result has been that these men have splendid herds.

The election of officers resulted as follows: President, E. R. Grove; Vice-President, J. T. Anderson; Secretary-Treasurer, R. C. Jacobson; Block Managers, E. B. Christian, C. J. Jacobson, P. J. Peterson, O. E. Helgeland and K. P. Teig.

WING ADVOCATES BOY CLUBS

Following a talk by Professor H. H. Wing, of Cornell, to the Holstein Breeders of Tompkins County, the members present voted to contribute the sum of $50 toward the junior project work which is contemplated in the country this year. Among other things Professor Wing spoke on the importance of calf club work and of exhibiting at the state and county fairs. Professor Wing pointed out that the boy of to-day makes the breeder of to-morrow. To have better stock and continued market for surplus stock the older men must interest themselves in the work of the younger generation.

Other speakers were, E. R. Zimmer, secretary of the State Association, who outlined the 1922 plan of that organization and President C. F. Bigler, who pointed out the advisability of giving greater attention to advertising and of keeping Holstein records and performances more before the public as a means of increasing interest in the breed and eventually improving the market.

Professor H. A. Hopper spoke on cow efficiency and said there is much to be done along this line.

PENNSYLVANIA DIRECTORS MEET

A meeting of the Board of Directors of the Pennsylvania Federation of Holstein-Friesian Clubs was held in Philadelphia, the evening of March 21st, at the time of the Brentwood Sale.

The following Officers and Directors were present: John A. Bell, Jr., president; C. E. Bennett, vice-president; W. Hugh Jones, secretary; Frederic C. Brinton, treasurer; H. C. Reinhold; Dr. L. M. Thompson; W. B. Devaney; N. A. Terpening; H. H. Blair; I. S. Gross; and J. Harris Lenker.

The Executive Committee was elected consisting of Messers. Bell, Jones, Brinton, Thompson, Reinhold, Blair, and Lenker.

A motion was carried that we favor the withdrawal of prize money offered through the Advanced Registry Office and its application to publicity or extension work.

It was voted that we endeavor to fill our increased quota to the National Sale at Kansas City.

A program for the coming year was adopted and accompanies this report.

A discussion of the milk situation around Philadelphia brought out the facts that the Guernsey Breeders have established what is known as AA grade milk and have built up a large demand. The public has been educated to the high test and discrimination against Holstein milk is a result. Holstein breeders are getting discouraged and some are unable to dispose of their milk. It was suggested that the only way to overcome the difficulty is to raise the per cent of fat in Holstein milk by breeding methods. The matter was referred to the Executive Committee.

The Secretary was instructed to publish a list of members in good standing to be circulated with the constitution and by-laws.

W. Hugh Jones, *Secretary.*

Proposed Program of Work of the Pennsylvania Federation of Holstein-Friesian Clubs.

A. Organization.
- (a) Federate local clubs already organized.
- (b) Organize new local clubs.
- (c) Build up and strengthen local clubs.
- (d) Stress the activity of the Coöperating Committees consisting of the President, Secretary, County Agent, and as many other members of the local club as may be deemed advisable, as provided in article IV of the By-laws.
- (e) Provide speakers to address local club meetings.

B. Education.
- (a) Encourage Holstein Field Days and exhibits of Holstein cattle at fairs.
- (b) Coöperate with Pennsylvania State College, County Agents, and Local Clubs to promote Dairy Club Work, Calf Club, etc.
- (c) Encourage the improvement of Health Conditions and better herd management in general.
- (d) Provide publicity of the accomplishments of the breed and of the breeders.
- (e) Provide publicity concerning the value of dairy products through coöperation with the National Dairy Council and the Milk Producers Associations.

C. Legislative.
- (a) Bring the view-point of Holstein Breeders to the attention of the law-making bodies of the State and Nation.
- (b) Work for an aggressive campaign of Tuberculosis Eradication in the State and Nation and for an adequate appropriation in connection therewith.

4. Coöperative.
- (a) Assist members in disposing of surplus stock and to secure foundation animals.
- (b) Help the Pennsylvaina State College, The State Department of Agriculture, The Bureau of Animal Industry, and all other private and public Agricultural Organizations within the state in their work to promote Dairy Interests in general and Holstein Interests in particular.
- (c) Assist at all times the Holstein-Friesian Association of America in maintaing its purposes, objects, and high character, as well as to increase its membership.

HOLLANDALE CLUB

A number of farmers around Hollandale, Wisconsin, met early in March and formed the Hollandale Holstein Club, the object of which is to promote the breeding of Black and White cattle and coöperate in selling surplus stock.

Blaine Steensland was elected president and Casper Olson, secretary-treasurer. After the meeting thirty-three head of cattle were listed for sale with the secretary.

MISSOURIANS FORM COUNCIL

A number of Missouri Agricultural and Breeders' Associations have signified their intention to join the Missouri State Agricultural Council which was recently formed at Jefferson City, Missouri. The officers of the new organization are, Dr. A. W. Nelson of Bunceton, chairman, C. O. Raine of Hayti, vice-chairman and S. T. Simpson of Columbia, secretary-treasurer.

BRATTLEBORO BUSINESS

Forty-three applications for membership were received at the office of the Secretary for the week ending March 25th. There were 3,059 certificates of registry issued, 2,279 female, 780 male; 1,995 certificates of transfer were written, 1,351 female, 644 male.

For the week ending April 1st, twenty-nine applications for membership were received at the office of the Secretary. During the same week 2,754 certificates of registry were issued, 1,999 female, 755 male; 2,113 certificates of transfer were written, 1,414 female, 699 male.

The Herd Prefixes reserved during the two weeks period are:

Ashmere, L. W. Hoffmeister, Boring, Oregon.
Berridale, Leon G. Clark, Mayville, Wis.
Clovercorn, Clio C. Mobley, St. Paul, Ind.
Clover Lane, H. S. Bole, Oxford, Maine.
Echo Meade, Mrs. R. J. Mann, Waukesha, Wis.
El Deen, F. O. Johnson, Boise, Idaho.
Fairyland, Robert P. Diehl, Lehighton, Pa.
Friendly, R. E. Shephard, Perry, Ohio.
Hanlon, M. J. Hanlon, Clayburgh, N. Y.
Happy Time, Claude Sykes, Felchville, Vt.
Harlem, Richard F. Gundry, Catonsville, Md.
Hyway, Ross W. Baker, Kinsman, Ohio.
Kingdale, H. T. King, Chittenango, N. Y.
Loyalton, Ole A. Mattison, Loyalton, S. D.
McWood. C. A. McCauley, Dakota, Ill.
Merry-Max, Rolland E. Maxwell, Urbana, Ill.
Nevidon, C. C. Holl, North Canton, Ohio.
Milky Vale, Louis H. Haas, Maple Park, Ill.
Orland, Alfred S. Schelling, Orland, Ill.
Pilz, Conrad Pilz, Browntown, Wis.
Pine Knoll, F. E. Kibler, Burton, Ohio.
Pinerex, Witt Swart, Plymouth, Wis.
Rydalmount, R. M. Hutchinson, Ashtabula, Ohio.
Sage, Russell H. Sage, Waterloo, Iowa.
Sunny Creek, Earl W. Spaulding, Crown Point, N. Y.
Sun Peep, Clarence H. Holter, Holmen, Wis.
Toteco, P. M. Longan, Tulare, Cal.
Vetchacre, M. Ackler, Conewango Valley, N. Y.
Waubonsie, Waubonsie Farms, Aurora, Ill.
Weeks, Eugene Weeks, Frankfort, N. Y.
Yucca Valley, B. C. Gillette, Nara Visa, N. Mexico.

HURON BREEDERS MEET

At the meeting of the Huron County Holstein Breeders' Association, held at Bad Axe, Michigan, March 21st, Joseph Rankin was elected president, Frank Hunt, vice-president, and E. E. Twing, secretary and treasurer.

Directors of the organization are Howard Nugent, H. L. Voelpel, Thomas Nichols, Albert Pangborn and John Hunt. The election and business meeting took place in the Tribune hall after dinner at the Irwin Hotel. Following the business session a Holstein film was shown.

BOONE BREEDERS ORGANIZE

The Boone County Holstein-Friesian Association organized March 18th at a meeting held in the Court House at Lebanon, Indiana. Constitution and by-laws were adopted and directors elected, consisting of E. A. Williams, L. W. Tomlinson, Verner Laughner, Jerome Kersey, and Arthur Wiley. As officers for the association, E. A. Williams was elected president; L. W. Tomlinson, vice-president; and Verner Laughner, secretary-treasurer.

SAM JOY PRESIDENT

At the annual meeting of the Ramsey County Holstein Association held on March 9th at the Athletic club, St. Paul, Sam Joy was elected president.

Other officers are: J. C. Johnson, vice-president and treasurer; R. Freeman, secretary; J. E. McMahon, W. C. Long, directors.

The membership fee was reduced from $5.00 to $1.00. Eighteen new members joined at the meeting.

GEIGER MEETS THE BOYS

The annual meeting of the Holstein Breeders' Association, was held in the Farm Bureau office, Litchfield, Minn., March 20, 1922. A very interesting talk was given by Robert E. Geiger, secretary of the Minnesota Holstein Association.

The following officers were elected for the year: President, A. A. Johnson, Grove City; Vice-President, Oscar Nyberg, Dassel; Secretary, Adolph Waller, Grove City; Assistant Secretary, T. G. Stitts, Litchfield. Directors: H. A. Olson, Grove City; John F. Olson, Litchfield, R. No. 7; Charles Nelson King, Grove City; N. O. Evenson, Litchfield, R. No. 7; Edward Waylander, Grove City.

ELECT FRAKES FOR LIFE

Holstein Breeders of Columbia County met in the courthouse at St. Helens, Oregon, March 20th, and organized the Columbia County Holstein Breeders' Association. They elected the following officers: Paul C. Adams, Warren, president; Fritz Anliker, Goble, vice-president; C. D. Ericson, Warren, secretary-treasurer. P. A. Frakes, Scappoose, the veteran Holstein breeder was elected life honorary member.

SHIAWASSEE BREEDERS MEET

Shiawassee County Holstein Breeders' Association held their annual meeting at Owosso, Michigan, February 26th. They elected officers as follows: President, Earl Van De Karr, Bennington; Vice-President, Fred Martin, Owosso; Secretary-Treasurer, Fred Brooks, Caledonia; Directors: Carl Baldwin, Bennington; Bert Smith, Perry; Charles Payne, Vernon; and Wesley Spitler, New Haven.

MOVIE ENTERTAINMENT

The Sparta Holstein Club put on a special movie entertainment, March 9th, at Sparta, Wisconsin. About one hundred attended. The titles of the films shown were "Holsteins in America;" "Growing Alfalfa" and "Milk."

Butter Girl May Johanna

SOUTH Carolina has another new champion in both milk and butter fat. This is the Holstein cow Butter Girl May Johanna, 398,055, owned by J. T. Willard, Spartanburg. As a junior four-year-old, this animal produced 22,823.8 lb. milk and 955.475 lb. butter during the year. The above production makes her state champion milk producer over all breeds, Junior four-year-old class leader, and second only to Sunnycroft Butter Girl Corona, 323,616, as a butter producer. The latter cow, owned by H. D. Jordan, Ridge Spring, only recently completed her record of 21,305.7 lb. milk and 971.054 lb. butter. Butter Girl May Johanna began her test on February 4, 1921 at the age of 4 years, 5 months and 2 days. During the early part of her lactation period she was put on strictly official test at which time she produced 659.8 lb. milk and 26,628 lb. butter in 7 days, and 2,702.1 lb. milk and 109.743 lb. butter in 30 days, the latter also being a state record.

Butter Girl May Johanna is sired by Colantha Johanna Lad 8th, 77,686, and who has 49 A. R. daughters and 15 proven sons; while her dam is May Butter Girl De Kol, 172,703, with 3 tested daughters. It is noteworthy that Butter Girl May Johanna is by far the best yearly record daughter of Colantha Johanna Lad 8th.

The former record in the Junior four-year-old class was held by Mutual Maid Clothilde, 364,253, owned by Clemson Agricultural College, with 16,100.0 lb. milk and 621.463 lb. butter, while the former state milk champion was Sunnycroft Butter Girl Corona, 323,616, with 21,305.7 lb. milk.

I. R. Jones, *State Supervisor A. R. Dairy Work.*

NEW CATTLE TAG

The job of tagging cattle is always a disagreeable one and any way of simplifying the work will be appreciated by live stock owners.

The Ketchum Clincher Ear Tag is an effort to make the task of cattle-tagging easier. This tag consists of a steel band, heavily stamped, with a point that enters the hole pierced in the ear, and then is clinched over to form the fastener. The tag, which the manufacturers claim will not corrode or rust, is light and serviceable, has no projections that may cut the ear or get caught in wire fences and is well worth the attention of those who find it necessary to use ear tags to identify cattle and that means practically everybody who has to employ hired help.

Blobbs—"That fellow Bjones is too grasping. He wants the earth." Slobbs—"All things come to those who wait. He'll be right in it when he's dead and buried."

"When Edith came home from college she was surprised at the things her parents didn't know." "Yes, and they were surprised at the things she did know."—*Boston Transcript.*

At the Dutch Treat Club: "Are you doing another book?" "No; just a little pamphlet, this time. It is called 'What to Do Until the Bootlegger Comes.'"—*Cincinnati Times-Star.*

City Minister: "Does the Bible have a special message for farmers?"

Farmer: "Yes, Sir—why, St. Paul devotes two books to Timothy alone!"

FOND DU LAC SALE

At the sale of the Fond du Lac Breeders held in the local pavilion on March 21st and 22d, one hundred and forty-six animals were sold for $21,665, an average of $147.

The top price of the sale was paid by E. H. Korrer, Fond du Lac, for a thirty-one-pound cow, Korndyke Queen Myrtle Segis. The top price male, Keep On Pontiac Lad, a thirty-pound bull went to McCully Brothers, of Reedsburg, Wisconsin, for the sum of $500.

A. L. Goodenough, Morrison, Illinois, was the largest buyer. He obtained a carload of heifers for the Whiteside County calf club.

The cattle bringing over $200 and their purchasers follow:

Consigned by Peter Nelson, Scandinavia, Wis.

Dirkje Countess, Tecumsah Farms, Antioc, Ill.	$485
Korndyke Butter Girl Faynem, Tecumsah Farms	345
Lulu Pauline, H. W. Crawford, Campbellsport, Wis.	250

Consigned by F. H. Scoville, Butte Des Mortes, Wis.

Knapi Lady Champion, August Marquardt, Knowles, Wis.	210

Korndyke Queen Myrtle Segis, E. H. Korrer, Fond du Lac.	725
Undercliff Maplecrest Segis, E. M. Cowles & Son, South Byron.	350

THE 1922 SALE

The 1922 Sale, under the management of the E. M. Hastings Company was held in Liverpool Sale Pavilion, April 11-12, with Kelley and Haeger as auctioneers and Leo Blanding of the E. M. Hastings Company as pedigree man.

There were 126 animals sold for $19,145, an average of $151.15. Some of the animals were individuals worthy of any sale, no matter how high-class, there were others that were fair and there were some that should never have been in a consignment sale. Prices ran low, especially so on well-grown heifer calves and yearlings.

The first morning of the sale there was a rather small attendance, but in the afternoon and all the second day, there was quite a crowd there, which included a large number of New York State breeders. The top price, $735, was obtained for the four-year-old, Rose Lyons Hengerveld, consigned by R. J. Stevens and purchased by S. D. Irving, Watertown. She had just completed a record of 27.47 lb. butter in seven days, but what sold her was her individuality for she was extra good and was the first prize three-year-old at the 1921 New York State Fair. She was by King Artis Lyons a son of King Lyons and a 29-lb. daughter of King Segis. Her dam was a member of the Prilly family.

Mr. Irving also purchased the three-year-old Idealize Pontiac Paladin Vale from the 35.36 lb. twelve-year-old Canary Paladin Vale. Mr. Moyer purchased this animal and her twin sister as calves at the Milwaukee sale for $525 each.

J. J. Walrath, Springfield, N. Y., bought Idealize Vale Ormsby, a daughter of Idealize Pontiac Paladin Vale and sired by King of the Ormsbys for $695.

The top price for the first day was $700, brought by Segis Daisy Joh, consigned by H. A. Moyer and purchased by A. W. Fonda, Fonda, N. Y. She was a real nice, well-veined and a granddaughter of King Joh. J. N. Conyngham, Wilkes-Barre, Pa., purchased a number of good ones and was the only out of state buyer.

We wish to commend the clerking of the sale. Mr. Hastings had a skilled stenographer in attendance and within five minutes of the close of the sale, the reporters present, had a list of the animals sold and prices paid and addresses of purchasers, a practice that might well be copied by other sale managers.

The animals that brought more than $150 with the names and addresses of their purchasers are:

Consigned by H. A. Moyer, Syracuse, N. Y.

CONCERNING THE 1922 SALE

By E. M. Hastings.

One of the big problems of every sale manager and every sale organization in arranging for a consignment sale of cattle is to keep down to the lowest point the proportion of undesirable animals. Under present conditions the cost of an advance personal inspection of the entries offered involves an item of expense that that the traffic will hardly warrant. In the past we have assumed, with results sometimes very satisfactory and again—as in the case of the Syracuse sale of a year ago—with results not encouraging, that the average breeder of intelligence can be trusted to make selections from his own herd that will measure up to certain stated specifications, such as, "well-grown, in good condition, straight of top-line, every female in milk carrying a level, well-balanced udder." These were the animals we asked for when soliciting consignments for The 1922 Sale; but of the 166 head sold in this sale, a hasty examination would have shown approximately 100 animals up to standard, probably 25 or about that number that might have been regarded as merely fair—good enough individually, perhaps, to be included with the 100—and around forty head that a reasonable interpretation of the specifications mentioned would have debarred from the sale. Twenty-five per cent of undesirables is too

(*Continued on page 268*)

MARYLAND ITEMS

A thirty-pound record is announced for Aaggie Liscomb Bracelet De Kol, a junior four-year-old, owned at Mountain View Farm, Germantown, Md. In seven days she made 718.8 lb. milk and 30.24 lb. butter and in thirty days she made more than 125 lb. butter and over 2,900 lb. milk. She becomes state champion of her class. Every day of the month she was on test she produced at least 3.3 lb. fat. Homer Dunham is feeling very much elated over her performance as she is his first 30-lb. cow. Homer has been having a run of good records lately, has had five three-year-olds on official test and all made 29 or more lb. butter in a week, one of them a daughter of Correct Change, milking 720 lb. in the seven days.

There were several nice things at the sale of the Maryland Breeders' on April 6th. For one thing, Mr. Lambert, the proprietor of Mountain View Stock Farm, announced that he would give 5% of all the prizes his animals brought, to the Baltimore County Children's Aid Society. A number of breeders' wives and their friends served luncheon and operated a counter at which milk, ice cream and sandwiches could be obtained. The proceeds went to the same society.

During the sale, Carl Schmid announced that the Ormsby Korndyke Lad heifers bred at Beaverdam were freshening and that already they had four 20-lb. two-year-olds, one of which had milked over 80 lb. in a day. In the course of his brief talk Carl said that instead of Ormsby Korndyke Lad being dead, as a matter of fact, from the standpoint of a sire, he was just commencing and they had about forty more heifers by this great bull that have not yet freshened.

MAY ECHO SYLVIA BREEDING
Edward E. Doty & Sons, Incorporated
Geneseo, N. Y.

A Grand Young Bull

BORN Feb. 12, 1922. His sire is King Pietertje Ormsby Piebe 16th, whose dam and sire's dam have yearly records averaging 28,283.55 lb. milk and 1351.37 lb. butter.

Dam has A. R. O. records of 557 lb. milk, 23.1 lb. butter for 7 days and is a show cow, was a 1919 Grand Champion Prize Winner.

Price only $200, which is far below his value. He is nicely marked, carries the splendid type of his sire and dam and is bred to make a great herd sire.

B. M. Arries, OAK LEAF STOCK FARM **Augusta, Wis.**

IOWA'S OWN HOLSTEINS

The State of Iowa is milking Holsteins at all of her state institutions, homes and reformatories. At the present all the herds are not exclusively purebreds for this is almost a new venture, but it is the plan to ultimately have registered cows only. There is a good foundation at each plant and some of the bulls represent some of the choicest strains of Ormsby breeding.

Last year about 800 cows were milked, making an average of nearly fifty at each institution. When the young stock incident to such a herd is taken into consideration it is by no means a bad showing. The cattle are kept not for profit, but purely as food producers for the different plants and in most cases the herds are enrolled in local cow-test associations. Some of their grades are splendid producers and of fine dairy type. Interest in official testing is also being developed. The fact that the Hawkeye State has adopted this breed and is building well, is a tribute both to her economic sagacity and to the Holstein cow.

LASSIE THE LEADER

The January report of the Twin Falls, Idaho, association shows 139 cows tested with an average of 714.34 lb. milk, 32.17 lb. fat. The highest producer was a registered Holstein-Friesian, Sarcastic Mercedes Lassie, with 83.5 lb. fat, 2,055.3 lb. milk. She was owned by E. G. Ehlers, Twin Falls. The Ehlers herd which consists of thirteen Holsteins and two grade Jerseys, averaged 41.8 lb. fat, 1,067.51 lb. milk.

The old reliable **O. H. COWS' RELIEF** has stood the test since 1899, with a record of over 99% satisfied users, on cases of Caked Bag; Spider in Teat; Heifers with first calf; Frost Bites; Chapped, Cracked, Sore or Injured Teats.

We guarantee it, and will refund your money if it does not satisfy you. Prices 60c and $1.20 at General Stores, Druggists and Feed Dealers.

If dealers cannot supply you, send direct to us. Booklet on Cow Troubles mailed free on request.

Our Husbands' Mfg. Co.
Lyndon, Vermont

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(*Continued from page 267*)

large a proportion. Undesirable cattle ought not to be sold either in public or private sale for breeding purposes. By undesirable I mean animals of scrub type and quality, even though eligible to registry. Such animals have no proper place in the pure-bred industry.

I am rather of the opinion that the fairest way to arrange a selling order is to go over the various consignments after they have been brought to the sale building, listing by themselves all animals that manifestly belong in the scrub class. I should want this inspection made by one who knows cattle and one whose judgment would admit of liberal treatment for the consignor. Then with the undesirables backlisted the sale would proceed, and at the conclusion of the sale proper, a supplementary sale could be held, consisting of the animals below standard and so announced. This is a plan that has been talked of in connection with certain sales but I don't think it has ever been tried out to the extent of relegating to a second session any considerable number of rejected animals. I am quite inclined to think that this is the plan that will be followed in future consignment sales of our own organizing. In this connection it is interesting to notice that by a peculiar circumstance one of the consignments in The 1922 Sale that by no stretch of imagination could have been regarded as up to the sale standard, and that under any plan of inspection would most certainly have been debarred, was entered by a breeder engaged at the time of the sale in selecting entries to represent New York state in the coming National sale at Kansas City.

Pulaski, N. Y., April 13, 1922.

THE MARYLAND FIRST ANNUAL CONSIGNMENT SALE

The sale of the Maryland Holstein Sales Co., was held at the Fair Grounds, Timonium, April 6th. The forty-eight animals sold for $7,535 an average of $157. The majority of the animals were quite young and it must be admitted that the cattle were not representative of the splendid animals that are in Maryland herds. Some of the offerings were high-class individuals and brought good prices but there were quite a number that could have been better.

The highest price male was a bull calf, born June 10, 1921, sired by Sir Aaggie Meade De Kol, from the thirty-pound cow, O. K. L. Tula, full sister to O. K. L. Pearl Tula and therefore a daughter of Ormsby Korndyke Lad. He was consigned by the Beaver Dam Stock Farm and Mr. Harry Van Horn obtained a fine animal when he got this bull for $400 for the Homestead Dairy Farm, Salisbury, Maryland. Charles Wertheimer, Frederick, Maryland, obtained the highest price for female, K. V. H. Ormsby Korndyke, a large dark handsome cow, that Mrs. W. R. Harvey, Corbett, Md., purchased for $350; while she had only a twenty-one-lb. record, she had milked 87.5 lb. in a day and was milking seventy pounds right then on two milkings a day. T. B. Baseman paid $325 for Diamondale Canary Ormsby, a granddaughter of King Pontiac Canary, consigned by J. B. Diamond, Jr., Gaithersburg, Md. The same gentleman purchased Countess Pontiac Lyons Colantha for $310. This cow has no record but she was a beauty and won second prize in the aged cow class at the Maryland State Fair last fall. Twin heifers from a two-year-old and sired by last year's Grand Champion bull, Brooklandwood King Pontiac, brought $220 each, Mack Walker, Gaithersburg, Md. taking the pair. He also purchased a very handsome calf consigned by Woodrow & James for $250.

The auctioneer was George Baxter with Wood as pedigree man and the pair worked hard for the prices obtained. It is a pleasure to record and relate the efforts of the Guernsey breeder Louis Merryman, who bid on quite a number of the animals himself and was instrumental in getting others to bid and contributed materially to the results obtained. Consigners held their own animals in the ring.

There were buyers from Pennsylvania, Delaware, Michigan, and many animals remained in Maryland. The animals bringing $150 or more with names and addresses of their purchasers and prices are herewith listed:

Consigned by Brooklandwood Farms, Brooklandville, Md.

1	Brooklandwood Segis Girl 2d, 1 yr., Mack Walker, Gaithersburg, Md.	$220
2	Brooklandwood Segis Girl 3d, 1 yr., Mack Walker	220

Consigned by Brentwood Farms, Abington, Pa.

3	Peg O' My Heart Korndyke, 2 yrs., K. J. Swam, New Freedom, Pa.	180

Consigned by William B. Kemp, Corbett, Md.

WESTERN NEW YORK BREEDERS' SALE

HELD UNDER THE DIRECTION OF THE NEW YORK HOLSTEIN-FRIESIAN ASSOCIATION
C. F. BIGLER, *President and Pedigree Expert*, E. R. ZIMMER, *Secretary*.

The Western New York Breeders' Sale was held on the Fair Grounds, Batavia, on Wednesday March 29, 1922. There were sixty-eight animals sold for the sum of $9,400, an average of $136.23. The top price animal was McKinley Pietertje Beets Vera, owned by Wheatfield Farms Association, Inc., of La Salle, New York. She was purchased by Bauder & Loper, Marilla, New York, who paid $400 for her. The second high price animal was Beryl Lady De Kol Pontiac 2d, owned by F. Howard Judd, Linden, Chase Brothers, Warsau, paid $310 for her. The highest priced male was Camp Bell McKinley Pietertje Beets, a four-months-old calf, owned by Frank M. Campbell. He was purchased by M. L. Scripter, Arcade; Howard R. Myers, and Ernest Holmes, Strykersville, for the sum of $300.

The animals sold with names and addresses of their purchasers and the prices paid are listed below:

Consigned by W. J. Orr & Sons, Attica, N. Y.

1	Era Pietertje Cornucopia, 3 yrs., Edward J. Allen, Holly, N. Y.	$135
2	Johanna Era Cornucopia, 4 yrs., Freeman L. Shepard, Batavia, N. Y.	125
3	Johanna Era Pietertje, 4 yrs., E. H. Waite, Alexander, N. Y.	110
3½	Heifer Calf, E. H. Waite	40
4	Mildred De Freule, 5 yrs., E. H. Waite	100
4½	Calf, E. W. Dilcher, Attica	20
5	Baby Pietertje Johanna, 1 yr., L. W. Johnson	100
6	Cornucopia Johanna Baby, 2 yrs., E. W. Dilcher	125
7	Johanna Pietertje Baby Era, 1 yr., G. A. Wetherbee, Albion, N. Y.	50

ASSOCIATION AIDS MARYLAND FAIR

The authorities in charge of the Maryland State Fair which will be held at Timonium, September 4, 5, 6, 7, 8, 9 have received word that the Holstein-Friesian Association of America will this year again donate $150 as added prize money. The Maryland State Fair and Agricultural Society of Baltimore County which operates this fair is composed of a real live wire bunch. Clinton L. Riggs is president and the well-known Holstein breeder John M. Dennis, vice-president, while the superintendent of livestock is G. H. Hibberd the manager of Brooklandwood Farms. Some idea of how this Association does business is shown by the fact that they have an official veterinarian in attendance and that the owners of the different classes of livestock have a voice in appointing the official veterinarian for their class, although they usually unite on the same person. As in the past year or two the Boys Purebred Calf classes will be a feature of the 1922 fair and six or eight prizes will be offered for youthful contestants.

ACE IS ACE HIGH

Of the 400 cows tested in the Wyoming, Pennsylvania, Cow Testing Association, during March, 97 produced more than 40 lb. fat and 28 produced more than 50 lb. fat; 119 produced more than 1,000 lb. milk while 72 produced more than 1,200 lb.

The best butter fat producer for the month is Belle Segis Mechthilde, a registered Holstein, owned by F. M. Riker, Factoryville, Pa. She is credited with 2,106 lb. milk, 90.6 lb. fat. The best milk producer is Rena Johanna 3d, a registered Holstein, owned by J. B. Quick, Meshoppen, Pa. She produced 2,484 lb. milk, 84.5 lb. fat.

Charles Ace, Tunkhannock, still holds the high average for milk, and has held it for the past five months on two milkings daily. His seventeen cows averaged 1,270 lb. milk and 40.7 lb. fat. He has all purebred Holsteins but one. J. B. Quick is first for fat production. His herd of twenty purebreds averaged, 1,180 lb. milk, 42.4 lb. fat.

DAIRYING CANNOT BE DISPLACED

The *Detroit News* recently published an editorial on the tractor situation. It was based upon figures secured by the Department of Agriculture in its investigation of the attitude of farmers toward the use of power for farm work. Eighty-six per cent of the men questioned, answered, that they can make tractors pay even in times of depression. This may seem a long cry from Holstein breeding but is it? Can you remember how large an acreage on the home farm was devoted to raising feed for the power to operate that farm. The horse is now a luxury as far as personal transportation is concerned and it is not going to be long before it will, in a measure, be replaced by motors in the field leaving all that barn-room for Holsteins and all that acreage for alfalfa and silage. One beauty about the dairy industry is that it cannot be replaced. It provides a fundamental essential of human nourishment and the demand is always ahead of the supply. True, sometimes the market is flooded with some one item that does not imply a surplus. It rather means a lack of systematic organization for distribution. There are people enough to use the milk if we will readjust methods of getting it to them.

RESEGEDALE HERD DISPERSAL

Early in 1903, F. F. Resseguie, of South Gibson, Pennsylvania, journeyed to Lacona, New York, in search of a purebred herd sire. At that time Frank owned grade cows only but was desirous of getting something better and thought that the first step was to head his herd with a high-class bull. He obtained a bull by a good sire and from a maternal sister of the famous Belle Korndyke. At the Averill and Gregory dispersal sale held at Syracuse in June of that year, Mr. Resseguie purchased a yearling daughter of Netherland De Jong, the first cow to have three A. R. O. daughters and a heifer calf of A. & G., Fanny Keyes, who afterwards became one of the local celebrities on account of her individuality and production, making 612 lb. milk, 23 lb. butter in seven days. The next herd head was Johanna Prince Aaggie, a son of Johanna Aaggie's Lad from an A. R. O. daughter of Pauline Paul's De Kol. He was a show bull and won first every time shown at the local fair.

The third herd sire was Walker Korndyke Copia, a son of Walker Korndyke Segis, who was a son of King Segis and Lillian Walker 3d, the best record daughter of the great foundation cow, Lillian Walker. There are a number of good daughters of this sire in the herd to-day and they are all great producers, possibly the best known being Spring Brook Clothilde 2d, who as a yearling made 17.34 lb. butter, 343 lb. milk in seven days and when three years nine days made 26.56 lb. butter, 512.6 lb. milk in seven days; 105.02 lb. butter, 2,145.2 lb. milk in thirty days and as a five-year-old produced 641.4 lb. milk, 30.17 lb butter in a week; 2,705.2 lb. milk, 122.99 lb. butter in a month.

The daughters of Walker Korndyke Copia were real producers and as two-year-olds nearly all made 60 or more pounds of milk a day. His dam was Korndyke Butter Girl Copia who as a junior two-year-old produced 401.9 lb. milk, 24.41 lb. butter in seevn days and was an association prize winner. She is the dam of Masterpiece, who has several thirty-pound daughters and for a time stood at the head of Henry Stevens & Son's herd.

Following this sire King Pontiac Alcartra Pietje was purchased. This bull is a son of King Segis Pontiac Alcartra, the well-known Arfmann Century sire, who was a grandson of King Segis. This bull was of champion breeding as his dam is Fairmont Zerma Segis Peitje, who made the world's record of 35.61 lb. butter in seven days as a junior four-year-old, milking 608.4 lb. She was by a son of the imported cow, Pietje 22d, 31.62 lb. butter in a week, world's record in class when made. As is well known King Segis Pontiac Alcartra was from K. P. Alcartra who made a world's record in year test as a junior two-year-old, and then as a senior three-year-old, made a world record for seven and thirty days butter production while the dam of King Segis Pontiac made world's records for seven, thirty, and 365 days butter production in one lactation period. She was the first 37-lb. cow and was the first cow to make 1,000 lb. butter fat in a year, and also the first cow to make a 30-lb. seven-day butter record in official test in three successive lactation periods.

King Pontiac Alcartra Pietje now has 16 A. R. O. daughters; one is a 26-lb. three-year-old; another as a three-year-old produced 23.63 lb. butter from 568 lb. milk in a week; and 97 lb. butter from 2,405 lb. milk in thirty days, while as a five-year-old she made 25 lb. butter and averaged over 90 lb. milk a day; another three-year-old made 22,183 lb. butter from 550 lb. milk and a number of others are nearly as good. For production and type this sire is considered one of the best bulls that ever came into Susquehanna County.

To mate with the daughters of the Pietje bull, Mr. Resseguie secured Dutchland Königen Creamelle Boy, a son of the great F. F. Field sire, King Segis Pontiac Königen, another grandson of King Segis so that the Resseguie herd is strongly bred in King Segis' blood lines. The dam of this bull is Dutchland Creamelle Colantha Vale who is backed by a wonderful strain of producers and sired by Dutchland Creamelle Korndyke Lad whose daughters are making wonderful records, reaching to 35.92 lb. butter in a week and 1,130 lb. butter in a year. The dam of Dutchland Creamelle Colantha Vale is Dutchland Colantha Vale, 30.42 lb. butter, 736 lb. milk in a week; 1,082 lb. butter, 27,625 lb. milk in a year. She is the dam of Dutchland Pietertje Vale, 35.17 lb. butter, 749 lb. milk in a week; 27,939.2 lb. milk, 1,263.02 lb. butter in a year.

The dam of the junior sire has just finished her year record of 21,868 lb. milk, 881 lb. butter so that the four direct dams of the Königen bull averaged 1,030 lb. butter, 26,254 lb. milk in one year. The ten nearest dams of this bull have year records that average 1,100 lb. butter, 27,000 lb. milk, and his 14 nearest dams have seven-day records with the remarkable average of 720 lb. milk and 32 lb. butter. The Königen bull is a very fine individual and his daughters show remarkable promise although they are yet too young to test. They are just the kind good breeders like to have in their herds.

In the Resseguie herd a number of splendid records have been made; the Pennsylvania state record was held here for two years by Saltram Dijkstra De Kol 2d, with 34.21 lb. butter from 562 lb. milk while Spring Brook Clothilde 2d, made 30.17 lb. butter from 641 lb. milk in a week and in thirty days produced 122.99 lb. butter, averaging better than 90 lb. milk a day. A number of other very fine records have been made while type, size and productiveness has been the Resseguie motto. On April 29th, the herd at Resegedale will be dispersed and this will bring into the market, cattle that could not be purchased at private sale. The herd is under Federal supervision and as Mr. Resseguie has more than a local reputation as a cattle judge and pedigree man the event is bound to bring buyers from long distances.

ARE YOU GOING?

The General Passenger Agent of the Atchison, Topeka and Santa Fé, Railroad Company and the Pullman Office at Chicago, have furnished us with the one-way carfare and Pullman rates from the capital cities in the United States to Kansas City, and with these figures we have compiled the following table which gives the one-way carfare and Pullman rate, and the total transportation charges of the delegates from each state, as well as the total transportation charges of the delegates from all states.

MANKATO BULL FOR OHIO ASSOCIATION

We are pleased to report the sale of Mankato Pietertje Ormsby Wayne No. 359,563, a son of Sir Pietertje Ormsby Mercedes 14th, from a 925-lb. daughter of Sir Pietertje Ormsby Mercedes 5th. He is a very fine individual and should grow into a very large bull. He has gone into good hands and there is no doubt but what he will be heard from later.

This bull was purchased by the Franklin Holstein-Friesian Breeders Bull Association, made up of the following members: President, A. B. Sower, Fayette, Ohio; Secretary-Treasurer, M. C. Lauber, Fayette. The other members are George Ziegler of Fayette, John Burkholder, Edward Meyer, Clyde Bowman and Floyd Lauber of Archbold, Ohio, all located from two to five miles east and north of Elmira, or eight to twelve miles west and north of Wauseon.

At Wauseon they have been using, and owned, Pride of the Ormsbys, full brother to Glen Canary DeKol 2d, and son of Sir Pietertje Ormsby Mercedes. Dr. Bernath of Wauseon owns King Jewel Ormsby Mercedes, son of Sir Pietertje Ormsby Mercedes 22d and Kaan Jewel Ormsby Mercedes, daughter of Sir Pietertje Ormsby Mercedes.

It is reported that these S. P. O. M. bulls have been bringing very fine daughters, and this young son of the 14th will be used on these as they wish to carry on line breeding of old Sir P. O. M.

The dams of these heifers are by Canary Mercedes Sir Pietertje with a dam that has 20,580 lb. milk and over 830 lb. butter in a year, and another sire whose dam made as a ten-year-old 29,950 lb. milk and 1,295 lb. butter.

Mr. Sower has an eleven-year-old cow, Pearlina Queen, that has milked 84 lb. a day on three milkings without being crowded. She is one of his foundation cows and he expects to put her on Semi-official test when she freshens again.

M. C. and Floyd Lauber have been using a son of the Pride of the Ormsbys. Mr. Burkholder and Mr. Meyers also have granddaughters of Pride of the Ormsbys, and Mr. Zeigler has a number of granddaughters of King Segis.

We think this bull Association is a fine idea, and believe that a great many more of these Associations will be organized during the coming years. We were much pleased with the confidence placed in us by the members of this Association. They did not come to see the bull, but purchased him on the photograph sent them and the information given them regarding him.

The following is a copy of a letter received from Mr. A. B. Sower, president of the Association after they received the bull. The letter speaks for itself.

"Fayette, Ohio, March 14th.

"The bull arrived Monday morning. He looks like the picture and we are *well* pleased. He weighed 1,250 lb. at the station when taken out of the crate.

"My foundation cow, Pearlina Queen, recently brought another daughter from our double grandson of Sir P. O. M. This is the cow that milked 84 lb. on three milkings a day under ordinary dairy conditions. Will put a semi-official record on her this year. Will expect to get very nice calves from the daughters of the grandson of S. P. O. M. and bred to Mankato Pietertje Ormsby Wayne.

"We feel that you have treated us square. A. B. Sower."

Mankato Holstein Farms
Marlow & Randall
March 17, 1922. Per J. C. Marlow.

RESPONSE TO STEVENSON

I have just finished reading your article in the Holstein-Friesian Register in regard to registry and transfer certificates, and I want to say right here that I am with you.

At present the transfering and registration of a bull (for non-member) is six dollars. When you consider that we small fellows who sell to ordinary farmers or to men with low grade Holsteins are lucky to get $50 for a calf and often less, you can see that these fees represent 12% of the sale price, if the big fellows who sell bulls for thousands had to pay as large a percentage we would soon get a reduction.

I breed Chester White hogs on a large scale and am a member of the Association. Our fees are $.75 and transfers cost nothing if recorded within sixty days of sale. We get a better certificate than the Holstein-Friesian Association gives and on it are three generations requiring a lot more clerical work on account of having to use two or more herdbooks for reference on each pedigree. Now why couldn't your Asso-

ciation do away with transfer fees entirely or at least on the first sale which could be registered on the face of the pedigree? If you would like to see one of these pedigrees I could send you one, that is, if you are not already familiar with them.

Another thing, these fellows to whom we sell always want "papers" even after you explain to them that they mean nothing as the bull goes to the butcher when they are done with him.

I'll be in the market for a bull calf this coming winter and will pay as much as the size of my pocketbook will warrant, so I'd like to know how much breeding you can give and for how much money. I'm interested in polled Holsteins. GROVER ARBEITER.

REASONS FOR VARIATIONS IN FAT TEST OF MILK

BY J. A. GAMBLE.

Professor of Dairy Husbandry, University of Maryland.

With the formation of the Maryland State Dairymen's Association came an opportunity to put into practice some of those things which made for a better understanding, fairer dealing and better business relationship between producers and dealers. These things have been taken up one at a time and reasonably good progress made. One of the most irritating questions was that of monthly fat tests. This had been a sore point between producers and dealers for many years and had led to much misunderstanding. Placing the testing of all milk coming into Baltimore under a neutral control was suggested in June 1919. On August 1, 1919, responsibility for the accurate testing of all milk from the 3,000 and more dairy farms shipping to Baltimore was taken over by what is known as the Laboratory Board. This consists of a representative appointed by the dealers, a second by the Maryland State Dairymen's Association, these two choosing a third man, making a committee of three. This board immediately found itself saddled with all the prejudices and misunderstandings relative to variations in tests which had waged for years between farmer and dealer. During the period since August 1919, much progress has been made. The monthly test placed sufficient information in the hands of the Laboratory Board so that they were able to answer questions of test raised by the different dairymen. It is with the hope of clearing up some of the questions still remaining in the minds of dairymen regarding variations in test that this article is written. It is not in any sense the last word on the subject. New information is coming in each day. There is still a lot we do not understand.

It is apparent that variations in the fat content of milk are due to three major causes.

1. The breed. The individual within the breed and the period of lactation.
2. Seasonal variations.
3. Watering, skimming and spillage.

VARIATIONS DUE TO BREED

The amount of milk secreted varies greatly under the influence of varying conditions. Some of these changes are regular and due to definite causes, others irregular and produce results for which we are usually unable to ascribe a definite cause. The fat content of the milk of an individual cow decreases slightly in fat percentage as the milk flow increases to its maximum. The high production usually occurs about the second month of the lactation period. From this point on there is a gradual decrease in flow, and a slight increase in fat content regardless of season. It has also been observed that if during the period of decline in flow, a decided increase in flow is brought about by feeding, there will again be a tendency for the fat percentage to temporarily decrease.

The fat content of milk drawn at the night and morning milkings, varies usually about .2 of one per cent, in favor of the milking representing the shortest period of time. In other words, if the periods between milkings and 14 and 10 hours, respectively the milk from the 10-hour period will usually have a slightly greater percentage of fat, possibly about .2 of one per cent. Several exceptions to this rule have been noted.

There is also considerable fat variation in the milk of individuals from milking to milking and day to day. The writer has observed differences as great as 3 whole per cent between different milkings of the same cow. However, when a 24-hour production of these same cows is pooled, we get an average test within the range of the fat content of the breed. It is difficult to ascribe definite causes to these variations from milking to milking. Among those mentioned, may be sudden changes in temperature, fright or rough handling, change of milkers, change of feed or change of routine. The fat content lost and the milk flow lost in these sudden drops is usually almost wholly recovered at subsequent milkings. It is a well known fact that the latter part of the milking is very high in fat. For this reason, failure to completely milk out each cow has an influence on the fat percentage of the milking. A great deal has been written regarding the influence of feeds on the fat content of milk and the present attitude of those who have studied this question most, is that the feeding of feeds which materially increase the milk flow have a tendency to slightly decrease the fat percentage. The reverse is likewise true. Withdrawing of succulent feeds will very often reduce the flow and slightly increases the fat percentage. It should be borne in mind that feeds which increase the milk flow invariably increase the weight of fat given although the percentage present in the larger volume is slightly decreased. The subject of feeding fat into milk has been and is still under investigation, but the consensus of opinion to date has been that the fat percentage in milk cannot be permanently increased through the use of feeds, although later information may shed further light on this question. Of all the milk constituents, fat is the most variable from day to day.

Some investigators report that the percentage of fat is affected by the age of the cow. There seems to be some foundation for this, although authorities do not agree as to the ages at which the highest and the lowest fat percentages occur in the individuals. It is not improbable that these variations are influenced by the characteristics of the different animals.

BEST FIGURES AVAILABLE

Without question, the greatest cause of variation in the fat content of milk is that of breed. The best figures available on the average fat content of the milk of different breeds are those supplied from Advanced Registry records. These show the average fat content of the Jerseys making Advanced Registry to 5.35% fat, Guernseys about 5%, Ayrshires 3.95 and Holsteins 3.45. In using these figures, however, it should be borne in mind that the averaging production of this group of Jerseys on Advanced Registry was 7,792 pounds, Guernseys 8,934, Ayrshire 9,261 and Holstein 14,622. In this connection it should be remembered also that the average cow produces approximately 3,700 pounds of milk per year. From this it is seen that the average of fat content of those not on Advanced Registry test should be somewhat higher than the Advanced Registry averages. The milk of individuals and families within the different breeds also vary greatly in fat content. For example, a survey of the Advanced Registry records made by the Guernseys shows that the highest average fat for a year was 7.12 and the lowest fat average 3.61, a difference of nearly 100 per cent, between the lowest and the highest. Like differences also exist in the milk of the other breeds.

Another major contributing cause to sudden rises or drops in the fat content of herd milk may be due to the introduction of fresh cows giving a large flow with a low fat content. This is especially true if these individuals are of a low fat breed or a low fat family within the breed. Then, too. fresh cows of the high fat breeds, when they reach their maximum flow, sometimes give so much milk with a lower fat content that the average of the herd is forced downward. The buying in of fresh cows in the Fall in order to establish a good Fall average has tended toward such a reduction on several farms shipping into Baltimore.

The effect of season upon the percentage of fat in milk has been studied in several states. Eckles reports that milk produced in the fall and early winter in Missouri has a higher percentage of fat than that produced in the early spring and summer and that climatic conditions in the different states may modify this conclusion. White and Judkins also tell us that fat is lower in summer than in winter. In regard to the trend of fat content during the entire lactation period, they further say that the general direction of the fat content of milk produced by winter-calving cows is up, not down and up is commonly supposed for summer-calving cows it is down and up, for fall-calving cows gradual up and down.

Richmond quotes figures to show that as far as seasonal variation in composition is concerned, the year is divided into four periods. November, December, and January, when the milk is richest in fat. A slight diminution in percentage beginning in February and increasing until April. From this point on, a gradual increase during May, June, July and August followed by a further rise during September and October. All of these workers are of the opinion that the fat content of milk is higher in winter than in summer, but none of them tell us why this is so.

The data secured from the milk of shippers into Baltimore since the inauguration of the Central Laboratory is perhaps the most extensive of its kind. More than 140,000 samples of 24-hour production in each case have been taken from milk produced on between 2 and 3,000 different farms. Complete data is now in process of publication, but it may be said that one of the most striking things pointed out by these figures is that the Baltimore milk supply on the average attains its highest fat content during November and drops to its lowest point in April. Rising in November to about 4.4 and dropping to 4.05 in April. This is a difference in fat content of from .3 to .4%.

CAUSES OF RISE AND FALL

The causes of this rise and fall are still problematical. A decrease in flow during the fall and early winter months may in part account for the rise in fat percentage. The decrease in fat content on the other hand which takes place from December until April may be partly due to feed in the sense that at this season of the year feed becomes less plentiful and poorer in quality on too many farms. It takes feeds moderately high in protein to enable cows of large capacity to produce a large flow of high fat milk If such concentrates are not fed, it is not improbable that the load of phosphatid carried by the blood stream and released by it in transit through the udder may be decreased through failure to supply the cow with sufficient food material. There is no data at present in support of this opinion. Several dairymen have suggested that the decrease may be due also to the poor condition of the cow, to the shedding of hair, etc.

Checking over the record of complaints received since the inauguration of the service it is observed that comparatively few kicks were registered during the seasonal rise in fat content. Practically all were sent in during the declining period. Producers should remember that it takes the up and down to make the average for a year. Occasionally sudden drops whose accuracy are established by check testing occur from month to month and in checking back over the monthly tests of milk from such dairies, exceptionally high fat contents to offset the low test are also noted sometimes.

VARIATIONS DUE TO SPILLAGE

Although materially curtailed, some spillage continues to take place between the farm and the milk plant of the dealer. In most cases, the top part of the can containing the milk richest in butter fat is the part usually lost. The spillage results from ill-fitting covers which permit the milk to escape if the cans are roughly handled in loading or unloading. Occasionally, whole cans of milk are overturned in handling. Leaky cans are also a contributing factor to losses between farm and city.

The testing regulations provide, however, that whenever there is a drop of more than .5 of one per cent in the test of milk from one month to another, the milk shall be immediately resampled.

AT MILKING TIME

Up through the early twilight, out of the dogwood hollow,
The foam-white dogwood hollow that runs at the foot of the hill,
One by one to the yard-gate, with laggard yearlings to follow,
Nibbling the short, sweet spring-grass, the cows come home as they will;
Star, the petted heifer, daintily paced as a maiden;
Bonnie and Bess, the matrons; Dolly and frivolous Kate—
With the long day's gracious garner in udders heavily laden,
Each to her certain welcome, they pass through the open gate.

Down in the dogwood hollow are ring-dove cooing and calling,
Loamy scents of the Promise drift up from the newplowed dale,
And, rounding the sweet perfection, the music of rich streams falling,
Whipping to froth-of-moonlight on the sides of the milking-pail;
And over, under and over, weaving of sound and fragrance
A treasure for memory's keeping—tenderly, never with tears—
A silver thread of singing, the voice of an old man singing
The song he has hummed at milking for half of a hundred years:

"We will rest in that fair and happy land, bye and bye,
Just across on the Evergreen Shore—"

But what of the foam-white hollow, and what of the dear home-comings,
When the singer has found his "fair land," and the song shall be heard no more?

—Katherine Atherton Grimes in Southern Agriculturist.

Success depends as much upon what you leave unsaid, as upon what you say.

What Shall We Do?

PRODUCERS, packers, commission men and retailers of meats have formed an organization, the object of which is to encourage a greater consumption of meats. Propaganda will be used to increase the per capita consumption of meat one-half a pound a week, thus adding millions of dollars to the value of live-stock products and providing a market for many millions of meat animals.

An association has been formed in some of the western states for the purpose of encouraging people to eat more corn and provide an outlet for the surplus corn now in farmers' hands. The secretary of agriculture has endorsed this movement, stating that if half the people of the United States would eat a half-pound of corn per day per person, there would be a market for over 64 million bushels of corn before the next crop is harvested. He would have people eat more corn bread, mush, corn cakes, hominy, etc.

Then, the millers and bakers want people to eat more bread; the dairymen advise drinking more milk, eating more butter, cheese, and ice cream; the prune growers say, eat more prunes; the citrus growers, the raisin growers, and all the other producers of food products have the same war cry. It is obvious that the well-meaning and accommodating individual cannot only comply with all these requests, or he may be like the little boy who, when he was told that if he ate any more cake he would burst, replied: "Well, pass the cake and get out of the way."—*Farmer's Guide.*

"I see they are now manufacturing asbestos shingles which will not burn," said the teacher.

"Well, I don't know about their not burning," said the boy reflectively. "I guess it will depend on how they are used."

Letters to the Editor

REGISTRATION PROBLEMS

LETTERS TO THE EDITOR:

Two years ago at the dispersal sale of a breeder who was retiring from business, I purchased two heifers which in due time each gave me a heifer calf. These two calves are now yearlings and show promise of developing into good cows. What do I have to do to get them registered and to whom do I apply?

KENTUCKY BEGINNER.

ANSWER BY EDITOR:

Write to Mr. F. L. Houghton, Brattleboro, Vt., for registry applications and for the pamphlet "Instructions for Preparing Applications for Register and Transfer." This form which is free gives explicit directions for filling out applications and answers many questions. It contains a photograph of an animal and also an outline of the same animal with the color marks sketched thereon. It also has a number of paragraphs on naming animals which tells things that may and may not be done when applying for names. It contains a miniature reproduction of the registry application, so that you can see just what is required in the way of signatures. If after reading this instruction pamphlet, you do not fully understand what is required, submit your problem to the Secretary or to THE HOLSTEIN BREEDER AND DAIRYMAN and you can rest assured that you will be advised and helped as much as it is possible.

FROM A MISSOURI BREEDER

I have already too many papers, but your idea for honest records, honest sales and honest, progressive, conservative, administration of our National Association makes me feel that I will try to read your HOLSTEIN BREEDER AND DAIRYMAN. I am far away to think that the forced test on various Holstein cows nowadays, will improve the average herd of the common breeder on the Hill.

What we want is a healthy type cow that will give an ample supply of good milk for a number of years, and reproduce herself as many years with a healthy offspring, and when that is done make a good carcass for the butcher. I am 63 years old and have been a citizen in the part of Switzerland where they raise the Simenthlaer cows, in color, red and white, average weight 1,500 lb., average production on different crops of hay alone (no grain) 7,000 lb. of 3.8% milk.

No one makes horse-race tests for milk production, but the average sale price is above that of the Holsteins in the U. S. A. Breeding stock is sold over all Europe. I believe that I can select good cows without records. I am sure many record cows will make a poor showing under normal conditions. I bought four A. R. O. cows and found them hurt in making the test. I bought four bulls where their dams gave a high per cent of butter fat and every time I have been disappointed in their offspring.

SAMUEL R. TRACHSEL.

BREEDERS BANQUET AT BATAVIA

The Batavia Sale was preceded by a banquet, which was held at the Hotel Richmond, on the evening of March 28th. Sixty-three were present and it proved a very enjoyable affair. The principal speakers were: Professor G. F. Warren, of Cornell University, who spoke on "Agricultural and Business Conditions in Europe" and A. A. Hartshorn of Hamilton, New York, who spoke on the "Development of the Purebred Herd." Short talks were given by State Fair Commissioner, Fred Park of Batavia, William A. Prescott of the *Holstein-Friesian World* and E. R. Zimmer, secretary of the New York Holstein-Friesian Association. The toast master was President C. F. Bigler.

Fond Mother—"For gracious sake, John, that child has got your watch in her mouth and will swallow it!"

John (bachelor brother-in-law and very fond of babies)—"Don't be the least alarmed, Mary. I've got hold of the chain; it can't go far."

A party of strangers was visiting at the college. It was crisp and cold. One of the members of the party, a charming young woman, was escorted through the grounds by a learned but absent-minded professor. Suddenly, two members of the track team, dressed for their sport, passed.

"It's dreadfully cold," remarked the young woman as she gazed after the runners, "to be without stockings."

The professor's mind, deep in the contemplation of the fourth dimension, was attracted by the sound of the girl's voice.

"Then why," he asked absently, "did you leave them off?"

The young man sidled into the jeweler's shop with a furtive air. He wanted a ring marked "with some names," he stammered.

"Yes. What names do you wish?" inquired the jeweler in a sympathetic tone.

"From Henry to Clara" the young man blushingly whispered.

The jeweler looked from the ring to the young man and said in a fatherly manner, "My boy, take my advice, and have it engraved simply "From Henry."

Young Danvers had married a "city girl." A friend, meeting Charley's father in the village, said that he had heard that Charley said his bride was an angel. "Do you think she is?" he asked the old man.

"Wal,' I don't know ef she's an angel," said the old man thoughtfully; "but I'll tell ye one thing, Henry, she's certainly a durn high flyer!"

Teacher—"What are you boys fighting about?"

Tom Lakeside—"Why that chump was a tryin' to make believe that Adam was the first man, when everybody knows 'twas Columbus."

DAIRY NOTES FROM WASHINGTON

Sixty head of grade dairy cows were located and sold to buyers in Oregon by county agent J. R. Beck, of Pacific County.

Members of the cow testing association in Clallam County are arranging for a three-day dairy tour to be conducted the latter part of March when their testing year ends.

A prize of $25.00 has been offered by Minard & Company of Elma to the owner of the herd who makes the greatest increase in production of butter fat in the county cow testing association during the year 1922.

Holstein breeders and the local bankers were entertained at a banquet by the Chamber of Commerce of Montesano. Ways and means were discussed as to how to finance men wishing to develop purebred herds. A committee was appointed and is working out plans to help dairymen purchase purebred stock.

Pend Oreille County dairymen are securing a number of high-class dairy heifer calves from the Tillamook County Oregon Cow Testing Association. Orders have been booked for shipments that will continue until June, reports E. E. Hupp county agent.

Worth Looking Over

Don't you think a herd of 70 head, none over 5 years old, is worth looking over? One member of this herd is now making 28 lb. butter a week.

Plum Spring Farm Copia

heads this herd. His nearest dams, none below 31 lb., have seven day records averaging 32.35 lb. butter, 613.3 lb. milk

Write your wants, or better yet come and see us—if you want good ones at reasonable prices.

A. W. Downton

Starrucca, Pa.

Through the efforts of the County Agent H. M. Wivell of Wahkiakum County three changes were made in dairy sires during the month. One farmer purchased a young bull and passed his herd sire on to two other farmers who are to use him jointly. The young sire has a backing of approximately 500 pounds butter fat. In the third case a high-class sire was leased for the season. This bull will replace a grade bull in a herd of 40 cows. The dam of the leased bull has a record of 625 pounds butter fat and two full sisters have 600 pounds each.

Annual meetings were held during the month, of the Snohomish County Holstein Dairy Association and the Jersey breeders. Committees were appointed from each organization to coöperate in promoting the dairy show for Snohomish County during the year 1922. County Agent W. D. Love assisted in outlining a program of work for the Holstein Association.

Boys' and Girls' Dairy Club members of Yakima County purchased 12 head of purebred Holstein yearling heifers at the recent Davis-Butchart sale, according to reports from E. C. Scott, county club agent. Part of the stock will go to the Moxee Valley Club with W. R. Duffield leader, while the remainder goes to the Ahtanum Valley Club with M. W. Poynor leader.

A cow testing association was organized in Lewis County by County Agent R. G. Fowler with 373 cows. Cowlitz County will be included in the association and the tester will have 100 cows to look after in that county. E. A. Donaldson was elected president, H. B. Taylor, vice president and A. T. Flagg secretary-treasurer.

The annual meeting of the Snoqualmie Valley Cow Testing Association was held during the month, according to reports from A. B. Nystrom, and the yearly fee was reduced from $2.50 to $2.25 per cow. E. W. Trezise of Tolt was reëlected president and L. J. Clark of Bellevue will be the secretary for the coming year.

County Agent Robert Cowan of Grays Harbor County reports much activity during the month in dairy circles. One registered Holstein sire, together with two high-grade Holstein cows were placed on the county farm.

The Freeman Dairy Club of Spokane County organized through the efforts of County Club Agent W. J. Green are using Holsteins. Two of the boys purchased high-grade cows costing $150 each, while a third paid $140 for a three-year-old.

True thrift lies in putting things to use, or disposing of them when they can be made to do some sort of duty.

ARP GOOD ADVERTISER

Max Arp of Eugene, Oregon, has a herd of big producers that have quite a reputation for individuality. The Arp herd is of Pontiac and Alcartra breeding, part of the foundation stock coming from the McKay Brothers herd where Tilly Alcartra originally came from.

Mr. Arp was one of the first in Lane County to start testing his cattle for tuberculosis and this herd has been on the accredited list for some time.

The herdsire is Sir Johanna Fayne Bonheur De Kol who has a number of good record daughters and one of the notable animals in the herd is Mercedes Alcartra Meade with a year record of 25,131 lb. milk and 935 lb. butter.

The farm buildings are close to the Pacific Highway and advertise the business for a long way. On the long stable is painted the words, "Registered Holstein-Friesian Cattle." This phrase occupies the whole length of the building, while on the testing barn close to the road is the name "Arp Dairy" so that name and business can be read by all those who pass.

HOLSTEIN ROAD

What do you think of "Holstein Road" for a highway? There is a three-mile road near Appleton, Wis., along which there are 22 farms of which 20 are owners of Holstein cattle. They recently petitioned to have the three-mile portion called Holstein Road, and have no objections to having the seven miles of the highway designated the same name as the first three miles. They plan to have an attractive sign calling attention to the name and to have the owners of purebred Holsteins along the road exhibit signs telling of their business.

WATCH THE MOVIES

The ranch formerly the property of James J. Jeffries, ex-champion pugilist, is now part of the property of the Burbank Dairy Cattle Co., of Los Angeles. The president of the company is E. H. Christianson, who has just shipped in 115 head of Holstein cattle from Monroe, Wis., and is shipping more. Mr. Christianson is vice-president of the Radion Film Co., so we may soon expect to see more Holsteins in the movies.

VERY GOOD SINGER

He—What is that loud noise?

She—Oh, that's my sister Mary cultivating her voice."

He—Cultivating? That isn't cultivating! That's harrowing.

Nature does not wait for school teachers. From the child's earliest days Nature is in one way or another profoundly affecting his mental strength and ability. Are you coöperating with Nature?

Many a man's business has been ruined by advertising done by his competitors.

HER RELATIVES SOLD

When Pietertje Ormsby Mercedes Frisby recently made 32.91 lb. butter in seven days as a junior two-year-old in the herd of Lawrence F. Murphy of Hartford, Wis., she made Mr. Murphy start looking up her near relatives some which he had sold to the Chequamegon Holstein Association. He was unable to get back any of the cattle as the Association has a rule that none of the animals bought, should be sold again for five years. Among the animals owned by the Association are Colantha Changeling Frisby the mother of the new champion, a full sister, three cows that have 75% of the same blood and four with 50% of the same blood. Arrangements have been made by which these cows are shipped to Hartford to breed to Pietertje Ormsby Mercedes Della, the Badger Stock farm herdsire who sired the 32-lb. junior two-year-old champion.

HEAL BUYS HERD

J. F. Heal of Marshfield, Wis., has purchased the entire herd of G. N. Loughead of that city. This includes the herdsire Johanna King Segis Bonnie Lad.

A Michigan breeder says a very suitable name for the scrub bull is the Bulshevik.

Three Fine Young Bulls
Priced for Quick Sale

No. 1 is 14 months old from a cow on ten months test. She has a seven day record of 27.88 lb. butter, 657.9 lb. milk, and produced 2,775.7 lb. milk, 114.77 lb. butter in thirty days.

No. 2 is 7 months old and is from a four-year-old with 19.25 lb. the first A. R. O. record I ever made.

No. 3 is 11 months old from an untested dam. Is a dandy calf, about ready for service.

The sire of these bulls is from a 22.55 lb. junior four-year-old and the second dam is a 28.48 lb. cow with a yearly record of 20,919.9 lb. milk, 830.3 lb. butter.

My herd is under State and Federal Supervision and has passed one clean test.

STILWELL LEAVES WALTON LAKE

W. E. Stilwell who for some time has been superintendent at Walton Lake Farms, Monroe, N. Y., has resigned his position. Mr. Stilwell has had a long experience in the Holstein business, for some eight years was superintendent of the great D. W. Field herd and under his care the cattle made a number of very large records, both in long and short time test. Perhaps the most noted short time record was that of Rag Apple Aaggie Colantha who, as a senior four-year-old, made 713.4 lb. milk and 41.27 lb. butter in seven days, 2,851.3 lb. milk and 163.67 lb. butter in thirty days, one of the greatest records ever made by a heifer of her age. Mr. Stilwell has had several very tempting offers and has not yet decided just where he will locate permanently. He is now residing at Middletown, N. Y., and is spending part of his time looking over some of the great herds in that vicinity.

HOWARD HEIFERS PRODUCE

They have been doing some good work at the Westside Stock Farms. John M. Howard has been testing four heifers, all two-year-olds, one of which is a daughter of King Pontiac Hilldale and three are daughters of Westside King Vale.

Westside Aaggie Pontiac Vale made 24.81 lb. butter in seven days as a junior two-year-old. She is a product of the Westside herd, but is now owned by Mr. Howard's son-in-law, Edwin P. Smith. Westside Zuba Hilldale made 23.21 lb. butter in a week, calving at 30 months old. Westside May Vale made 22.23 lb. butter at 26 months old and at the same age Westside Mona Pauline Vale made 21.90 lb.

Westside King Vale sire of three of the heifers, is a son of King Korndyke Sadie Vale from Westside Zuba Veeman 2d, a cow of Mr. Howard's breeding with official records of 21.26 lb. butter in a week as a junior two-year-old, 29.79 lb. as a three-year-old and 31.29 lb. butter in seven days at full age. She produced 95.7 lb. milk in a day.

MISSOURI COWS ADVERTISE

There is quite a little interest being created around Cape Girardeau, Mo., by the production of two purebred Holsteins owned by the Agricultural College. One of these cows Tentie Korndyke Abigail made 4,768.7 lb. milk in 85 days. The other Queen Beryl Segis Pontiac made 1,291.4 lb. milk from February 10th to March 1st, an average of 71.7 lb. a day for the 18-day period. This is far more than any of the local cows have ever done. In consequence, the local dairymen are very much interested in the pair. pair.

KANSAS MILK RECORD

Holly Crest Diamond Pontiac owned by F. H. Bock of Wichita, Kansas, made 761.4 lb. milk in a seven-day test recently making 115.9 lb. in a day. This is the highest Kansas milk record.

ASHHURST HAS GOOD STOCK

The Ohio State sale will be held at North Randall, Ohio, May 2d and 3d, and to it the Ashhurst Farm is consigning a son and daughter of Finderne Pride Fayne, that good son of Finderne Pride Johanna Rue, former world champion year record cow.

The son is from Lady Alice Pontiac Korndyke 24,785 lb. milk and 1,203 lb. butter in a year as a four-year-old. She is a daughter of Fairview Pontiac Beets Korndyke, one of the few sons living of the famous sire Pontiac Korndyke. This young bull, who is owned by Ash Brothers and Blosser Brothers, of Coraopolis, Pa., has wonderful records back of him, his two nearest dams averaging 1,336.8 lb. butter in a year. We are assured that he is a splendid individual, and he certainly has remarkable backing. The daughter of Finderne Pontiac Fayne has a record of 24.89 lb. butter in seven days made at five-years-old. She is a fine individual, and is bred to Ona Sensation, that remarkably bred young bull, who is owned jointly by Ash and Nims Brothers.

Ona Sensation in his pedigree intensifies the blood of the great Ona Clothilde De Kol tracing to this cow three times in a six generation pedigree. His sire, Sensation, is from Lindale Bonnie Pauline, 1,250 lb. butter and over 30,000 lb. milk in a year. Sensation is a grandson of Ona Clothilde De Kol, who as an eleven-year-old cow made over 11,000 lb. butter and over 25,000 lb. milk in yearly test.

Ona Sensation is son of Meadow Holm Wayne Clothilde 697.7 lb. butter and 16,025 lb. milk in a year as a junior two-year-old. She is by Sir Clothilde Concordia, a grandson of Ona Clothilde De Kol, and her dam Ona Pontiac Wayne, who made over a thousand pounds of butter in a year, is a daughter of Ona Clothilde Wayne, 1,266 lb. butter in a year, who in turn is a daughter of Ona Clothilde De Kol 2nd, 1,044 lb. butter in a year, whose dam is the 1,100 lb. cow, Ona Clothilde De Kol.

This is the only instance of four direct generations of thousand pound cows and Meadow Holm Wayne Clothilde is expected to stretch this into five.

ONTARIO GOVERNMENT BUYS BULL

At the dispersal sale of T. Gordon Brown of Ancaster, Ontario, the Ontario government purchased the two-year-old herdsire, Violets Champion for $525. The top price obtained for a cow was $470 for Ourvilla Belle Dewdrop purchased by K. Fliss of Millgrove. Sir John Eaton of Toronto purchased one for $460. The total was $12,336, the sales average being $250.

VIOLET REPEATS

Idaho Violet owned and bred by the University of Idaho, recently smashed her last year's state record by making 21,379.3 lb. milk and 1,007.4 lb. butter in a year. This is the second record above 1,000 lb. butter, Violet has made.

JOHNSTOWN DAIRY DAY

The Johnstown Dairy Day is always a notable Colorado Holstein event and the 1922 event was even better than ever, and was attended by a large crowd. One hundred head of registered cattle passed before A. C. Oosterhuis, of Oconomowoc, Wisconsin, dairy extension lecturer for the Carnation Milk Co. The Holstein awards are as follows:

Aged Bull—Crowley and Letford first; VanMeter and Krebil second; Whowell and Polley third.

Under three and over two, Whowell and Polley.

Under two and over one—Leroy Wailes first; S. A. Gray second; VanMeter and Krebill third.

Bull Calves—Agricultural College first; A. Dye second; S. A. Gray third.

Aged Cow—Whowell and Polley first; Crowley and Letford second; Agricultural College third.

Over three and under five—Agricultural College first; Leroy Wailes second; VanMeter and Krebill third.

Over two and under three—Whowell and Polley first; Crowley and Letford second.

Yearlings—Whowell and Polley first and second; Agricultural College third.

Heifer calves—Agricultural college first; Crowley and Letford second; Whowell and Polley third.

Produce of dam—Whowell and Polley first; VanMeter and Krebill second.

Get of sire—Whowell and Polley first; Crowley and Letford second; Agricultural College third.

Herd—Whowell and Polley first; Crowley and Letford second; Agricultural College third.

Grand Champion Bull—Whowell and Polley (Holstein); reserve, Charles Ewing (Guernsey).

Grand Champion Cow—J. W. Purvis (Guernsey); reserve, Whowell and Polley (Holstein).

Best fitted herd—Whowell and Polley (Holstein); J. W. Purvis (Guernsey); Agricultural College (Holstein).

Cow producing most butter fat—1st, Whowell and Polley 13,733 lb. milk 612½ lb. butter fat; 2d, Crowley and Letford 17,129 lb. milk, 598.4 lb. butter fat; 3d, Crowley and Letford 17,425 lb. milk, 583.4 lb. butter fat. (Test covering period of one year.)

VETERAN HOLSTEINER IN THE SOUTH

It might interest some of your readers to know what they are doing in the dairy and cattle business in this far-off section. I am only a visitor so can only speak of this vicinity, Marion County near Ocala. They have on this farm about 3,000 acres, over 2,000 fully cleared and entirely free of stumps, well-fenced and nicely divided into 40- and 80-acre fields, nine windmills and three barns, one, the largest I have ever seen, with boxes and stalls for 125 horses, feed rooms and over 1,000 head stock cattle, hogs, sheep and goats. They now have 100 horses besides mules and jacks and 50 dairy cows including 25 Holsteins lately from Wisconsin some few registered, balance grades. They hope soon to have between 100 and 200. The milk is sent to the creamery at Ocala, eight miles from here, lately established and now handling about 500 gallons of milk daily, which is used in wholesale and retail ice cream, butter and cottage cheese on these farms. They have five silos of 300 tons each formerly used for beef cattle and have been carrying 600 to 700 beef cattle, mostly Aberdeen Angus of which there are 100 registered here yet, I think the best herd in the south. But as the bottom has dropped out of beef business. they are now getting into the dairy, which should have been done before the slump in prices.

Last season there was shipped from this place some 50 tons of fine sweet potatoes and lots were fed to stock as being too large for market. Have in now some 25 acres of stock beets and rutabagas planted about Christmas, 150 acres in field corn, 30 acres in sweet corn, 200 acres in oats and rye. Now putting in 200 acres for silage in corn and sorghum, some peas, can grow anything here for stock or garden. Not much citrus fruits in this vicinity though lots in this country. Have now strawberries and vegetables in plenty. Some lettuce is being shipped, also cabbage. But prices have been so low and freight so high that farmers won't ship.

J. R. BEUCHLER, *an old time Holsteiner.*
Anthony Farms, Anthony, Florida.
March 15. 1922.

WINTERTHUR BULLS FOR PENNSYLVANIA

At the second annual bull sale held at Winterthur Farms, Winterthur, Del., on March 17th, 33 young bulls were sold at an average price of $213 per head.

In view of the depressed condition of the purebred cattle market, coupled with the fact that a large proportion of the bulls offered, were very young, the prices received were considered fairly satisfactory.

An incident worthy of note in connection with this sale was the fact that 17 out of the 33 head were purchased by Holstein breeders in the state of Pennsylvania.

Carl G. Allen, Williamsport, who is proprietor of the Allendale Farms, at Montoursville, Pa., purchased two of the very best bred bulls in the entire sale. Both of these young bulls were sired by King of the Ormsbys—the noted sire now at the head of the Winterthur Farms herd—and out of cows with splendid seven-day and yearly records.

The oldest bull was born February 13, 1921, and has for his dam Lady Pietertje Trijntje Segis, a cow with a yearly record of 971 lb. butter and 21,627 lb. milk and also a seven-day record of 30.4 lb. butter and 524 lb. milk. This latter record being made only a few days before the sale. The other calf purchased by Mr. Allen was born November 16, 1921. His dam has a semi-official record of 953 lb. butter and 21,488 lb. milk in a year and a seven-day record of 27.3 lb. butter and 598 lb. milk.

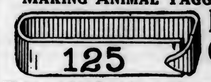
Both of these young bulls are not only bred in the purple, but are very high class individuals and they should prove a valuable addition to the high class Holstein herd maintained at Allendale Farms.

Four very high class bulls were purchased by the Warriors Mark Holstein Breeders' Association, Warriors Mark, Pa. Mr. George Rumberger, is secretary of this Association and judging from the quality of the bulls which they have selected, these people will be heard from within the next few years. The balance of the young bulls purchased by Pennsylvania parties at this sale, mostly went to progressive Holstein breeders in Chester and Delaware counties.

RATIONS SUGGESTED

The New York State College of Agriculture in its Savage Feed Service recommends for use at current prices the following grain mixtures:

Cows in milk
300 lb. wheat bran
300 lb. ground oats
400 lb. hominy
700 lb. gluten feed
200 lb. cottonseed meal 43%
100 lb. oil meal



Dry cows, young stock and calves
45 lb. ground oats
45 lb. hominy or corn
10 lb. oil meal

A REAL BULL
Born February 15, 1921

Sire: a grandson of King of the Pontiacs.
Dam: a 32 lb. daughter of Aaggie Cornucopia Johanna Lad. There are FOUR century sires in his pedigree. He is a splendid individual, mostly white. Write for price and pedigree to

THE WAUKESHA SHOW

The Waukesha Dairy show was held in the pavilion March 15th and Professor W. W. Yapp of the Illinois Agricultural College, passed upon 65 head of Holsteins. In many classes competition was strong. In the aged bull class the first prize was won by Shadford Segis Hartog, owned by the Carnation Stock Farm. This bull, a son of Matador Segis Walker was also the senior and grand champion male, and with two of his brothers, was successful in the get of sire class. He is only three years old is a good size and of excellent quality.

In the senior bull-calf class, one of the largest classes in the bull division, the first prize was won by Nockdair Canary Walker Paul, owned by A. A. Fuller & Sons of North Lake, and bred by Baird Brothers, Waukesha. Second went to Carnation Stock farm on Matador Segis Walker 11th, and 3d to L. V. Garvens on Nockdair Canary Daisy Paul. Junior bull-calf, 1st went to Baird Brothers on Nockdair Canary Urmagel Paul; 2d went to Klussendorf Brothers on King Netherlands Fayne.

There were only four animals in the aged cow class. First went to Korndyke Somita DeVries owned by Klussendorf Brothers. She was made senior and grand champion female. T. J. Jones had the third prize animal while second and fourth went to Bonair Farm. The yearling class was very strong. First and second went to the Norris Farm on two animals fed by the Norris boys in last year's calf club. The first prize heifer was later made junior champion. The get of sire class had eleven entries. Carnation Farms won first on get of Matador Segis Walker, Baird Brothers second on get of Cedar Lawn Canary Paul.

The awards were:

Bull 3 years or over—1st, Carnation Stock Farm; 2d, Norris Farm.

Bull 2 years and under 3—1st, Riverdale Farm.

Bull 1 year and under 2—1st, William Basting.

Bull, senior calf—1st, A. A. Fuller & Sons; 2d, Carnation Stock Farm; 3d, L. V. Garvens; 4th, Fred Weiffenbach; 5th, Klussendorf Brothers.

Bull junior calf—1st, Baird Brothers; 2d, Klussendorf Brothers; 3d, H. W. Carr & Son; 4th, Norris Farm.

Cow, 3 years or over—1st, Klussendorf Brothers; 2d, Bonair Farm; 3d, T. J. Jones; 4th, Bonair Farm.

Heifer, 2 years and under 3—1st, Bonair Farm; 2d, Klussendorf Brothers; 3d, T. J. Jones; 4th, T. J. Jones.

Heifer, 1 year and under 2—1st, Norris Farm; 2d, Norris Farm; 3d, Muckleston Brothers; 4th, Klussendorf Brothers; 5th, Bonair Farm.

Heifer, senior calf—1st, Bonair Farm; 2nd, Bonair Farm; 3rd, W. J. Mann & Son; 4th, Norris Farm; 5th, I. W. Carr & Son.

Heifer, junior calf—1st, William Basting; 2d, H. W. Carr & Son; 3d, Klussendorf Brothers; 4th, H. W. Carr & Son; 5th, Klussendorf Brothers.

Breeders' Young Herd—1st, Bonair Farm; 2d, Klussendorf Brothers; 3d, Muckleston Brothers; 4th, H. W. Carr & Son.

Breeders' Calf Herd—1st, Bonair Farm; 2d, Klussendorf Brothers; 3d, H. W. Carr & Son; 4th, Muckleston Brothers.

Get of Sire—1st, Carnation Stock Farm; 2d, Baird Brothers; 3d, Norris Farm; 4th, Bonair Farm; 5th, Bonair Farm.

Produce of cow—1st, Bonair Farm; 2d, William Basting.

WESTERN COW TESTING SPECIALIST

Mr. W. S. Murdock, a graduate of the Utah Agricultural College, has been appointed Cow Testing Association specialist for the Western office of the Dairy Division of the United States Department of Agriculture. Mr. Murdock has had several years' practical experience with cow testing work and as county agricultural agent. For several years he was Extension Dairy Agent for the State of Washington, and was recently employed as agent for the Minidoka Reclamation Project, Rupert, Idaho. His many friends wish him success in his new position.

There are scrubbers of halls and scrubbers for hire,
But the worst scrub of all is the old scrub sire.

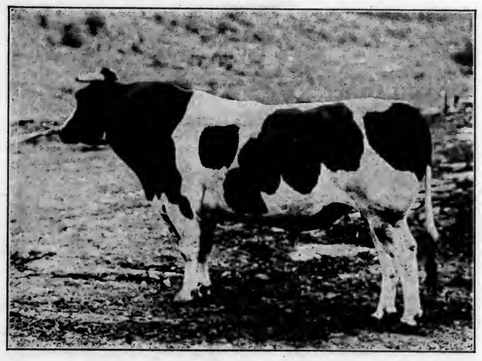
RESEGEDALE DISPERSAL SALE

40--Head of Purebred Holsteins--40



Saturday, April 29, 1922, at 1 o'clock sharp
at the Farms, South Gibson, Pa.

This herd consists of some of the best bred and best individuals ever offered for sale in Pennsylvania—Fresh Cows, Fall Cows, Bred Yearlings, Calves and Young Bulls ready for service.

The offerings include: Three daughters of 30 lb. cows.

A daughter of King Lyons with a 20 lb. two-year-old record, her three direct dams all have 30 lb. seven-day-records.

TWENTY daughters of KING PONTIAC ALCARTRA PIETJE, better known as the $10,000 Bull. His daughters are wonderful individuals and producers. He already has 16 in the A. R. O. list including a 26 lb. three-year-old, a three-year-old with 23.63 lb. butter, 568 lb. milk, in 7 days, 2,400 lb. milk, 97 lb. butter in 30 days, 17,169 lb. milk, and 718 lb. butter in a year in cow testing association work, while in July she made 632 lb. milk and 25.08 lb. butter. Others have done nearly as well.

A ONE-THIRD INTEREST in KING PONTIAC ALCARTRA PIETJE will be sold. He is by King Segis Pontiac Alcartra and his dam is Fairmont Zerma Segis Pietje, 35.61 lb. butter, 608 lb. milk in seven days, the former WORLD'S CHAMPION junior four-year-old. He is a show bull, and the sire of show stuff. This is the chance of a lifetime to get in on a real bull, sound and sure.

SIX Daughters of DUTCHLAND KONIGEN CREAMELLE BOY whose 14 nearest dams average in 7-day work, 720 lb. milk, 32 lb. butter. His ten nearest dams in year work average 27,000 lb. milk and 1,100 lb. butter. His four DIRECT dams average 26,254 lb. milk, 1,030 lb. butter. Two of his heifers are from daughters of KING and one from a daughter of the century sire, Tidy Abbekerk Prince.

There will be a small but good consignment from the Lathrop Farms, Montrose, Pa. which will include five head bred to their 34 lb. son of King Valdessa Pontiac. These are a choice lot.

Holmont Farm of South Montrose is sending some granddaughters of King of the Pontiacs, sired by a 40 lb. bull. You will like these.

The farms are located about half way between Binghamton and Scranton, on line of the D. L. & W. Railroad. Trolley service from Scranton to Nicholson every two hours. Trains leave Scranton 9 A. M., Binghamton 8 A. M. for Nicholson, Pa., and cars will be provided to carry visitors to the farms. Autos turn off Lackawanna trail at Nicholson, Foster or Kingsley, Pa.

Herd under Federal Supervision. 60 day retest privilege.

Not How Many But How Good

Here is another member of my herd, a heifer combining outstanding individuality with a wonderful pedigree. She has ranked high at great shows where the Queens of the Breed competed for highest honors. She has wonderful year production back of her—her two nearest dams average 1,128.67 lb. butter, 25,664 lb. milk; her five nearest dams average 1,062.35 lb. butter, 24,458.9 lb. milk.

BEAUTIFUL JOSEPHINE 3d—Grand Champion at Minnesota State Fair when only a yearling, first prize senior yearling at the National Dairy Show and first prize senior yearling at the Fargo Interstate Fair 1921.

Three Fine Young Bulls
Priced for Quick Sale

No. 1 is 14 months old from a cow on ten months test. She has a seven day record of 27.88 lb. butter, 657.9 lb. milk, and produced 2,775.7 lb. milk, 114.77 lb. butter in thirty days.

No. 2 is 7 months old and is from a four-year-old with 19.25 lb. the first A. R. O. record I ever made.

No. 3 is 11 months old from an untested dam. Is a dandy calf, about ready for service.

The sire of these bulls is from a 22.55 lb. junior four-year-old and the second dam is a 28.48 lb. cow with a yearly record of 20,919.9 lb. milk, 830.3 lb. butter.

My herd is under State and Federal Supervision and has passed one clean test.

"IT'S A WINNER"

The Holstein Breeder and Dairyman

VOL. I HARRISBURG, PA., MAY 8, 1922 No. 9

BRIDGING THE GAP

BETWEEN the primal producer and the ultimate consumer the gap is generally a wide one, particularly in agriculture. The amount of the consumers' dollar that reaches the pockets of the farmer is quite small and for some reason or other the dollar seems to diminish very rapidly between the start and the end of its journey. Our present story tells how this gap has been bridged by one farming establishment, the management of which have secured for themselves the whole hundred cents of the consumers' dollar.

Brooklandwood Farms is one of the best known cattle breeding establishments of Maryland and is located at Lutherville not far from Baltimore. On the 480 acres there are kept some 50 Holsteins and about one hundred Guernseys. Captain Emerson, the owner, is the principal owner of the Emerson Hotel, one of the leading Hotels of Baltimore. The milk is separated at the farm and the cream is used at the hotel but this leaves a large quantity of skim milk which Captain Emerson and farm manager, G. H. Hibberd, determined to realize a good price for.

The Brooklandwood Farms are on the main highway between Baltimore and York, Pa. Thousands of autos pass over this great thoroughfare every fine day. The beauty of the farm and the fame of its herds of cattle attract many visitors who frequently expressed the desire to purchase dairy products. Some of the visitors did not care for milk in liquid form and as the business gradually grew, it was determind to put in a few other liquid refreshments and so in 1918 ginger ale and citro were kept on hand. Then in 1919 the drink, choco-lac was invented and placed on sale. So great was the demand that it quickly surpassed all the other products sold. This is a sweetened preparation of milk and cocoa with flavoring and other ingredients. Besides choco-lac, eggs and milk are sold and at the present time they are building a refreshment parlor and bar to accommodate the tremendous trade which Brooklandwood enjoys on fine Sundays and holidays. The visitors delight in looking over the calf nurseries in which can be seen the little Holstein and Guernsey babies. The test barn is another center of interest. Everything is kept spotlessly clean and Brooklandwood is one of the greatest advertisements for clean milk that can be found in the state.

Of course this trade requires a lot of extra work for there are often a hundred or more visitors at one time in the large barn. On some days it has been necessary to have three directors of traffic and five clerking in the store. Quite often, Mr. Hibberd assured us, 5,000 drinking cups have been used in a day and they estimate that 1,500 cars holding 5,000 people sometimes come to the farm in one day.

During the last four months of 1921, 14,391 bottles of milk were used besides the amount consumed in paper drinking cups. The creamery business statement as submitted to Captain Emerson for the four months is herewith appended:

635 gal. choco-lac @ $1.60	$1,016 00
1,612½ gal. choco-lac @ $2.00	3,225 00
940 gal. bottled milk @ $.80	752 00
989½ gal. milk in cups with choc. @ $1.70	1,187 00
1,072¾ gal. buttermilk in bottles @ $.80	858 20
852½ gal. buttermilk in cups @ $1.00	852 50
333 1-16 gal. cream @ $4.00 a gal.	1,336 25
Total	$9,227 35

In studying over this statement you will notice that there are two prices for choco-lac. One is for the preparation sold in bottles, the other is sold in paper cups and consumed on the premises. About four-fifths of the choco-lac is skim milk. It can be readily seen that a goodly price is realized for this by-product. The business has grown and is growing at a phenomenal rate. During 1918 the total

Herd under the Accredited Plan

The Springdale Herd
is headed by
Woodmont Echo Sylvia Champion

His sire is a son of Champion Echo Sylvia Pontiac. His dam, Butter Boy Empress, 30.27 lb. butter in a week, one of the best show cows exhibited last year, was first in the aged cow class, the A.R.O. class and was Grand Champion at the 1921 New York State Fair.

Our herd is strong in Spring Farm, Pontiac, Tobe and Korndyke blood. It has been built up for 16 years on a basis of profitable production and reproduction. Animals from this herd will make good anywhere.

B. F. JONES & SON
South Montrose, Pa.
B. F. JONES W. HUGH JONES

Plum Spring Farm Copia

heads my herd of 70 head, none of which are more than 5 years old. His dam produced 32.73 lb. butter in 7-day official test, averaged over 97 lb. milk a day for thirty days and is a granddaughter of

PONTIAC KORNDYKE

His four nearest dams have 7-day official records averaging 35.31 lb. butter, 606.4 lb. milk.

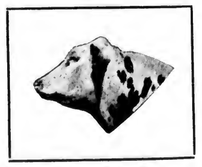
Three Fine Young Bulls
Priced for Quick Sale

No. 1 is 14 months old from a cow on ten months test. She has a seven day record of 27.88 lb. butter, 657.9 lb. milk, and produced 2,775.7 lb. milk, 114.77 lb. butter in thirty days.

No. 2 is 7 months old and is from a four-year-old with 19.25 lb. the first A. R. O. record I ever made.

No. 3 is 11 months old from an untested dam. Is a dandy calf, about ready for service.



The sire of these bulls is from a 22.55 lb. junior four-year-old and the second dam is a 28.48 lb. cow with a yearly record of 20,919.9 lb. milk, 830.3 lb. butter.

My herd is under State and Federal Supervision and has passed one clean test.

The Holstein Breeder and Dairyman

VOL. I HARRISBURG, PA., MAY 8, 1922 No. 9

BRIDGING THE GAP

BETWEEN the primal producer and the ultimate consumer the gap is generally a wide one, particularly in agriculture. The amount of the consumers' dollar that reaches the pockets of the farmer is quite small and for some reason or other the dollar seems to diminish very rapidly between the start and the end of its journey. Our present story tells how this gap has been bridged by one farming establishment, the management of which have secured for themselves the whole hundred cents of the consumers' dollar.

Brooklandwood Farms is one of the best known cattle breeding establishments of Maryland and is located at Lutherville not far from Baltimore. On the 480 acres there are kept some 50 Holsteins and about one hundred Guernseys. Captain Emerson, the owner, is the principal owner of the Emerson Hotel, one of the leading Hotels of Baltimore. The milk is separated at the farm and the cream is used at the hotel but this leaves a large quantity of skim milk which Captain Emerson and farm manager, G. H. Hibberd, determined to realize a good price for.

The Brooklandwood Farms are on the main highway between Baltimore and York, Pa. Thousands of autos pass over this great thoroughfare every fine day. The beauty of the farm and the fame of its herds of cattle attract many visitors who frequently expressed the desire to purchase dairy products. Some of the visitors did not care for milk in liquid form and as the business gradually grew, it was determind to put in a few other liquid refreshments and so in 1918 ginger ale and citro were kept on hand. Then in 1919 the drink, choco-lac was invented and placed on sale. So great was the demand that it quickly surpassed all the other products sold. This is a sweetened preparation of milk and cocoa with flavoring and other ingredients. Besides choco-lac, eggs and milk are sold and at the present time they are building a refreshment parlor and bar to accommodate the tremendous trade which Brooklandwood enjoys on fine Sundays and holidays. The visitors delight in looking over the calf nurseries in which can be seen the little Holstein and Guernsey babies. The test barn is another center of interest. Everything is kept spotlessly clean and Brooklandwood is one of the greatest advertisements for clean milk that can be found in the state.

Of course this trade requires a lot of extra work for there are often a hundred or more visitors at one time in the large barn. On some days it has been necessary to have three directors of traffic and five clerking in the store. Quite often, Mr. Hibberd assured us, 5,000 drinking cups have been used in a day and they estimate that 1,500 cars holding 5,000 people sometimes come to the farm in one day.

During the last four months of 1921, 14,391 bottles of milk were used besides the amount consumed in paper drinking cups. The creamery business statement as submitted to Captain Emerson for the four months is herewith appended:

635 gal. choco-lac @ $1.60	$1,016 00

sales were under $7,000. With the introduction of choco-lac and a raise in the price of milk this jumped to over $15,600 for milk and choco-lac for 1919, which was more than doubled in 1921. The total sales for the year ending December 31, 1921 was $35,162.72 as will be seen by the apended statement which covers a four-year period:

	1918	1919	1920	1921
Milk, etc. ...	$6,057 62	$15,642 86	$20,677 43	$33,499 88
Citro	396 71	700 35	924 10	944 58
Ginger ale ..	389 15	569 13	483 75	718 26
Total ..	$6,843 48	$16,912 34	$22,085 28	$35,162 72

At the head of the Guernsey herd stands Audecity of Edgemoor and Jacqueminot of Lindavista. Both are show bulls and both sire show stock, From the standpoint of individuality the Guernsey herd is superior to the black and white one, the heifers, especially, look as though they had been all cast in one mould.

At the head of the Holstein herd stands Brooklandwood King Pontiac, a home bred bull, a grandson of King Segis Pontiac Alcartra from a granddaughter of King of the Pontiacs. King was first prize aged bull, senior and grand champion at the Maryland State Fair 1920 and 1921 and in 1920 headed the first prize exhibitors herd and sired the first prize "get of sire" and other prize winners. No less a judge than Bob Haeger has pronounced him one of the very best animals he ever looked over.

It is not the intention of Brooklandwood to make sensational records but quite a number of the animals are kept on long-time test and milked three times a day. There are three granddaughters of King Segis Pontiac Alcartra that in their first lactation period and with three times a day milking have produced over 17,000 lbs. milk in 365 days. There are six on test at the present time and all making a good showing. A number of good records have been made on this farm. The largest for milk production was 23,551 lb. made by the seven-year-old Lily Lyons Hengerveld; her butter production was 897.68 lb. The largest butter record is 1,030.46 lb. from 21,625 lb. milk made by Dossie Butter Boy Burton. A couple of sensational yearling records have been made. Rosetta Hengerveld De Kol 2d at 21-months-old made 16,409 lb. milk and 657.63 lb. butter and Brooklandwood Pietertje Queen at 20-months-old produced 15,189 lb. milk and 594.55 lb. butter in a year. Some 20 cows have completed year records. The first 15 averaged over 18,950 lb. milk and this includes the two yearlings and two junior two-year-olds.

There are a number of things about this farm that would interest both farmer and city man. One is a schedule or report which is filled out daily by every employee and affords the superintendent or employer a detailed account of the work done from 6 A. M. to 5 P. M. This schedule is divided into 30-minute periods and tells what field was worked in, what implements were used, if horses were used and if so, how many and the number of hours they labored.

Close to the barn is a cement swimming pool which is in great favor with the help during the summer months and from which the water can be used in case of fire. The boys have fire drill regularly and Mr. Hibberd assured us from the sounding of the fire alarm to the time when a stream of water would be going on the flames would be very short, that each of the boys knew his place and what to do. It is needless to say that it takes a real executive to manage the many details on this establishment, and Mr. G. H. Hibberd who until lately has been secretary of the Maryland Holstein-Friesian Association, is the man for the place.

Captain Isaac E. Emerson, the owner of Brooklandwood, is head of the Emerson Drug Co., and the Maryland Glass Co., and many other business enterprises. The Emerson Drug Co., manufactures Bromo-Seltzer with which many of the readers of this paper are doubtless acquainted, yet in the vicinity of its manufacture choco-lac surpasses bromo-seltzer in popularity.

Philly After National Dairy Show

A COMMITTEE of business men of Philadelphia and vicinity was appointed April 13th to find ways and means to bring the World's Dairy Congress and the National Dairy Show to Philadelphia. These events will be held on consecutive weeks in some one of the chief cities of the United States in October, 1923, and are expected to draw an attendance from home and abroad of half a million people.

The meeting at which the committee was appointed was held at the Bellevue-Stratford Hotel, under the auspices of the Philadelphia Inter-State Dairy Council. Dr. Clyde L. King, of the University of Pennsylvania, presided as head of the Council. Professor H. E. Van Norman, president of the World's Dairy Congress Association and also of the National Dairy Association, which conducts the annual show, came from Washington, D. C., and W. E. Skinner, secretary-manager of the National Dairy Association, from Chicago to tell the conferees of the preliminary requirements for the two big meetings.

The needs of the congress are comparatively simple. It requires a big auditorium and several small halls for general and sectional meetings. The show, however, will have to have many thousand square feet of floor space—250,000 for machinery exhibits, 100,000 for educational and working exhibits, 150,000 for cattle stalls, an arena, 200 feet in diameter, surrounded by upwards of 6,000 seats, and a meeting place for couple of thousand people.

The Philadelphians said that plenty of accommodation could be provided by the erection of some of the Sesqui-Centennial Exposition buildings for that purpose. The Exposition is to be held in 1926. While the erection of buildings now would entail additional trouble and expense, the congress and show would bring to Philadelphia people from all parts of the world, and would serve as a giant advertisement for the Exposition. The proposal will be presented to the Exposition management by the committee, which is headed by Fred Rasmussen, secretary of Agriculture for the State of Pennsylvania.

The World's Dairy Congress was provided for by the Federal Agricultural Act, approved March 3, 1921, which authorized the President of the United States to invite foreign governments to send representatives. It will be managed by the World's Dairy Congress Association—formed of representatives of all the branches of the American dairy industry—in coöperation with the United States Department of Agriculture. The plan to hold the National Dairy Show in the same city with and immediately after the congress was decided upon to give visitors a chance to see the exhibits as well as to listen to the discussions.

The congress will be the first international dairy meeting to be held in this country and will be broader in scope than any similar meeting ever held anywhere. Milk and milk products will be approached from every angle. The farmer, the milk products manufacturer, the distributor, the machinery manufacturer, the scientist, the physician, the educator, the child or social welfare worker, the dietitian will each have the opportunity to hear all the newest phases of his subject discussed from the universal point of view.

A Worthy Example

By D. M. Cresswell

IN Lycoming County, Pennsylvania, in the vicinity of Williamsport, there lives and operates a remarkable organization of progressive, substantial breeders of purebred Holsteins. Their active operations for more than ten years as an organization have done many things for the advancement of purebred cattle, not only at home, but throughout that territory.

Many of the members of this organization, which is known as the Central Pennsylvania Holstein Breeders' Association of Lycoming County, make frequent visits to the Pennsylvania State College. Naturally they have drifted into the magnificent dairy barn on the college campus to view the college herd and talk "cow" with the men of the dairy department of the agricultural school.

It appears that these men were particularly impressed with the remarkable results obtained by the college from the largely average purebreds that limited funds made available. But they were still more greatly impressed by the fact that in the row after row of stalls there were an unbelievably large number of empty stanchions.

"Why are so many stanchions empty?" they asked. The answer was simply to the effect that there was no money available at the college to purchase the kind of animals it should have there.

If they had seen a student dairy cattle judging class at work they would realize that the college has only four or five cows of each breed that are presentable and of the type that students should work with to familiarize themselves with the points that indicate a first-class milker or breeder.

The men from Lycoming County got their heads together when they went home. "Why not send the college an 'A-number-one' Holstein heifer to endow one of these empty stanchions?" they asked. The idea was given enthusiastic approval all around, and through the college, D. K. Sloan, the Bradford County agent, was asked to look through the barns and select the best heifer he could find. Needless to say, a fine individual was picked by Sloan, who holds an enviable reputation throughout Pennsylvania as a judge of dairy cattle.

The animal selected was a junior two-year-old heifer, named Landar Pontiac Dorsky, 633,409, born Septem-

MEMBERS OF THE CENTRAL PENNSYLVANIA HOLSTEIN BREEDERS' ASSOCIATION OF LYCOMING COUNTY.

sales were under $7,000. With the introduction of choco-lac and a raise in the price of milk this jumped to over $15,600 for milk and choco-lac for 1919, which was more than doubled in 1921. The total sales for the year ending December 31, 1921 was $35,162.72 as will be seen by the apended statement which covers a four-year period:

	1918	1919	1920	1921
Milk, etc. ...	$6,057 62	$15,642 86	$20,677 43	$33,499 88
Citro	396 71	700 35	924 10	944 58
Ginger ale ..	389 15	569 13	483 75	718 26
Total ..	$6,843 48	$16,912 34	$22,085 28	$35,162 72

At the head of the Guernsey herd stands Audecity of Edgemoor and Jacqueminot of Lindavista. Both are show bulls and both sire show stock, From the standpoint of individuality the Guernsey herd is superior to the black and white one, the heifers, especially, look as though they had been all cast in one mould.

At the head of the Holstein herd stands Brooklandwood King Pontiac, a home bred bull, a grandson of King Segis Pontiac Alcartra from a granddaughter of King of the Pontiacs. INTENTIONAL SECOND EXPOSURE

ber 9, 1919, and fresh September 16, 1921. She is settled in calf to an unusually good bull and at the time of selection was milking forty pounds a day. She is now at the college and over her stanchion one sees her new name, "Lycoming Breeders' Choice" and a statement to the effect that she was donated by the Lycoming organization. She comes from the farm of L. M. H. Losch, near Montoursville.

"LYCOMING BREEDERS' CHOICE"
Presented to the Pennsylvania State College by the Central Pennsylvania Holstein Breeders' Association of Lycoming County.

The Lycoming men went down into their own pockets for hard-earned dollars and gladly made up the $400 necessary to buy the heifer for the college. Her owner had refused a still greater amount for the cow at private sale, but was more than willing that she should go to the college to "endow an empty stanchion."

The result of this voluntary gift gave "Dave" Sloan an idea which he immediately proceeded to put into operation. He has put this great college need up to his fellow county agents and they are taking the stanchion endowment plan to the many breeders' associations and other farm organizations throughout the state. An appeal is to be made to the purebred cattle breeders of the state who are under the Accredited Herd plan to donate to the college herd such cows as they feel able to release.

According to Professor A. A. Borland, head of the dairy department of the college, there is room in the college barn for between fifty and sixty good cows of the Holstein, Guernsey, Jersey and Ayrshire breeds, the number of each needed being about equal. The college herd was wiped out a number of years ago by disease, and since that time the efforts of the department have worked wonders with the material available with funds that amounted to not nearly what they should for an institution that has done so much for the dairy industry of Pennsylvania. Excellent advanced registry records have been obtained from even the ordinary cow equipment available, and the college work could be greatly enhanced through the addition of first class material.

In taking their gift action, the Lycoming breeders have started the provision of such equipment that state funds could purchase, but they appreciated the necessity for immediate action. They have done their bit to provide proper quality cattle for the college that it might be able to best function in instructing the coming cattle breeders of Pennsylvania.

According to the last census report, the dairy cattle industry of the state greatly surpasses any other class of live stock in value. In fact, of the total value of all domestic animals in the state, approximately half is represented by its dairy cattle. The present conditions throughout the state also prove conclusively that no other feature of live stock husbandry shows similar development as does dairy farming and purebred cattle breeding for the past ten-year period.

Already many breeders and organizations are expressing their willingness to follow the action taken by the Lycoming breeders.

Missouri Banker Endorses Dairying

BANKERS and business men of Baton Rouge, Louisiana, have formed an organization headed by Dr. W. R. Dodson, to raise a sum of $25,000 and loan that money to farmers for the purpose of purchasing high grade dairy cattle along the lines of the Pettis County Plan. In order that the officials of the Baton Rouge Organization might have full information as to how the Pettis County Association operated, Dean Dodson wrote to Mr. W. W. Barrett, president of the American Exchange Bank of Sedalia, Missouri. In return Mr. Barrett wrote to W. P. Cownell, president of the Louisiana National Bank, and strongly indorsed the Pettis County coöperative Dairy Plan. His letter follows:

At the request of Dean W. R. Dodson, of your city, we are writing you with reference to the Holstein-Friesian association of this country.

This company was formed some years ago by our county farm agent, and the money was subscribed by the business men and farmers with which they purchased a herd of thoroughbred Holstein dairy cows. They were put out to farmers on contract, with which I presume you are familiar with the details as I think our farm agent has furnished Dean Dodson with the full details of the organization and for this reason I will not go into this part of the matter.

I wish to say that we have found this plan of bringing dairy cows into the community has been a great stimulus to the dairy industry and we find that especially during the hard times which have prevailed, over the country recently. The dairy people have always had money to take care of their obligations and seem to be prosperous, furthermore, I wish to say that I believe the plan as outlined for the organization of the association to bring in these dairy cows is not only a good one for the community but a profitable one to the investor.

You will have some advantage if you go into the business now over us, as we purchased the cows when they were much higher than they are at the present time and consequently we will have to overcome the depreciation before a profit can be realized, and it would look now like there would be an increase in the price of cows at this time, rather than a decrease in the future.

Producers or Just Cows

By F. H. Judd

IT doesn't seem as though we are getting enough for our milk, does it?" That is what farmers are saying to me. But I firmly believe that other manufacturers besides farmers and by the way we are manufacturers, are confronted by the same problem.

If the big manufacturer of to-day did not take advantage of the more efficient machinery as it is designed and put on the market, he would find himself up against it in trying to sell his goods at a profit.

The wise manufacturer does not try to get into competition until he has a properly equipped plant and in building that plant he takes expert advice so that it will be modeled to save labor and time. He takes into consideration, light for his men, making more healthy and cheerful surroundings, ventilation, sanitary drinking fountains, baths and toilets. Then his machinery is studied all the time to reduce operations. Each operation that is cut out makes the cost of production that much lower, so that he can produce cheaper and still make a profit.

We farmers have come to the point the manufacturer has reached. How can we make milk at a lower cost and still make a profit? By better machinery, better care of machinery, reduced operations and the proper kind of plant and equipment.

When the manufacturer finds machinery in his plant that is not producing economically, he scraps it, takes his loss and puts in new. He finds some of his men are not efficient and cuts them from the pay roll. I have talked with manufacturers who have said that this is one of the hardest things they have to do, but if the business is to pay it has to be done. Isn't it the case with farmers? We hate to turn off those boarder cows we have in the dairy when we should cut them from the pay roll, take the selling price of two or three and put it into a cow machine that will produce and make a profit.

I have often noticed that the man who keeps a small herd is the one who makes the least kick about prices. The cows he keeps are well housed and cared for, usually are larger than the average and are real profit producers. He does not keep a lot of boarders to eat up the profits of the good ones and consequently, in the long run is ahead of some of the men with much larger herds. Invariably it is the man with the large herd that could cull to the best advantage.

The most profitable thing for dairymen at large to do would be to start a culling campaign. It would leave more feed for the good ones and get rid of the surplus question and thereby give farmers better profits for a smaller amount of labor.

I am submitting for your consideration a number of examples, which I think will prove that you can produce milk under present conditions and make a profit if you will only buckle down and junk the old machinery, in other words, kill the poor cows.

Grade Herd A Cow No. 1

Cost of cow, $65. Number of months milked 8, number of lbs. of milk in year, 3,840. Cost of feed, pasture, hay, ensilage, grain $65.50. Total value of milk, $63.00. Labor and true profit $2.52. Calf vealed.

Grade Herd A Cow No. 2

Cost of cow, $85. Number of months milked 11, number of lbs. of milk in year, 4,890. Cost of feed, pasture, hay, ensilage, grain $126. Total value of milk, $158.75. Labor and true profit, $32.50. Calf vealed.

Grade Herd A Cow No. 3

Cost of cow, $150. Number of months milked 11, number of lbs. of milk in year, 12,840. Cost of feed, pasture, hay, ensilage, grain $136. Total value of milk, $283.56. Labor and true profit, $147.50. Calf vealed.

Grade Herd B Cow No. 4

Cost of Cow, $300. Number of months milked 9. Number of lbs. of milk in 9 months, 13,890. Cost of feed, pasture, hay, ensilage, grain, $171. Total value of milk $355. Calf bull sold for $75.

It would take forty-two 5,000 lb. cows to equal the cash returns of 10 cows like No. 3.

Herd No. 1. Sixteen grades. Average production, 10,000 lb. Average cost of cow, $150. Average cost of 100 lb. of milk, $2.43.

Herd No. 2. Sixteen grades. Average production, 10,000 lb. Average cost of cow $150. Average cost of 100 lb. of milk, $1.84.

Herd No. 3. Sixteen purebreds. Average production, 15,000. Average cost of cow, $900. Average cost of 100 lb. milk $138.

Which machine is the most efficient?

Remarkable Pedigree

THE herd bull question is one that is ever present with owners of purebred herds. In an effort to solve this problem, bull associations have been formed in many parts of the country wherein several owners have purchased a bull in partnership and exchange services. Susquehanna County, Pennsylvania, has several of these associations in operation.

Block 3 of the first Susquehanna County Bull Association consists of George Hayden & Sons, F. F. Resseguie, Scott Manzer, and Silas Howell, of South Gibson. These gentlemen own Dutchland Konigen Creamelle Boy, No. 252971, a bull of fine individuality and remarkable breeding. He is a son of Dutchland Creamelle Colantha Vale. The eleven nearest dams of the "Boy" have year records averaging 1,030 lb. butter, 26,262 lb. milk, and in his pedigree are some of the greatest record animals the breed has ever developed.

"You love my daughter?" said the old man.

"Love her!" he exclaimed passionately. "Why, I would die for her! For one soft glance from those sweet eyes I would hurl myself from yonder cliff and perish, I would—"

"Hold on my boy," said the old man as he shook his head. "I'm something of a liar myself, and I think one is enough for a small family like mine."

In the Smith River Valley, Montana

By Mark Hunt

THE Smith River Valley of Montana has hitherto-fore been known as a range cattle, and sheep country. With the influx of settlers taking up land by government entry, a very large part of the free range was shut off from the old timers who made fortunes by a monopoly on a "water hole." They were compelled to reduce operations and the valley is now in

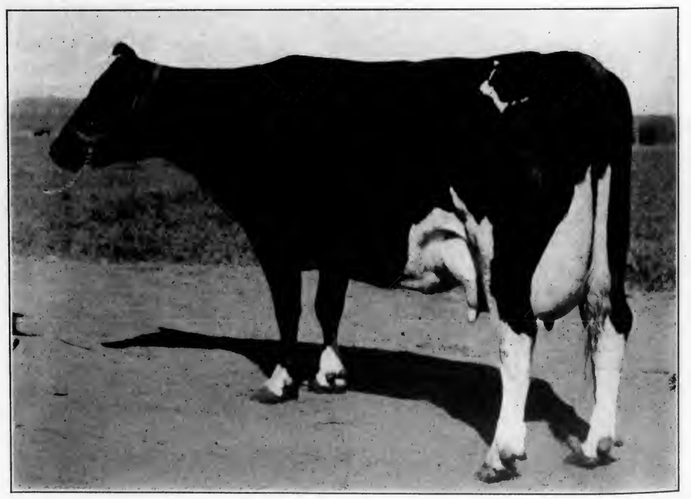
A promising three-year-old of Rose Glen Farm. A Montana youngster raised on Holstein vitamines.

a state of transition from the range-roving herds following the line of least resistance, to concentrated and specialized effort along the lines of farming and dairying.

The central and western portion of the state comprises many valleys through which flows a parent stream fed by numerous creeks. There valleys are irrigated, and for quality and quantity of hay and the common cereals, are not surpassed under the sun.

In these valleys, protected by the mountains and watered by its numerous and copious streams the dairy industry, which means the Holstein cow, has made its debut. The famous Smith River Valley of which White Sulphur Springs is the county seat and where Rose Glen is located, is a valley, fifty miles long and twenty miles wide. In this valley the "disease" has spread from five exceptionally good grade cows brought in from Minnesota in 1913 to numerous herds of high grades and to 150 purebreds, with inoculation steadily going on.

With scarcely an exception one will find in dairy districts the best improved and most homelike farms and the highest land values. In localities where dairying is not now practiced the process is largely a matter of evolution.



A farmer starts with a few cows for domestic use. Soon he has a surplus of butter and cream. He seeks a market and finds one either at home or in a near-by town. His returns are found to be remunerative. He enlarges his plant. Soon he is making money in the dairy business hardly knowing how he came to get started. He improves his herd by the addition of a registered bull. He improves his farm. He pays cash for his living and takes on an air of general prosperity.

His neighbor looks on with derision which is gradually changed to surprise and interest. He starts to think a little and analyzes the proposition from the tangible evidence of his neighbor's success. His ego is stirred and the convolutions of his cerebrum begin to wiggle. Where atrophy has not set in at the top there is always hope. He asks his dairy neighbor a few questions and is soon embarked in the business. Note I said business—not game—game implies an element of chance. There is no hazard in the dairy business. It stands third in the list of human certainties, death and taxes only taking precedence.

All good things are infectious. Other neighbors do likewise. Soon there grows up a district of fine homes, good stock and an interest which has changed the seeming drudgery of farm work to a joy.

The way is paved for a county agent, a community house, calf clubs, pig clubs, coöperative organizations, a place "under the sun" for the hewers of wood and drawers of water.

Our own establishment, Rose Glen Farm comprises 240 acres, of which 120 is irrigated, the balance is in pasture. In 1918-19 we were milking twenty to twenty-six good grade cows. Some of them were good enough to later sell for $200 each. The income from cream was from $200 to $225 per month.

IRIS DE KOL CANARY NO. 414027

32.10 lb. butter and 621 lb. milk in 7 days as a senior four-year-old, owned by Maxwell Farms, Hollywood, California. A former member of the Rose Glen herd, White Sulphur Springs, Montana, where two of her sons are now in service.

In 1919 the entire grade herd was sold. Eleven registered Holstein cows were purchased around Watertown, Wis., also a few heifers from Minnesota. Fourteen purebreds were the largest number milked at one time with an average of eleven. The income from August 1, 1920, to August 1, 1921, was $2,638.90 from milk and cream, and $2,800 from breeding stock, nearly all of which were young bulls. In September of 1921 the Maxwell Farms bought our entire remaining herd of females, ten cows and fourteen heifers, at a satisfactory price to both purchaser and vendor. That the stuff had merit is attested by the fact that they since made a near 16-lb. seven-day record with a two-year-old, and two 32-lb. records, with others giving very satisfactory accounts of themselves under official test.

One of the thirty-two pounders is Iris De Kol Canary who as a senior four-year-old made a seven-day official record of 32.10 lb. butter and 621 lb. milk in a week. Her sire is a son of Canary Paul Fobes Homestead and her dam Iris of Shrewsbury 3d is by a good son of the great Hengerveld De Kol. Two sons of "Iris" are now in service in the Rose Glen herd and both are outstanding individuals.

The cover scene of this issue of THE HOLSTEIN BREEDER AND DAIRYMAN show members of the Rose Glen herd on alfalfa pasture. The individuality of the herd and the animals composing it can be readily seen while their condition speaks volumes for the quantity and quality of the herbage.

This valley is destined to be further celebrated as a nursery of the Holstein by the acquisition to our ranks of Mr. R. T. Ringling, son of the late Al Ringling of the Ringling Brothers Circus. His interests here are varied and notable, including extensive ranching, mining and oil, but most important of all to the Valley, he is establishing the largest herd of registered Holsteins in the state. Commensurate with all his enterprises on a large scale, and fit as a setting to the premier dairy breed of the world, he has just completed a modern, down-to-the-minute, dairy palace, costing in excess of $50,000. He is rendering a distinct service to the valley and "putting it on the map" as a desirable place to live and prosper. Later on, we plan to tell readers of THE HOLSTEIN BREEDER AND DAIRYMAN more about his plans and aspirations.

Boys Learn Holstein Handling

THE Chairman of the Board of Health of Hong Kong, China, is Dr. Henry Chow a former Chinese boy who obtained much of his education in the United States. He got his first introduction to American institutions of learning at the Hillside School, Greenwich, Mass., after graduation from that institution, he attended the Mt. Hermon school for Boys, went on to Syracuse University and by dint of hard work obtained the degree of Doctor. The school that gave him his start is certainly entitled to considerable of the credit for his success and the purpose of this story is to tell a little about this institution.

Away back in 1900 Miss Charlotte Drinkwater was superintendent of the Boston Y. W. C. A. She was a native of Greenwich and owned considerable property in the township. Her life had been devoted to philanthropy and after some years at Boston she decided to devote the remainder of her life and fortune to the establishment of a school for worthy boys and girls without means. Her sister, Mrs. Mary E. Warren, joined hands with her and the sisters founded the school on the old Drinkwater homestead where they had been children together. The first few years they met difficulties and discouragements but stuck to their self-imposed task and founded a school from which have gone boys and girls who have become worthy citizens.

After existing a number of years as a boys and girls school, the policy was changed to admit only boys and to-day there are thirty-six young Americans ranging in age from seven to fifteen years in attendance. Great care is exercised in selecting candidates and last fall only one out of every thirteen applicants was accepted.

In the course of training at Hillside the boys learn both indoor and outdoor work. The younger boys attend to household duties, as washing dishes, sweeping and dusting. The older boys work on the farm. School lasts half a day and is so arranged that half the boys can attend school and the other half work and then change about.

The farm supplies a large amount of the food consumed by the scholars. There are three hundred acres of good land in the Swift River Valley, a poultry flock of nearly five hundred, a herd of fifteen Holstein females besides the bulls, registered hogs, horses, Shetland ponies and carrier pigeons, all under the supervision of the present superintendent, Mr. John F. Zappy.

Whether it is the training or whether it is the Holstein milk they consume, the boys have had splendid health since school opened in September. There has not been a case of serious illness and the average monthly gain in weight has been 1.4 lb. The trustees and instructors in the institution are business men and educationalists. The president is Franklin P. Shumway of the Shumway Advertising Agency and one of the two vice-presidents is Kenyon L. Butterfield, president of the Massachusetts Agricultural College and famous as an agricultural teacher and a writer of agricultural books.

A suburban chemist had been advertising his patent insect powder far and wide. One day a man rushed into his shop and said excitedly:

"Give me another half-pound of your powder, quick, please."

"Oh!" remarked the chemist as he proceeded to fill the order, "I'm glad you like the powder. Good isn't it?"

"Yes," replied the customer. "I have one cockroach very ill; if I give him another half-pound he'll die."

"How does your husband regard you," asked Mrs. A— "as a luxury or a necessity?"

"Well," said Mrs. B—, "it all depends, my dear. When I am asking for a new dress I am a luxury. When I'm cooking his dinner, I'm a necessity."

Canadian Champion Two-Year-Old

OUR illustration shows the Canadian Champion senior two-year-old, Echo Sylvia Laura. This daughter of Champion Echo Sylvia Pontiac is owned by the Wright Farm, Brockville, Ont., Canada. Mr. Wallace D. Wright in sending the picture says that they were unable to get Laura to pose for it. She would not stand still for any length of time and the

ECHO SYLVIA LAURA

picture in consequence is a snap shot, but it gives some idea of her individuality and capacity.

The records recently completed by Echo Sylvia Laura are: 91.9 lb. milk in 1 day; 505.5 lb. milk in 7 days; 36.64 lb. butter in 7 days; 96.9 lb. milk in 14 days; 69.82 lb. butter in 14 days; 2,230.5 lb. milk in 30 days; 141.10 lb. butter in 30 days.

The Superintendent of a Home for aged women was making his usual Christmas calls. "Good morning, Sister Martin," he said, addressing a quaintly charming old lady. "I see you are happy this morning with a new copy of your dear *Atlantic Monthly*."

"Yes" she answered, "John always told me I could not possibly be happy in heaven because I should not have the *Atlantic Monthly*."

"No" agreed the superintendent, "you will not have the *Atlantic Monthly* in heaven; but you will have *Life*."

"Well," came the rather startling answer, "I much prefer *Punch*."

Worlds' Dairy Congress

THE World's Dairy Congress had its inception in a proposal for a pan-American dairy meeting, which the representatives of Argentine Republic presented to our Secretary of State in 1919. The dairy and allied interests, gathered at the National Dairy Show of 1920, formed a temporary organization at the suggestion of the Department of Agriculture—the suggestion had been handed on to the Secretary of Agriculture—to plan a World's Dairy Congress.

The Agricultural Act, approved March 3, 1921, authorized the President of the United States to invite foreign governments to send delegates to a World's Dairy Congress to be held here in 1922. To give more time for the development of plans, the meeting was adjourned a year by a joint resolution, passed by the Senate and the House of Representatives on December 22d, last. Meanwhile, also at the suggestion of the Department of Agriculture, the University of California had given Dean Van Norman a leave of absence on July 1st to devote himself to the congress and, on October 12th, while the National Dairy Show was in progress at the Twin Cities, Minn., a permanent organization of the association had been formed. The headquarters of the association is in the Star Building, Washington, D. C.

Hillside Pietje Honora Again

HILLSIDE PIETJE HONORA, who holds the Holstein championship of Pennsylvania for high test recently made 30.79 lb. butter in seven days as a ten-year-old cow, averaging 6.47% butter fat; as an eight-year-old she produced 29.77 lb. butter in a week with an average of 7.05% butter fat.

Honora was the first junior four-year-old in Pennsylvania to average better than 90 lb. milk a day for a week and at this age produced 635.3 lb. milk, 27.87 lb. butter. Her best day's milk was 104 lb. She is a daughter of Woodcrest Pietje and is the third one of

HILLSIDE PIETJE HONORA

30.79 lb. butter at ten-years-old, 29.77 lb. butter in seven days at eight-years-old. Her average for these two tests is 6.76% butter fat. Bred, owned, and developed at Hillside Farms, Wilkes-Barre, Pa.

his daughters to cross the 30-lb. mark. The other two are Hillside Pietje Mary, and Hillside Saxon, each of which have made more than 30 lb. butter in seven days two different years, while Hillside Pietje Honora has two records averaging over 30 lb. This cow and her sisters were bred and are still owned at the Hillside Farms, Dallas, Pa., which are owned by J. N. Conyngham, a prominent business man of Wilkes-Barre, while the farm Superintendent, D. P. Honeywell, is well-known to eastern breeders.

"Mary," said the teacher, "what is the spinal column?"

"The spinal column," said Mary, "is what my head sits on one end and I sit on the other."

Hotel Accommodations, Kansas City

IMPORTANT NOTICE TO MEMBERS REGARDING HOTEL RATES

(HOLSTEIN-FRIESIAN HEADQUARTERS WILL BE AT THE BALTIMORE HOTEL)

The following paragraphs are taken from a circular on hotel rates in Kansas City put out by the Convention Bureau of the Chamber of Commerce, Kansas City.

"During times of congestion these hotels agree not to raise the regular prices, but will charge full capacity rates. For example, a room that rents at $2.50 a day for one person, and $4.00 a day for two persons, would be $4.00 a day whether occupied by one or two persons.

Where a greater number of persons than the stated capacity occupy a room, the same rate would be charged the extra guests as is charged for the one person making up the capacity. For example, a room that rents for $4.00 a day for one person, and $6.00 a day for two persons—if more than two occupy the room, a charge of $2.00 for each extra guest shall be made."

It is, therefore, well to specify price when reserving a room, and if possible, to select a friend with whom you wish to occupy the room long enough in advance so as to avoid inconvenience after your arrival.

Reservations can be made through the Kansas City Chamber of Commerce, Convention Bureau, Kansas City, Mo.; Heart of America Dairy Show—offices 121 West 11th St., Kansas City, Mo.; your State Association Secretary; by writing to the hotels direct.

Other conventions are being held in Kansas City the same week and it is essential that you reserve your rooms at as early date as possible.

The following are the prices of the hotels located within easy walking distance of Convention Hall.

A man whose trousers bagged very badly at the knees was standing on a corner, waiting for a car. An Irishman watched him with great interest, and then said rather impatiently:

"Well, why don't yez jump?"

First Year Record at Wyalusing

THE first cow to finish a year record on the Merryall Farms is Pietje Pride Homestead No. 282,668. She started the year in poor condition yet she produced 21,147 lb. milk and 800.7 lb. butter. She is a large strong cow and an animal of superior type and conformation. While making her record she stood in the stanchion with her stable mates, did not have the advantages of a box stall and her exercise was taken while running in the yard with the rest of the herd.

PIETJE PRIDE HOMESTEAD

21,147 lb. milk and 800.7 lb. butter in a year. Owned by C. W. Newman Merryall Farms, Wyalusing, Pa.

When fresh without any preliminary fitting she made 20.86 lb. butter and 580.3 lb. milk in seven days. She is a daughter of Homestead Pride Boon De Kol and was sired by Pietje Vander Lei Lad, son of Dutchland Sir Lyons Hengerveld and so a grandson of Colantha Johanna Lad. She was bred by her present owner, C. W. Newman the present postmaster of Wyalusing, Pa.

"Look here," yelled the infuriated bridegroom of a day, dashing wildly into the editor's room of the *country weekly*: "what do you mean by such an infernal libel on me in your account of our wedding?"

"What's the matter?" asked the editor calmly. "Didn't we say that after your wedding you would make your home at the Old Manse?"

"Yes," howled the newly made benedict, "and just see how you've spelled it."

And the editor looked and read:

"After their wedding tour the newly-married couple will make their home at the Old Man's."

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

MAY 8, 1922

The Holstein Breeder and Dairyman **was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.**

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Association Calf Club Prizes

A GOOD move has been taken by the Holstein-Friesian Association in the giving of special prizes for calf club classes at fairs and shows. The breed and its interests are not advanced by meetings and banquets where members of the association and owners of purebred Holsteins dine and throw verbal bouquets at each other, nor by great sales wherein the animals are consigned by well-known cattlemen and bought by other well-known cattlemen—a mere passing around of animals—the result being that no one is the gainer except the sale managers and those who derive personal profit by their work in or for the sale event. It is the interesting of outsiders in the breed; the demonstration of the superiority of the purebred Holstein as a producer and reproducer; the interesting of the younger generation in the possibilities of purebred cattle breeding, feeding and development; in these directions lie the advancement of the Holstein industry, better average prices for cattle, and an increased demand for the breed and for the products of the breed.

"As the twig is bent, the tree is inclined"—the boy owning a purebred animal is, boy-fashion, of the opinion that his possession is as good or better than any other on the face of the earth. He lavishes care and affection upon it, and if necessary, will deny himself that his pet may have greater comfort. The boy with the purebred animal does not consider his work from the money viewpoint. He is not on the lookout for someone to come by to offer to him a price which will insure him a profit on the investment and accumulated costs. The boy with the purebred animal has the true breeder viewpoint,—to grow and develop the animal as much as is possible; to improve rather than to cash in; to possess rather than to sell.

Calf club competitions at such great fairs as the National Dairy Show, the Eastern States Exposition, the Waterloo Dairy Congress, and the Pacific International will not advance the breed and its interests unless there is widespread interest and competition among the junior project clubs scattered in the various counties of the cattle-breeding states; unless there is this widespread interest, the prizes at the four great shows will be won by sons and daughters of Holstein owners instead of by boys and girls living on farms where the purebred animal is a rarity. It might be advisable to stipulate that the son or daughter of an owner of a certain number of registered cattle should not be eligible to compete. While such a rule is drastic, perhaps in this way true advancement lies.

The announcement of the suggested prize money award reached the office of THE HOLSTEIN BREEDER AND DAIRYMAN on April 28th. You will notice that it says that state club leaders and state fair secretaries must have application for this money in the office of the Holstein-Friesian Extension Service by May 15th. It seems to us this is not giving sufficient time for the Holstein breeders and their friends to get in touch with the district calf leaders and with the fair secretaries, and for the latter to investigate and act in time for a request to reach the Extension Service department before the date designated. This is a subject that should be discussed at the meetings of the local and county clubs and at least three months' notice should have been given so that the proper action could have been taken.

Prize Money for Calf Clubs at Fairs

IN line with the growing importance of calf club work particularly at state and interstate fairs and the larger sectional shows, the Holstein-Friesian Association of America announces special prizes for calf club classes during 1922. Awards at the shows will be made in proportion to the calf club work that has been done in the various states and the support given to calf club classes at fairs by the fair association and the Holstein breeders of the state. State club leaders and state fair secretaries must have application for this money in the office of the Holstein-Friesian Association of America, Extension Service, 910 S. Michigan Ave., Chicago, Ill., by May 15th.

Special prizes are offered at the National Dairy Show for county calf club and state calf club herds.

The Eastern States Exposition at Springfield, Mass.; the Waterloo Dairy Congress at Waterloo, Iowa, and the Pacific International Livestock Exposition of Portland, Oregon, will take an active part in bringing boys' and girls' club work to the front in the show ring.

Every breeder should make it a point to coöperate with local club leaders of his county to insure the success of calf club work in his community. Showing at fairs teaches our young dairymen how to fit and prepare an animal for the show, and most of all, how to take life's winnings and discouragements with a smile. It develops a spirit of clean, healthy competition in the younger generations, which, after all, is the most important part of club work.

Virginia 1923

THE Chamber of Commerce of Richmond, Virginia, supported by the Virginia breeders are putting forth an effort to secure the 1923 Convention of The Holstein-Friesian Association of America.

Richmond is the capitol city of Virginia, the metropolis and gate-way to the South, a leading railroad center, with ample hotel accommodations, has a Sale Pavilion that will accommodate 5,000 or more, all of which conditions makes it particularly well suited for entertaining the Annual Convention.

With an increased interest being shown in dairying in the South and particularly a growing demand for Holsteins, this invitation comes at an opportune time as it is a recognized fact that wherever the Annual Convention is held, it stimulates an interest in the breed with an increased demand for better cattle.

We believe the time was never more opportune for the Holstein industry and for the south. And if the Annual Convention goes to Richmond it will mean encouragement to the breeders all over the southland. The Holstein Association can well afford to avail itself of this opportunity when the conditions are so ripe.

Hansen Mis-Quoted

AXEL HANSEN writes that he was misquoted in our report of the Conference of Judges held at Philadelphia during the time of the Brentwood Sale. Our report says that "The opinion of exhibitors at the great shows was that the present get of sire class should be changed." Mr. Hansen says that he is not in favor of changing the get of sire class and that 24 of the nearly 30 well known men to whom he sent a questionnaire were not in favor of changing the class while some of the others suggested an additional class.

The representatives of THE HOLSTEIN BREEDER AND DAIRYMAN had in mind that the suggested change was a classification rule which would require at least half of the four members of a get of sire class to be females. Our readers will remember that one noted get of sire exhibits which won at a number of great shows consisted of four brothers. There is a wide spread ringside opinion that at least half of a get of sire exhibit should be female. We believe this is a reasonable requirement and that such a change in the rules should be made.

Johnny—"Did Moses have dyspepsia like what you've got?"

Dad—"How on earth do I know, why do you ask such a question?"

Johnny—"Our Sunday school teacher said the Lord gave Moses two tablets."

"And now, Johnny," said the teacher, "can you tell me what is raised in Ireland?"

"Aw go on," replied the bright boy. "I know what you want me to say, but Ma told me I shouldn't talk rough."

Letters to the Editor

PLAIN TALK

April 27, 1922.

EDITOR, BREEDER AND DAIRYMAN:

Yes, I will subscribe for your paper, and I hope it will not give you a case of swelled head when I say that it is the *best real Holstein* paper since the *Black and White Record* came out a few years ago as an independent representative of the men who breed Holstein cattle for a living and not as a hobby; and before it was gobbled up by the big fish and merged with something else to become the tool of politicians and the fellows who had an itching for office and an eye on the big reserve fund.

As I fold up the money order and lick the stamp, I am wondering how long it will be before you "sell your birthright for a mess of pottage," and become a boon companion of the other fellows looking for the big double-page advertising of the fellows who buy cattle from each other for big prices and try to pull the wool over the eyes of the small breeders as to their real purpose.

Now you asked me to subscribe to your paper, and I am sending you $1.00 to pay for it. In paying for your paper, I feel I have a right to say a few things right from the shoulder. If you don't want to print it, put it in the wastebasket. If you mean what you say at the head of your editorial columns, it looks as though "the small fry" had at last got someone that would fight for a square deal to protect the interests of the fellows who milk their own cows for a living and haven't any use for the way things have been going on in the Holstein-Friesian Association for the past three years.

Ever since the Philadelphia meeting, in June, 1919, all we have heard from the *Holstein World* and the hand-picked bunch of directors that were selected in Star Chamber Session the time they voted $12,000 to Aitken, has been "move the offices, amend the by-laws, employ paid state secretaries, increase the transfer fee, spend money, spend money, spend money."

Now, Mr. Editor, 85% of the men who make up the membership of the Holstein-Friesian Association are men that *do not believe in these high-handed methods.* The politicians, headed by the chairman of the Executive Committee, Mr. Reynolds, of Ohio, have done about everything they could possibly do to take the management of the association out of the hands of the *plain every-day breeder* and turn it over to a bunch of men who constitute less than 10% of the entire membership, evidently with no other thought in mind than to have a whack at the $330,000 reserve fund that was accumulated through the honest work of Fred L. Houghton, covering a period of twenty-five years, and on a transfer of 25c.

All this highbrow talk about running the association on "business principles" is just pure unadulterated bunk.

The best proof possible showing that the association was *always run on business principles* up to the time that the office-seeking, money-spending bunch got control of it, is the fact that it rolled up this great big surplus of $330,000; and that Holstein cattle, milk and dairy products brought bigger prices and were better thought of then than they have ever been since, notwithstanding all the hullabaloo about extension work and paid secretaries.

Any man with a grain of sense knows that a paid secretary at a salary of $5,000 or $6,000 a year is nothing more or less than a political move to build up political fences and perpetuate political control of the association. Every red blooded man resents it. Every plain breeder and dairyman knows that with all the paid secretaries, with all the thousands upon thousands of dollars spent for so-called extension work, *cattle are selling for less to-day than they have in the past ten years.*

I just want to tell you, Mr. Editor, that when the politicians up at St. Paul took away the right of the small breeder to have a voice in the association's affairs by the use of his proxy vote they disfranchised 85% of *the entire membership of the Holstein-Friesian Association,* and came pretty near putting a

tag on the association marked "Deceased," in great, big, black letters.

If you will just look back and read the letters that were sent out by Judge Peasley, C. W. Newman and a few other good level-headed men, you will find that nearly everything which they prophesied would be done by the political leeches, has come to pass.

It is about time that the rank and file of the members of the association, and by this I mean the men who breed Holstein cattle and are engaged in dairying as a business for a livelihood, rise up and assert themselves, get the affairs of this association back on to a common sense basis, and out of control of the politicians who have fastened their claws on to its throat with a weather eye on the reserve fund.

(Signed) J. M. Murphy.

WANTS PROXY SYSTEM BACK

Editors, Holstein Breeder and Dairyman:

I have, with considerable interest, read your articles relative to the National Convention to be held at Kansas City. I have always been and am now in favor of the proxy system of representation in the National Convention, and my attitude has been strongly confirmed by the events which have transpired since the Syracuse Convention a year ago. I believe that the election of delegates as determined upon in the special session at St. Paul is all wrong. I believe that the delegate system was deliberately adopted for the purpose of seeking and perpetuating the political control of the affairs of the association.

The great backbone of the association consists of the small breeders, whose cattle dot the hillsides throughout the country, and is not composed of those who seek the political control of the association to obtain political and personal glory through the holding of offices or pecuniary advantage by and through their connection with its affairs.

In the judgment of the writer, transfer fees should not be increased. For many of its earliest years, the association had low fees. They were within the reach of every person of moderate circumstances. Notwithstanding that fact, the association greatly increased in numbers and a handsome surplus of about $330,000 was piled up in the treasury.

Three or four years ago, a movement was made for the increase of salaries of certain officials, and a large salary equal to that of the Vice-President of the United States, was voted the president; certain members of the executive committee who were closely allied to the president in the management of the association were also given large salaries.

The members of the association throughout the United States became convinced that the politicians of the association, about the time they discovered this large and growing surplus in the treasury, had begun to deliberately plan for a looting of the treasury for the personal benefit of themselves.

In order to further entrench themselves in power, and in the holding of their offices, a sort of extension work, so-called, was started in the various states, which would necessitate the employment of a state secretary with a large salary. The then president of the association, who for a year had drawn his salary as president, realizing that it was in violation of the by-laws of the association, had a new office created, called Director of the Extension Department, and had himself elected to that position at the same salary which he had received as president, and proceeded to canvass the different states for the purpose of organizing these State Associations and in most all instances, selecting a state secretary whom he knew in advance would be a faithful adherent of his in the perpetuation of his tenure of office, but about this time, these facts becoming apparent to the members of the association all over the country, a determined effort was made against this abuse of power, with the result that at Syracuse, in June, 1921, a new president was elected, to serve without salary. Now we see this ex-president and his political adherents engaged in a campaign for the increase of fees,—What for? Judging from the past, it can only be for the purpose of making of new offices and the filling of these positions by favored members of this clique of politicians, who are ready to pick every feather in sight at the expense of the great army of members who can ill afford to have their pockets filched by ony one under whatever guise.

Another point of vantage sought to be attained by this political crowd are the retirement of Secretary Houghton and Superintendent Gardner of the A.R.O. Registry, two faithful men who have given the best years of their lives in the upbuilding and maintenance of the affairs of the association, and at Kansas City you will see this same political crowd doing their level best to retire these two gentlemen under the hue and cry of a consolidation of the offices in a central location.

Central Fiddlesticks!

What matters it whether we mail our letters to Brattleboro, Vt., or to Delevan, Wisconsin? It gets there just the same, and from any point in the United States, could not result in a delay of more than one day in any event. If time was an element of value in communicating with either office, a telegram would reach one of these cities just as quick as it would any other.

I will be very glad to welcome the day when the individual members will have a chance to have a voice in the affairs of the corporation to which they belong, but that time will not come until we return to the proxy system as of old. A change from the proxy system to the delegate system was made by a lot of disappointed politicians, who raised the hue and cry against the use and abuse of proxies at Syracuse, notwithstanding the fact that they had gotten into power and retained their power through the use of the same proxy system. It was a smokescreen the use of which succeeded at St. Paul, and the abuse of which at the same place put every individual of the association in an offensive attitude to those political schemers. I am against these political schemers and in favor of the retention of Messrs. Houghton and Gardner.

Pike, New York. G. S. Van Gorder.

Proposed Amendment

MR. GEORGE E. STEVENSON of Scranton, Pa., vice-president of the Holstein-Friesian Association of America, has sent to Secretary Houghton notice of a proposed amendment to the by-laws, such amendment to be incorporated in the call for the meeting and to go before the convention of delegates at Kansas City on June 7th. The only comment Mr. Stevenson made in his letter was, "I believe this is a desirable change in the interest of reasonable economy."

To amend Article II, section 1 to read as follows:

OFFICERS—The officers of this corporation shall consist of a President, Vice-President, Secretary, Treasurer, Superintendent of Advanced Registry, and a Board of six Directors, which shall be classified into three classes. The term of office of all the Directors in one class only shall expire each year, and the term of office of each class shall be three years.

NOTE—No election of new Directors shall take place until the present Board of sixteen has been reduced by their terms expiring, so that not more than six members remain on the Board, and then two new Directors shall be elected annually thereafter.

Section 1 of Article II at present reads as follows:

"OFFICERS—The officers of this corporation shall consist of a President, Vice-President, Secretary, Treasurer, Superintendent of Advanced Registry, and a Board of sixteen Directors, which shall be classified into four classes. The term of office of all the Directors in one class only shall expire each year, and the term of office of each class shall be four years."

LEST WE FORGET

Excerpts from letters received from breeders previous to the Syracuse Convention who requested their proxies voted against extravagance and mismanagement of the Association. Continued from page 261, April 22, 1922, Edition.

"Your circular letter of May 14th was duly received, and its contents carefully noted. A year or two ago, when I became acquainted with the fact that the President of our Association was drawing the salary that he is, I was *thoroughly* indignant, and was upon the point of rushing into public print in criticism of our association for allowing anything of that kind to happen. I think it is an *outrageous form* of graft that has crept into our association, and steps can be taken none too soon to eradicate or change the conditions that exist.

"I am heartily pleased that you and others are taking the initative in a fight to end, some time in the near future, these bad conditions that are surrounding us. The justices of our state supreme court, well-trained lawyers, receive $8,500 each. There is hardly a city in the United States that pays to their Superintendent of Schools such a salary, neither are there any State Superintendents of Public Instruction, that receive such a salary, as has been paid to the President of our association in the few years past. I would like to know what he is doing, or what he has ever done in the past to advance the interest of our breed or our association to entitle him, wealthy man that he is, to any such remuneration.

"I believe that there are hundreds of real breeders who have done fine work in the past, and are still doing constructive work who can just as ably represent our association, and would gladly do it for one-third or one-half of what is being paid to the present incumbent. It levies a tax upon hundreds of farmers who have heavy burdens to bear to reward in a most extravagant and lavish manner, a lawyer, who ought not, in my opinion, ever to be placed at the head of a farmer's organization. The lawyers as a class, belong to the parasitic class, and are the last in the world that I would choose to represent or be the leader of a farmer's organization.

"I shall not be able to attend the annual meeting, but am forwarding to you my proxy, and hope that it may be used in such a way as to correct existing evils and extravagances that seem to have developed in regard to our business within the last few years. I hope that there may be a change in officials and the persons to be our leaders for another year, that they may come from the ranks of real breeders and real farmers, rather than from those who take up breeding and farming as a side issue to something else. I think I have said enough so you have something of my viewpoint in regard to this matter. I wish you the greatest success at the coming meeting in revolutionizing present methods and turning back to ways of genuine democracy. With very much of respect, I am,

"Wisconsin Breeder."

"I sent my proxy to you the other day, hope you received it and since, I have received a letter from A. L. Brockway giving details of what the directors, some of them at least, with the President of our Association are trying to do. A contrived plan to rob our Treasury.

"Now, Mr. Newman, I trust that you will vote against any director or President, that is trying to rob the members as a body, to say what shall be done with the surplus in our treasury. Mr. Aitken, if I understand right, should not be reëlected President, nor any other of his following.

"I trust you will vote my proxy against *all* the parties to this (money grab scheme). If you did not receive my proxy let me know at once, and I will send one to Mr. Brockway at Syracuse.

"Trusting that you and others that are working for the interest of the rank and file of our members will win out, I am,

"Pennsylvania Breeder."

Manchester, Mich.

"We have sent our proxies to Frederick M. Peasley of Conn., and we are in favor of reducing the transfer fee from $1.00 to $.50. Leave the officers of the Association just where they are. These whirlwind campaigns conducted at large expense are doing no good and should be cut out."

Maumee, Ohio.

"Enclosed you will find my proxy which I hope you will vote to the best of your judgment. Our by-laws should stand as they are, and I am against giving full control to the Board of Directors; the right to make by-laws belongs to the members and should never be given to the board. Cut out the high salaried officers and stop the foolishness that has been going on for some time."

Metamora, Ohio.

"Am enclosing proxy to be voted by you and ask that you vote for Houghton and Gardner and against Aitken. Have been keeping tabs on this extension work and from what I have observed it has been worse than a lemon. I thank you for this chance to have my vote do good work."

Morenci, Mich.

"I am heartily in accord with your views in the affairs of the Association and I have given my proxy to Mr. Frederick M. Peasley as he seems to have the same view as you have on these matters. Hoping that your efforts will bring about the desired results in curtailing expenses, and putting the Association back on a sensible basis, I am"

CALL CHICAGO

THE NEW HOLSTEIN HOME
Watch Us Grow

ROCHESTER, N. Y.

"Enclosed find my proxy to be used in case I cannot be present. The facts set out in your letter ring true. Abolish the farce or comedy of Mr. Aitken's pet whirlwind campaigns, the results of which have been simply ridiculous. Now is the time to practice economy. Let us sober up from our hilarious spending jag. Go into this fight to win and battle this bunch of spendthrifts to a finish."

OWOSSO, MICH.

"I have sent my proxy to another man, but I want you to know that I am in favor of cutting down expenses to the minimum. We do not need a fancy home nor a $12,000 president. We need a president that will work for the Association and not create offices that are of no earthly use and one that will not blow his own horn quite so loud. The directors have proven themselves no good. You can read this at the meeting if you wish."

"I fully agree with what you say and am very much opposed to paying Mr. Aitken any such large salary as $12,000 a year. I am opposed to having the transfer remain at $1.00, and am in line with the good work that you are evidently trying to do."

HOWELL, MICH.

"I am in full accord and sympathy with you people in this matter. Hence, I sent Judge Peasley my proxy. I want to help rescind the action taken at St. Paul last year; check this lavish expenditure of our money in big salaries and whirlwind campaigns; keep all fees at a minimum and *Not* grant full power to a few men to run our business. Hoping you will come out victorious at the meeting, I am."

KANKAKEE, ILL.

"Have mailed my proxy to Mr. Peasley. Governor Len Small and I have a partnership membership and I am enclosing our proxy to you, and he is mailing his also. We want to see Mr. Houghton and Mr. Gardner stay right where they are. They are the men that made this Association what it is to-day. Let us cut out extravagant salaries and go along on a common sense basis.

CUMMINGS, MICH.

"I have sent my proxy to Fred. M. Peasley and I don't like it a bit the way things are going in our Association. There is too much high flying on other peoples' money. If the power to make and amend by-laws is placed in the hands of the Directors, this Association will come to a sad end."

KENDALL, WIS.

"I have already signed my proxy but I should like to see Mr. Houghton stay in office, because I believe he works for the good of the black and whites. There is too much money being thrown away. There is too much being wasted and extravagant salaries and expenses should be cut out."

MEAD, KANSAS.

"You are absolutely right in the position you have taken, and I want to be presented along that line."

THE following are excerpts from letters received previous to the special meeting called at St. Paul, on October 11th, sent by men who wished to have their proxies voted to retain the proxy system.

This special meeting was called by the Board of Directors who were defeated at the Syracuse Convention in their efforts to get further control of the Association by having the members give them the right "to alter, amend or repeal" our by-laws from time to time, "as the advisability of such action may become apparent."

Defeated in their efforts to disfranchise the members at the Syracuse Convention and realizing that they would go down to defeat at the Kansas City meeting where many of their members would come up for reëlection unless they could deprive the members of their right to vote direct or by proxy, they called a special meeting for the purpose of abolishing the proxy system and adopting a political form of government that would permit of loose business practices and be more easily controlled and manipulated by politicians.

The proxy system was too effective in eliminating the undesirable element from control, that is what they learned at Syracuse, and that is why the proxy system is retained in our banking institutions, railroads and other business organizations and corporations, and that is why the politicians wanted to adopt a delegate form of government and to do it before the next Annual Convention.

I agree with you in every particular. Your promises as stated in your letter are entirely right, your purpose commendable. You would receive my proxy but that I have already sent it to Judge Peasly.

I left the Annual meeting in absolute disgust at Philadelphia. The vicious purposes of the Gang was apparent.

I sat still at Syracuse and saw the creditable way the proxies were used. After the report of the Proxy Committee, I said Vote and Keep Still. It is not always wise to answer a Fool according to his folly.

I believe in the proxy system. It has saved the Association more than once. I have just received James A. Reynolds manifesto—also from the 17 societies—one is effrontery and the other Bombast.

I do not believe the Association can pass any Rule or Amendment that will deprive any member of the right to be represented by proxy. It is a power of attorney which cannot be ignored.

You will notice Mr. Aitken's Whirlwind Campaign did not raise up in New England any creatures to do his will.

I myself declined to recognize such a piece of folly. I doubt if the 17 clubs represent 100 members of the National Association.

You have my best wishes and if I could possibly get away, I should go and add my influence to your efforts, for unless you succeed, the organization is certain to go to pieces.

MASS., BREEDER.

THIS WAS THEIR PROMISE

IS THIS WHAT WE'LL GET?

Unopposed Extravagance

Cow Testing Association Reports

ONE HUNDRED PER CENT IN VERMONT

The farmers in the little town of Waltham, Vermont, deserve a word of praise for the progress they have made in Livestock Improvement Work. Two years ago, a dairy survey was made and it was found that a few farmers in town were still using scrub sires in their dairy herds. A brief summary of conditions existing at the time the survey was taken is as follows:

Registered females	102
Grade females	400
Common females	417
Registered males	16
Grade males	6
Common males	12

Mr. H. W. Day, the community leader in this work with some others who strongly believed in the value of purebred sires, set about to interest others in improving the herds of the town, through the use of purebred sires. A recent survey given below shows that there is no longer a place for the scrub sire in the herds of the farmers of Waltham.

Registered females	107
Grade females	721
Common females	0
Registered males	31
Grade males	0
Common males	0

The Champlain Valley Cow Testing Association has been a big factor in building up the dairies in this section, the work having been successfully carried on for the past seven years, some herds having been in the Association continuously.

The most recent development in the Livestock Improvement work in the town is the organization of the Ethan Allen Purebred Calf Club, with a membership of eleven. At the time the boys organized, seven of the fathers were present to help get them started along the purebred road.

Several other towns in Addison County have made substantial gains in the Livestock Improvement work during the past two years. Weybridge and Leicester are nearly free from scrub sires and parts of Middlebury and Salisbury have done a great deal in Tuberculosis eradication work.

S. G. JUDD.
Acting Extension Dairy Specialist, University of Vermont.

A WISCONSIN FOX

The highest thirty-day record since the Crawford County, Wisconsin, Cow Testing Association was formed last July, was made by Fox, a registered junior three-year-old owned by Fawkes & Mindham. She produced 1,881 lb. milk, 71.4 lb. butter fat. The second high cow in the association is Tillie, a purebred Holstein, also owned by Fawkes & Mindham with a production of 1,820 lb. milk, 68.4 lb. butter fat. There were twelve cows produced more than 50 lb. fat, ten of these being Holsteins, and of the 28 cows producing more than 40 lb. fat there were 24 black and whites. The high herd was composed of 25 Holsteins owned by Lariviere & Son with an average of 1,109.6 lb. milk, 36.9 lb. fat. The second high herd, owned by Fawkes & Mindham, consisted of 20 Holsteins and produced 951.5 lb. milk, 35.7 lb. butter fat.

EAST AURORA

There were 19 herds containing 361 cows tested during the month of March in the East Aurora Dairy Improvement Association of Erie County, New York. The leader was a purebred Holstein Kol Ettie 5th, who produced 3,624.3 lb. milk, 171.5 lb. fat during February and March. She is owned by Elmer Foss, of South Wales. The high cow for milk production in February and also in March was a purebred Holstein, Korndyke Netherlands Butter Girl with 4,213.2 lb. milk, 108.5 lb. fat. She is owned by D. T. Graves, East Aurora. Eighteen of the nineteen herds are headed by purebred sires and 50% of the members of this association have purebred herds.

C. C. SPAULDING, *Supervisor.*

VIRGINIA PUREBREDS LEAD

In the Central West Virginia Cow Testing Association for the month of March, there are 27 cows on the honor roll of cows showing a production of more than 1,000 lb. milk and of these 16 are Holsteins. Spot, a registered Holstein, owned by C. W. Cunningham, is the leader with 1,404 lb. milk, 58.9 lb. butter; Armsby, also a Holstein, owned by Phillips John, comes second with 1,795 lb. milk, 55.6 lb. butter. Eight of the twenty-seven cows producing more than 50 lb. butter fat and nine more than 40 lb. fat. Armsby was second in February with 1,702 lb. milk, 59.5 lb. fat while the leader was Maxine, of the Phillips & John herd with a production of 1,876 lb. milk, 60 lb. fat. Thirteen of the leading twenty-two in February were black aud whites.

LITTLE CHUTE SHOOTS HIGH

There were 807 cows in the Wrightstown-Greenleaf, Wisconsin, Cow Testing Association for the month of March. One hundred and twenty-two produced forty pounds or more of fat. Little Chute, a purebred Holstein, owned by Boehlke Bros., was high cow for the month. She produced 2,641 lb. milk, 84.5 lb. fat. Second high cow was a purebred Holstein, owned by Bender and Frane, with a production of 2,406 lb. milk, 81.8 lb. fat.

PETTIS COUNTY ASSOCIATION MAKES GOOD

The members of the Pettis County, Missouri, Cow Testing Association, met April 6th and listened to an address by E. M. Harmon, Dairy Extension Specialist of the University of Missouri.

During the year ending March 1, 1922, the 23 members of the association had a total feed bill of approximately $20,000. The increase in production was 671 lb. milk and 32.03 lb. butter fat per cow over that of last year. Through the Association and its improved methods it has introduced, the returns per dollar invested for feed was increased by 51%. The average of all cows in the county during the past year was 7,213 lb. milk, 277.6 lb. butter fat. The milk average is the highest of any association in the state and the butter fat average was the second highest.

The cows owned by the Pettis County Holstein Company averaged 1,241 lb. milk, 20.4 lb. fat more per cow than the cows owned by the other members of the association and also showed a profit of $15.23 more per cow above the feed cost than the others.

HOLSTEINS IN WASHINGTON

During March the Snoqualmie Valley, Washington, Cow Testing Association tested 397 cows, 136 of these passing the 40-lb. mark. The highest producing cow for the month was a purebred, Hollywood Lilith Piebe De Kol, owned by Tom Owens, Kirkland. She produced 3,202 lb. milk, 115.9 lb. fat. Next to her came La Conner Pontiac Lady Netherland, a five-year-old Holstein, owned by Hollywood Farm with a credit of 2,306 lb. milk, 108.4 lb. fat, while Pietertje Mutual Fobes owned by Mr. Owens was third with 2,830 lb. milk, 99.1 lb. fat. Second high herd average went to the herd of 48 Holsteins owned by Hollywood Farm with an average of 1,307 lb. milk, 44.4 lb. fat.

PUREBRED AND GRADE

There were 306 cows tested during March in the Somerset County, Pennsylvania, Cow Testing Association, of which 57 produced more than 1,000 lb. milk. The leader, a registered Holstein, owned by A. W. Young, produced 2,821 lb. milk, 93.1 lb. butter fat. Next to her comes a grade Holstein also owned by Mr. Young with a production of 1,820 lb. milk, 67.3 lb. fat. The four high cows in the association were black and whites.

HOLTZE HERD CLEANS UP

Three hundred cows were tested in the Oconto County, Wisconsin, Cow Testing Association for the month of March. Of these, 41 produced more than 40 lb. fat, the leader producing 342 lb. milk, 61.7 lb. fat. The second high cow is credited with 1,758 lb. milk, 56.3 lb. fat. Both leaders and the leading herd, which averaged 1,043 lb. milk, 37.8 lb. butter fat, were black and whites and all were owned by Walter Holtz.

LITTLEPORT, IOWA

The high cow in the Littleport, Iowa, Cow Testing Association during March was a purebred Holstein which made 1,677.1 lb. milk, 57 lb. butter fat. The high herd consisted of nine purebred and two grade Holsteins and averaged 1,120 lb. milk, 40.2 lb. butter fat. They belonged to W. L. Pieck, Littleport. A purebred Holstein owned by J. L. Cords made 1,543.8 lb. milk, 49.4 lb. fat.

The average production of all the herds in the association for the month was 663 lb. milk and 24.2 lb. butter fat. There were 18 cows producing more than 40 lb. butter fat and three more than 50 lb. fat. The cost of producing a pound of butter fat ranged from 25.9 to 90.5 cents per pound.

ATHENS COUNTY, OHIO

In the Athens County, Ohio, Association, twenty-eight cows produced more than 40 lb. fat in March and fourteen cows produced more than 50 lb. fat.

The high cow was a registered Holstein owned by Theodore Rypma, with 2,110 lb. milk, 84 lb. butter fat. The second high cow was owned by Hope Brothers with 1,580 lb. milk, 70 lb. fat. Eight of the eleven cows tested belonging to the Childrens' Home made over 40 lb. of fat.

WASHINGTON COW TESTING IN MARCH

BY FRANK W. KEHRLI,
Asst. Dairy Extension Specialist, W.S.C.

The 2,680 cows tested in the nine Washington cow testing associations during March averaged 807 lb. milk and 32.5 lb. butter fat. Of the number tested 656 cows or 24% made the honor roll by virtue of a better than 40 lb. butter fat production. Two hundred and nine cows exceeded 50 lb. fat each during the month.

The Clallam County association again leads the state in numbers on record with 484 cows tested, averaging 33.9 lb. fat; 133 cows producing over 40 lb. fat. The highest average was made by the Snohomish Valley Association, 83 cows tested averaged 911 lb. milk and 37.2 lb. fat. The Snoqualmie Valley association was well toward the top with 397 cows tested averaging 913 lb. milk and 36.2 lb. fat.

The Valley Gem Farm herd of Arlington comes back the third month in succession with the highest herd average in the state for herd of Class 1, 15 cows and over milking. This herd of 27 purebred and grade Guernseys produced 1,001 lb. milk and 46.6 lb. fat a piece during the month. The Pierce County Farm of Sumner, with 16 Holsteins averaged 45.6 lb. fat. John Ham of Thomas has a 19 cow Holstein herd with an average of 1,167 lb. milk and 42.3 lb. fat.

For the fourth consecutive month the highest producing cow in the state comes from the herd of Thos. J. Owens of Kirkland. Hollywood Lilith Piebe De Kol a five-year-old Holstein owned by Mr. Owens produced during the month 3,202 lb. milk and 115.9 lb. fat. The highest producing grade cow reported is owned by the Pierce County Farm of Sumner, a mature Holstein with a production of 2,076 lb. milk and 89.1 lb. fat.

In Grays Harbor County the high herd and high cow were both owned by J. B. Erbinger of Elma. His 12 grade Holsteins averaged 1,251 lb. milk and 41.4 lb. fat and one member of the herd produced 1,516 lb. milk and 60.6 lb. fat.

In Lewis County 399 cows averaged 747 lb. milk and 29.5 lb. butter fat, 61 cows made the honor roll. The high herd and high cow were Holsteins owned by Nathan Hamilton of Chehalis. His seven cows averaged 1,400 lb. milk and 44.1 lb. fat and one purebred member of the herd produced 2,641 lb. milk and 78.7 lb. fat.

There were 52 honor cows of the 189 tested in Pierce County. The high herd and high cow were owned by the Pierce County Farm, sixteen Holsteins averaged 1,272 lb. milk and 45.6 lb. fat and one cow produced 2,076 lb. milk and 89.1 lb. fat.

In the Snoqualmie Valley there were 136 honor cows, six Holsteins owned by Henry Rosen of Tolt averaged 1,148 lb. milk and 47 lb. fat. Hollywood Lilith Piebe De Kol owned by Thomas J. Owens of Kirkland produced 3,202 lb. milk and 115.9 lb. fat. The high cow in the Stillaguamish Valley was a purebred Holstein owned by E. E. Hegg and Son with a production of 2,170 lb. milk and 80.8 lb. fat, 460 cows were tested and there were 99 honor cows.

In the White River Valley the tester, S. C. Schoultes reports 280 cows tested average 869 lb. milk and 32.7 lb. fat; 68 honor cows. The high herd was owned by John Ham of Thomas, 19 Holsteins averaged 1,167 lb. milk and 42.3 lb. fat. The high cow was a grade Holstein owned by J. Cochrane, with 2,223 lb. milk and 64.5 lb. fat.

TROUBLE IN ONTARIO

Many of the Holstein owners of Ontario, Canada, are protesting against the Dairy Standard act just now before the Provincial Parliament. This act will require that all milk delivered at condenseries, cheese factories, creameries and butter factories, shall be paid for according to the amount of butter fat it contains this amount to be determined by the Babcock test.

TIOGA HOLSTEINS MILK

The Tioga County Testing Club has finished the fourth month of testing with the following ten cows high:

Name	*Age*	*Fat*	*Milk*	*Owner*
Gwennie Prilly Pontiac	Mature	83.6	2499	T. M. Escott
Eva Pontiac Ormsby	4 yrs.	82.8	2028	M. F. Patterson
Amelia De Kol Alcartra	Mature	79.32	1965	M. F. Patterson
Lokena Mechthilde Pontiac	Mature	78.05	2049	Howell & Campbell
Blacres Peep-O-Day Prilly	3 yrs.	75.186	2286.2	Bennett & Latzer
Lokena Mabel Pontiac Melaine	Mature	71.61	2012.1	Howell & Campbell
Jewel Posch Mercedes	3 yrs.	70.66	1984	M. F. Patterson
Lady Johanna Mercedes De Kol	Mature	70.21	2095.5	A. D. Prutsman
Blacres Grace De Kol Prilly	Mature	67.53	2268	Bennett & Latzer
Neta Pontiac It	Mature	66.0	1935.6	T. M. Escott

These cows have practically all been running since the beginning of the test and have made a very creditable showing considering the length of time they have been in milk. The high cow for the month has been milking since the 9th of December and has maintained an average of 85 pounds daily of milk and almost 90 pounds of fat for the month. These cows are all purebred Holsteins.

Heifers Wanted

I want to buy fifteen or twenty heifers, coming two or three years old, bred to freshen next fall.

They must be good individuals, come from a healthy herd and show promise of making profitable producers. They will have a first class opportunity and are wanted to put into a herd for breeding purposes, not for speculation.

B. H.
Care of Holstein Breeder and Dairyman.

THE SIRE CONTEST

At the present time there are 6 sires with 100 or more daughters in the A. R. O. list. There is already quite a little interest among the breeders to know which will become the 17th. Korndyke Abbekerk is generally expected to attain this position but there are some who fancy Matador Segis Walker. At the Allamuchy and Tranquility Farms there are quite a number of daughters of Korndyke Abbekerk that have not yet been tested and of which great things are expected. On their establishments in Wisconsin and Washington the Carnation Farms have a large number of daughters of the Matador Bull and are already claiming that he will be a century sire before the close of 1922. Johanna McKinley Segis has a long list with some more to be tested. Pietertje Hengerveld's Count De Kol really is a century sire for he has 99 daughters in the Advanced Registry, several of which are also in the Canadian Record of Merit list while he has a Canadian tested daughter that does not appear in the American Herdbook.

King Segis Pontiac seems headed towards becoming a double century sire. At the present time he has over 180 daughters in the A. R. O. list while through the center west there are quite a number of daughters of this bull that have not yet been given an opportunity to make an official record. King of the Pontiacs stands supreme at the head with 279 daughters in the Advanced Registry and there is a bare possibility that he may become our first Triple Century sire and have 300 daughters in the A. R. O. list.

PAY OR DIE

The herd of 74 Holstein cows at the State Hospital Farm, Mt. Pleasant, Iowa, produced 80,525 lb. milk during the month of March. The steward, Ralph Huling charges the hospital $2.40 a hundred for this milk, which gives the products of the herd a value of $1,932.60 for the month; the feed bill was $798.54.

No boarders are allowed in the hospital herd. For 16 years the milk of each cow has been weighed and tested, if one of them fails in her duty she goes to the slaughtering pen and there are no favorites. During March the top cow made 2,522 lbs. Ten animals produced over 2,000 lb. during the month. Unless a cow gives nearly 10,000 lb. or more milk a year they have no use for her.

AIM TO IMPROVE

It is claimed that Pennsylvania is the leading state for number of bull associations. The largest number of bulls in an association is 13, the smallest number is three. There was never a time when the use of a sire of good breeding is more important than at the present. The great need of the dairyman is more economical milk production and to meet present day conditions the farmer must produce at a low cost and maintain his position by the use of improved cattle and improved machinery.

INTERNATIONAL INTERMOUNTAIN SHOW

The attendance during the week of the fifth International Intermountain Livestock Show which was held at Salt Lake City, exceeded more than 10,000. The opening day of the Mormon church conference brought in many visitors from Utah, Idaho and near-by states. About 20 head of purebred dairy stock were disposed of April 6th at private sale. Nelson Brothers, J. I. Atkinson of Woods Cross and Ansel Hatch of Bountiful were Holstein breeders who made good sales.

The judging contests for college and high school students created much interest. In the latter class nine teams were entered and 10 boys participated in the individual judging contest. The Provo High School judging team won the first prize of a registered Jersey bull calf making 996 points out of a possible 1,200. There were only 69 points between the score of the first and sixth team. Wendell Wride received the Holstein bull calf presented by Scott L. Bringhurst of the Lakewood Farms for the highest score in individual judging.

Judging in the dairy cattle section of the fifth annual intermountain livestock show was completed April 4th. The chief competition was between the herds of the Utah Agricultural College, Ansel Hatch, J. I. Atkinson and Nelson Brothers. The Agricultural College had the grand champion bull and J. I. Atkinson grand champion female. The awards were as follows:

Class 1, Utah Agricultural College, first; Ansel Hatch, second; J. I. Atkinson, third; class 3, Nelson Brothers, first; class 4, J. I. Atkinson, first; class 5, Earl G. Lloyd, first; J. I. Atkinson, second; class 6, Nelson Brothers, first; Utah Agricultural College, third; class S. Potter, third; class 7, J. I. Atkinson, first; Utah Agricultural College, second and third; class 8, Utah Agricultural College, first; Nelson Brothers, second; Utah Agricultural College, third; class 9, 9, C. S. Potter, first; J. I. Atkinson, second; Utah Agricultural College, third; class 10. Utah Agricultural College, first; Nelson Brothers, second; J. I. Atkinson, third; class 11, Utah Agricultural College, first; C. S. Potter, second; Earl G. Lloyd, third; class 12, Nelson Brothers, first; C. S. Potter, second; J. I. Atkinson, third.

Aged herd—Utah Agricultural College, first; J. I. Atkinson, second.

Young herd—Nelson Brothers, first, Utah Agricultural College, second; J. I. Atkinson, third.

Calf herd—Nelson Brothers, first; C. S. Potter, second; J. I. Atkinson, third.

Senior champion bull—Utah Agricultural College.

Junior champion bull—Nelson Brothers.

Grand champion bull—Utah Agricultural College.

Senior champion female—J. I. Atkinson.

Junior champion female—S. C. Potter.

Grand champion female—J. I. Atkinson.

DEVELOPING A HERD

There are 360 acres in the Kennecoot Farm, Readfield, Maine, but only a portion of the farm is devoted to dairying. There are 22 purebred animals at present but it is the plan to build up a large purebred establishment.

The herdsires are Woodmont Sir Echo Champion and King Silver Coin De Kol.

The Champion bull is a son of Champion Echo Sylvia Pontiac, the work of whose daughters are known to every one interested in Holsteins. King Silver Coin De Kol is by a 29-lb. son of Prince Hazel Korndyke and is from Katie Hengerveld De Kol Plum 2d, a 24-32-lb. cow. When this bull lacked three weeks of being two years of age he weighed 1,540 lb. He is nearly all white in color, well proportioned and straight backed, and is a fine specimen of the breed.

The milk is skimmed, the cream sold, and the skim milk kept for the calves, consequently the young stock would be a credit to any establishment in the country. There are two large silos and it is planned to increase the barn capacity and a little later build another barn. Last year 1,000 bushels of potatoes were harvested and considerable other crops of this kind.

LONSDALE MAKES THIRTY POUND

Bess Mutual De Kol Netherland owned by the Lonsdale Co., of Lonsdale, R. I., has made 30.43 lb. butter and 619.2 lb. milk in seven days. A number of other good official records have recently been made in the Lonsdale Herd which is headed by the 31-lb. bull Model Segis Annie Butter Boy. In January this herd was tuberculin tested. The entire 160 head passed clean.

CLUB ACTIVITIES

THE MARYLAND BREEDEDS' ANNUAL MEETING

The Maryland Breeders' held their annual meeting and banquet April 5th at the Hotel Emerson, Baltimore. Fifty or more breeders and friends were in attendance and all thoroughly enjoyed the occasion. President J. M. Dennis in his opening address thanked the Milk Producers' Association for their coöperation in the campaign to increase the consumption of dairy products and suggested that a nominating committee be appointed to select representative breeders from different parts of the state as directors and officers. The resolution was moved and unanimously carried and thereupon Mr. Dennis appointed J. B. Diamond, Dr. Latch and Mr. Reynolds as a committee.

C. F. Bigler, president of the New York Holstein-Friesian Association, said that Maryland breeders and all owners of purebred Holsteins should carefully consider the sales of the past year which were really business barometers with many encouraging features. The Brentwood sale was good considering conditions throughout the country. In the Brentwood sale 186 animals were sold for an average of practically $800 and at the National Sale at Syracuse the June previous the same average was reached. Nearly four hundred animals were sold at this average price within a radius of 400 miles in considerably less than a year which was, general business conditions considered, truly remarkable.

The New York Association put on sales to show buyers both in and out of the state that sales can be straight. They had a veterinarian present during the last sale to decide any disputes arising between the consigners and the buyers as to the condition of the animals. He advised breeding good animals and growing them better; strict culling; suggested that the breed would be improved if the breeders sketched the animals when very young and filed the sketches with the secretary and then did not register the animals until they had been passed upon by an authorized judge who would decide whether or not they were worthwhile specimens of the breed and so worthy to be registered.

Holstein milk was best for calves of any breed of cattle and therefore they had a right to believe that it would be best for babies, which belief was sustained by the investigations of scientists and doctors. Mr. Bizler touched on advertising and suggested that billboard advertising could profitably be used by owners of Holstein-Friesian cattle.

New York State had started cleaning up tuberculosis by counties. The first test in Essex County showed 3 per cent reactors and the second less than 1 per cent. It was planned to take Clinton County next and then clean up the entire state, county by county. Breeders all over the country should urge their Senators and Congressmen and State Representatives to secure adequate funds for tuberculosis eradication.

Calf club work should be encouraged; instead of discouraging the boy when he wished to feed his calf he should be encouraged. Business ethics were not as good as they should be in the breeding industry but education was making them better.

The transfer fee which was cut as a result of the Syracuse meeting, should be increased. The New York State Association had 752 members last year, they aimed at 2,000 this and were using paid solicitors at the present time to increase the membership.

President Dennis called on S. T. Wood, who said that farming was the greatest business on earth and the recent census showed that it represented as much wealth as the combined railroads and factories of the country. He advised the owners to grow their cattle better and deplored the use of oleo on farmers' tables.

The next speaker was W. C. Snarr, Rockville, who trained the boys team that won the prize of a trip to England in competition with boys' clubs all over the country. Like many men who have accomplished big things, Mr. Snarr was quite modest and would say very little about what he had accomplished. He touched on the present milk trouble at Washington.

G. H. Truckell, of the HOLSTEIN BREEDER AND DAIRYMAN, spoke on the possibility of having the National Dairy Show and the World's Dairy Congress at Baltimore or Washington. He suggested that the breeders of the South should organize to have the 1923 convention of the Holstein-Friesian Association held in one of the southern states. The present by-laws say that it shall be held somewhere east of the meridian running through Erie, Pennsylvania. Meetings have been held in New England, New York State and Philadelphia and it was only fair that the next meeting should come to the South.

Professor Meade of the Agricultural Department of the Maryland College contrasted the agricultural and horticultural wealth of the state. He said that the total value of all the crops was $109,811,000 and total value of live stock and dairy products of Maryland was $65,361,000. This did not include pork products, which would make the total much more.

The Maryland Agricultural College was in great need of land on which to erect needed buildings and to conduct experiments. They needed a feed laboratory, a judging pavilion, specimens of dairy cattle and hogs or different breeds and complete sets of herd books. He pleaded with the breeders to urge their Legislative representatives to look after the University of Maryland in return for its work for the benefit of the farmers' interests.

Mr. George Baxter told a number of good stories, called attention to the fact that although this was a Holstein breeders' banquet there was no cream, milk or cottage cheese on the table. The greatest need of the south was the dairy cow and there were good cattle in all breeds. Mr. Baxter closed by urging the breeders to consign only good cattle to public sales.

The Guernsey breeder, Louis Merryman, was called upon and spoke on boys' clubs. He paid a glowing tribute to Professor Snarr as a trainer of boy judges and said that the team he trained not only won the prize of a trip to England but that the leader of the competiton at St. Paul was one of the Maryland boys. Mr. Merryman said that the boys having livestock become enthusiastic over their charges and related that one whose animal had lost part of its tail in an accident stole a bottle of hair tonic so that the animal could grow a new switch.

The nominating committee suggested for president, Nelson James, Rising Sun; vice-president, Mack Dennis, Lutherville; secretary and treasurer, W. R. Whittingham, Corbett. These with Earl Brown, of Sparks, and A. H. Smith, Greensboro, form the executive committee. For other directors: D. B. Diamond, Gaithersburg; J. R. Brown, Gapland; Chas. Wertheimer, Frederick; Samuel Ensor, Frederick; A. G. Ensor, New Windsor; W. P. Jackson, Salisbury; James G. Davis, Galena. The selection of the nominating committee was unanimously confirmed by the members and a rising vote of thanks was given to the retiring president, John M. Dennis.

CUMBERLAND VALLEY BREEDERS

The Cumberland Valley Association met in the Chamber of Commerce, Chambersburg, Penna., April 12th and elected the following officers: D. E. Witherspoon, president; C. P. Omwake, vice-president; D. H. Yaukey, secretary; Enos H. Horst, treasurer; executive committee: S. B. Lehman, S. R. Miller and M. M. Kauffman.

S. R. Miller reported that 42 animals were promised for the sale at Red Bridge May 31st, and it was suggested that George Stevenson & Sons be requested to consign ten head. It was decided to hold a picnic on August 16th at Red Bridge. Enos Horst was elected chairman of picnic committee with power to select an assistant.

The association passed the following resolution:

"Resolved, That we, the Cumberland Valley Holstein-Friesian Breeders' Association, urge upon all breeders of Holsteins

or any other breed of purebred cattle to join the Franklin County Cow Testing Association. Further, that when any animal proves herself unprofitable, that she be disposed of, not as a breeder, but for beef."

OLD OFFICERS REELECTED

The Holstein men of Scott County, Minnesota, were guests of the Jordan Communiy Service Club April 7th and listened to a number of talks by prominent cattle men. Robert Geiger, secretary of the Minnesota Holstein Association, spoke briefly on calf club work, cow testing associations and the general ways and means of boosting the Holstein breed and the dairy interest. The association will get behind the club work and the organization of a county cow testing association. It was agreed to donate $25.00 to each of the county fairs for premiums in calf club work. The election of officers resulted in the unanimous reëlection of the old officers who were: President, Axel Hansen; vice-president, Jos. Erkens; secretary, Edw. Liebbrand; treasurer, John Frank. Every man present, before leaving, signed up for three year membership in the state and county Holstein Breeders' Association. The state association is planning a farmers' and dairyman's sale and show to be held at Mankato on May 23d and 24th.

MANITOWOC REELECTS OFFICERS

The Manitowoc County Holstein-Friesian Breeders' Association held their annual meeting at the Court House, Manitowoc, Wisconsin, and reëlected their old officers as follows: President, Martin Geraldson, R. D. 4, Manitowoc; vice-president, Theodore Pritzl, Cato.; secretary and sales manager, Chas. Hampke, R. D. 6, Manitowoc; treasurer, Chas. Wilhelm, Reedsville; directors, David Lorfeld; Cleveland; Herman Tills, Manitowoc, R. D. 6; Bernard Fetzer, Grimms, and Elmer Thompson, Quarry.

President Geraldson gave a very good talk on the necessity of advertising while J. Champion of the State College of Agriculture spoke on the necessity of purebred cattle.

PLAN COUNTY EXHIBIT

The Burlington-Ocean County Holstein-Friesian Association met at Mount Holly, New Jersey, April 14th, and elected the following directors: A. B. Jackson, Columbus; Chas. H. Atkinson, New Egypt; Frank Gauntt, Jobstown; W. H. Hoffman, Birmingham; J. G. Jennings, Medford; W. R. Forsythe, Bordentown and Frank Raycraft, Jobstown. The board organized by electing A. R. Jackson as president, Chas. H. Atkinson vice-president and Fred Gauntt as secretary and treasurer.

A meeting is to be held at an early date with the representatives of the Burlington County Fair Association to consider the question of the two-county association putting on an exhibit of cattle at the fair next September.

MADISON COUNTY ASSOCIATION

About fifty members of the Holstein-Friesian Breeders' Association of Madison County met at the Pioneer Restaurant, Oneida, New York, March 17th. Among the speakers of the evening were F. R. Walkley of the Farm Bureau; Dr. Bond of the State School at Morrisville; Bert Marshall, Morrisville, and Raymond Coalter of Chittenango Station; W. H. Maynard was chairman. Many matters of interest to the breeders of Holstein cattle were discussed. State President Bigler and State Secretary Zimmer were present and spoke on state and county breeders' associations and their relationship.

FORM COUNTY ORGANIZATION

About twenty breeders of purebred Holsteins met April 5th at the Farm Bureau office, Mansfield, Ohio, and listened to an address by Dr. H. B. Gooding, Tiffin, formerly president of the Ohio Holstein-Friesian Association. The Richland County Holstein Breeders' Association was organized. A. L. Lockhart, of Lexington, was elected president; George W. Will, of Shelby, vice-president; G. W. Henne, of Mansfield, secretary-treasurer.

CALF CLUB ORGANIZED

The Holstein Breeders' Association held their quarterly meeting in the Commercial Club rooms, Grove City, Pennsylvania, on March 27th. About twenty-five members attended and the most important matter was the organizing of a boys' calf club of 100 members. Mr. H. L. Baker who has charge of the boys' and girls' clubs of the state, will aid in securing the desired membership. The meeting was addressed by John A. Bell, Jr., who told of the results that may be accomplished by raising purebred Holsteins. James Hunter, a local Holstein breeder, told of the value of the official test; W. S. Hagar, farm agent, spoke of proper feeding.

LADIES FORM AUXILIARY

The annual meeting of the Cameron Holstein Club, which was one of the first clubs to be organized in Barron County, was held in the Odd Fellow's Hall, Cameron, Wisconsin. Chas. Meisegeier was elected president and S. E. Severson secretary-treasurer.

About a dozen women, interested in the Holstein breed, formed a temporary organization, the Black and White auxiliary, and elected a committee consisting of Mrs. Chas. Meisegeier, Mrs. Wyle, and Mrs. L. M. Burgess, to perfect the organization.

CHEQUAMEGON ELECTS OFFICERS

At the second annual meeting of the Chequamegon Holstein-Friesian Association held March 29th, at the Court House, Ashland, Wisconsin, the following officers were elected: President, Ed. Carlson; vice-president, Carl Rudquist; secretary, D. W. Emerson; treasurer, R. P. Prince. The same directors were reëlected. They are: James W. Good, Carl Rudquist, Ed. Carlson, Henry Roffers, R. B. Prince, Otto Olson, and D. W. Emerson.

HINT DISCUSSES TESTING

The Jackson County Holstein Breeders' Association held a meeting at the Y. M. C. A., Jackson, Michigan, March 31st. An excellent address was given by E. D. Hint, of Michigan Agriculture College, on the subjects of advanced registration and testing. Talks were given also by R. E. Decker, County Agent; A. C. Balsar, of the Michigan Agricultural College, and M. J. Noon, of the Farm Bureau. Harry Boardman was chairman.

BRISTOL COUNTY, MASS.

The Bristol County Holstein Club held its annual meeting at Taunton, Mass., March 29th. They elected the following officers: President, Harold Goff, Rehoboth; vice-president, Ralph Horton, Rehoboth; secretary, Warren Ide, of the Bristol County Agriculture School; treasurer, George B. Flint, Mansfield. An address was delivered by Prof. J. Fawcett, of the Massachusetts Agricultural College.

MAINE BREEDERS MEET

The Maine Holstein Breeders' Association held their annual meeting in Winslow Hall, Orono, March 31st. Myron C. Peabody, of South Portland, presided over the meeting. The principal speaker was C. L. Blackman, secretary of the New England Holstein Breeders' Association. He is an alumnus of the Maine College of Agriculture and is an earnest, painstaking worker for the Holstein industry.

Pennsylvania's Competent Sales Manager

H. R. LONGACRE

Royersford, Pa.

WRITE OR WIRE FOR TERMS AND DATES

BRATTLEBORO BUSINESS

Forty-five applications for membership were received at the office of the secretary for the week ending April 8th. There were 2,739 certificates of registry issued, 2,013 female and 726 male; 2,403 certificates of transfer were issued during the same time, 1,1621 female and 782 male.

During the week ending April 22d, thirty-one applications for membership were received. There were 2,572 certificates of registry issued, 1,913 females, 659 males; 1,984 certificates of transfer were written, 1,349 female, 635 male.

The list of herd prefixes which were reserved for the two weeks' period are:

Andhurst, Neal D. Andrew, Canaan, N. H.

THE HOLSTEIN-FRIESIAN ASSOCIATION OF AMERICA,
F. L. HOUGHTON, *Sec'y.*

SUSQUEHANNA BREEDERS ANNUAL

The annual meeting of the Susquehanna County Holstein-Friesian Association was held in Montrose, Pa., April 22, 1922.

The auditors reported accounts correct with a gain of $30.98 during the past year.

The report of County Agent, Charles P. Fague, enumerated among the things of value done for the Holstein interests such matters as assistance in securing subscriptions for a sale pavilion, aid in selling over $27,000.00 worth of cattle, and the holding of a calf sale.

W. G. Comstock, president of the Agricultural Society, stated that it is the intention of the society to erect a sale pavilion.

President L. M. Thompson presented some recommendations among which were the holding of a field day, better attendance at meetings, and more interest on the part of breeders. He said that the business of the association has not kept pace with the growth of the breed and that the system of selling through the secretary had not been successful because the breeders failed to make reports of what they had for sale and information furnished was not definite.

A motion was carried that a committee be appointed to arrange for a field day.

After discussion of the matter of holding a county sale, a motion was carried that a committee be appointed to consider the question and to hold a sale at such time as they think best.

Election resulted as follows:

President, Dr. L. M. Thompson, Montrose; first Vice-president, E. D. Ellsworth, Meshoppen; second vice-president, C. L. Snyder, Kingsley; third vice-president, A. L. Bowell, Thompson; secretary and treasurer, J. Terrence Sheen, So. Montrose.

Professor Borland, head of the Dairy Department of the Pennsylvania State College, gave a very interesting and instructive address. He showed the high position of Pennsylvania as a dairy state and of Susquehanna as a dairy county. He presented a chart showing the higher producing ability of purebreds over grades and also the greater economy of purebred production. A study of producing averages of all cattle of all the dairy breeds having long time records, showed that the Holstein produces much more milk and butter fat per animal than any other breed.

A series of charts prepared by Professor Borland in regard to prices at the last Brentwood sale, showed that higher prices were obtained for animals of good individuality, from well known blood lines, with proven sires, and backed by good records particularly long time records. He mentioned the value of fitting for the sale ring. Some of the breeders present thought that in figuring out the prices the influence of excessive fitting had not been calculated and, if that had been considered, the long time records would have shown but little influence on prices obtained. Professor Borland thought that might be true to some extent, but held to the conclusion that long time record backing brought considerably higher prices.

W. HUGH JONES, *Sec'y.*

Professor—"Do you believe in a more elastic currency?"

Brightmind—"No, it's elastic enough. Why not make it more adhesive?"

Flesh-colored stockings are popular because holes don't show.

THE SPRINGDALE HERD

Throughout Northern Pennsylvania the Springdale herd has an enviable reputation but it has a right to its fame. The head of the firm, B. F. Jones, is Pennsylvania's best-known judge and his services are in request at many of the leading fairs of his native state. It is, therefore, fitting and proper that the Jones herd should be one of high class individuality. The younger member of the firm is W. Hugh Jones, who is secretary of the Pennsylvania Federation of Holstein-Friesian Clubs. Hugh is a recognized authority on Pennsylvania A. R. O. Records.

For sixteen years the Springdale herd has been built up with the idea that the value of the cow should be based upon her ability to produce and reproduce. Bulls of high quality have headed this herd. Many of the older members of the herd are daughters of Tobe Rag Apple Korndyke whose dam made 31.66 lb. butter in seven days as a ten-year-old and is the dam of Lady Tobe De Kol, a 36-lb. four-year-old with a 30-lb. four-year-old daughter. Another former herdsire was King Tweede Spring Farm whose sire was full brother to the first 44-lb. cow K. P. Pontiac Lass and whose dam, Dressie Lady Pontiac is a 30-lb. daughter of Spring Farm King Pontiac. This bull now heads the high-class herd of Abner Deysher of Reading, Pennsylvania.

The present Springdale head sire is a son of Butter Boy Empress a 30-lb. cow and a wonderful show animal; who was pronounced by no less a judge than the owner of Minerva Beets to be one of the three best cows on the show circuit last fall and was the Grand Champion of the 1921 New York State Fair.

"Father, will you give me five cents for a poor man who is outside, crying?"

"Yes, son, here it is. You are a charitable boy. What is he crying about?"

"He's crying 'Fresh roasted peanuts, five cents a bag!'"

GLENN R. MEAD

THE LIVE WIRE

A-good breed is essential
U-ntil you start you can't improve
C-an't the herd stand a real purebred?

CALIFORNIA SALE AVERAGES BIG

At the Guarantee sale held at the Rhoades and Rhoades Sale Pavilion, Haynes, California, April 5th. There were 58 animals sold at an average of $457.85. Five bulls sold for $2,330 an average of $466. The top price male was King Korndyke Pontiac Fobes Mona, a son of King Korndkye Pontiac 20th and Mona Fobes, a 30-lb. cow. This animal was consigned by W. J. Higdon, Tulare, and was purchased by Frampton Brothers, Artesia, for $1,300. Fifty-three females brought an average of $457, the top price, $1,700, being obtained for Norma Korndyke Cornucopia, who was purchased by Fred Hartsook of Lankershim. She has a seven-day record of 38.42 lb. butter from 673.10 lb. milk and a thirty-day credit of 155.75 lb. butter from 3,113.6 lb. milk as a junior five-year-old. She was consigned by Mrs. Annie Donders, Fresno.

The animals that sold for more than $250 with names of their purchasers and consigners follow:

Consigned by Mrs. Annie Donders, Fresno.

Victoria Brunaro Johanna, Carl Ray, Lankershim	$525

King Korndyke Pontiac Fobes Mona, Frampton Brothers	1300

MANITOWOC SALE

The annual sale of the Manitowoc County Holstein-Friesian Association was held at the county fair grounds April 7th, and more than seventy head of cattle were sold for approximately $7,000. The highest price paid was for a yearling bull King Cleveland De Kol, consigned by David Lorfeld, Cleveland, and purchased by Charles Kiel for $360. The second high price was obtained for a 34-lb. bull, King Cleveland Neeltje, also consigned by David Lorfeld, and purchased by Nick Salm, Cleveland for $350. The top price female was Miss Kamman De Kol 5th, consigned by George Thompson, Quarry, and purchased by A. C. Thompson, Valders, for $235.

The animals bringing $125 or more with names and addresses of the purchasers and the prices paid are as follows:

Consigned by Fred Siemers, Cleveland.

De Kol Jewel Neeltje, Alfred M. Madson, Manitowoc	$175
Female, Cahill Brothers, Grimms	180

Consigned by Fred Witte, Mishicot.

Mishicot Juliana Homestead, Hugo Stook, Manitowoc	130
Lady Belle Yesletine, Franke Kaldoff, Two Rivers	155

Consigned by Morton Geraldson, Manitowoc.

Female, N. Gustaveson, Manitowoc	125

Consigned by Dave Lorfeld, Cleveland.

Bell Sarcastic Cleveland, Jerry Hussey, Manitowoc	150
Aaggie Cleveland De Kol, Jerry Hussey	170

Consigned by Box Elder Dairy Farm, Isidor Lemberger, Cato.

Pearl Inka Ormsby, Hilda Skattebo, Valders	155

Consigned by Charles J. Konop, Cato.

Lone Valley Lona De Kol, John Dvorak, Two Rivers	210
Clara Bettina Segis, Alfred Madson	220

Consigned by George J. Pieschel, Cato.

Maltilda Ormsby Hengerveld De Kol, Louis Cootway, Manitowoc	155

CUMBERLAND VALLEY BREEDERS' SALE

The Holstein breeders of Cumberland Valley plan a quality sale May 31st. This will be held at the Red Bridge Park, Chambersburg, Pa. The animals in this sale have been carefully selected as being representative of the cattle raised in Franklin County. Every animal in the sale is chosen from herds that are either on the accredited list or under Federal supervision and are sold subject to a sixty-day retest privilege. Every bull in the sale is from a dam with an official record, and every animal was selected from the standpoint of individuality as well as breeding. The blood of Pontiac Korndyke will be strongly in evidence, as there are a number of granddaughters and some grandsons of that great old sire in the sale.

The Cumberland Valley is one of the beauty spots of America, and those who can possibly motor to the event are strongly advised to do so. Just take a day off and enjoy the beauties of nature and attend a real high-grade sale. The well-known Holstein breeder, S. R. Miller, of Thornwood Stock Farm, is manager of the sale, and will be pleased to answer all communications and requests for information. Better write for a catalog while you have it fresh in mind.

DISTRIBUTION SALE

The Cumberland Holstein Club held its spring sale at Barron, Wisconsin, March 25th. The club advertised the sale as one at which the stock would be sold at farmers' prices and over thirty head of stock was sold in less than two hours. It was estimated that thirteen of the bulls sold will replace scrubs and animals of low breeding. Over half of the bulls sold were under a year old and the average price was $56. The females of which only two were more than one year averaged $94.50.

A bull calf was given free to be drawn for by boys and girls beween the ages of 8 and 17 years. Selma Alberg with number 49 took the calf. There were 99 entered.

S. T. Hook purchased the entry of Aug. Roberg for $200. John C. Nelson bought the John LeJeune & Sons' entry for $150, and Theo Hoverson purchased a three-months heifer calf from the same consignor for $100. William Meisegeier paid $100 for a yearling heifer consigned by C. A. Oldeen & Son.

(Continued on page 308)

LET THERE BE LIGHT

The dairyman's day is a long one. He starts to work before the break of day and during the season when his cows are in the barn he usually milks both morning and evening by artificial light. Frequently he has to go to the stables after work is done using a lantern which is a poor aid. Some of the larger Holstein establishments are so fortunate as to be located near electric light lines where they can otain both light and power. Quite a number own their light and power plants which in many cases are quite expensive. A dynamo being put on the market by C. L. Templar is stated to be a long step in the direction of reducing the cost of installing the necessary equipment to produce electric light and power. The price of this dyneto is low for a machine of this kind, ranging from $75 to $139 according to size and capacity.

When the dairyman or his hired man can just press a button and obtain a bright and clear light in any part of the barn the trouble of making inspection trips is materially lessened to say nothing of the danger of fire. The good wife, too, will appreciate getting away from the drudgery of cleaning smoky lanterns. Power for the washing machine, vacuum sweeper and electric iron will lighten the work in the house and will preserve for years to come the roses in her cheeks.

Electric power will pump the water and the small boy will call it blessed. It will run the feed grinder and on many farms a small air pressure tank has been installed thereby saving the necessity of pumping tires when it becomes necessary to take the flivver to town. This is the age of electricity. The farmer may just as well be dead as out of fashion.

Charming Jill ran up a bill
For one dress more'n she ought'er.
When in that gown she skipped the town,
The sheriff, darn him! caught her.
—Wayside Tales.

KINGSTHORPE FARMS HOLSTEINS

Fully accredited Herd
Productivity—High Test—Type—Breeding

Our motto is **"No Slopers."**

Our prices are low—taking all points into consideration. Bulls, Heifers and a few cows for sale. Write your wants.

Fred'k A. King, Prop., Northboro, Mass.

A Grand Young Bull

BORN Feb. 12, 1922. His sire is King Pietertje Ormsby Piebe 16th, whose dam and sire's dam have yearly records averaging 28,283.55 lb. milk and 1351.37 lb. butter.

Dam has A. R. O. records of 557 lb. milk, 23.1 lb. butter for 7 days and is a show cow, was a 1919 Grand Champion Prize Winner.

Price only $200, which is far below his value. He is nicely marked, carries the splendid type of his sire and dam and is bred to make a great herd sire.

B. M. Arries, OAK LEAF STOCK FARM **Augusta, Wis.**

MISSOURI TEST WORK

The March report of the Missouri College of Agriculture shows that the Holstein Breed is more than holding its own in that state. The list of records completed since the beginning of the year shows that the three highest records were made by Holstein cows and that in the younger class they show very prominently.

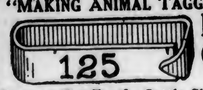
Daisy Netherland Annis, owned by A. B. Cole, leads for both milk and fat, her records being 21,530 lb. milk, 685.79 lb. fat. Cecil Segis Spofford, owned by the Pickering Farms, is second with 19,662 lb. milk, 660.62 lb. fat, and Inka Beauty Barber, owned by C. E. Driver, is third with 20,584 lb. milk, 642.99 lb. fat.

Clifden Palmar Veritas Pontiac, owned by Pettis County Holstein-Friesian Company, heads the four-year-olds with 15,017 lb. milk, 543.01 lb. fat made in 305 days. Daw De Kol Eureka, the property of C. E. Driver, as a three-year-old made 11,085 lb. milk, 402.8 lb. fat in 305 days. The two-year-old list shows a couple of splendid records made by animals owned by the Pickering Farms. In the full year Ora Finderne Pontiac made 17,527 lb. milk, 543.27 lb. fat and in ten months Queen Finderne Pontiac Clothilde produced 16,987 lb. milk, 525.73 lb. fat.

The completed list of the February tests show that the eleven highest producers were all registered Holsteins. Tete Ormsby Johanna, of the Pickering Farms leads with a credited production of 2,381.9 lb. milk, 88.368 lb. fat. The Pickering Farms also owned the third, fourth, seventh, eighth, tenth and eleventh ranking animals. Alice Clothilde Piebe, owned by Glenn G. Davis, stands second for fat with 80.314 lb. from 1,780.8 lb. milk. Duchess Chemacqua Hengerveld, owned by Bellefontaine Farms is in the fifth position and Fobes Homestead Rauwerd, the property of S. C. Lindsey stands sixth.

During March 256 cows in 51 herds were officially tested of which 168 were Jerseys 63 Holsteins and 18 Guernseys.

A REAL BULL



Born February 15, 1921

Sire: a grandson of King of the Pontiacs. Dam: a 32 lb. daughter of Aaggie Cornucopia Johanna Lad. There are FOUR century sires in his pedigree. He is a splendid individual, mostly white. Write for price and pedigree to

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Continued from page 307)

RESEGEDALE DISPERSAL SALE

Prices at the F. F. Resseguie Sale, which was held at South Gibson Pennsylvania, April 29th, were materially influenced by the announcement of the decided decrease in the price of milk in Dairyman's League territory. The 37 animals sold for $6,575, an average of $177.70. Baxter was auctioneer and R. F. Howard pedigree expert. The top price was $800, which was obtained for two different animals each purchased by Dr. L. M. Thompson, for the Lathrop Estate, South Montrose, Pa. One of these was Pietje Lilith Cornucopia, just fresh, a daughter of King Pontiac Alcartra Pietje, from a daughter of Lilith Pauline De Kol's Son. Her dam traces direct on the maternal side to Aaggie Cornucopia Pauline, the first 34-lb. cow. The other animal bringing $800 was K. P. A. P. Queen, another daughter of King Pontiac Alcartra Pietje. Her dam was the 30-lb. four-year-old, Queen Walker Pietertje, whose dam has a 27.85 lb. three-year-old record, her dam over 30-lb., with the two dams on the maternal side back of these animals are each above 30-lb. milk. Another daughter of King Pontiac Alcartra Pietje eight months old, sold for $400. She was from a 30-lb. cow and was also purchased by the Lathrop Farms. Joh Aaggie Lyons, consigned by A. E. & G. B. Robinson went to G. H. Dippie, Stillwater, Pennsylvania, for $310. This heifer was by a 33-lb. son of King Joh, and her dam was a 31-lb. cow whose dam was a 25-lb. daughter of Aaggie Cornucopia Pauline 2d, a 31-lb. daughter of the first 34-lb. cow.

The animals bringing $150 or more with names and addresses of their purchasers and prices are:

SOUTH CAROLINA HOLSTEINS SHINE

The Holsteins on test in South Carolina made a splendid showing, during March, no less than 84% of the black and white cows tested made the honor roll.

The champion cow of all breeds for butter fat production during the month is Ormsby Korndyke Hazel, owned by H. D. Jordan of Ridge Spring. She made 2,388 lb. milk, 80.9 lb. fat. Very close to her is Leafy Veeman Forbes De Kol, owned by V. M. Montgomery, Spartanburg. She produced 79.9 lb. fat and her milk production of 2,667.6 lb. was the largest reported for any cow. Four other animals of which two were four-year-olds and one a three-year-old in the Montgomery herd made over 72 lb. fat in the month and exceeded 2,200 lb. milk. No other cow in the state reached the 70-lb. mark. Mr. Montgomery had 11 cows on test that made the honor roll with an average of 2,129.4 lb. milk, 67.3 lb. fat. Mr. Jordan had nine animals above 40 lb. fat in the month. J. F. Willard, Spartanburg, had six, and so did St. J. A. Lawton of Charleston. South Carolina State Hospital had three above 58 lb. fat and the senior two-year-old Queen Ona Bernardo of the Clemson Agricultural College, produced 1,285 lb. milk, 41.8 lb. fat in the fifth month of her lactation period. Mr. Lawton had two grade Holsteins in the list, one making 46.4 lb. fat and the other 64.2 lb.

During the month 104 cows were tested of which 70 made the honor roll. There were 43 Holsteins on test of which 36 attained distinction. The Holstein Breeders of South Carolina have every right to feel gratified at the splendid showing their animals are making which is bound to increase the interest in the black and white breed within the state.

ALL TEN LEADERS

During the month ending April 13th, the ten leading cows in the Cumberland, Pennsylvania, Cow Testing Association were all black and whites. The leader is a grade owned by H. A. Schultz. She made 1,773 lb. milk fat in the month. The next six cows were all registered Holsteins. A. P. Loudon had one with 2,178 lb. milk, 74.1 lb. fat. I. V. Otto is the owner of number three with 1,941 lb. milk, 71.8 lb. fat. Mr. Otto has two others in the ten leaders, which all produced over 61 lb. fat. G. W. Strock is the owner of two, L. H. Brehm, A. Thomas, E. H. Otto each have one. The average of the ten cows is 1,873 lb. milk, 68.1 lb. fat. The average test is 3.63%. Supervisor A. A. Raudabaugh tested 288 cows in 26 different herds during the month. Sixty-two cows attained 40 lb. fat in the month, 24 gave over 50 lb. while 52 produced more than 1,200 lb. milk.

In his remarks Mr. Raudabaugh pointed out that the 18 cows of the I. V. Otto herd averaged 1,412.6 lb. milk, 48 lb. fat. The Strock dairy of 39 cows averaged 1,031 lb. milk, 33.5 lb. fat, which is a splendid showing. The Otto and Strock herds consist entirely of purebred Holsteins.

GAIN IN NEBRASKA

The average fat production of the Gehrig, Nebraska, Cow Testing Association for the past month showed a gain of one-half pound butter fat from 28.5 to 29 lb. Prof. L. R. Wright has four cows that averaged 1,322 lb. milk, 46.6 lb. fat. Sam Barton and Son had twelve cows that averaged 1,603 lb. milk, 53.1 lb. fat. A new member, F. B. Sutton had six cows that averaged 1,195 lb. milk, 46.1 lb. fat. The high cow was a registered Holstein, Mabel, owned by L. R. Wright. She produced 2,058 lb. milk, 55.3 lb. fat. A four-year-old grade Holstein, owned by Lee Everett was second with 1,500 lb. fat of 4.6% milk equal to 69 lb. butter fat.

THOUSAND POUND ALLIE

Allie Lincoln of the University of Nebraska herd, completed a 365 days' record with 22,160 lb. milk, 1,057.28 lb. butter. There are now eleven Nebraska cows that have exceeded 1,000 lb. butter in a year, ten are Holsteins and one a Jersey. Allie ranks 7th in the Holstein list. Twenty-two Holsteins in the college herd have completed one or more lactation periods.

PRODUCING HOOSIER HERD

Morton Friend, of Orland, Indiana, has been making a number of nice records on his Holsteins and already has 17 cows in the Advanced registry, nearly all of which are three-year-olds and were raised by Mr. Friend.

Returns from the Lima Creamery show that this herd is credited with a production of 1,007½ lb. butter in November; 1,227 lb., in December; 1,236 lb. in January; 1,046¾ lb. in February. During this time the milkers have ranged from 16 to 20 there being 21 cows in the entire herd.

A DIFFICULT POSITION

Two Irishmen were crossing a bog when one of them fell into a mudhole. His companion, running to a near-by farmhouse, asked the loan of a spade.

"What do you want it for?" asked the farmer.

"Sure, Mike is stuck in the bog and I want to dig him out," was the answer.

"How far in is he sunk?" questioned the farmer.

"Up to his ankles."

"Begorra, then he can easy walk out."

"Begorra, he can't," exclaimed Pat. "He's in wrong end up."

YES, HOW DO YOU?

An American in dear old London was bragging about his auto. He ended his eulogy by declaring:

"It runs so smoothly you can't feel it, so quietly that you can't hear it, it has such perfect ignition you can't smell it, and as for speed—boy, you can't see it!"

"But, my word, old dear," interrupted the Briton, anxiously, "how do you know the bally thing is there?"

WISE FLORIDA DAIRYMAN

W. T. Gwynne, Orlando, Florida, is an enthusiasic dairyman with an establishment on Lake Davis; he is also a strong advocate of purebred stock. The report of the City Pure Food Inspector shows that the milk consumed in Orlando is produced by 2,300 cows which averaged only three quarts daily. The wholesale price is ten cents and the retail price is fifteen cents a quart. "Get rid of the 'boarder cow' said Mr. Gwynne, 'and the dairying business can be made to pay.'"

YANKTON HERD

Yankton Bertha Cornucopia, 242,657 in the herd at the State Hospital, Yankton.

The highest producer was Junette Madrigal 2d, the only cow that made over 500 lb. fat in a year. Six others exceed 400 lb., 12 made over 360, 37 made over 300 lb. Junette was owned by Fred Kroeger. There are now 331 purebred females in the circuit and during the past year 41 purebred calves have been sold, most of them very young. There are still two purebred bulls over six months of age and 27 calves to be disposed of. During the year 36 purebred females were sold at an average of $146.32. In all the sale of surplus stock has amounted to $9,235 during the year.

GOOD IDAHO HERD

The herd of the Intermountain Institute of Idaho is interesting many breeders of purebred Holsteins. The great Mercena Mabel Hartog, who a year ago as a heifer made 3,116.8 lb. milk, 140 lb. fat in thirty days, finished the year with 21,214.7 lb. milk, 703.29 lb. fat and was averaging a pound of milk a day when she finished her year's test. At the close of her thirty-day performance she had a severe attack of indigestion and for a time it was thought that she would not recover. Institute Hope Walker holds the junior three-year-old record, producing 17,642.7 lb. milk, 557.01 lb. fat in a year. She made a number of show trips and took fourth place both at the Idaho State Fair, at Boise, 1921, and the International Livestock Show, Portland, Oregon.

COLOR SCHEME ON THE FARM

Charles Shultz of the Bawndell Farm, Independence, Kansas, is getting considerable advertising because of the color scheme of his farm. Of course, he has Holstein cattle, then he has a herd of Poland China, hogs and a large flock of Ancona hens. It is planned to paint the buildings, fence-posts and farm implements black and white.

One of the Bawndell cows is Princess Pietertje Bawn De Kol. In one day she gave 114 lb. milk and in seven days gave 784 lb. and is the only cow in the state that milked more than 100 pounds in a day in three different lactation periods.

The Bawndell herd is on the accredited list, having twice passed the tuberculosis test without any reactors.

GOOD FOR MARYLAND

In the high class herd of W. P. Jackson, Salisbury, Maryland, the senior three-year-old, Pride Daisy Segis Hengerveld completed a record of 23,992.8 lb. milk, 910.15 lb. butter in 357 days. She is a daughter of Segis Hengerveld Beets Lyons and was bred by L. W. Pratt of Le Raysville, Pa. Much of the credit for this splendid showing should go to Harry Van Horn, the efficient manager of the Homestead Farms.

The Cumberland Co. Holstein-Friesian Breeders' Association

WILL HOLD THEIR

FIFTH ANNUAL SALE

AT

McHenry's Sales Stables, Carlisle, Pa.

50 HEAD—TUESDAY, MAY 23—50 HEAD

A Straight, Clean Sale of Straight, Clean Cattle

THE BIG, HEALTHY KIND that have no option BUT TO MAKE GOOD

All Registered and Tuberculin Tested.

All Sired by or Bred to 30 lb. or 1,000 lb. Bulls.

Sale starts at 12:30

Catalogs ready

R. L. SHENK, Secretary, Newville, Pa.

THE COW TESTER AND HIS PATRONS

By J. B. Countiss.

To say that a cow testing association is a success is to say that the tester in that association has the entire confidence of all the members, and vice versa. The motto, "one for all, and all for one," must be practiced at any and all times. In order to gain the entire confidence and admiration of all the members, the tester must necessarily demonstrate his ability to use his hands as well as his head. The tester who is afraid to fall in under a cow with a milk pail between his legs, or to take a fork and help clean out the dairy barn, is very seldom able to call a meeting of his association and get away with anything he might suggest to his members. The shortest way to a man's heart is by *Service*.

To be of the greatest service to the members of his association, the tester must have the assistance and support which only the Farm Bureau in his county can give him. By keeping in close touch with Advisers at the Farm Bureau, one naturally becomes acquainted with the leading farmers in the county, which is a very great help indeed to a "wandering tester." But the greatest help comes from the Farm Bureau in buying or selling live stock for the members, buying feeds in large quantities, putting on exhibits at the local fairs, and T. B. campaigns, etc. Another big help which the tester may receive from the Farm Bureau is the assistance which it can be to him in getting out detailed monthly reports for the benefit of the members of the association. In fact, it has been my experience that a report of this kind causes more interest and enthusiasm in the work of the association than any other thing I have tried out. However, if it were not for this highly appreciated assistance which I receive from the Farm Bureau in Knox county, I could never think of getting out all the reports each month.

If the Farm Bureau boosts a thing and puts its stamp of approval on it, the farmers usually take to it, and we must admit that a cow testing association must be boosted by some one before it can be a success. However, regardless of how much boosting is done, the tester must have a sincere purpose in mind, and the members must never be allowed to lose interest in the work of the association at any time, if the association is to be a success—these three—each as important as either leg of a three legged milk stool.

A QUALITY HERD

From the herd of A. W. Brown, West Winfield, New York, have come many great cows that in after years have made splendid records in both long time and short time tests. Mr. Brown, with his brother-in-law, Don Wood, were early breeders and built up their herds for dairy production. They did little official work or advertising but the quality of their dairy animals became noised around the country and for many years some of the greatest breeding establishments of that day periodically sent representatives to their dairies to obtain surplus animals. The herds were closely related, both coming from the same foundation animals and the herd sires were used in common or exchanged. One of the most noted animals thus developed was the wonderful show cow, Aaggie Grace's 2d's Pietertje, who was the first cow in New York State to produce over 110 lb. milk a day in strict official test.

SELLS TO ALLAMUCHY

Several good producing animals went from Pennsylvania when the Allamuchy Farms took five of the E. D. Ellsworth big producers. This bunch included two daughters of Dichter Calamity Segis De Kol. Dichter Abruzzi De Kol has a 343-day record of 593.45 lb. butter, made without any special preparation, and Dichter Segis De Kol also has an A. R. O. record.

There were three daughters of Prince Segis Korndyke, Jr., who has a long list of good record daughters, one of which made over 30-lb. butter as a five-year-old and another is a 30-lb. four-year-old. Several daughters of this bull have made good long-time records. In the hands of their new owners we may expect to again hear from these daughters of the Ellsworth herd bulls.

THE DOWNTON HERD

There are very few herds of purebred Holsteins consisting of 70 members without a cow being more than five years old. The future of such a herd is bound to be even more profitable than its past as the milkers are maturing and gaining in producing capacity day by day. The Downton herd is young but already a number of good records have been made and others will be as time goes on.

The present herdsire, Plum Spring Farm Copia, is one of royal breeding. His dam has a record of 32.73 lb. butter in seven days, 131.42 lb. butter 30 days, and she averaged very closely to 100 lb. a day during her seven-day test period. She is by a good son of Pontiac Korndyke and is a daughter of a 31-lb. four-year-old. The sire of Plum Spring Farm Copia is from the twice 30-lb. cow De Kol Plum Copia, and is sired by Spring Farm Pontiac Cornucopia, who has a long list of high record daughters and is a son of K P Pontiac Lass, the first 44-lb cow.

The Downton Farm consists of 300 acres and is located two miles from Starrucca. Records in this herd have been made by the animals taken right from pasture, in fact, some of the animals have freshened right in pasture and many members of the herd have cow testing association records that show that they do better in their every-day work than they did in strict official test without any preparation.

ELLSWORTH BUYS THE POTENTATE

A transaction that may mean much to breed history is the acquirement of The Potentate by E. D. Ellsworth. This bull is the son of Cornucopia Pontiac Korndyke, who has a long list of high record daughters and is a son of the 33-lb. cow Ada Cornucopia Posch. The dam of The Potentate is Leafy Veeman De Kol, the 40-lb. daughter of the 43-lb. cow, Leafy Dawn De Kol. The three nearest dams of The Potentate have seven-day official records averaging 38.83 lb., and each one of these animals milked over 80 lb. a day during the time of her test.

The Ellsworth herd is noted for its uniform type and for the splendid udders carried by the milkers. Located at Meshoppen, Pennsylvania, the Craige Hills Stock Farm is in a country noted for its dairy herds. Animals from this herd have gone into other hands and made large official and year records, while a number of real good seven-day and long-time records have been made at home without any special preparation.

Franklin County Holstein Breeders Association
CONSIGNMENT SALE OF
50 Head of Cumberland Valley's Best Registered Holsteins
at Red Bridge Park, Chambersburg, Pa.
May 31st, 1922, at 12 o'clock

The animals offered in this sale have ALL been carefully selected as advertising representatives of Franklin County in the Holstein Industry. This is a QUALITY SALE well worthy of your attendance. ALL animals selected are either from Accredited Herds or Herds under Federal Supervision and are sold subject to a 60-day retest. Show animals. Splendid individuals. A number of A.R.O. Cows. ALL bulls offered have A.R.O. Dams. Grandsons and Granddaughters of Pontiac Korndyke from proven sires.

Chambersburg is on the Cumberland Valley Division of the Pennsylvania Railroad and the Lincoln Highway. Good Roads. Motor to this sale and see the beautiful Cumberland Valley AT HER BEST.

VAN NORMAN IN EUROPE

H. E. Van Norman president of the Worlds Dairy Congress Association is making a tour of Europe. He has been appointed a delegate to the general assembly of the International Institute of Agriculture which is to be held from May 8th to 18th at Rome, Italy.

The World's Dairy Congress will be the first international dairy meeting to be held in the United States. It is planned that to hold this congress the week immediately preceding the 1923 National Dairy Show. The city in which these great dairy meetings will be held has not yet been designated but the East is favored on account of the larger patronage the dairy show receives when held in the denser population centers. At the present time Washington or Baltimore appear to be the favorites.

BREEDING SOWS ON FARMS INCREASE

There were 12,424,000 breeding sows on farms April 1st, the United States Department of Agriculture estimates. This is 1,237,000 animals more than on the same date in 1921 and represents an increase of 11.1 per cent.

The large corn crop last year and the unusually large farm stocks of corn are given as the explanation of the large increase in breeding sows this spring. Corn was worth more as pork than as corn, and hogs were needed to eat the corn.

The number of hogs is quickly responsive to the general economic situation. In April, 1918, the number of breeding sows was 9.5 per cent more than on the same date in 1917, due to high hog prices as a result of war conditions. The figures on April, 1920, showed a decline of 10 per cent for the year ended on that date. Then the price of corn was relatively too high to encourage the feeding of hogs.

When feed is low priced, more animals are kept than when corn is high and this rule applies to all kinds of livestock, beef and dairy cattle included.

HERD SIRES:

Life experience in buying dairy cattle.

ENTIRE HERD RAISES RECORD

Molly Hengerveld Towanda, whose picture appeared on page 105 of February 22d issue, is on test at the Illinois Holstein-Friesian testing plant at Dixon. As a senior two-year-old she produced 21,750.2 lb. milk in a year and then freshening again as a senior three-year-old made 29.47 lb. butter and 571.9 lb. milk in seven days, 126 lb. butter 2,453 lb. milk in 30 days. She is a cow of good size and individuality with lots of vitality, is of splendid type and is making a good year record at the present time. She is from an untested dam and was sired by Towanda Spring Farm Pontiac De Kol who was by Spring Farm King Pontiac Cornucopia from a 33 lb. cow.

Molly is owned by Harry M. Wood, of Delavan, Ill., and is one of a number of good ones in this herd. Every one of her stable mates of milking age is in the A. R. O. list and every one that had a previous Advanced Registry record raised her record this year.

HEYER TESTING

Darien Johanna Aaggie Skylark, a junior two-year-old, has just completed a seven-day record with 26.70 lb. butter from 365.8 lb. milk, an average of 52.3 lb. a day to her credit. Her sire is from a daughter of King of the Pontiacs, sire of the first 44 lb. cow, and the first 1,000 lb, senior two-year-old heifer. Her dam is by a grandson of Sir Ormsby Hengerveld De Kol, sire of Pietertje Maid Ormsby. Another excellent record was made by Sunny Side Spofford, who produced 27.689 lb. butter from 538.2 lb. milk, an average of 76 lb. a day for seven days. She produced 1,075.7 lb. milk, 42.603 lb. fat, or 53.25 lb. butter in fourteen days. They are both owned by J. E. Heyer, of Darien, Wisconsin.

RECORDS ON THE ONA FARM

Some creditable seven-day records are being made on the farm of the Ona Company, East Claridon, Ohio. Meadow Holm Pietertje Ormsby produced 437.9 lb. milk, 19.82 lb. butter as a junior four-year-old; Meadow Holm Hartog Ormsby, 359.3 lb. milk, 15.13 lb. butter as a senior three-year-old; Miss Hetty Hartog, 349.2 lb. milk, 18.07 lb. butter as a senior two-year-old; Meadow Helm Ormsby Pietertje, 302.4 lb. milk, 15.99 lb. butter as a senior two-year-old; and Meadow Holm Ona Button Lady as a senior two-year-old, produced 338. lb. milk, 15.94 lb. butter.

EXPECTED TO WIN

The First National Bank of Appleton, Wisconsin, is giving a silver trophy to the cow making the best seven day record in Outagamie County. The cow that is expected to carry off the prize is Calumet Abbeberk De Colantha, that recently produced 696.4 lb. milk, 31.25 lb. butter in seven days. She reached 106.8 lb. milk on her best day. She is owned by B. F. Winckler & Sons, of Medina, and is the first 31 lb. cow to be developed in Outagamie County. In the herd there is a three-year-old daughter of Calumet that promises to be as good as her dam and she has milked 67 lb. in a day. Ten other cows of the Winckler herd have made large official records. The Winckler herd is fortunate because the herd owned by their near neighbors W. H. Steffensen is barred from the competition. Three of the Steffensen cows have records above 30 lb. butter but the farm itself is just over the line between Calumet and Outagamie Counties.

LOYALSOCK HEIFER MAKES 30 LB.

Loyalsock Sadie Vale Craeg, at 4 years, 17 days old, recently finished a 7-day record of 562.7 lb. milk and 30.5 lb. butter. She is the daughter of King Sadie Vale Hengerveld and her dam Craeg Emma Veeman is an A. R. O. daughter of Sir Veeman Hengerveld 9th. She traces back to old Sir Veeman Hengerveld on both sides of her pedigree as her sire is by King Korndyke Sadie Vale and is from S. V. H. Belle De Kol a 37.38 lb. three-year-old daughter of the old bull. Loyalsock Farm is located at Montoursville, Pa., is the property of Flock Brothers Co., and the superintendent is the well known Holstein man, F. A. House.

DOING GOOD WORK

During the past season H. N. Kutschbach of Sherburne, N. Y., tested six animals varying in age from three to five years, that made records ranging from 22 to 28.54 lb. butter in the week. Mr. Kutschbach raised Granville King Veeman and sold him to Professor G. F. Warren, of Ithaca, N. Y. Three daughters of Granville King Veeman have made records above thirty lb. butter in a week and one has 29.26 lb. with prospects of increasing.

PROFITABLE

Clifden Palmer Veritas Pontiac, owned by John F. Bluhm, of Smithton, Pettis County, Missouri, has made 16,496 lb. milk, 787 lb. butter in 331 days. She made a profit over her feed cost of $311.25 during the test period. Clifden Palmer Veritas Pontiac is a daughter of King Alcartra De Kol Pontiac and was bred by Fred Karlen of Winslow, Illinois. She has a seven day official record as a senior three-year-old of 559.6 lb. milk, 27.14 lb. butter.

ROBERTSON RECORDS

Dimeta Burke DeSpoffard, one of the good cows in the Robertson herd was expected to make a large official record, but had a little trouble at freshening time. She is making good, however, in long time test and during the past month milked better than 2,000 lb. Her picture appeared on page 214 of THE HOLSTEIN BREEDER AND DAIRYMAN.

Echo Leeds Belle a fine daughter of Radium, has just closed a seven-day record of 17.86 lb. butter and 414.2 lb. milk as a two-year-old. She is starting out on a semi-official test so strong that Mr. Robertson hopes that she will beat his state champion, Hill Pine Flora Finderne. Echo is now milking between 60 and 70 lb. a day and is gradually gaining. In the Robertson herd individuality and production seem to go hand in hand.

Two very good long time records have just been completed by Robertson cows. Hill Pine Pontiac Moontykes as a mature cow made 21,517.6 lb. milk and 856.65 lb. butter and the three-year-old Inka Korndyke Fayne Butter Boy produced 16,629.6 lb. milk and 733.6 lb. butter in a year.

BULLS IN DEMAND

King Piebe of York who heads the Robertson Herd is not only a splendid individual but also is siring some very handsome young bulls which seem to be in great request. King Piebe of York is the only bull in Pennsylvania with the Piebe-County combination that is, he was sired by Piebe Laura Ollie Homestead King from Flo Walker Pontiac Segis, a thousand-pound three-year-old daughter of King Segis Count. In a letter just received from Mr. Robertson he says:

"We are having a great call for sons of our herdsire.

King Piebe of York 2d, went to head the herd of M. B. Zimmerman, High Rock, Pa., King Piebe of York 6th to H. N. Forrey, York, Pa., King Piebe of York 10th to George L. Smith, Fallston, Md., King Piebe of York 11th to L. R. Bair, Quarryville, Pa., York Piebe, another son of King Piebe of York went to head the herd of Webster Styer, Spring City, Pa. York Homestead Pontiac, the beautiful white show bull I showed you when here, went to M. H. Bennetch of Richland, Pa. He should make Mr. Bennetch a great show bull this year. As you know he is a grandson of Count."

Am consigning King Piebe of York 12th to Brattleboro in May. He is a beautiful, typy son of our bull, a real chip off the old block.

H. E. ROBERTSON.

MOOSEHEART BUYS CARLOAD

Mooseheart the institution maintained by the Royal Order of Moose has purchased a carload of purebred Holstein cows from Jefferson County, Wis., although this institution already has one of the largest herds of purebred Holsteins in the state of Illinois.

THE OAK LEAF HERD

The Oak Leaf Herd, located at Augusta, Wisconsin, is one of the high quality from the standpoint of both individuality and production. It is the aim of the proprietor, B. M. Arries, to give every animal of milking age an official record although he believes that the work of a cow year by year and throughout her life time is really of more importance than her ability to make a large record in test work. Two of the Oak Leaf animals have made records above 23 lb., five have exceeded 20 lb. butter in a week and several records approaching this mark have been made by two-year-old heifers. The star of the herd is Johanna Rue Queen 2d with an official record of 23.35 lb. butter and 526.6 lb. milk. She is the daughter of Johanna Bonheur 2d Segis and of the 22 lb. cow Johanna Rue Queen whose daughters have also made good.

In a little folder gotten out some time ago, Mr. Arries says of the Oak Leaf Farm animals, "The cows are the strong, rugged sort, able to stand up well under heavy feeding, easy milkers, with pleasant dispositions, the kind of

B. M. ARRIES
Oak Leaf Farm, Augusta, Wisconsin.

cows that make good under average farm conditions."

At the State fair in 1919 the Oak Leaf Stock Farm won a large number of prizes. Aaggie Madison Grahamholm Lad, the herd sire, was the grand champion bull. The first and second prizes in the aged cow class was won by members of the herd, one of which became the grand champion. The first prize two-year-old, the first prize yearling, and the junior champion bull all came from this establishment which also won first on junior herd.

Aaggie Madison Grahamholm Lad is a son of the famous sire and show bull Aaggie Cornucopia Johanna Lad, Jr., whose long list of daughters includes Lutscke Vale Cornucopia with 31,246.9 lb. milk in a year and who is a brother to Winnie Korndyke Cornucopia De Kol with 31,034.2 lb. milk in 365 days. The dam of "Lad" is Madison Jennie, with 29.2 lb. butter and 698.7 lb. milk in seven days and a number of other large records made in both short and long time test.

The present herdsire owned in company with William Millar, Jr., and W. S. Comings, is King Pietertje Ormsby Piebe 16th son of King P. O. P. and Oakdale Burke De Kol, 32.08 lb. butter and 625.1 lb. milk in a week, 1,313.29 lb. butter and over 26,000 lb. milk in a year. She is a daughter of Williams Farm Flossie De Kol 31.52 lb. butter and 611 lb. milk in a week, dam of two 30-lb. daughters each of which has made over 1,000 lb. butter in a year. As King Pietertje Ormsby Piebe was from the worlds champion junior four-year-old Queen Piebe Mercedes with 1,389.45 lb. butter and 30,250.2 lb. milk in seven days it can be readily seen that some tremendous averages are shown in the pedigree of the present Oak Leaf Farm herdsire.

ONE WAY TO SELL

In an effort to extend dairying and to dispose of a surplus of purebred stock the West Tennessee State Normal School through director Frank L. Teuton is making a very unusual offering. The school offers to sell a registered Holstein bull calf to any reliable farmer in the section around Memphis, under an agreement to take corn, potatoes, pork, chickens, eggs and other farm products in full or part payment of the purchase price. A limited number of choice heifers are offered on the same terms.

FOR SEVERAL GENERATIONS

There are 22 head of registered Holsteins on the Williams farm, Webster, Maine. This establishment has been in the Williams family for several generations and each generation have been successful farmers. Butter is made from the milk produced and Guy Williams has sold butter in Lewistown to regular customers for the past twenty years. Chester White hogs are kept and each year cattle and swine are exhibited at the Topsham fair, generally with a considerable degree of success.

BUYS ENTIRE HERD

Hall Cope, a graduate of the Agricultural course at Manhattan, Kansas, has purchased the entire Holstein herd of O. E. Goulde which now will be kept on the Cope ranch five miles west of Norton, Kansas. This herd is one of the only two tuberculin tested herds in the country.

BRITISH IMPORT STOCK

There are now 44 British-Friesians that have produced 20,000 lb. or more milk in a year and quite a number of these have made over 1,000 lb. butter in a year. The British breeders have arranged to import a number of Friesians from South Africa and the first shipment left there February 28th.

BEGINNER'S LUCK

Whenever one reads a dairy paper he will always note the achievement of large breeders and very little of the beginner's luck. As a mere beginner I have a little story to tell about a Holstein-Friesian heifer and what she did under the care of an ordinary farmer.

I purchased my first purebred Holsteins, five in number, October 20, 1921, at the "Dairy Center" sale which was held at Mankato, Minn. Ever since I made the purchase I have had a pride in the cows which I never experienced when I owned my scrub or grade cows.

One of the purebred heifers freshened within four weeks after the sale. She was not in the very best condition, but after her appetite was good she gave around 60 lb. milk a day. I had no intention of doing any official testing until I knew more about the fundamentals of feeding for a seven-day test, but was urged by both the president and secretary of our county association to run this heifer on short time test, and finally decided to try it.

The heifer, Lilamere Cybele Walker, No. 572723 freshened as a junior two-year-old, and she produced in seven days 455.7 lb. milk containing 13.969 lb. fat, or 17.46 lb. butter. Her best day's milk was 68.6 lb. and the best day for fat 2.25 lb. This was my first attempt at A. R. O. testing, and I did not use any expensive feeds whatever, the ration consisting of bran, oilmeal, corn and oats, also silage and hay.

This goes to show that the well-bred cow is the only one that will produce with the same care given an ordinary scrub cow. I would urge all beginners in the purebred business to do some A. R. O. testing, as it is worth the price for the experience alone, say nothing of the record on the cow.

LEONARD H. MATZKE.
Good Thunder, Minn. R. 2.

HOLSTEIN EVAPORATED MILK

While waiting to be served in a grocery store, the attention of the BREEDER AND DAIRYMAN representative was attracted by the words "Manor Farm" on some tins of evaporated milk, and his interest grew when he found that the raw milk from which the manufactured product was made was produced upon the famous old Holstein Manor Farm of Pierrepont Manor, New York, formerly the property of the late W. H. Grenell.

Some famous old time sires made their home at Manor Farm. Perhaps the greatest was Manor De Kol, son of the then World Champion, Netherland Hengerveld, 26.67 lb. butter in seven days, A. R. O. Manor De Kol sired a number of good cows and some great sires, chief of which was De Kol 2d's Butter Boy 3d.

Another great Manor Farm sire was Aaggie Grace Sir De Kol, a son of Manor De Kol and of Aaggie Grace 2d's Pietertje, one of the first cows to produce 100 lb. milk in a day in official test and probably the greatest show cow of her day. E. M. Hastings has immortalized her in his trade mark. The shapely black and white beauty perched upon seven 85 lb. shipping cans with the motto " a can of milk a day" the complete emblem of the E. M. Hastings Pedigree Company, commemorates the type and symmetry of Aaggie Grace 2d's Pietertje as well as her producing capacity.

Beryl Wayne Belle Kornydyke, a son of the noted Belle Korndyke and several other high class sires headed the Grenell Herd which was dispersed some time after Mr. Grenell's death by his daughter whose husband, Matt Huggins, was the Superintendent of Manor Farm for many years.

AT THE OVERTON FARMS

In 1884 F. C. Overton and his brother Charles, decided to change from purebred and high grade Durhams to purebred Holsteins. About this time the Babcock test came into general use. The Overtons decided to have as good as they could afford.

To-day if you go into the dairy barn at the Overton Farms near Adams, N. Y., which is under the management of Kent Overton, son of Floyd and half owner of the farm, you will find a number of good ones making records. One is Frances Pineer 3d. As a two-year-old she has produced 93.3 lb. milk and 23.59 lb. butter in seven days. A three-year-old heifer, Sumdale Colantha Pet gave 651.7 lb. milk and 26.25 lb. butter in a week and reached 95 lb. her best day. Another two-year-old, Martha Maple Crest De Kol made 539 lb. milk and 23.4 lb. butter in a week. Another two-year-old made 22.72 lb. and averaged nearly 54 lb. a day.

SCHOOL ACQUIRES HERDSIRE

The California Polytechnic School recently acquired a herdsire who has a long line of high production ancestry. He is Sir Juliana Lorenz Korndyke, whose three nearest dams average 688 lb. fat.

He is sired by Sir Colantha Julian 2d, who is credited with eleven A. R. O. daughters. One of these daughters, California Agnes Colantha, is owned by the University of California and has a year record of 21,801 lb. milk, 788.45 lb. fat.

His dam is Pietertje Lorena Korndyke, who has a record of 22,696 lb. milk, 677 lb. fat. Her sire is Lorena Korndyke and her dam is Pietertje Bloom 2d, with a record of 604 lb. fat.

MUCH IN LITTLE

Shoemaker—"I want a sign for my new store. Just say I sell shoes and repair them."

Sign Painter—"Oh, that's so old! Why not have something original?"

Shoemaker—"What would you suggest?"

Sign Painter—"Shoes sold and half-soled."

PUREBRED SIRES PAY

Away back in 1913, G. M. Frisbie, of Kingman County, Kansas, purchased three purebred Holsteins, a three-year-old heifer, a yearling heifer and a six-months-old bull calf, paying $800.00 for the trio. The sire of the young bull was Count of the Pontiacs and his dam had an official record of 25 lb. butter in a week and milked over 100 lb. in a day. When the bull was nearly 4 years old they sold him to a Wichita cattle man. He was a real good sire and his heifers in every case were superior to their dams in producing ability.

Mr. Frisbie says, "purebred sires of any breed pay." "It is not only the financial gain derived from purebred sires that should be considered, but rather the fact that boys and girls that live on the farms where good stock is grown usually become interested in the game and this helps to make them contented and happy, to do things, and to love the farm home."

GOOD MICHIGAN HEIFERS

N. D. Smith, Grass Lake, Michigan, has made some fine seven-day records with his Holstein heifers. One senior yearling yielded 303 lb. milk, 12.03 lb. fat; a junior three-year-old gave 440 lb. milk, 17.13 lb. fat; a senior four-year-old produced 476 lb. milk, 18.32 lb. fat and a senior four-year-old produced 587 lb. milk, 22.48 lb. fat.

Teacher—"How many seasons are there?"

Izzy—"Two! Busy season and dull."

The old reliable **O. H. COWS' RELIEF** has stood the test since 1899, with a record of over 99% satisfied users, on cases of Caked Bag; Spider in Teat; Heifers with first calf; Frost Bites; Chapped, Cracked, Sore or Injured Teats.

We guarantee it, and will refund your money if it does not satisfy you. Prices 60c and $1.20 at General Stores, Druggists and Feed Dealers.

If dealers cannot supply you, send direct to us. Booklet on Cow Troubles mailed free on request.

Lyndon, Vermont

BOOKS YOU SHOULD HAVE

Two books that should be on the desk of every maker of A. R. O. records are published by the Wisconsin Livestock Advertising Co. One of these, a 136-page book, contains a list of the national and state butter champions for the 7-, 30-, 305- and 365-day divisions giving the breeders and owners, the records made and in what volume of the Blue Book this record was reported. Besides this, it has a list of the three national leaders for the milk production in each class. It is a veritable mine to any one who wishes to have such information at his fingers' ends.

The second book, which is entitled the Holstein-Friesian Hand Book, contains 186 pages in which all the 30 and 100 lb. cows have been listed, arranged alphabetically according to the states in which their owners lived at the time of making the records. Then the breeders and owners have been listed alphabetically and given credit for the 30 lb. and 100 lb. cows they have bred and those they have developed. Starting with the Holstein year 1902-03 the 30 lb. cows are tabulated year by year, as well as the century sires, the thousand pound cows and the cows that have produced 30,000 lb. or more of milk in a year. During the Holstein year 1920-21, 354 cows made records of 30 lb. or more in a week, a great contrast to 1902-03 when there were only two. Yet we find that during the present year 1921-22 no less than eight cows, each made 1,250 lb. butter in a long time test a record equalled only by the year 1916-17. Of the 21 cows making 30,000 or more pounds of milk in a year, six finished their records between the dates of April 30 and December 31, 1921. The Holstein-Friesian Progress Tables by States will prove interesting for this gives the century sires of each state, the number of 30 lb. seven-day records and thousand pounds long time records made in each state.

Mr. James Garver who has copyrighted both these books, has spent a long time and done much careful work on them. We understand it is his intention to periodically issue revision sheets, bringing the tables up to date. These books are offered to the public at the price of $1.00 each or $1.50 for the pair. Any one who has ever tried to look up the conflicting claims of various states or owners can readily see that this is a very low price. It is not an unusual thing for an advertising writer to spend days on research work before writing an article on advertising relating to accomplishments of the daughters of some great sires.

CITY OF BRIDGEPORT FARMS

Hayland Artis Pauline on three milkings a day has produced on the City of Bridgeport Farms a year record of 910 lb. butter and 21,915 lb. milk. She is a daughter of Sir. Korndyke Pontiac Artis Jr.

In the same herd also on three milkings a day is Grace Lilith Clothilde Beets who produced 688 lb. butter in a year. The great milk producer and Connecticut champion, Rye Hill Korndyke Konigen, has produced 6,511 lb. milk in 90 days. This junior two-year-old is now giving over 70 lb. milk daily in her fourth month from freshening.

The City of Bridgeport Farms is under the management of Angus P. Thorne who is one of the Connecticut delegates to the Kansas City convention.

Salesman (at automobile show)—"Are you interested in a new motor car."

Pedestrian Visitor—"Naw, I'm just seeing how it feels to dodge 'em without getting hit."

He—"Are you married?"
She—"That's my business."
He—"How's business?"

MERRYALL FARMS HERD UNDER STATE AND FEDERAL SUPERVISION

Our Herd Sire is

King Sylvia Johanna Pontiac

Brother to Carnation King Sylvia and son of Otego Valley Christmas Belle; 40.56 lb. butter, 651.2 lb. milk in 7-day official test. Our herd is run for production coupled with economy and profit. Cows in this herd have made and are still making dandy records in both short time and long time semi-official work. A cow we sold to State College produced 22,247 lb. of milk, 851.1 lb. butter in a year; and we think we have others just as good. *Come and see for yourself.*

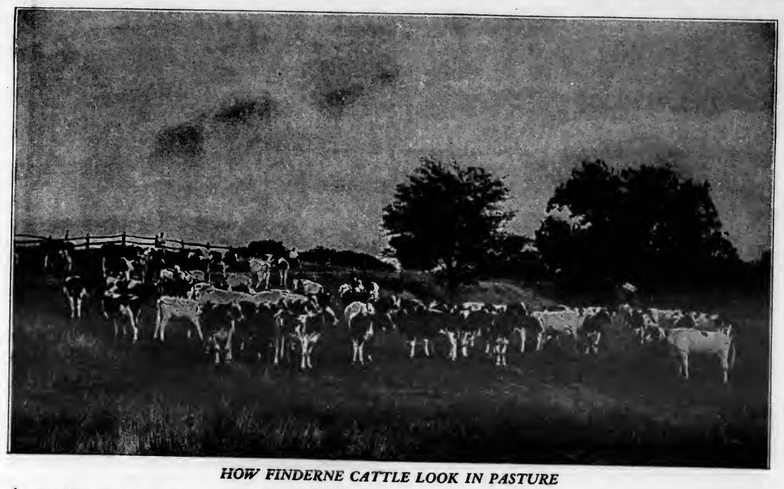
C. W. NEWMAN, **Wyalusing, Pennsylvania**

RECORDS AT WHEATFIELD

They are making some good records in Wheatfield Farms. Poplar Jewess De Kol when fresh produced 32.34 lb. butter and 594 lb. milk in a week and then 42 days after freshening raised her records to 33.67 lb. butter and 801.2 lb. milk. She is on semi-official test now and five months from freshening is producing over 100 lb. of milk a day. She is a daughter of Poplar Gem Pledge and Poplar Wandering Jewess Pledge.

Albina Kearsarge Tulip, a daughter of Albina Butter Boy, as a junior four-year-old made 32.77 lb. butter and 599.1 lb. milk in a week, 129.87 lb. butter and 2,575.9 lb. milk in thirty days, and no less than 244.88 lb. butter and 5,223.1 lb. milk in 60 days. She too is on semi-official work now and is making a good record. The senior three-year-old Zerma Segis Lyons recently completed a 7-day record of 28.02 lb. butter and 467.4 lb. milk. She is a daughter of King Lyons, one of Moyerdale's great animals.

At the head of the herd is Lyndale Pietertje Pontiac Echo who is proving to be a sire of big producers. His first daughter, tested at thirty months old, made 28 lb. butter and 601.8 lb. milk in a week and in 90 days made 30.75 lb. butter and 733.5 lb. milk. A junior three-year-old daughter of this bull recently produced 28 lb. butter and 644 lb. milk in a week.



There are about 250 head of purebreds on the Wheatfield Farms, with 15 animals now on long time test. This number will soon be increased while every cow in the herd will be given a chance to prove her production value.

The Wheatfield Farms are owned by J. C. Dold who has done much for the Holstein industry of western New York. The farms which consist of about 700 acres, are located on the picturesque Niagara River about half way between Buffalo and Niagara Falls. The farms are under the management of Ludwig Hausman who formerly successfully managed several large dairy farms in Pennsylvania. The herdsman is J. F. Roberts. There is good team work between the manager, the herdsman and the owner which is certainly appreciated by the cows as shown by the splendid records they are making.

NEW CONNECTICUT CHAMPION

Avalon Pearl Beauty is the new champion of Connecticut in the junior four-year-old class for 7-and 30-day butter and 7-day milk production despite the fact that she was only four years and ten days old when she freshened. In the week she made 31.86 lb. butter from 650.8 lb. milk and in 30 days produced 129.55 lb. butter from 2570.5 lb. milk. In the 7-day division she displaces Black Korndyke Pansy 30.14 lb. butter and in the 30-day division takes the place of Lillie De Kol Pietertje 2d 115.26 lb. The new champion is a granddaughter of King of the Pontiacs and is owned by E. D. Curtis, of Bantam, Conn.

FINDERNE STOCK FARMS *WHERE WORLD CHAMPIONS ARE BRED AND DEVELOPED*

HOW FINDERNE CATTLE LOOK IN PASTURE

But come and see them in the barn, examine them carefully and you will see the reason why this herd produced such world champions as Finderne Pride Johanna Rue—1,470.58 lb. butter in a year; Finderne Holingen Fayne, 1,395.06 lb. butter as a junior three-year-old; and Finderne Mutual Fayne—1,200.63 lb. as a junior two-year-old. To head your herd you need a bull of FINDERNE QUALITY, sired by King Valdessa, whose two nearest dams average: 7 days—Butter, 43.036 lb.; Milk, 640.25 lb. 30 days—Butter, 167.894 lb.; Milk, 2,625.15 lb.

FINDERNE STOCK FARMS, BERNHARD MEYER, Owner **Finderne, New Jersey**

The Lathrop Herd

headed by

KING VALDESSA PONTIAC HOMESTEAD, whose three nearest dams average 37.9 lbs. butter in 7 days, offers to discriminating breeders a few young bulls sired by this great young sire, also a few yearling heifers and several foundation cows in calf to this show bull. His daughters are not for sale.

And please note:--

The Lathrop Herd is fully accredited. We started clean and have never had a reacting animal in the herd. Come and see us, please, for we are proud to show visitors the herd.

Entire Purebred Herd Dispersal

—at the—

Brookside Stock Farm, Troy, Penna.

between Williamsport and Elmira on the Pennsylvania Railroad

MAY 11, 1922 — **SIXTY-FIVE HEAD**

Forty milkers, many bred to freshen this fall, balance young. Cattle in nice condition, well marked and good individuals. An extra nice bunch of young cattle, combining

BREEDING
SIZE
QUALITY

One of the prizes will be

Pride Klaare De Kol Korndyke

111 lb. milk in one day, 3,034 lb. in 30 days, the champion four-year-old milch cow of the state.

Several good young females and a year-old son of this cow, all sired by a 33 lb. bull.

A number of cows with records from 20 lb. to 28 lb., good enough to go into any man's herd.

While my cows do not have as high records as do some, if they could have the time and money spent on them that some millionaire owners give their stock, I think their records would be as good as any. I do not think that any herd in the state can, under similar conditions, beat them for milk production.

My senior herd sire is LOCKHART FINDERNE PRIDE DE KOL, sired by Finderne Pride Johanna Korndyke from a 30.6 lb. junior three-year-old. He is a grandson of old Finderne Pride Johanna Rue, 1,470 lb. butter in a year, world's record when made, 36.87 lb. butter in seven days and then back again in eleven months with 36 lb. again, one of the greatest cows of the breed. Sisters of this herd sire are making tremendous long time records in Pennsylvania, California and Missouri, the east, west and center of the country.

Much more can be said regarding this herd but I think the cattle will show for themselves on day of sale.

There is no question but what these cows will sell around the price of grades in many localities. Price of 3 per cent milk here is only $1.25 per 100 lb. Within six to ten miles on the same railroad line it is fifty to sixty cents more per hundred.

Cattle Tuberculin Tested
Lunch will be served

THIRD ANNUAL SALE

Oneida-Herkimer Co. Holstein Club, East Utica, N. Y.

TUESDAY, MAY 30, 1922

Sale will be held in International Foundry Building and will commence at 10 A. M. standard time

ONEIDA and HERKIMER COUNTIES have long been famous at the home of record-making Holsteins. Here was developed the first 30-lb. A.R.O. cow and here was made the first 44-lb. record. Spring Farm King, King Segis De Kol Korndyke, and King Korndyke Sadie Vale—history making sires of wide reputation—are representative Oneida-Herkimer Holsteins, and all three will be prominent in the catalog of the coming sale. The early entries consist largely of animals close in pedigree to these famous sires and others of like quality from dams with records up to 27 lb. butter in 7 days.

THE AIM is to make this third event a better sale than the two that have preceded, in respect to quality of animals offered. The breeders of the Oneida-Herkimer Club have established the reputation of Oneida-Herkimer Holsteins and in this series they are trying to build up an annual sale worthy of the widest patronage.

A CONSIDERABLE PROPORTION of the entries will consist of tuberculin-tested animals and these will be sold under a 60-day guaranty against tuberculosis.

Grades or Purebreds

I am in one of the greatest dairy counties in the state—a county noted for producers. Let me fill your orders for milkers or heifers—purebreds or grades.

My herd sire is from a thirty-pound junior three-year-old and was sired by a son of Finderne Pride Johanna Rue, 1,470 lb. butter in a year, World's Record when made.

My lifetime experience with dairy cows and years of work as a breeder of purebred Holsteins is at your service.

D. B. YORK
Brookside Stock Farm, Troy, Pa.

Crestmont Ormsby Alcartra

a member of the Crestmont herd has just made 29.15 lb. butter in seven days as a junior three-year-old, second highest record ever made in that class in Pennsylvania. This was after finishing a 305-day record of 722.99 lb. butter, 15,883.1 lb. milk as a junior two-year-old. She is a daughter of

King Pontiac Alcartra Wayne

two of whose daughters have already made state champion records.

Consider that this sire has spent his life in my small herd and you will better appreciate his worth.

A bull by him or from one of his daughters is bound to sire producers. Let me give you prices and descriptions.

HARRY C. GATES
Canton, Penna.
Buy your Bull from an Accredited Herd

COHOCTAH, MICH.

"I am in accord with your views as outlined in your letter, and have sent in my proxy with instructions to vote as you suggest. Hope to hear after the Convention that Mr. Houghton and Gardner are kept in the service of the Association and that the efforts of those high fly schemers have been defeated."

"The fees are too high and should be reduced to a sum that will pay the expenses, and leave a safe surplus instead of tempting one, a large surplus is always a temptation to some 'smarty' to exploit himself.

"WISCONSIN BREEDER."

SHERIDAN, MICH.

"I am enclosing my proxy. I had already sent one of the Michigan State Association but this one revokes the other one. I do not want to pay two prices for transfer and registration nor do I want to pay any man $12,000 per year for what this gentleman has been doing. We want Mr. Houghton and Mr. Gardner where they are. Hoping the members will be the ones to continue to run the Association and not a handful of big men that cannot even milk a cow, to say nothing about raising a calf, Yours truly"

NOVELTY, OHIO.

"I am with you in what you say about transfers and keeping the Association officers where they are. We can never have better men than F. L. Houghton and Mr. Gardner. Our Ohio State Holstein Association does not amount to anything so far as helping the members is concerned. They promise to do great things to begin with; they got our money, and now we can whistle.

(To be continued.)

The Holstein Breeder and Dairyman

VOL. I HARRISBURG, PA., MAY 22, 1922 No. 10

The Worth of the Purebred

THE intrinsic worth of the purebred is, her producing and profit-making capacity, her ability to make better use of the feed she consumes and to produce large amounts of milk and butter fat at a less cost than is required by her grade or native competitor. Careful scientists at experiment stations have investigated as far as has been possible with the limited herds found in the experiment station barns, and have proved that purebreds are more profitable than grades or natives, and the breed associations have published the result of such investigations. The conclusions of careful dairymen, garnered from years of experience, confirm the research work of the scientists. THE HOLSTEIN BREEDER AND DAIRYMAN, in its issue of February 8th, carried an article on the report of the Pettis County Cow Testing Association for the year 1920-1921. This report, compiled by E. M. Harmon, Extension Associate Professor of Dairy Husbandry, at the University of Missouri, a painstaking and conscientious investigator, was a striking testimonial to the producing ability of the purebred Holstein-Friesian cow. The Pettis County Holstein Company, a corporation composed of dairymen, bankers and businessmen in Pettis County, Missouri, purchased a large number of purebred Holsteins and placed them with dairymen of the county. Each dairyman takes shares in the corporation and pays for the animals allotted to him with part of the receipts derived from the sale of their product.

Each of these dairyman owners has his herd enrolled in the Pettis County Cow Testing Association. The purebred animals are recorded in the name of the Pettis County Holstein Company. The native or grade cows in each herd are recorded in the name of the owner so that it is easily possible to contrast the production and profit made by each class—the registered and the unregistered cows. The 1921 report shows that the purebred cows averaged to produce over 1,100 lb. milk more than the average of all the cows in the association; that they exceeded the gross average by practically 20 lb. of fat and that the average profit of the registered "company" cows was $22.00 more than the average of the entire association.

The year ending March 1, 1922, confirms the deductions of the previous year. The registered cows averaged 1,241 lb. milk more than the other cows in the association. The average production of the company cows was 20.44 lb. fat more than that of the other cows in the association. The company milkers earned for their owners $15.23 a piece more than did the natives and grades.

The year 1922 shows a greater producing capacity and earning power of the animals and the returns were more profitable than those of the previous year. The production per cow increased 671 lb. milk, 32.3 lb. fat, and the average return per dollar of feed cost shows an increase of 51 cents. This is probably due to better understanding of the animals on the part of their caretakers, to better balanced rations and possibly to more skillful marketing. It speaks volumes for the worth of test association work.

Table No. 1 shows the work of the recently ended year contrasted with the results of the previous year. An average production for the animals enrolled in the entire testing association of 7,213 lb. milk and 277.6 lb. butter fat is certainly creditable, for this takes in milkers of all ages. The earnings of the cows for each dollar expended for feed is $2.44, a remarkable showing considering the number of animals milked. The year 1921 was satisfactory as to profit over cost of feed so that an increase of 51 cents profit, roughly 20%, reflects great credit on the caretakers and the college experts who gave them counsel on ration mixing and amounts to feed.

Table No. 2 is one that deserves study. The Company cows are registered Holstein-Friesians, the other cows the grade and native milkers. Each herd consists of varying numbers of the latter with a sprinkling of purebreds. Here is evidence that cannot be gainsaid and no better lesson will ever be required by the caretakers or by anyone who can look over the herds and figures. An average net profit of $15.23 per head on an entire dairy, this for the milk yield alone, is worthwhile, to say nothing of the additional returns of the progeny. And remember, the unregistered milkers are those that remained after the herds were culled to make room for the purebreds.

The past year's records are summarized in Table No. 3. Here is shown the profit-making ability of the heavy producer as well as the percentage of registered Holstein-Friesians that qualify in the four classes. The big milkers produced the most butter fat. In the

mad race for outstanding records we are apt to overlook the fact that, while there are individual exceptions, this rule will hold good for numbers. The law of averages insures this. Then, the more the animal produced, the more she paid for the feed she ate, and the less per pound did it cost for her to manufacture milk and butter fat.

The bulk of the association cows produced between 250 lb. to 350 lb. of fat in the year, 60% of the total cows and 56% of the purebreds falling into this class, which averaged a net profit of $73.74 above a feed cost of $57.04 per animal. But class 3, with an average production of 8,943 lb. milk, returned a profit of $119.35 per animal over a feed cost of $65.87. In other words, an added expenditure of $8.83 for feed given to the right animal, brought $53.48 increased income. In class 3 there are 23% of the total number of milkers and 26% of registered animals.

The big producers, those who exceeded 450 lb. fat in the year, are grouped in class 4. While the number are not given, we are told that 7% of the animals tested come in this class and that the percentage of "company" or purebred cows is 14. This group of cows averaged 11,150 lb. milk, and, for a feed expenditure of $73.40 returned a profit of $156.13. A dairy of producers of this kind would gladden the heart of any owner.

Contrast the showing of group No. 4 with that made by group No. 1, the tailenders which also returned a profit, but of only $26.89 per animal. Five cows of class 4 quality would earn their owner as much as a dairy of twenty-nine of group 1. Then consider the added investment needed for barns to house the larger dairy, and the added labor cost. Even if we, for argument's sake, allow that the five-cow dairy cost as much to buy or raise as the twenty-nine cow herd, the profitability of the heavier producer is clearly shown. There are several lessons taught by this report, but the two main ones are: First; the heavy producer is the most profitable, even if it does cost a little more to feed her; and Second; Purebred Holsteins pay better than do Grades or Natives, even when only their earning capacity at the pail is considered.

Shall We Charge for Test Certificates

IT is recognized that the Advanced Registry system has been largely responsible for the progress and popularity of the Holstein-Friesian breed of cattle and the Holstein-Friesian Association of America. When official work was first taken up it was with some effort on the part of the Association that breeders were encouraged to place their cows on official test because of the trouble and expense of conducting the test. Therefore, no fee was charged for Advanced Registry certificates. The expense of the office was defrayed from revenue received from the registration and transfer fees, the receipts of the Secretary's office.

The Advanced Registry department has now grown to a point where the annual expense is upwards of $100,000.00 and as the work increases it is apparent that it will in time absorb all the funds from the secretary's office. Some of those most familiar with the work feel that a fee should be levied on the Advanced Registry certificate to partly or wholly defray the expense of conducting the Advanced Registry office.

The matter of levying a fee for Advanced Registry test was discussed at a meeting of the executive committee held at Cleveland, July 30, 1921. At this meeting President Lowden recommended obtaining revenue from the Advanced Registry office and said as follows:

"I wonder if the time has come, Mr. Chairman, when I might suggest,—I suppose I will be derided, and overruled, and thrown out of the room for the suggestion,—

"But if the time has come for this suggestion: Everyone realizes that the growth of the breed has depended very largely upon the great work done by the Advanced Registry office. We are all, I think, in favor of it, but isn't it possible that while the breed is benefited largely, the men who are principally benefited are the men who get the certificates of Advanced Registration. The expenses of that office are constantly increasing and will, as tests multiply. A very small fee levied upon the men who receive the certificate of Advanced Registry would go a long way towards paying the expense of that office.

"It seems to me it is only just. While the breed is benefited as a whole, the people who particularly derive the benefit are the people who get the certificates of Advanced Registry. That is an expense that we cannot cut down absolutely without injuring the business very much. Now, could we work out some sort of way there, by which these men contribute to the expense of the Advanced Registry office?"

Following President Lowden, Secretary Houghton made the following remarks:

"I was going to inquire, in line with the statement made by the president, whether the point would not arise, sooner or later, when the increase in advanced registry testing would absorb the entire earnings of the Secretary's office, even though you kept up your relative increase of registration around fourteen to twenty per cent. For the past year, as I recall it, there were about nine thousand advanced registry entries. The past year, there were about seventeen thousand. Now, if you were to maintain that ratio of progress, it would seem to me that all of the earnings of the Secretary's office would be required to take care of the Advanced Registry department."

James A. Reynolds, chairman of the executive committee also participated in the discussion as follows:

"I will say for myself, I talked this over with President Lowden and I fully came to the conclusion we ought to charge something for advanced certificates because we have a bunch of clerks up there who do a lot of work for people who are not even members of our Association. Anybody can test a cow, and we pay for it; pay the expenses of it. I don't know whether I would say a fee of ten dollars, but some fee for every certificate issued by the Advanced Registry office. That is my personal opinion."

Following these remarks, Col. G. Watson French spoke as follows:

"I agree with the President that there should be a charge made for entering the Advanced Registry, and I think that an outsider should pay three times as much as a member pays. What this amount should be, I am not prepared, at this time, to state, but it should be an amount that would help pay the expenses of that office."

John A. Bell, Jr., expresses himself as follows:

"The man who gets the benefit ought to pay for the privilege. He ought to pay a small fee for the benefit he gets."

Waking Up

THAT many of the greatest business minds of the country are cognizant of the fact that the farming interests have not been treated right by the powers that be and that the attitude of many city dwellers toward the demands of the urban population is not justified, is shown occasionally in public utterances of great leaders of finance. Bernard M. Baruch is regarded as a typical Wall Street man of the kind that has little understanding of the agriculturist's wants, yet he has several times gone on record and discussed farm questions in a style that shows he has given both time and thought to the problems. And now comes Otto H. Kahn, another well-known New York banker and man of many business lines. In an open letter he points out that normal conditions cannot be restored until the buying power of the farmer is restored and his products sell on an equilibrium with the goods he has to buy. Some extracts from his letter follow:

Every right-minded business man must be desirous to have the legitimate grievances of the farmer—and he has, and long has had such—redressed and remedied. Justice demands that this should be done. The larger interests of the nation demand it, for it is harmful and menacing to the Commonwealth that so numerous and so valuable a portion of the population should feel discontented and resentful and be without prosperity. The enlightened selfishness of business requires it, for not only does the material well-being, or the reverse, of the farmer largely react upon business, but experience has shown that when the farming industry is in the throes of depression the farmer is very apt to blame business and to hit out at business and to get himself in a frame of mind which the well-meaning, self-deceived purveyor of political and economic nostrums or the cunning demagogue are only too ready to take advantage of.

It is manifest that the representatives of farming communities and states must know better than most business men, and particularly business men of the East, what ails the farmer. These men are not only not to be criticized; on the contrary, they are to be commended for using their votes and their influence to get remedial measures enacted into law and to obtain for the farmer a square deal. To the extent that we business men are in disaccord with the agricultural leaders in and out of Congress, it is not because of their efforts to promote the welfare of the farmer, which efforts we cordially approve and indorse, but because not a few of them seem to be acting under the impression, in certain respects at least, that it is possible to aid some sections and callings of our common country by hurting others.

So far from counseling an attitude of antagonism toward the farmers and their representatives, I would advise that your committee endeavor to get into touch with the leading farm organizations and representatives of agriculture, with a view to establishing opportunities for comparisons of views, leading, it may be hoped, to an endeavor to agree upon wise and effective lines of policy and action so as to promote the essential and legitimate interests of agriculture in the only way in which they can be promoted lastingly.

"Will you let me off this afternoon, sir?" asked a clerk in a dry-goods store; "my wife wants me to beat some carpets."

"Couldn't possibly do it," said the boss.

The clerk turned joyfully to his work, saying, "Thank you, sir. Thank you a thousand times."

Three Times Over Thirty

LOCATED between Sheffield and Saybrook, Pa., is the Crary Farm owned by Horton Crary and Co., of Warren. In this herd there are a number of real good animals one of which, Meadowside Helena De Kol Burke 3d, is a three-times thirty-pound cow. As a senior three-year-old she made a seven-day record of 25.26 lb. butter and 462.7 lb. milk. Calving again as a senior four-year-old she increased her records to 30.72 lb. butter and 623 lb. milk in a week. When she was six years old she made 34.93 lb. butter and 545 lb.

MEADOWSIDE HELENA DE KOL BURKE 3d

34.93 lb. butter in seven days. She has three seven-day records above 30 lb. that average 32.34 lb. Owned by Horton Crary & Co., Warren, Pa.

milk in seven-day official test and made a large 20-day record but was not kept on test for the full month. Just before Helena freshened at eight years, eight months, and thirteen days old she weighed 1,945 lb. Her owners expected she would raise her previous records but she did not quite come up to expectations, yet she joined the select list of cows that have three different years demonstrated their capacity by producing 30 lb. butter in a week and made the creditable official records of 31.38 lb. butter and 520.2 lb. milk in seven days, 119.02 lb. butter and 2,324 lb. milk in thirty days.

This great cow is a daughter of King Segis Hengerveld De Kol Burke and her dam was Meadowside Helena De Kol Burke, a granddaughter of the splendid old time sire De Kol Burke. Helena has two daughters in the Advanced Registry, both tested as senior two-year-olds. One of these heifers, Ridge Farm Helena Rag Apple, made 24.19 lb. butter and 440 lb. milk in a week and the other, Crary Farms Christina, broke the state record for age by producing 28.21 lb. butter in seven days and 116.2 lb. butter in 30 days. Her milk records were 407.2 lb. milk in a week and 2,156.7 lb. in the month. She is a daughter of Spring Farm King 3d, sire of a number of good ones in the Crary Farm herd. He was by Spring Farm King from the 30 lb. three-year-old Spring Farm Agatha Pontiac.

They think a great deal of Meadowside Helena De Kol Burke 3d and her offspring in the Crary herd. Two of her sons are in service, one is Crary Farm Pontiac Champion a full brother to Crary Farm Christina, and the other is Crary Farm Segis De Kol Burke who was sired by Grand Champion Segis 2d, a son of Grand Champion Segis and of Belle Segis Champion, the 37 lb. four-year-old daughter of King Segis Champion.

Four daughters of Crary Farm Segis De Kol have freshened at an average age of less than two years. Crary Farm Amelia Segis at 25 months old made 393.8 lb. milk and 16.23 lb. butter; Crary Farm Segis at two years and eight days old made 365.4 lb. milk and 15.21 lb. butter; Crary Farm Sophia Segis at 23 months old produced 335.3 lb. milk and 14.83 lb. butter and Crary Farm Marcella Segis when only 21 months old is credited with a production of 262.4 lb. milk and 12.32 lb. butter.

There are a number of other good cows with fine records in this good herd but at this time we will not take the space to tell of them. When Helena and her daughter were making their records Lady Clothilde Valentine 2d was in test as a seven-year-old and made an official record of 27.2 lb. butter and 589.5 lb. milk in a week. All of the cows and heifers in milk in this herd are in the Advanced Registry. This herd is on the accredited list and has passed three clean tests without finding a reactor.

Meadowside Helena De Kol Burke 3d will be continued on long time test and is expected to add to her

CRARY FARMS CHRISTINA

As a senior two-year-old made 28.21 lb. butter in seven days and 116.20 lb. butter in thirty days, Pa., State Champion. Daughter of the three-times-30 lb. cow. Meadowside Helena De Kol Burke 3d, owned by Horton Crary Co., Warren, Pa.

present laurels. A cow that has three seven-day butter records averaging 32.34 lb. is certainly something to be proud of and we must commend the action of her owners in giving her a long time test which as she has two daughters and two sons in the herd and a number of granddaughters, is bound to add materially to their selling value if their owners ever wish to dispose of them.

Some people never know when to stop, especially when they are going backward.

Marriage is a tie, but, of course, it is necessary to make both ends meet.

Barney Kicked Out of Office

Told to Resign or He Would Be Fired

WILLIAM B. BARNEY, Iowa State Dairy and Food Commissioner, to-day handed his resignation to Governor N. E. Kendall. The resignation was forced on him by the State Executive Council. Secretary of State Walter Ramsey, commissioned for that duty by the council, yesterday informed Commissioner Barney that he would have to resign.

"The resignation comes as the result of charges brought against Commissioner Barney more than one year ago by *The Evening Gazette*. He was charged with inefficiency and maladministration as to his office, and with having been a member of the firm of W. B. Barney and Son, Chapin, Iowa, a party to sales of tubercular cattle. At a hearing which consumed the entire last week of October these charges were thoroughly aired before the executive council which includes the governor, secretary of state, state auditor and state treasurer.

"Charges were brought against Commissioner Barney in early November, 1920. It was not until the state commissioner had written the *Gazette* condemning it for its methods in championing tuberculin tested milk that the newspaper's attention was turned to the state officer. Then he was directly charged with incompetency and maladministration, and with being a party to sales of tubercular cattle from his own herd at Chapin."—*The Cedar Rapids Evening Gazette.*

Stevenson's Argument

EDITOR HOLSTEIN BREEDER AND DAIRYMAN:

I have before me the notice of the 37th Annual Convention of the Holstein-Friesian Association of America, to be held June 7, 1922, at Kansas City. Among the amendments offered to be voted on at that meeting is one, No. 37, which I presented in the interests of economy of the management of the Holstein-Friesian Association. Judging by the records of expenditures for the past several years, probably $2,000 might be saved in the expenses of attendance at regular and special meetings of the directors and officers of the Association, if the board was reduced from sixteen to six, and it is solely for this purpose that I offered the resolution.

The accounts of the Association show the travel and hotel costs of some 14 members of the Board of Directors in attendance at meetings June, 1919, to June, 1921, to have amounted to $5,447.81. This is exclusive of an expenditure of $6,645.93 by and through the chairman of the Executive Committee. During the same two years the president was paid a salary amounting to $24,000 and traveling expenses, hotel bills, stenographer, rent, etc., over $11,000 additional. During this same period of time, Mr. Pollock, as director of extension service or assistant, was paid $6,000, with some additional sum for expenses, and Prof. Rider also received an additional $5,000. In June, 1921, the result of the annual meeting was to discontinue the salary to the president, and to the director of extension service, Mr. Pollock having resigned some time before. I do not see why we should not properly reduce expenses by cutting down the number on the Board of Directors to the number that proved entirely sufficient for our interests in the earlier days during which we created our large surplus and reserve.

GEO. E. STEVENSON.

Scranton, Pa.

Five Generations

OUR cover illustration shows a five-generation group—five direct descendant animals. The oldest and youngest animals are under the tree. The old cow is Aaggie Manor De Kol, 105,190. She has an official record made when practically nine years old of 662.3 lb. milk and 30.07 lb. butter in a week and a thirty-day record of 2,639.7 lb. milk and 117.46 lb. butter. This cow is now 14 years old and her owner tells us she is again safe in-calf. The Blue Book shows her with three daughters in the Advanced Registry. Her 30-lb. record is not the only notable performance with which she is credited. The year before she made 26.52 lb. butter in a week averaging 79 lb. milk a day and as a six-year-old she has a seven-day record of 22.75 lb. butter and at that time averaged better than 75 lb. milk a day. We are informed that she really is the head of six generations of living animals with the prospects of this being increased to seven in the immediate future.

The cow looking over the fence is her daughter, Lady Manor Hengerveld, 157,452, who had a record, made as a senior three-year-old, of 460.4 lb. milk, 20.62 lb. butter in seven days, 1,971.4 lb. milk, 84.79 lb. butter in thirty days; and as an eight-year-old 459.1 lb. milk, 24.21 lb. butter in seven days. Immediately behind her is Lady Manor Hengerveld 2d, 216,338, with 523 lb. milk, 24.33 lb. butter in seven days as a junior four-year-old. The white cow nearest the camera is her daughter, Hubbavale Aaggie Manor Lyons, 324,667, a daughter of King Lyons 5th. She is the dam of the heifer calf and has a record made as a six-year-old of 557.3 lb. milk, 28.06 lb. butter. She was consigned to the first Brentwood Sale by George C. Hubbard and purchased by Rancocas Stock Farm and was resold at the third Brentwood Sale to Miller Bros., Ithaca, New York, for $510.

This picture was taken at Hubbavale Farm, Red Hook, New York, and is one of which the owner, Geo. C. Hubbard, is very proud. THE HOLSTEIN BREEDER AND DAIRYMAN would be glad to get pictures of similar groups.

There are two kinds of success. One is the very rare kind that comes to the man who has the power to do. That is genius. Only a very limited amount of the success of life comes to persons possessing genius. The average man who is successful—the average statesman, the average public servant, the average soldier, who wins what we call great success—is not a genius. He is a man who has merely the ordinary qualities.—*Theodore Roosevelt.*

Every woman who marries a man to reform him would try to make an omelet out of a bad egg.

King Buys Good Ones

A LIBERAL bidder at recent great sales is A. J. King of Kansas City, Mo., who, at the National sale at Syracuse last June and at the recent Brentwood sale bought a number of young cows and heifers of high class individuality and superior backing.

One of his Brentwood purchases is Carnation Sylvia Clothilde Emma a daughter of Carnation King Sylvia and Segis Clothilde Emma. Mr. King had to pay a four-figure price for this heifer.

Carnation King Sylvia is siring a number of very handsome daughters and it is becoming evident that the breed suffered quite a loss when this young sire passed out.

Segis Clothilde Emma is one of the best year record daughters of Matador Segis Walker, and has a number

SEGIS CLOTHILDE EMMA

1,164.99 lb. butter, 28,786.4 lb. milk in a year. She is owned by the Carnation Stock Farms and is the dam of Carnation Sylvia Clothilde Emma, purchased by A. E. King for $1,030.

of very creditable seven-day records. But her claim for preëminence rests upon her year record of 1,164.99 lb. butter and 28,786.4 lb. milk. She has a sister, Matador Mechthilde Vera with 1,169 lb. butter and nearly 27,500 lb. milk in a year. Emma is from a daughter of King Segis 10th, the sire of Segis Pietertje Prospect, world's champion for year milk production.

It can be seen that in purchasing Carnation Sylvia Clothilde Emma, that Mr. King obtained an animal exemplifying the blood lines upon which the future fame of the Carnation herd will rest, a combination of the blood of Carnation King Sylvia, Matador Segis Walker and King Segis 10th.

Stevenson Fears Division

Prof. T. E. Elder,
Mt. Hermon School,
Mt. Hermon, Mass.

MY DEAR SIR:

I have read with considerable interest your replies to my recent publications and want to thank you for the friendly spirit displayed throughout your article. It was for the very purpose of opening up a discussion and trying to get an opinion of the majority of the members of the National Association that I published the first article. I sincerely believe that a return to the methods followed by the National Association prior to the June meeting in 1921 will lead to a division of the membership into two bitter factions and may result in the establishment of a new Association to be managed along lines of reasonable economy. I am afraid that the action of the St. Paul meeting last October will prove to have disfranchised a vast majority of the members in the National Association, and fear that the delegates who will attend the National meeting at Kansas City will represent only a small minority of the membership in most of the remote States. I believe we can serve the interests of the members of the National Association best by indulging in such a friendly discussion or controversy upon these questions as the Breed papers will devote space to. I am sending a copy of this letter to each of the Breed Papers for publication. Yours truly,

(Sgd) GEORGE E. STEVENSON.

Scranton, Pa., May 10, 1922.

The Holstein-Friesian World vs. Director E. C. Schroeder

Attach Proceeds of Cattle Sale, Syracuse Publishers Secure Writ to Cover Bill of $6,000

UNABLE, they claim, to collect a bill of approximately $6,000 which they alleged has been running over a long period of time, Syracuse publishers of *The Holstein World,* Thursday, secured a writ in the Court of Common Pleas in Philadelphia, attaching $5,200 due E. C. Schroeder, of Moorehead, Minnesota, Holstein Cattle breeder, for animals sold at a recent Pennsylvania sale.

Assistant District Attorney Oscar J. Brown with a Philadelphia law firm as counsel, secured the writ tieing up the money which is in the hands of Wm. G. Davidson, a Philadelphia wool merchant, who acted as agent and looked after Schroeder's interests during the sale.

Schroeder is well known to local cattle breeders and a prominent figure in the Holstein breeding industry. The Syracuse publishers posted a bond of $12,000 and the funds of the cattle man will be held up until the June term of Common Pleas Court. The money is due for advertising and services, the claimants alleged.—*Syracuse Journal.*

Honor Roll Associations

THERE are now 115 cow testing associations with 32,000 members operating in the State of Wisconsin. There are two associations which certainly have a right to consider themselves on the honor roll. These two are the Allenton-Kohlsville and the Delafield, and the following can be said of them:

1. Every member uses a registered dairy bull.
2. Every member's wife serves *real butter* on the table.
3. Every member's herd is listed free from tuberculosis.

Seventy of the 115 active associations are free from scrub bulls.

Bettering Good Herd

THE Lathrop Estate at Montrose, Pa., have been adding a number of well bred heifers to their accredited herd during the past few months. Dr. L. M. Thompson, the manager is not content with pedigrees, but insists that the animals shall be of high quality and splendid individuality. At the Brentwood Sale, Dr. Thompson bid off a number of real good ones. One of his purchases was Carnation Sylvia Lorinda, a

CARNATION SYLVIA VERA

Daughter of Carnation King Sylvia and Matador Mechthilde Vera. Owned by the Lathrop Est., Montrose, Pa.

daughter of Carnation King Sylvia from Lorinda Segis Walker a heifer that produced 24.42 lb. butter and 464.3 lb. milk in seven days at her first freshening. This heifer was purchased in the sale by R. J. Cunningham of Turtle Creek, Pa. She is a daughter of Matador Segis Walker whose daughters are making wonderful records in both short and long time test.

Another daughter of Carnation King Sylvia that Dr. Thompson had to pay even more for is Carnation Sylvia Vera. Her dam is Matador Mechthilde Vera, also a daughter of Matador Segis Walker. This great cow

MATADOR MECHTHILDE VERA

1,169.59 lb. butter, 27,488.6 lb. milk in a year. Dam of Carnation Sylvia Vera.

has a year record of 1,169.55 lb. butter and 27,488.6 lb. milk and is the highest year record daughter of her sire.

The dams of these heifers have made good in test work. The sire's dam, May Echo Sylvia, is one of the greatest cows living and is the only cow that has ever produced over 1,000 lb. milk in a week. She can lay claim to many other honors which we will not take space to tell of here. That she has a 41 lb. seven-day butter record is international information.

The herd sire at the Lathrop Farm is King Valdessa Pontiac Homestead a son of the great King Valdessa Pontiac from Joyce Fobes Korndyke, a 34 lb. junior four-year-old daughter of the Pennsylvania state champion Kayewood Joyce Korndyke, 39.39 lb. butter and 607.5 lb. milk in seven days and 1,076.86 lb. butter and 23,658 lb. milk in 305 days, at eight years of age. She has just closed a year record of 1,106.7 lb. butter, 26,222 lb. milk as a ten-year-old.

John and Jimmie, two American soldiers, were wounded in France and sent to a French hospital. They were only a few beds apart.

One day a beautiful French nurse came in. Going over to John's bed she asked: "Well, my dear, how many Germans did you kill?" John answered, "I killed three." "Which hand did you kill them with?" "With my right," came the answer. Bending over she kissed John's right hand three times.

Then the nurse walked over to Jimmie's bed and said, "Well, my dear, how many Germans did you kill?" "Thirty," Jimmie answered quickly.

"Which hand did you kill them with?" "Lady," Jimmie answered, "I bit them to death."

It's all right to take things easy provided they don't belong to somebody else.

CONSIGNMENT SALE OF

The Maryland Holstein Sales Co.

Fair Grounds, Frederick, Md.

THURSDAY, MAY 25, 1922

FEDERALLY SUPERVISED HERDS

Consignments from

Frederick **Maryland**

Are You Going to Kansas City?

The following is the schedule suggested for officers and delegates of the Holstein-Friesian Association and their friends who plan to attend the convention in Kansas City. The itinerary was published on page 257 of the April 22d issue of THE HOLSTEIN BREEDER AND DAIRYMAN.

Officers and delegates from New England States, New York State, Eastern Pennsylvania, New Jersey, and Maryland have decided to travel via. St. Louis and the Missouri Pacific Railroad in accordance with schedules given. New York State delegates will leave Syracuse 10:53 p.m., Saturday, June 3d, and have secured a through car. Mr. E. R. Zimmer, secretary, New York State Association, Weiting Block, Syracuse, N. Y., is handling reservations.

New England delegation will leave Boston, Mass., 2:00 p.m., Saturday, June 3d; Worcester, Mass., 3:15 p.m., Springfield, 4:35 p.m., and Pittsfield, Mass. 6:15 p.m., and also have secured a through car. Reservations can be secured through Mr. C. L. Blackman, field secretary, 311 Massasoit Building, Springfield, Mass.

These cars will be on the same train from Syracuse and will arrive at St. Louis 6:08 p.m., Sunday, June 4th.

Delegates from Eastern Pennsylvania, New Jersey and Delaware are being assigned space in regular cars, North Philadelphia to St. Louis, and St. Louis to Kansas City. We have secured twelve (12) berths in each of these cars on train leaving North Philadelphia 6:41 p.m., Saturday, June 3d, Harrisburg, Pa., 9:00 p.m., arriving at St. Louis, 5:00 p.m., Sunday, June 4th, and leaving there 10:10 p.m, June 4th. Reservations can be secured from Mr. D. I. Lister, traveling passenger agent, Missouri Pacific Railroad, Room No. 811 Brokaw Building, 1457 Broadway, New York City. In case there are twenty or more from the above three states a through car will be run from North Philadelphia and reservations of space already assigned will be changed accordingly.

Mr. W. Hugh Jones, secretary, of Pennsylvania Federation of Holstein-Friesian Clubs, South Montrose, Pa., will issue circular shortly giving additional data as to trip.

Be sure and secure certificate at the time you purchase your railroad ticket so as to secure the reduced rate returning in case a sufficient number attend.

Dinner can be secured at Harvey Restaurant, Union Station, St. Louis, Mo., and you can then arrange in case same is desired for a trip around St. Louis to the Forest Park Highlands where several of the World's Fair Buildings are located, via. the numerous boulevards through the city.

A Passenger Representative of the Missouri Pacific Railroad will meet each of the parties upon arrival at St. Louis.

Mr. Lister will also be in Kansas City at our convention with the local representative of the Missouri Pacific Railroad to assist in completing plans for the return trip.

THE OFFICIAL DELEGATES

The following list of delegates which are eligible to vote at the annual convention of the Holstein-Friesian Association of America which will be held in Kansas City, Missouri. June 7, 1922, is sent by Secretary F. L. Houghton from Brattleboro, Vermont, under date of May 15th.

No nominations having been made, the following named districts are unrepresented:

Alabama, District of Columbia, Florida, Georgia, Idaho, Kentucky, Louisiana, New Mexico, Montana, North Carolina, Tennessee, Texas, West Virginia, Wyoming and Canada.

The number in ( ) after each state is the number of delegates elected.

The Convention City of 1923

EDITOR, BREEDER AND DAIRYMAN:

I have read with great interest the article in the May 8th issue of the HOLSTEIN BREEDER AND DAIRYMAN entitled "Virginia in 1923." As the time for the 1922 Convention of the Holstein-Friesian Association of America approaches, it is right that we consider where the next convention should be held. In making our selection we should choose a city with ample hotel accommodations easily accessible from all points, if possible where the convention has never been held, and where the influence of the convention will be effective in stimulating interest in the breeding of Holstein cattle.

I believe that Richmond, Va., offers everything that could be desired in the way of a suitable city in which to hold the 1923 convention. It is the metropolis of the south, has ample hotel accommodations, excellent transportation facilities both by boat and by railroad and is situated in an excellent farming section where the interest in dairying is rapidly increasing.

I personally know that Virginia breeders and their friends earnestly desire a convention of our Association because at the time of the Philadelphia meeting several influential gentlemen from that state asked what could be done to get the next annual meeting for the South. I believe that the delegates assembled at Kansas City meeting on June 7th would do well to decide to hold the 1923 convention of the Holstein-Friesian Association of America at Richmond, Va.

Very faithfully yours,

EUGENE B. BENNETT,

Formerly President of the Pennsylvania State Holstein-Friesian Association.

Nell—"While you were shopping, did you see anything that looked cheap at the bargain counter?"

Belle—"I saw Mr. Jones waiting for his wife."

He who fights and runs away shouldn't burn his bridges behind him.

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

MAY 22, 1922

The Holstein Breeder and Dairyman **was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.**

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

The Call for the Meeting

THE "call" or notice of the 37th annual convention of the Holstein-Friesian Association of America this year attains an importance that it has never before possessed. In past years the "call" told of the proposed amendments to the by-laws that were to be considered by the membership in convention assembled. Every member had the opportunity to express his opinion as to the merits or demerits of every question, either directly or by proxy. If he attended he could vote according to the dictates of his conscience on every question considered on the floor. If he deputized another member to vote for him by giving a proxy he had the right and power to instruct the recipient how that proxy should be voted.

This year things are different. Under the delegate system now in operation for the first time the delegates are elected by the vote of the members before any of the members know what questions are going before the convention, what amendments are to be proposed or what appropriation may be considered or voted. This is one of the great disadvantages of the delegate system now in operation.

As every member of the Holstein-Friesian Association of America has received the reports of the officers, the auditor, the finance committee and of Mr. Koenig, the Extension Service leader, there is no necessity for our printing these in full. We will, therefore, simply discuss some of the subjects that seem to us of most importance.

To give careful consideration to all the matters mentioned in the "call" will keep the delegates busy if they get through the program on the day of the meeting. However, the officers, delegates and the rest of those in attendance must realize that the most important thing, in fact the only real reason why they are called together is to attend to the business which properly should go before an annual meeting of the Association. Side trips, banquets, entertainments and the sale are relatively of minor importance, although there is a tendency on the part of many to elevate the sale to a position where it does not belong. Sales can be held at any time. The business that is of real importance at Kansas City is the proposed amendments to the by-laws, the appropriations to be voted and the election of officers of the Holstein-Friesian Association of America.

There are forty-one items mentioned in the Call. The first fourteen consist of the usual routine: the president's address, the reports of the officers, the finance committee, and the committee on special prizes —fairs, etc., which are in print and sent to every member.

The 15th item is the appropriations. Action on these will probably be postponed until after the eight proposals to increase the transfer fee are considered. We trust there will be no new appropriations or rash increases unless there is a well worked out plan and schedule submitted as to how much money is required, how it shall be spent and what results are to be obtained. At the Philadelphia meeting the transfer fee was quadrupled and the money attained spent without any plan ever being submitted and, after more than a year of operation, there was no thought out plan. It was simply, "get the signers, get the money and hurrah boys!" a typical whirlwind campaign. Neither Mr. Aitken or Mr. Pollock ever told any of the state secretaries or anyone else as far as we have been able to find out, of any extension plan along defined lines. Each state secretary was left to work out his own salvation hit or miss. This was one cause for the uprising of the members which occurred before the Syracuse meeting a year ago and which was responsible for the deposition of the then president who lost his $12,000.00 job when the extra revenue was cut off. In this connection we may say that during the past year so-called extension work has been done from Chicago. Mr. Koenig has held his office for the year and a calf club leader, Mr. Cooper, has been appointed, so that the claims that no extension work is done because the transfer fee was reduced, is at once seen to be false.

Items No. 19 and 21 relate to color markings and are proposed to clear up the ambiguity of the present rules. Some of our breeders claim that if an animal has one entirely black leg, it is not eligible to registry. Others claim that one black leg is passable but that two black legs debar the animal from registry. This is a matter that needs to be carefully considered. Coming as they do from all parts of the country the delegates have the qualifications and experience to give this matter the consideration it deserves. The only difference in the two resolutions is that Mr. Stevenson's is plainer and probably will be considered at the meeting in the place of one offered by James A. Reynolds.

No. 20 offered by C. F. Bigler relates to changing the dividing line between the so-called east and west. This line is the 80th meridian running very close to Erie, Pa. We see no reason for changing this at this time for its only purpose at this meeting appears to be to enable the 1923 meeting to be held somewhere in Ohio. Logically the southeast part of the country is the one in which the 1923 meeting should be held.

Since the meeting at Philadelphia, we have had one general meeting at St. Paul, one general meeting at Syracuse, the special meeting at St. Paul and now the convention at Kansas City. In fairness to the eastern part of the country and to the great undeveloped south, it is our opinion that it would be an injustice to the southern breeders to deprive them of the privilege of entertaining the National Association next year. For this reason we believe that this resolution should be defeated although in time to come it may be advisable to move the present dividing line farther west. This should be done at an eastern meeting, not at a western meeting and certainly not for the express purpose of holding a convention in the territory changed across the dividing line. The proposal smacks too much of a political move and we have too much politics already.

No. 22 offered by Malcolm H. Gardner is a resolution, the object of which is to clarify the present by-laws on transfer. We believe it should pass.

Items No. 25 and 26 proposed by T. E. Elder would shorten the time in which applications for registry should be filed to take advantage of the single fee to six months instead of a year, and these for transfer from six months to sixty days. The passing of these resolutions might speed up business and eliminate some of the dissatisfaction expressed by beginners over the delay in getting certificates of purchased animals. These resolutions or some modifications of them will probably pass.

Items No. 32 and No. 34 are proposed by Mr. James A. Reynolds to amend the delegate plan. The gist of these resolutions is that should a number of the elected delegates from any one state fail to attend a convention then his fellow-delegates attending shall cast the full vote of the district, in other words, if the convention is held in San Francisco and there is only one member from New York, Wisconsin, Pennsylvania or Ohio present, he can represent the entire state membership. How is this any improvement over the old proxy system?

Item No. 35 also by Mr. Reynolds does away with all honorary memberships. These honorary members have no voting power. Perhaps this proposal is logical under the delegate system, but whether it is advisable to discontinue to present policy of giving honorary memberships to the state experiment stations, state agricultural colleges and to educational institutions maintained by the National Government, we will leave to the consideration of the convened delegates.

Under the head of New Business, there are a number of questions. There will be many arguments for and against the proposed discontinuance of all prizes for milk and butter fat. It is a fact that the larger herds get a big percentage of the money prizes; yet the winning of a prize has served to encourage many men who have tested just a few of their animals.

Mr. Elder proposes that instead of giving prizes, a Roll of Honor should be maintained, but he would debar animals whose milk tested less than 3%. If this passes, we respectfully suggest that animals showing an abnormal percentage of fat should also be debarred. The adoption of this resolution will probably mean a Roll of Honor and an appendix, for owners who test cattle will protest against having the records lost unless the fat contest is between an arbitrarily selected range.

Under Section 3, sub-section C of this new business there is an attempt to find out from the delegates their opinion of the punishment to be meted to parties who do not pay their test bills. This is a subject for free discussion.

Sub-section D of section three is on the offering of prize money at fairs. If prize money is done away with at fairs, there will be dissatisfaction in many parts of the country, although there are arguments in its favor. There is much wire-pulling to obtain grants for localities favored by those influential in the Association. If competitive prize money is done away with and money devoted to educational exhibits at certain fairs, there still will be wire-pulling. This matter is one that should be given careful consideration and should be discussed by the membership. We believe that action on this proposal should be postponed until the next annual meeting, so that the owners of Holsteins can study this question and then express their opinions.

THE HOLSTEIN BREEDER AND DAIRYMAN looks with contempt on the eight proposed amendments to increase the Transfer Fee and Mr. J. M. Hackney's proposal to make the offices of Secretary and Superintendent of Advanced Registry appointive instead of elective. These resolutions are directly against the wishes of the majority of the members.

The members, after being fully informed previous to the Syracuse Convention as to the finances of the Association and how the increased funds derived from a dollar Transfer Fee were being foolishly and extravagantly wasted, cast the largest proxy vote in the history of the Association in favor of decreasing the fee from one dollar to fifty cents, which should be ample proof that they were not willing to submit to taxation through an increased fee as is proposed in any of the eight amendments.

If our present board of sixteen directors are not capable of conducting the Association successfully on a transfer fee which is twice as large as it was previous to 1919 when our Board of Directors was only nine and a surplus fund had been accumulated of upwards of $220,000, let us go back to nine directors or to even six directors as Mr. George E. Stevenson proposes or, if need be, elect more efficient directors before increasing the Transfer Fee.

As to the Hackney amendment, a similar proposal was introduced at the Milwaukee Convention in 1918 when a direct attack was made against Secretary Houghton. Those who were trying to defeat him also proposed this cunning little trap to catch him in case they failed to defeat him in an open fight.

Mr. Hackney who led the fight on the floor of the Convention at Milwaukee, announced in the outset that it was the first annual meeting that he had ever attended and after talking himself black in the face trying to disguise the real purpose of the proposed amendment and realizing that he was unable to deceive those present and that the proposal would be defeated

when it came to a vote, he turned and addressed our efficient, honored and faithful secretary, Frederick L. Houghton, using the following language. "You may defeat the amendment, sir, through your friends but you will surely lose out one year from now or two years from now." With this resolution coming up at the Kansas City meeting, proposed by Mr. J. Hackney, it could be not any more apparent that it is being introduced in a spirit of malice as it has no merit. It should be overwhelmingly defeated as it was in Milwaukee in 1918.

At the special meeting at St. Paul, October 11th, after the report of the proxy committee had been presented and it was apparent that the politicians and promotors controlled the convention and would be able to put across their scheme to disfranchise the membership and deprive them the right of direct vote in the future management of the Associations affairs, this same Mr. Hackney addressed those present in the following language, "Might I suggest that by not voting the proxys the revenue could be saved." Those who were present can well remember how quickly the Hon. Frederick M. Peasley sprang to his feet in disapproval of Mr. Hackney's suggestion and stated, "The National Association does not wish to go on record as trying to defraud the United States Government out of anything. I think such action would be contemptible."

We believe those tried and true officers, the Secretary, Superintendent of Advanced Registry and Treasurer should be reëlected without quibble or question.

We wish to go on record as deploring any effort to establish an advertising department that will expend large sums of money to advocate the increased use of milk. The National Dairy Council is a national organization backed by the varied dairy interests and established to advocate the increased consumption of milk and dairy products. The members of the Holstein-Friesian Association of America are now contributing $500.00 a month to the National Dairy Council to carry on the work.

There are less than 20,000 active members of the Holstein-Friesian Association of America. There are only a little more than half a million purebred Holsteins and it is not just to tax the few to finance a milk campaign the expense of which should be borne by all the dairymen of the country from the products of thirty millions dairy animals.

Some action should be taken to speed up the official reports of the proceedings at the annual conventions. These reports are bound in volumes of the Herd Book. Since the meeting last June in Syracuse, at least two volumes of the Herd Book have been published, neither of which carried a report. The latest one, which appears in Herd Book No. 43 tells of the proceedings at the meeting at St. Paul which took place June 2, 1920, two whole years ago.

No man can dope out the eccentricities of time. Tomorrow never comes, but to-day goes into the discard just the same.

"Please omit flowers" is good advice to hand to those who are in the habit of throwing bouquets at themselves.

Richmond

THE city of Richmond, Va., will be put in nomination by delegates from the south as the convention city of 1923. Richmond is the capital city of Virginia and is often called the metropolis of the south. It is a point of historic interest. It lies at the head of tide water, ninety miles from the sea on the historic James River, which was explored in the year 1607 by Capt. John Smith of Pocahontas fame. Jamestown Island has been called the birthplace of the nation.

Close to here, Cornwallis surrendered to Lafayette and the Revolutionary generals. The original state capital of Virginia, said to be the oldest state capital of the Union, was planned by Thomas Jefferson in 1785. In a Virginia convention assembled in St. John's church, Patrick Henry, first governor of the state, thundered his immortal words. Within a few miles of Richmond are famous battlefields of the Revolutionary and Civil Wars. The entire country is really endowed with historic points.

In addition to its river, Richmond has six trunk lines of railway. It has several colleges and universities, large private and public schools and parks and has a population practically 100% American. It has the largest cigar factory in the world. According to the census of 1920, Richmond has a population of 171,667. It is two hours journey from Hampton Roads, the greatest natural harbor on the eastern coast. It is eight hours from New York, two and one-half hours from Washington and within a radius of six hundred miles resides fifty-four million people, half the total population of the United States.

New England Wants Next Convention

THE officers of the New England Association are formulating plans with a view of inviting The Holstein-Friesian Association of America to hold its 1923 Annual Convention at Springfield, Mass. The New England breeders are in a position to entertain the Association in a royal manner. Aside from ample hotel accommodations and excellent railroad facilities, the Eastern States Exposition Grounds offer the best of accommodations in which to conduct the Sale.

We feel that the breeders generally would welcome an opportunity to attend a Convention held in New England and would not only be interested in the Convention and Sale but would enjoy a visit to Brattleboro and the opportunity to go through the home offices of the Association where the records have been kept for years in a most efficient manner.

With Judge Peasley, president of The New England Association and the other officers and directors back of the movement, the members of The Holstein-Friesian Association can be assured of receiving a cordial reception at the hands of the New England breeders if the invitation to convene at Springfield in 1923 is accepted.

Don't brag about what you are going to do tomorrow. Somebody might ask you what you did yesterday.

LEST WE FORGET

Excerpts from letters received from breeders previous to the Syracuse Convention and the special meeting at St. Paul who wished to have their proxies voted against extravagance, and to keep the management of the Association affairs in the hands of the membership. Continued from page 299, May 8th Edition.

Enclosed please find my proxy card. I hope you and Judge Peasly will get enough proxies so that you will be able to protect the interests of the Eastern Breeders, many of which will be unable to take the time or spend the money to get to St. Paul.

I have carefully read your circular letter and agree with you that the proxy system should be upheld, as it is the only way by which a great many small breeders who feel not justified in the expense of personally attending the national meetings, can express their wishes.

I also agree with you that it is wrong to let politics interfere with the affairs of our great Association, which should be run in such a manner that the interests of the small breeder will be looked after to his advantage, as he is the man who supports the Association and gives the breed its predominating position, because he outnumbers the so-called large breeders and for the paramount reason that he is the man who breeds Holstein cattle and produces milk for a livelihood. Unless he feels that the efforts of the Association and its representatives are directed toward advancing his interests as a breeder of Purebred Holsteins he will very naturally become disinterested. If the small breeder is made to believe that he does not count in the Association's affairs and that the Association is being controlled by a small group of men for their own advantage, he will not only lose interest in the Association but will cease to breed purebred Holsteins. I have occasion to come into contact with a good many small breeders and for the past six months many of those I have talked with have been saying to me that they are seriously considering the sale of their purebreds, replacing them with grades, as they are not in any way being considered in the conduct of the Association.

Wishing you all success in your efforts on behalf of the best interests of the Holstein-Friesian Association, I am,

MONTGOMERY, N. Y.

Oct. 1, 1921.

Herewith find my authorized proxy. I am content to let the Association run its policy acording to the wish of the membership, but I most certainly do know *D. D. Aitken is the booster for the Big Breeder and caters entirely to the millionaire element.*

I do not think Mr. Aitken is a real friend to anyone except of equal wealth with himself and I must place myself on record *as not wishing Mr. Aitken to direct the policy of our Association,* and my opinion is based on a five year's personal acquaintance with him.

FLINT, MICHIGAN.

I myself can see no benefits that have arisen from the raise in transfer fees, and this Extension work certainly has done me no good, and possibly harm, as every State Association seems to be a move for a certain few to obtain all the power, and nab the profits. Our Sales for instance in this State, the past two years have almost totally taken priavte selling out of the small breeders' hands and forced him to consign to certain sales managed by certain elements, the result has been steadily declining prices and a relative cost of 20% when private sales as formerly held were satisfactory to all concerned and with less than 10% overhead.

It's back to the old way for me, or out of the game entirely as these State sales are in a lot of cases splendid excuses to dispose of the bulls and at prices that are too high, and the good ones are not appreciated. I am stating matters as I find them in this state, other states may have better success. KANSAS BREEDER.

SCRANTON, KAN.

"Your letter received. I sent my proxy to W. H. Maul, our state representative and gave him instructions to vote, to cut down unnecessary expenses. I don't see why they ever wanted to raise the transfer fee because $.50 is a great plenty and I am opposed to any by-law that turns the rights of the members into the hands of a few men and I want to see the Association put back to normal, so that the breeder knows what he can depend upon. I never was in favor of this high priced salary for president and we better dispense with him. I am the oldest breeder in the state, and Mr. Houghton and Mr. Gardner have served us faithfully. I say continue them as long as they live."

HORNELL, N. Y.

"Your letter received. We don't want any Holstein Home. There is enough money being spent now. Lower the transfer fees, and cut out extravagance. Hope you will succeed at the Convention."

Will Extravagance Cease Before This Happens?

Letters to the Editor

AGAINST THE ARMSTRONG AMENDMENT

In the fourth volume of the *Holstein Herd Book*, the editor, Mr. Charles Houghton, who was also secretary of the association, states that the object of the association is "to promote acquaintance among the owners and breeders of Holstein cattle, and interchange of information in regard to them and the best systems of breeding; and to keep and preserve a register of animals known to be of pure blood, and their progeny." The transfer of cattle was, of course, part of the work.

This was in 1879. For many years the recording of A. R. work was the only official addition to the association's activities. It grew in membership, in influence and in wealth. The Holstein cow gained her way into practically every section of the country and the breed total was greater than any other in America.

A character in one of Owen Wister's books says that, "Americans used to be a small people living and dying for a great ideal, but have become a great people, living and dying for money." This statement could, we think, be very well applied to the Holstein-Friesian Association, if we use the word "working" in place of "dying." In the early years it was a small association living and working for a truly great ideal—the development of a beautiful and useful breed for the benefit of the dairy livestock industry. It so continued for many years, wisely and conscientiously guided by those officials who thought first of progress, not of present profits; of development, not of dollars; of the cow, not of consigning her to sales whence scandal could grow; of her genuine value as a fundamental part of agriculture attainment, not of her possible value as the "top price" animal in an inflated sale.

Their ideas—or ideals—were good, their principles sound and the entire confidence of the Holstein public was the response.

In those safe and sane years no herds skyrocketed in a great blaze for a year or two and then came down like a blackened stick; a price of a thousand dollars or two thousand was rare indeed but it then meant money paid, not rumored or rebated.

But about ten years ago the phenomenal growth and increasing wealth of the association attracted the attention of a class of men who have been anything but an asset to it. From that time on, sordid selfishness has tried in every possible way to exploit the Holstein breed and has threatened to disrupt the whole association, through the efforts of those who seem to think of the great mass of breeders as a stepping stone to power and financial gain for a favored few.

There are enough Holsteins to "go around" and they pay a handsome profit to those who work rightly with them and with their fellow breeders. There is not now, nor has there ever been, any need for high-salaried people to go about the country saying the same platitudinous things over and over and over. Much of what was said so expansively and expensively the audiences knew quite well, and oftentimes much better than those who told it to them; and after hearing some of it and reading more, we failed to find any amount of practically useful or really enlightening information in it.

Vice-President Stevenson truly says:

"We all believe the fees (Registry and Transfer) should be enough to furnish money to pay all necessary and reasonable costs of operating the National Association, but not so great as to accumulate a large reserve and surplus."

The day the plan is carried through to have the fees increased and divide the excess with state associations, the National Association is headed for trouble and plenty of it. There is enough sectional feeling of jealousy as it is—what will there be in the matter of state sales and state appropriations? Will *any* state secretary be satisfied with what the Association gives him? And will not secretarial displeasure stir up trouble in the state—and out of it too?

It would seem to be a good plan to think back and recall the ideals of the men who made the foundation plans for this, the greatest breed association in the world; remembering that the *true advancement* of the breed was entirely due to following out their plans.

The last seven years may have been needed to bring the breeders back to a sense of "saving grace." If we so need not grudge the time to those who "clothed with a little brief authority" made such sordidly selfish use of it. Publicity can most effectually dispose of them by stopping the funds. Even the price of a year without extension work would be a low one to pay, if it means the end of such an element in the association membership and control. GEORGE LESLIE.

RECONSTRUCTION—READJUSTMENT

Conditions prevailing throughout the entire United States affect all industries. The purebred cattle industry and the dairy industry furnish no exception. In order to hasten the restoration to normal balance, it behooves us, The Holstein-Friesian Association of America, to practice the most rigid economy in the management of the Holstein-Friesian Association of America, and thereby lighten the burden placed upon the members of our Association by the increased expenses of operation, which began with our entry into the World War in 1917, and was further increased by the action of those in control of the Annual Meeting at Philadelphia in 1919. At that meeting, the Board of Directors was increased from nine to sixteen, and the New Board of Directors voted to pay to Mr. Aitken, the then President, a salary of $12,000 per year. (Later the book shows this salary was paid to Mr. Aitken as Director of Extension Service.) At this same meeting, the transfer fee was increased from twenty-five cents to one dollar, —300%, although the call for the meeting announced an amendment to increase it only 100%. Then followed two years of extravagance, World-Wind Campaigns for State Organizations and Paid Secretaries. The reaction was inevitable, and when the proper time came at Syracuse, in June, 1921, the transfer fee was reduced to fifty cents. (Not to the twenty-five cents which prevailed during the years when the Holstein-Friesian Association made its most rapid progress and did its best work.) At this meeting in 1921, campaigns for State Paid Secretaries fostered by the National Association's official's was abandoned, and the salary of the President, or, Director of Extension Service, of $12,000, was abolished. Other salaries of the employees of the Holstein-Friesian Association had been increased during the years of the war and could not be as suddenly decreased. Therefore, the reduced revenues failed to meet our expenses. However, we have a considerable reserve fund and a large surplus, which may be drawn on to tide us over the present emergency.

What will best serve the combined and individual interest of the breeders and members of the Holstein-Friesian Association of America?

Shall we draw upon our reserve fund which was created during our prosperous years, supposedly for this very purpose, that is, to tide us over the nonprosperous years, or, Shall we increase the transfer fee and thereby increase the burdens of our small breeders and dairymen, whose products do not now sell for enough to pay back the cost of production?

Why the reserve and surplus, now crowding toward a half million dollars, if it is not to be used during this emergency?

This large fund menaces the future integrity of our organization, and I think we better draw on it now to ease the burdens of our members rather than add an additional tax on all our breeders to aid a comparative few. This fund is ours, we created it in our prosperous years. Let us use so much of it as may be necessary to tide us over the present depression, and thus divert the avaricious eyes of the few from the property of all of us.

Let us further economize by putting the A. R. O. Department fairly on its own feet. Let those who use the Department support it. Charge actual cost for the supervision of all records. This is only fair, as only a small percentage of our breeders make records, and those generally who are financially able to pay the full costs thereof. I therefore, advocate for careful consideration at Kansas City, the following:

Let the transfer fee remain at fifty cents where it is now; Let the failure of revenue to equal expenditures be made up from the surplus; Let charges be established for supervision of A. R. O. records that will meet all the expenses of that department; Direct such extension service as may be deemed desirable to the majority of us and along a line that will benefit us all, and not the few who join the State Associations.

GEORGE E. STEVENSON.

BIG BOARD EXPENSIVE LUXURY

In view of the fact that Mr. George E. Stevenson, vice-president of The Holstein-Friesian Association of America has offered an amendment to the constitution decreasing the number of directors from sixteen to six and Mr. Stevenson states very distinctly that his reason for offering this resolution is in the interest of economy, we are causing to be printed herewith copies of some of the vouchers drawn on the association's treasury by various directors.

We are printing the above vouchers which gives only a portion of the amount drawn from the association treasury by the directors. For example, Mr. Barney has served continuously as a director of the association since 1900 and the vouchers listed cover the short period of six months. We have not the records at hand that will enable us to give the total amount that Mr. Barney or any other director has drawn from the association. However, we believe the information given demonstrates that even though the directors give their services, that an increased number is an expensive luxury.

Cow Testing Association Reports

REALLY PUREBREDS

The past two months of the Livonia Dairy Improvement Association have been two of the most successful in its history. For the month of March 342 cows were on record, 175 of which made the roll of honor. Nine of these honor roll cows gave over 2,000 lb. of milk, 14 over 1,802 lb. of milk, 3 over 90 lb. butter fat, 8 over 80 lb. butter fat. The grade Holstein milked by Samuel Barber of Groveland Station was the high butter fat producer with a record of 2,232.7 lb. milk containing 111.6 lb. butter fat and another grade Holstein owned by J. M. Huff, Hemlock, N. Y., was the high milk producer giving 2,660 lb. milk containing 80 lb. butter fat. Two purebred Holsteins worthy of mention this month are Hengerveld Pietertje Beets an eight-year-old who has been fresh for five months and gave 2,160.7 lb. milk for the month and Braininhurst Wayne Veeman a two-year-old that gave 1,692.6 lb. milk containing 67.7 lb. fat. The former owned by James Alger, Jr., the latter by J. S. Cooley.

For the month of April Samuel Barber again had the high cow both for milk and butter fat, his grade Holstein leading with a production of 2,805.0 lb. milk containing 116.5 lb. butter fat. It might not be out of place to add here that both this cow and Mr. Huff's great producer are really purebred animals but cannot be registered due to some technicality.

One of the most encouraging aspects of the work of this association is the promise that the two-year-old heifers are showing, 18 making the honor roll last month. These heifers either grade or purebred are all sired by bulls with heavy A. R. O. backing. The members are slowly but steadily increasing the number of their purebreds by raising their heifer calves to replace the grades, and now and then by purchasing a new foundation cow. At the last Hornell Sale, Wolfspring Ella Bertha Hartog, a 17-lb granddaughter of the 32-lb. cow, Sethje Mooie was added to the Doty and Seaman herd. So you see that Livingston County is bound to be heard from.

LOUIS P. ZUMSTEIN.

UTAH RETAINS LEAD

The April report of the United States Dairy Division Western Office shows that in the nine western states the Utah Association maintains its lead for average production. There are 158 cows in this association, their average being 38.5 lb. fat, 74 of these made more than 40 lb. fat. Oregon was second, New Mexico third, followed by Colorado and California in the order named.

The twelve highest leading cows were all Holsteins, the five best being registered cattle. Maxwell Farms, Hollywood, California, is first with a cow producing 1,985 lb. milk, 120.8 lb. fat. The next three animals each produced over 3,000 lb. milk and better than 102 lb. fat. Five cows, all registered Holsteins, each made over 100 lb. fat, three were from California, one from Washington, and one from Utah. The two leading herds of 15 cows or more consist of registered Holsteins. The 19-cow dairy of E. J. Lindquist, Denver, Colorado, stands first with 1,742 lb. milk, 59.9 lb. fat, while the 25-cow dairy of Holdaway Brothers, Vineyard, Utah, is second with 1,399.1 lb. milk, 55.9 lb. fat.

IN WISCONSIN

There were 105 honor cows out of the 405 cows tested in the Mishicot Testing Association during February. A grade Holstein owned by Albert Lorenz led with 1,836 lb. milk, 78.9 lb. butter fat.

While there were only 316 cows tested during March in the Shirley-Denmark Association there were 57 that produced more than 40 lb. fat and six over 60 lb. The leader was a grade Holstein, owned by H. Benecke, with 2,179 lb. milk, 69.7 lb. fat. Second was a registered Holstein in the same herd with 1,871 lb. milk, 65.5 lb. fat. The first six cows were black and whites, then came a grade Guernsey and then three grade Holsteins.

The March report of the Racine-Kenosha Cow Testing Association showed that 102 cows produced over 50 lb. fat during the month. The leader was a grade Holstein Carrie, owned by Fred Hanson, with 1,659 lb. milk, 84.6 lb. fat. Walter Vyvyan had a registered Holstein junior two-year-old producing 1,969 lb. milk, 72.9 lb. fat. Beck and Peterson own a two-year-old daughter of Sir Pietertje Ormsby Mercedes 41st, which made 64.3 lb. fat and also made a 19-lb. seven-day official record during the month. Bessie Colantha Change, a registered Holstein owned by Clinton Skewes now has to her credit 10,932 lb. milk and 415.9 lb. fat in seven months and 18 days.

During the 28 days of February 246 cows were tested by Matthew Nelson in the Falls-Wilson Association. A grade Holstein, owned by James Poppe led with 1,955 lb. milk, 67.4 lb. butter fat. She was milked three times a day and made a profit of $19.22 over cost of feed during the month. Second to her was a grade Holstein Bessie, owned by Alfred Wumsch, with 1,793 lb. milk, 64.2 lb. fat. Of the leading twenty cows, seventeen were black and white and of the ten high herds nine consisted of Holsteins, purebred, grade, or mixed.

SEVEN IS LUCKY

One hundred and ninety-four cows were tested in the Ada County, Idaho, Cow Testing Association during March and averaged 33.8 lb. butter fat, 823 lb. milk. The two high producing registered herds were both Holsteins each of which consisted of seven animals. Chris Lillegard dairy at Boise, had the average of 1,327 lb. milk, 49.2 lb. fat and the seven-cow herd of C. S. and R. H. Musser, Nampa, averaged 1,391 lb. milk, 45.9 lb. fat. William G. Messersmith, Boise, had fifteen cows, a few of which were registered Holsteins and the rest grades that averaged 1,056 lb. milk, 40.5 lb. fat.

Herman Weick of Hilltop Farm, Notus, has a senior two-year-old, Lulu Kris Fayne that produced 2,241 lb. milk, 79.5 lb. butter fat and a senior four-year-old Elverde Mercedes Kris Fayne that made 2,055 lb. milk, 72 lb. butter fat. Elverde is the mother of Lulu.

LEAD IN OHIO

The report of the Dairy Department of the Ohio State University shows that the two highest producers in the entire state were registered Holsteins, enrolled in the Butler Road Association. Prilly Lyons Maplecrest Trixy, owned by N. W. Lee, New London, produced 2,167 lb. milk, 75 lb. fat and Mayside Neenan Wellington, owned by P. J. Fay, Wakeman, produced 2,449 lb. milk, 75 lb. butter fat. Of the six high cows, three for butter fat and three for milk, five belong to members of the Butler Road Association and all are Holsteins. The report is for the month of February.

COLORADO MARY

The high cow for March in the Boulder County, Colorado, Cow Testing Association is Mary Alcartra Dode Soldene, owned by Marcus Harper of Boulder. She made 1,932 lb. milk, 85.1 lb. butter fat. The Holstein herd of eighteen cows average 1,502 lb. milk, 52.8 lb. fat during the month. Two hundred and seventeen cows were tested of which 87 made 40 or more lb. butter fat.

Lady Bess Homestead, No. 457,458, owned by Willard Forsythe, has finished the year with 15,817 lb. milk, 540.1 lb. fat. Her roughage for the year cost $34.25 and the grain cost $53.30 the value of her product was $231.31 leaving a profit of $143.46.

IN VIRGINIA TOO

A six-year-old Holstein owned by Lee McChesney, Bristol, Va., topped the southern Virginia Cow Testing Association for March, with 55.8 lb. fat, 1,551 lb. milk. There were 406 cows tested by Harold Straw, supervisor in charge.

SUMMER FEEDING PAID

The benefits of summer feeding are sometimes questioned by those who have not practiced it. In a letter to the president of the Crawford County Cow Testing Association, Blaine Steenland of Hollandale, Wisconsin endorses the practice, justifying his words by his experience during 1921. Mr. Steensland says: "It was impossible for me to feed any until about the first of August as I was having my barn remodeled. I purchased $247 worth of feed which I fed after August 1st and had 30,000 lb. more milk during the milking season than the year before and with six less cows than the previous year. This was the first year that I ever practiced summer feeding and when the year was over and I compared my results with previous years, I have concluded that I will continue the practice of summer feeding. The net profit due to summer feeding last year was as follows:

30,000 lb. milk at $1.42 per 100 lb.	$426 00
Cost of feed	247 00
Profit over feed cost	$179 00

Due to this extra feed, my cows went into the winter in better condition and another thing that proved beneficial was that 1921 was a very difficult year due to the intense heat and drought and if I had not fed the grain, I would have had a good deal less milk than in previous years, but by using the grain, I received 30,000 lb. more milk than in previous years.

BOYS ARE CHIEF PRODUCT

At a meeting of the Rotary Club of Pomona, California, April 18th Edward G. Anderson, the new superintendent of the California Junior Republic was chief speaker. He said that when R. A. Condee came to the Republic in 1914, the herd consisted of eleven cows that produced 29,000 lb. milk in a year. Mr. Condee persuaded the Board of Directors to spend $1,000 on purebred stock and two of the animals purchased gave 32,000 lb. milk the first year. From that stock they now have 15 cows and at the last state fair this herd took ten prizes. The Republic herd has won honors both in the show ring and in official test work.

But the real product of the Republic, says Mr. Anderson, is boys. From the dairy department 100 boys have been graduated, four are now foremen of large dairies, two are foreman of large swine herds, and others hold responsible positions in the state. He concluded by inviting the Rotarians to hold a meeting at the Republic, which invitation is likely to be accepted.

PAULHAMUS LEADS

The March report of the Lycoming County Testing Association shows that a registered Holstein belonging to H. R. Paulhamus, Hepburnville, Pa., led the association with a production of 1,787 lb. milk, 89.4 lb. fat. There were 31 honor cows of which Mr. Paulhamus owned eight.

TESTING IN THE WESTERN STATES

The dairymen in the Western States are recognizing the value of keeping records of production and feed costs. They are becoming convinced that good producing herds cannot be built up without them, and are responding to the call of the Extension Department of the Agricultural Colleges, through the county agents, in a very encouraging way.

Ten years ago there were only two cow testing associations west of the Kansas-Nebraska line in active operation. These are still active and among the strongest associations in the country. During the past year many new ones have been added to the list and there is room for many more which may be organized in the near future. At the present time there are 42 associations, representing about 25,000 cows, sending in monthly summary reports to the Western Office of the Dairy Division, Salt Lake City, Utah, in comparison with 17 associations, representing 8,000 cows, last year. These monthly reports are compiled and mailed to the officers of each association, the testers, county agents and to the extension offices in each state, which tends to keep the work constantly before every one interested. In addition to the summary reports sent out, short notes giving conditions, prices of feeds, stock for sale; etc., from each section, supplement the report and have been found interesting to many.

The testers in the western associations are not just bookkeepers, but are rendering a real service to the members in many ways. For instance, last year a survey was undertaken to determine how many herds in the associations were using purebred bulls. The report was very disappointing, as there were many apparently high producing herds still being headed by grade bulls. A campaign throughout the West was immediately started to eliminate the scrub bulls from all association herds. The response from the testers was very encouraging, and resulted during the year in the elimination of all scrub and grade bulls in 19 of the associations, representing approximately 7,400 cows. The testers also advised the individual dairyman as to better feeding, which has resulted in the building of several hundred silos for both summer and winter feeding. Nor do they neglect the sanitary side of dairying and a better product is being marketed, which in most cases result in a larger income. Just at present there is a movement started among the testers to have all herds in the associations on the accredited list, and some progress is being made in that direction.

All the work outlined means much in the establishment of a permanent dairy industry in the Western States, and no doubt will have a tremendous influence on future herds in this section. From the work that is being done, it may be surmised that the testers are unusually high class men, and it is true. Many of them are four-year graduates of agricultural colleges, and while the average salaries are low for such men, some of them are getting rich experience and are preparing themselves for higher positions, where such experience will be a valuable asset. Salaries range from $1,200 to $1,800 per annum with board and lodging. Many testers starting a few years ago at a low salary are now occupying positions that pay from $2,500 to $3,000 per annum.

Does it pay to have a tester that can be a real adviser to the members? The dairymen say it does. In looking over the production records of all the cow testing associations in the United States, it will be found that the associations in the Western States exceed all other sections in average production. Is it because we have better cows, better feed, better climate, or more efficient testers? At any rate, the tester is an important factor.

A WONDERFUL AVERAGE

The highest producing cow during March in the whole state of Illinois is a purebred Holstein, owned by the Buffalo Creek Farm, Arlington Heights, in the Cook County Cow Testing Association, she producing 2,142 lb. milk, 104.3 lb. fat. In the Adams association a grade Holstein, owned by B. Terstreip produced 1,476 lb. milk, 100.4 lb. fat; while a registered cow owned by the Rock River Farms made 2,421 lb. milk, 99.3 lb. fat.

The ten highest producing cows in the entire state were black and whites, three of them were grades and the rest were purebreds. Rock River Farms have four of these every one of which made over 81 lb. fat and 2,200 lb. milk. The high herd consists of five purebred Holsteins, owned by W. C. Van Pappendam, with an average of 1,653 lb. milk, 58.3 lb. fat. The feature of the report is the splendid average for 76 purebred Holsteins, owned by the Rock River Farms, the property of the Hon. Medill McCormick. This registered herd averaged 1,414 lb. milk, 50.9 lb. fat and this is a record of which Superintendent Allyn and his subordinates have every reason to be proud.

LED FOR FOUR MONTHS

A registered Holstein, owned by Gus Raduege led the Madison Township, Ohio, Cow Testing Association for the month of March with production of 1,720 lb. milk, 63.6 lb. butter fat. This is the fourth consecutive month she has been the leader. Two hundred seventy-three cows in 23 herds were tested during the month and averaged 27 lb. butter fat. There were 37 cows on the honor roll.

EIGHT GOOD ONES

Walter Wurthman of Marathon County, Wis., has eight milkers, part purebred and part grade Holsteins. One of his cows four months after freshening produced 1,983 lb. milk, 73.3 lb. fat and was the high cow in Marathon County for March. The Wurthman herd averaged 1,278 lb. milk, 44.3 lb. fat.

MANY BREEDS REPRESENTED

During the 30 days ending April 15th, 355 cows were tested in the Footville-Evansville Cow Testing Association, Rock County, Wisconsin. Fifty-nine made more than 40 lb. fat in the month; 15 animals were sold for dairy purposes some going to Nevada and some to Virginia; 12 animals were sold for beef, having proved unprofitable.

The high herd for milk and butter fat consisted of seven purebred Holsteins owned by Harry Broughton, with an average of 1,716 lb. milk, 54.3 lb. butter fat. The 12 purebred and grade Holsteins owned by Robert Hegday averaged 881 lb. milk, 30 lb. butter fat. The high cow for fat was a grade Shorthorn with 77 lb. fat but she was closely followed by a purebred Holstein owned by Theo Wolff, with 76.5 lb. from 2,015 lb. milk. Among the honor cows are included purebred and grade Holsteins, milking Shorthorns, purebred and grade, grade Jerseys, grade Guernseys, purebred and grade Brown Swiss. The official tester is W. J. McKee.

ARIZONA PUREBREDS BEAT GRADES

A dairyman near Phoenix, Arizona, is B. Coman who has a herd of 20 milkers consisting of 13 purebred Holsteins and seven grades. During March the average production of the 13 purebreds was 1,588.7 lb. milk, 58.7 lb. fat while the grade average was 1,427 lb. milk, 44.37 lb. fat for the seven. The purebred cows produced 11.3% more milk and 34.2% fat than the grades.

Only two of the grade cows are over five years old while eight of the purebreds are immature and three are over ten years old. As none of the grade cows are more than nine years old, the grades have considerable advantage in age. The Coman cows are enrolled in the Tempe Cow Testing Association. At the end of the association year a comparison will be made of the production of the purebreds and grades of the different dairies of the association.

TWO ASSOCIATIONS ORGANIZED

Two Cow Testing Associations have been organized in Somerset County, Pa., by the Farm Bureau since January 1st. They are the Cambria-Somerset County Cow Testing Association, which included Northern Somerset and Southern Cambria counties and the Somerset County Cow Testing Association which covers a territory within a radius of twelve miles around Somerset.

A registered Holstein, owned by A. W. Young, Rockwood, Pa., led for the first two months of the year with 4,495 lb. milk, 152.9 lb. butter fat.

GOOD JUST THE SAME

No less than 53 out of 230 cows tested in the Greenville, Wis., Cow Testing Association exceeded 40 lb. butter fat. A purebred Holstein owned by Hans Anderson produced 2,216 lb. milk but was only third in butter fat, producing 66.4 lb. A grade Holstein, Nellie, owned by F. C. Kaphingst made 1,994 lb. milk, 67.7 lb. butter fat. Fourteen grade and purebred Holsteins, owned by Henry Manteufel averaged 1,322 lb. milk, 47.7 lb. fat.

ANDROSCOGGIN

The month of the Androscoggin Valley Cow Testing Association ending April 15th showed 281 cows owned in 29 dairies were tested during the thirty days. There were 50 cows that made the honor roll, the leader for milk being a purebred Holstein, owned by Oscar Trundy, of Hebron, with 1,793 lb. milk, 46.6 lb. fat.

The Western Maine Sanitarium at Hebron, has the largest milk average, their twenty registered Holsteins averaging 1,120 lb. milk, 36.7 lb. fat.

ALICE WAS FIRST

One hundred and ninety-eight cows were tested in the Kent County, Michigan, Testing Association during the thirty days ending April 13th, of which 54 produced over 1,000 lb. milk, 31 over 1,250 lb. while 48 exceeded 40 lb. fat and 15 made over 50 lb. Eight grade Holsteins, owned by G. O. Felt averaged 1,376.2 lb. milk, 53.23 lb. fat. The purebred Holstein, Alice, owned by Otto Fisher, Caledonia, led the association with the production of 1,716.4 lb. milk, 75.5 lb. fat. A three-year-old registered heifer owned by J. W. Sangleberg & Sons was second with 1,349.6 lb. milk, 74.2 lb. butter fat.

GIBSON SALE CANCELLED

The Dispersal sale of the Holstein herd owned by J. S. Gibson Company, Williams, California, scheduled for May 3d and 4th was cancelled. California breeders are pleased that this herd in which several large records have been made of late will continue in operation.

From the Gibson herd, Jack Cook of Orland, recently purchased the sixteen-month's-old bull Sir Queen De Kol Winnie, a son of California State Fair Queen, who has a record of 31.4 lb. butter in seven days as a four-year-old.

CORNUE OWNS PRODUCERS

The well-known Illinois breeder, A. D. Cornue, Hebron, had the highest producing dairy in McHenry County during March. The Cornue herd of twenty purebred Holsteins gave an average of 1,267 lb. milk, 43.8 lb. butter fat, and ranked seventh in the entire state. A purebred Holstein owned by B. L. Thomas, Greenwood, led the association with 2,210 lb. milk, 81.8 lb. fat.

TO BE EXPECTED

The highest record in the Waverly, Iowa, Cow Testing Association was made by a Holstein owned by Earl Carpenter of Horton. She produced 76.7 lb. fat from 2,397 lb. milk. The supervisor is Walter Anderson.

HANCOCK COUNTY

The high cow in the Hancock County, Illinois, Cow Testing Association for the month of April was a four-year-old purebred Holstein owned by W. C. Van Pappelendam. She made 2,106 lb. milk, 71.6 lb. fat. Other animals in the Van Pappelendam herd showed on the honor roll, while this six-cow dairy was high herd and averaged 1,711 lb. milk, 53.9 lb. fat. During the month there were 209 cows tested, ten that produced over 50 lb. fat, 20 between 40 and 50 lb. There were 21 purebreds and grades purchased in the association.

ON THE RIGHT PATH

Mr. R. N. Brewer, Carlin, Minn., has purchased thirty-one head of Holstein cows from Chas. Liehe and Henry Vienette, members of the Eagle Point Cow Testing Association. Eighteen head came from the farm of Chas. Liehe and included fourteen high grades, two registered heifers and two registered calves. Mr. Liehe plans to replace the animals he sold with purebreds. Mr. Vienette intends to buy more purebreds and in a time will have registered cattle.

QUITE A CONTRAST

There are 71 honor cows in the Newport County, Massachusetts, Cow Testing Association during March. Two years ago there were only eight and with the exception of one or two changes the herds had the same owners as they do now. Through test work these owners have learned to know their poor cows and have replaced them with better ones as the occasion offered. Better feeding methods and better grain mixtures are other causes of increased production.

EIGHT OF ELEVEN

Eleven cows produced more than fifty pounds butter fat in the Pulaski, Wis., Cow Testing Association during March. Eight of the eleven were black and whites. The high cow was a purebred four-year-old Holstein owned by J. Malzewski, with a production of 1,537 lb. milk, 61.5 lb. butter fat. The high herd consisted of grade Holsteins and averaged 973 lb. milk, 37.9 lb. fat and was owned by Otto Tesch.

Recent experiments conducted by the U. S. Dept. of Agriculture, show that the milk production of many cows is limited by inadequate mineral supply. U-cop-co Special Steam Bone Mineral meal is especially prepared and ground with reference to its use for feeding dairy cows. It is pure, clean and readily eaten.

U-COP-CO STEAM BONE MEAL

insures plenty of minerals for a heavy production, helps prevent disease and makes better breeding stock. Prices in 125-lb. sacks are 3½c. per lb. in less than ton lots and 3c. per lb. in ton lots and over. F. O. B. our factory, Hammond, Indiana.

OSWEGO ENCOURAGES THE BOYS

The Oswego County Holstein Breeders' Club met April 7th at the home of H. J. Karpinski, Hawthorne Lodge Stock Farm, Oswego, New York, for its first annual stock-judging contest. The Agricultural Departments of Mexico, Pulaski and Hannibal High Schools each sent teams consisting of three students. Professor J. A. McConnell of Cornell University acted as official judge and selected four aged cows and these the teams judged, placing them in order by comparison. The club presented a fine gold-lined silver loving cup, which was won by the Mexico High School. This cup is to be held permanently by the team winning it twice. The three breed periodicals each donated a subscription, the leader of each team receiving one, the two-year subscription, to THE HOLSTEIN BREEDER AND DAIRYMAN going to Leon Gillis, Martville. The Junior Project Leader and Farm Bureau Manager assisted in making the event a success.

The evening session was presided over by the newly elected President, Hugh F. Whitney, of Pulaski. It was decided that the club should hold a field day and picnic some time this summer. It was also decided that all members of the Association should send accounts of records made in their herds, either official or semi-official, to L. W. Hollis, Lacona, who would put them on a county honor roll.

A committee consisting of L. W. Hollis, H. W. Hess and Grant Farrington were appointed to coöperate with the officers of the County Jersey Club and the fair officials in the matter of showing tuberculin tested cattle at the fairs. Prof. J. A. McConnell gave a talk on "Feeding Problems." Secretary E. R. Zimmer of the New York State Association, explained the joint fee plan which will be discussed and acted upon at the next annual meeting which will be about the first of November. At the suggestion of President Whitney, the Oswego County Breeders' have adopted the slogan, "The Cradle in the Nursery of the Breed."

HILDEX ASSOCIATION MEETS

The Hildex Association held its first field meeting, May 3d, at Sugar Hill, New Hampshire. A display of registered Holsteins was held on the lawns of the Advent Church and consisted of entries by a dozen or more breeders representing some of the best strains of the breed. The meeting was under the personal supervision of W. K. Dexter, secretary of the Hildex Association, and to this fact should be attributed much of its success. The speakers were Prof. C. L. Blackman, Springfield, Mass., field secretary of the New England Holstein Club; W. Ross Wilson, County agent; and Rev. E. A. Tuck, of Sugar Hill.

After a dinner served by the ladies of the Community Church, one of the club members, Jay Fields, held a sale of Holsteins which was attended by breeders from different parts of the county. Prices received were very satisfactory and showed that there is still a demand for black and whites. Six animals sold for $1,120.

D. M. TEFFT.

STATE HOLSTEIN-FRIESIAN ASSOCIATIONS TO MEET

A meeting of all State Holstein-Friesian Associations has been called for Monday, June 5th, the opening day of the Heart of America Dairy Show, which will be held at Kansas City, June 5th-12th, in connection with the annual meeting and sale of The Holstein-Friesian Association of America.

C. M. Long of Illinois was elected temporary secretary of The Federated State Holstein-Friesian Associations at the St. Paul meeting last October. He has arranged for a program, which has for its major object—unifying the efforts of all State Holstein-Friesian Associations in the standard departments of extension work. An effort will be made to

provide means for effective extension work through county associations. Every state organization, whether employing a salaried secretary or not, is urged to be represented through its officers. An open discussion of the problems of state and county association work will complete the program. The detailed program follows:

The Ohio Manager Plan—H. C. Barker, Ohio Holstein-Friesian Association.

The Manager Plan in New Jersey—John W. Bartlett, New Jersey Holstein-Friesian Coöperative Association.

A Program of Work—R. N. Thompson, Illinois Holstein-Friesian Association.

Publicity for State Associations—Fred A. Koenig, Extension Service, Holstein-Friesian Association of America.

What a State Association Can Do for Calf Clubs—L. L. Oldham, Wisconsin Holstein-Friesian Association.

General Discussion.

THE HOLSTEIN-FRIESIAN ASSOCIATION OF AMERICA,
910 SOUTH MICHIGAN AVENUE,
CHICAGO, ILL.

DAIRY BREED ASSOCIATION CONFERENCE

Representatives of the leading dairy breed associations met in Washington, D. C., May 5th, at the call of Dr. C. W. Larson, Chief of the Dairy Division of the United States Department of Agriculture. The subjects of discussion were the improvement of dairy cattle, advanced registry, fairs and sales. Figures prepared by the Department of Agriculture showed a decided need for improvement in dairy animals and in making the best use of the improved animals that are now available. The average production of the cows of the United States is about 4,000 lb. milk and 160 lb. butter fat a year, while the average cow in some other countries produces almost twice as much. There are 30 million grade and scrub dairy animals in the country and less than a million purebreds. There are 4,566,664 American farms having dairy cattle, and only 208,251 of these farms have purebred dairy cattle. It is estimated that approximately 250,000 purebred dairy bull calves born each year are not needed on the farms where purebreds are kept. Of the purebred animals that were registered last year, about 150,000 were females and less than 75,000 males which indicates that not half of the purebred dairy bulls were registered.

The conference approved the plans for increasing the use of purebred bulls in scrub and grade herds, and of plans for coöperative bull associations as being the best-known means for distributing surplus bulls and introducing them into new territory. Although there is a place in this country for all the purebred dairy cattle that may be produced for some time, it was the consensus of opinion that an export business in purebreds would help to stimulate interest among the farmers at home.

The conference recommended coördination of effort by and between the agricultural colleges and breed association. The representatives will ask their associations at their earliest meetings to appoint committees to meet with the Dairy Science Association to see if an improved plan for making official tests of cows can be worked out, which will be agreeable to the breeders, the associations, and the colleges that send out the official testers.

One of the recommendations was that the breed associations cease giving competitive money prizes at fairs and exhibitions, but that they furnish all or part of the funds for putting on educational exhibitions; that production records be considered in awarding prizes at fairs and shows; that the associations should give attention to educational exhibitions showing the economic advantages of purebreds in dairy practice; that each association should have a select list of suitable persons to act as judges of their respective breeds at fair and shows; that no animals should be admitted at fairs and expositions unless they are from accredited herds or from herds under state or federal supervision; and that fairs that do not enforce such a rule should not be favored with animals for educational exhibits.

It was proposed that representatives of all of the dairy cattle associations meet at an early date and draft a code of ethics that would eliminate many of the undesirable conditions found in some public and private sales. The association was recommended to send to the Bureau of Markets and Crop Estimates regular reports of prices paid for purebred dairy cattle. At the present time a few high prices receive special attention to the neglect of average conditions.

The representatives were in favor of holding similar conventions at regular intervals. Secretary of Agriculture Wallace and Dr. J. R. Mohler, Chief of the Bureau of Animal Industry, addressed the representatives who during their stay in Washington visited the United States Farm at Beltsville, Maryland.

The Ayrshire Breeders' Association was represented by its president and secretary; the Brown Swiss Cattle Breeders' Association by its president and L. E. Hull, Ohio; American Guernsey Cattle Club by its president and by breeders from Maryland and New Hampshire; the representatives of the American Jersey Cattle Club were president M. D. Munn, secretary R. M. Gow and breeders from New York and Missouri; and the Holstein-Friesian Association of America was represented by Fred Pabst, Wisconsin, director H. W. Norton, Jr., and ex-president D. D. Aitken, both of Michigan.

TWICE OVER A THOUSAND POUNDS

MAY 11, 1922.

To All Interested:

I am pleased to announce that the Holstein-Friesian cow Adirondac Wietske Dairy Maid 204,072 has just closed a long-time test, and is credited with 34,401.9 lb. milk, containing 1,136.15 lb. fat, in 365 days, thus showing an average of 3.3 per cent in the milk. She freshened at the age of 9 years, 20 days. Her sire is Gem Paul Johanna 50,157; her dam is Wietske Dairy Maid 55,619. She was bred by Harry Mason Knox, Canton, N. Y., and is now owned by the Bridgford Holstein Company, Patterson, California. Her best seven days' official production during the test is 876.4 lb. milk containing 29.371 lb. fat and she is credited with 3,601.1 lb. milk containing 118.29 lb. fat in thirty days. Previous to the record just completed she has been officially tested for a longer or shorter time during five consecutive lactation periods, beginning with her second calving. The fat production for best seven days in each lactation shown are 16.024 lb., 22.179 lb., 24.307 lb., 32.813 lb and 30.930 lb. The best thirty-day tests for the last two lactation periods are 126.646 lb. and 121.525 lb. fat. Her only sixty-day official record shows 243.962 lb. fat. During the test just finished, in addition to a thirty-day strictly official period she had 12 other test periods, of which one was a retest. Nine different supervisors were employed in the conduct of the test. Her 365-day fat production of 1,136.15 lb., equivalent to 1,420.18 lb. butter on the 80 per cent basis gives her the fourth place among cows producing above 1,000 lb. fat, and while this test does not increase the number of 1,000 lb. cows, it gives her the honor of being the first Holstein-Friesian cow to twice produce above 1,000 lb. fat in 365 days. It will be noted that Wietske is credited with 66,301.7 lb. milk and 2,172.24 lb. fat in but 26 months and 21 days. MALCOLM H. GARDNER, *Supt.* A. R.

THE OHIO ASSOCIATION

The office of the Ohio Holstein-Friesian Association has been changed from Tiffin, Ohio, to Room 404, Commonwealth Building, corner East 102d, St., and Euclid Ave., Cleveland, Ohio. The Secretary, E. M. Clark, formerly of Urbana and Belvidere, Ill., will be pleased to welcome visitors and friends any time.

WRITE OR WIRE FOR TERMS AND DATES

CANADIAN TESTING

Canadian official testing records reported during March are headed by Agassiz Segis May Echo with 798.4 lb. milk, 36.65 lb. butter in seven days and 2,887.1 lb. milk, 139.96 lb. butter for thirty days. This cow is owned by the Experimental Farms, Agassiz, B. C. The noted Grace Fayne Aaggie, whose record of 34.12 lb. butter was reported in the February issue has made a thirty-day record of 2,828 lb. milk, 142.68 lb. butter. The Experimental Farms, Ottawa, Ont., has every reason to be proud of this cow. Colony Korndyke Newman of the Colony Farm, Essondale, B. C. made 701.1 lb. milk, 30.18 lb. butter in a week; 2,818.3 lb. milk, 125.10 lb. butter in thirty days.

The senior four-year-old class is headed by Princess Eugenie Korndyke, with 588.1 lb. milk, 27.11 lb. butter while the Hardy junior four-year-old May Echo Pontiac 2d is first in her class with 659.8 lb. milk, 26.23 lb. butter in seven days and 2,548.8 lb. milk, 109.29 lb. butter in thirty days.

The sensation of the report is the great record made by Correct Axie, 491.1 lb. milk, 37.98 lb. butter in a week; 2,117.4 lb. milk, 132.28 lb. butter in thirty days. She set a new mark in her class for seven day's butter production displacing Elva Spoffard, whose record, 37.86 lb. was made in 1919. She is owned by W. G. Gooderham, Clarkson, Ont. Daisy Alcartra Segis followed with 512.8 lb. milk, 29.59 lb. butter, which is a new high record for the Province of Alberta. Rose Clyde De Kol leads the junior three-year-olds with exactly 28 lb. butter, 578.3 lb. milk. Centre View Jemima Colantha leads the senior two-year-olds with 486.3 lb. milk, 24.39 lb. butter.

Englewood Burke De Kol led the class of nineteen junior two-year-olds with 539.3 lb. milk, 25.29 lb. butter and was followed by Englewood Beauty Pontiac with 438.6 lb. milk, 21.69 lb. butter. They are owned by Dr. H. A. Clarke, Brockville, Ont.

Ninety-three cows and heifers were recorded in the Record of Merit for the month.

Fifty-three cows and heifers qualified in the Record of Performance test. In the mature class, eight cows exceeded 800 lb. butter and are led by Woodcrest Johanna with 25,023 lb. milk, 1,007.50 lb. butter. She is owned by W. C. Houck, Chippewa, Ontario. Iolena Ormsby heads the four-year-olds with 17,109 lb. milk, 773.35 lb. butter and Centrewood Segis Ormsby heads the three-year-old class with 22,103 lb. milk, 887.50 lb. butter. The former is owned by C. W. Davis, and the latter by I. J. Davis both of Ingersoll, Ont. The two leading two-year-olds are owned by E. G. Stevenson, Amherstburg, Ont., Traverse Ninetta Segis, making 14,965 lb. milk, 698.75 lb. butter and Traverse Seggis Aaggie 2d, who made 13.407 lb. milk, 683.75 lb. butter. A number of good 305-day records are also reported.

ADVANCED REGISTRY REPORTS

Number 18 of Reported Tests tells of 24 cows that have made records of 30 lb. or more in seven days. The leader is Hartog Pontiac Colantha Maid owned by W. W. Walker of Austin, Minn. Her records are 630.9 lb. milk and 37.17 lb. butter. Highland Korndyke Lassie a daughter of Dutchland Colantha Hark owned by H. R. Remley of Watsontown, Pa., leads the senior four-year-olds with 666.2 lb. milk and 33.90 lb. butter.

The junior four-year-old class is led by Walcowis Ollie Butter Maid a daughter of Iowanna Sir Ollie, owned by the Dickinson Farms of Lake Geneva, Wis. Eighty-three days after freshening, she produced 728.1 lb. milk and 32.25 lb. butter. She has a thirty-day record, commenced 60 days from freshening, of 3,115.2 lb. milk and 135.89 lb. butter.

The four 30 lb. senior three-year-olds are led by Segis Valdessa Pontiac Champion, daughter of King Valdessa Pontiac and owned at the Bell Farms. She has the splendid records of 615.9 lb. milk and 32.74 lb. butter in seven days and 2,623.7 lb. milk and 135.24 lb. butter in thirty days. One of her sisters, Korndyke Valdessa Pontiac, with 502.6 lb. milk and 31.31 lb. butter comes second in the junior three-year-old class being beaten by Florence Veeman Pontiac with 567.9 lb. milk and 32.57 lb. butter. This daughter of Weed Pontiac Alcartra is owned by H. E. Rising, Woodland, Mich.

Neoma Grand Alcartra leads the senior two-year-olds with 497.2 lb. milk and 24.80 lb. butter and Maggie Posch Teake, another Bell Farm heifer, leads the junior two-year-olds with 436.6 lb. milk and 24.91 lb. butter.

The feature of the ten months' tests is the record of Satie Colantha Pietertje. This daughter of Colantha Johanna Lad 8th produced 24,069.7 lb. milk and 1,003.45 lb. butter, making a world record for milk in this division.

Traverse Colantha Walker leads the senior four-year-old class with 20,034 lb. milk and 963.41 lb. butter. Chesney Scotia Lothian heads the junior four-year-olds with 18,471.5 lb. milk and 933.61 lb. butter. The senior three-year-old class is headed by Fay Tritomia Hengerveld Walker, 17,452.1 lb. milk and 794.43 lb. butter.

The good Nebraska heifer Loup View Corona with 20,440 lb. milk and 827.21 lb. butter leads the junior three-year-olds. She makes a new world record for butter in this class. Piebe Pride Pontiac Ormsby heads the senior two-year-old class with 15,883 lb. milk and 663.05 lb. butter while the junior two-year-old class is headed by the Colorado heifer, Olive Denver Tiffany, with 18,444.6 lb. milk and 766.45 lb. butter.

"Sister Henderson," said Deacon Brown severely, "you should avoid even the appearance of evil."

"Why, Deacon, what do you mean?" asked Sister Henderson.

"I observe that on your sideboard you have several cut-glass decanters and that each of them is half filled with what appears to be ardent spirits."

"Well, now, Deacon, it isn't anything of the kind. The bottles look so pretty on the sideboard that I just filled them halfway with some floor stain and furniture polish just for appearance."

"That's why I'm cautioning you, sister," replied the Deacon. "Feeling a trifle faint I helped myself to a dose from the big bottle in the middle."

Two cantankerous old chaps got quarreling before a magistrate, whose decision naturally displeased the loser, who turned to his opponent and threatened;

"All right. I can get no satisfaction here. But I'll law you to the Circuit Court."

"Do. I'm willing," said the other.

"I'll law you to the Supreme Court," added the threatener.

"Correct—I'll be there," was the reply.

"I'll law you to hell, so I will," was the final threat.

"Go ahead," said the other. "My attorney will be there."

"I think I'll drop in on the boys," said the miner as he fell down the shaft.—*Froth.*

VIRGINIA—A BULLY STATE

Virginia will soon be known as the state of good bulls. There are at least three in the state whose dams have averaged 5 lb. butter a day or more in seven-day official test.

One of these is Carnation Pietertje Colantha which H. S. Seward of Petersburg, purchased at the Brentwood sale last March. This is a son of Dutchland Governor Sir Colantha and of Segis Pietertje Prospect the world champion for year milk production. She has a seven-day butter record of 39.2 lb. made as a seven-year-old and one of 33.2 lb. made as a six-year-old. Her year record of 1,448.70 lb. butter and 37,381.4 lb. milk is still fresh in the minds of every one.

At Randolph, the property of Cheney Brothers and Jones, there is a son of Ormsby Korndyke Lad from Shady Maple King Pontiac Hockster. Last June this cow milked 106 lb. in a day and produced 35.14 lb. butter and 636.3 lb. milk in seven days, 131.5 lb. butter and 2,631 lb. milk in thirty days. She is a granddaughter of King of the Pontiacs, and has at least two A. R. O. daughters, one of which made over 30 lb. of butter in seven days as a four-year-old and the other a two-year-old full sister to this bull, made nearly 21 lb. of butter in seven days and milked 70 lb. a day; both sisters of this bull are now on year test.

The third bull is King Korndyke Prilly Pontiac now owned by J. C. Stafford of Petersburg. This is a son of King Prilly Segis Pontiac whose dam two different years made over 35 lb. of butter in a week. His own dam is the world champion junior three-year-old Louise Alcartra Prilly.

After making a year record as a junior two-year-old of 865 lb. butter and 23,250 lb. milk this great heifer produced 402 lb. butter, 589.9 lb. milk in seven days, 151.32 lb. butter and 2,614.8 lb. milk in thirty days, making new world's records in the junior three-year-old class for both seven- and thirty-days butter production.

Virginia has long been a leader in accredited herd work and her proportion of tuberculin tested herds has not equaled or even approached by any other state in the Union. The work of the Holsteins in the Virginia Polytechnic Institute has been told by agricultural writers in breed and farm papers for several years. The Virginia breeders are already making an earnest bid for the 1923 convention of the Holstein-Friesian Association of America which the by-laws of the Association say shall be held somewhere east of Erie, Pennsylvania. Meetings have been held in New England, New York and Pennsylvania and breeders of the south believe that it is now their turn to be favored. In view of the progress the breed is making in the southland it would seem that their claim rests upon a firm foundation.

Is the place where the censors review the movies called the objection room?

June 15—State College, Pa., Holstein Bull Calf Sale, Penna. State College.
June 18—Poughkeepsie, N. Y., Sisson's Consignment Sale.
June 22—Richmond, Va., Dr. Wallace Dispersal, C. Saunders, Mgr.
July 4—Doylestown, Pa., Victory Farms Holstein Sale.
Sept. 11—Indianapolis, Ind., Zelden Rust Dispersal.
Oct. 5—Marshfield, Wis., Central Wisconsin Breeders' 15th Semi-Annual.
Oct. 17—Tunkhannock, Pa., May Apple Stock Farm Dispersal, D. M. Bartron, Prop.
Oct. 21—New Douglas, Ill., Madison County Breeders'.
Oct. 24-25—Lake Mills, Wis., Lake Mills Semi-Annual Consignment.
Nov. 7-8-9—Sedalia, Mo., Pettis County Holstein-Friesian Co.

THE MARYLAND SALE

The animals that will be offered at the sale of the Maryland Holstein Sales Company, which will be held at the Fair Grounds, Frederick, Maryland, on May 25th, will come from some of the best herds in the state. The Corby herd is known for the quality of the cattle composing it, and for the number of state records made by its animals. The highest record ever made in the state is 36.20 lb. made by Sadie Vale Korndyke, one of the many good daughters of Pontiac Korndyke. A daughter and a number of granddaughters of this cow are in this sale. The Corby herd has been under Federal Supervision for a number of years past.

From the Fair Oaks herd, which is also under Federal supervision, there are a number of good young animals including a 24-lb. granddaughter of King Fayne Segis. From the herd of Harry Swomley, which is also under Federal Supervision, ten herd are consigned, one of which is a two-year-old bull whose four nearest dams have seven-day butter records averaging better than 33 lb. his own dam has a seven-day butter record of 36 lb.

There are ten head of young cows and heifers bred to one of the best sons of Sir Inka Prilly Segis, whose daughters are making wonderful short time and long time records in the Winterthur herd.

We are informed that all animals over six months of age have been tuberculin tested and that a sixty-day retest privilege will be given. The sale is under the management of W. P. Morsell, the veteran Maryland Sales manager.

D. B. YORK SALE

The dairy herd of D. B. York was dispersed at his establishment, Brookside Stock Farm, Troy, Penna., May 11th. While there were not many present, all were interested and bidding on the older animals was quite brisk. All the animals remained in the state, a number going in the near neighborhood.

Robert P. Diehl, of Fairyland Farm, Lehighton, took five good ones. H. G. Lake, of Montrose, purchased the two highest priced animals, taking Emma Dot De Kol for $550 and Pride Klarre De Kol Korndyke for $500. The former had records of 27.90 lb. butter and 622.1 lb. milk in seven days, 98.6 lb. milk in a day, while Pride is the champion of the state for milk production in the junior four-year-old class and has produced 111 lb. milk in a day and 739 lb. milk in seven days. Daniel F. Swartz, of Williamsport, bought several nice looking animals, paying $365 for Daisy Ekster Burke 2d., a 21-lb. granddaughter of Mercedes Julip's Pietertje's Paul.

The forty-nine animals brought $8,375. There were many small heifer calves: discarding these; the average was right around $200. Dent Hawthorne, of Granville Summit obtained several good females and bought a seven-months-old son of the 27.9 lb. cow Emma Dot De Kol for $250.

The individuality of the animals shows that Mr. York is a real good judge and most of them were in condition that would warrant them going into any high class sale. Three young grades brought $225 and two sows and nineteen pigs a month old totalled $150.70, the sows bringing $30 each.

The cattle were sold on the lawn, were driven from the barn and allowed to graze while being offered. The auctioneers were Geo. W. Baxter and C. M. Hess, while R. Austin Backus expounded the pedigrees.

The animals bringing $150 or more with the names and addresses of the purchasers and the prices paid were:

2	Aaggie Changeling Pietje, 2 yrs., Dent Hawthorne, Granville, Summitt	$205
4	Lady Pontiac Veeman Whale, 9 yrs., Shoemaker Bros., Wyoming	200
8	Daisy Ekster Burke 2d, 5 yrs., Daniel F. Swartz, Williamsport	365
9	Belle Pohlcrest Korndyke, 5 yrs., Robt. P. Diehl, Lehighton	350
11	Colantha Graymont Rose, 5 yrs., Daniel F. Swartz	155
13	De Kol Aaggie Korndyke, Pet, 3 yrs., Sam. J. Welch, Troy	180
14	Grace Segis Beets De Kol, 2 yrs., Sam. J. Welch	200
15	Pride Klarre De Kol Korndyke, 5 yrs., H. G. Lake, Montrose	500
16	Segiska Julip Beets, 7 yrs., Daniel F. Swartz	185
17	Urmagelsche Govers, 5 yrs., Shoemaker Bros.	175
21	Dana Aaggie De Kol, 7 yrs., C. L. Rader, Hepburnville	185
24	Lena Idene De Kol Segis, 1 yr., Dent Hawthorne	205
25	Lelia Posch, 7 yrs., Robt. P. Diehl	200
27	Morning Star Pontiac, 7 yrs., Robt. P. Diehl	200
28	Dolly Sylvia Wayne, 8 yrs., Anthony Fiene, Columbia Cross Roads	200
29	Aaggie Duchland Colantha, 7 yrs., Robt. P. Diehl	315
31	Maida Dorothy Victoria, 5 yrs., B. B. York, Troy	205
33	Lady Johanna Glista, 7 yrs., Anthony Fiene	200
35	Heifer, 1 yr., Dent Hawthorne	150
37	Emma Dot De Kol 2d, 1 yr., Dent Hawthorne	150
39	Bull Calf, 7 mo., Dent Hawthorne	250
51	Alta Beets Pontiac, 7 yrs., Robt. P. Diehl	230
59	Heifer, 1 yr., Dent Hawthorne	150
62	Emma Dot De Kol 2d, 1 yr., G. B. Robinson, Montrose	175
70	Kenyon Cow, 4 yrs., Shoemaker Bros.	205

CHAMBERSBURG SALE

In telling of the Cumberland Valley Breeders' Sale which will be held May 31st under the auspices of the Franklin County Holstein Breeders' Association, some of the newspapers have given the place as Red Bridge and others as Chambersburg, Pa. The sale will be held in Red Bridge Park which adjoins the borough of Chambersburg and is on the Lincoln Highway. The animals in this sale have been personally selected and Mr. S. Blaine Lehman, secretary of the Cumberland Valley Holstein-Friesian Breeders' Association, tells us that they are all of fine type and that their pedigrees show a combination of some of the best producing blood lines of the breed. The animals are tuberculin tested and are subject to a 60-day retest privilege. All the animals in the sale have been chosen from herds that are under state and federal supervision, a number of them on the accredited herd list. The sale manager is S. R. Miller, president of the Franklin County Association.

The day after Decoration Day is a good time for the cattleman and his family to rest from the rush of spring work and we know of no better vacation than a trip through the Cumberland Valley, incidentally taking in this sale.

CUMBERLAND COUNTY BREEDERS' SALE

The Fifth Annual sale of the Cumberland County Holstein-Friesian Breeders' Association will be held at McHenry's Sale Stables, Carlisle, Tuesday, May 23d. In this sale there will be 50 head of cattle which are described as strong, clean, the big, healthy kind—cattle that are bound to make good. All animals six months of age or more will be tuberculin tested and, as is usual, everything will be registered and transferred to the buyer.

There are sons and daughters of 30-lb. bulls and of sires whose dams have made records of 1,000 lb. butter or more in a year. The older females are bred to bulls of this quality.

The Cumberland County Holstein Breeders' Association has an enviable record for their sales and they assure us that the Fifth event will be like the others, a straight, clean sale of straight, clean cattle. The sale will start 12: 30 o'clock standard time. The secretary of the sale is R. L. Shenck, Newville, to whom requests for catalogs or for information should be addressed. This is a sale that you should plan to attend and to drive to if possible. The Cumberland County Holstein Breeders have 30 or more high class herds, and the country is now at its best. W. S. Kerr is president and Ivo V. Otto is treasurer of the association.

DEYSHER HEIFERS MAKING GOOD

Heifers in the Deysher herd are making real good records. Creamelle Adroit Korndyke produced 522.2 lb. milk, 21.87 lb. butter in a week. Johanna De Kol Clyde Pietje at three years and six months old, produced 412.3 lb. milk and 21.26 lb. butter. Queen Echo Model Walker, a daughter of King Echo Sylvia Model and the 30 lb. four-year-old Queen Walker Pietertje, at three years one month and nineteen days old made 551.1 lb. milk, 22.21 lb. butter. Colantha Korndyke Butterfly made 452.6 lb. milk and 20.57 lb. butter the junior three-year-old Mandolyn Pontiac produced 444.7 lb. milk and 16.45 lb. butter and Miss Pieter Segis another junior three-year-old made 455 lb. milk and 18.41 lb. butter.

Eco-Sylv Mechthilde is keeping up her good work, is averaging well over 70 lb. a day and is making a great 30-day record. This yearling is a daughter of Champion Echo Sylvia Pontiac the famous Avondale herdsire.

JUST MISSED THE STATE RECORD

About three miles from the pleasant village of Canton, Pa., is the home of the Crestmont herd. There are only a dozen milkers at this establishment but they are real good ones. Crestmont Ormsby Alcartra, a junior three-year-old daughter of the herdsire King Pontiac Alcartra Wayne has just closed a record of 29.15 lb. butter in a week from 594.4 lb. milk. This is the second highest butter record ever made in the state by a junior three-year-old and is all the more creditable as the heifer made in 305 days 722.99 lb. butter and 15,883.1 lb. milk as a junior two-year-old. She is full sister to Crestmont Duchess Ormsby which Mr. Gates consigned to the Brentwood Sale and was purchased for $1,000 by Ralph King. Crestmont Duchess Ormsby produced 806.65 lb. butter and 18,234.1 lb. milk in 305 days as a junior three-year-old. This great pair of sisters are certainly a credit to the Crestmont herd and to its owner, Harry C. Gates.

Those who have looked over the Reported Tests Bulletin No. 19 will notice that the senior three-year-old class is headed by Keystone Leona De Kol Princess another member of the Crestmont herd. This heifer completed a year record of 19,521.3 lb. milk and 898.39 lb. butter. She is a daughter of Segis Hengerveld Beets Lyons. Mr. Gates has four animals on long time test at the present time and all are making good.

LEASED A HERDSIRE

The Washington State Department of Agriculture has leased Ondinus Newman Cornucopia, formerly herdsire for Lockhart and Sons of Mt. Vernon, Washington. This bull will head the herd at the state farm at Steilacoom. Ondinus is a real good individual and was grand champion at the Skagit County sale two years ago. He was not shown last year but his calves won in the get of sire class. His dam is a 30 lb. granddaughter of Colantha Johanna Lad.

To pass the time away you find,
When you have nothing else to do,
It works both ways; so bear in mind
That time is also passing you.

PEDIGREES

4-Generation, 3 copies, 2 colors, $1.25
5-Generation, 3 copies, 2 colors, $2.00

All sizes and styles--write for circular and samples.

SALE CATALOGS

NEW YORK TEST WORK

During the month of February there were 11,024 cows tested in 27 Associations reporting in the Dairy Improvement Associations of New York State. Despite the fact that the month was short there were 1,042 or 9.45% that made the honor roll requirements. Fifty produced above 60 lb. fat, 19 above 17 lb. and 14 above 80 lb. during the month.

The leader was a grade Holstein, Bessie, owned by Arthur Delaney of Livonia with 95.8 lb. fat and 1,916.7 lb. milk. A registered cow owned by E. H. Witter of Cuba, is second with 92 lb. fat and 1,576 lb. milk.

Another cow in the Alleghany Association owned by J. B. Harbert of Black Creek is third with 87.5 lb. fat and 2,760.8 lb. milk. She is closely followed by Kol Ettie 5th a registered cow owned by Elmer R. Foss of South Wales, with 87.1 lb. fat and 1,761.2 lb. milk, Lady Aaggie Alcartra owned by W. T. Smith and Son of Elmira produced 85.8 lb. fat and 2,383 lb. milk.

The April report shows that during the previous month the largest producer was a grade Holstein owned by Sam Barber of the Livonia Association. She produced 111.6 lb. fat and 2,232.7 lb. milk. The largest milk producer was owned by that well-known breeder D. B. Armstrong of Watertown, she making 2,613 lb. milk, her fat production was 86.2 lb. The second cow for fat production was a registered Holstein in the Chemung Association owned by Jesse Dalrymple with 2,300 lb. milk and 96.5 lb. fat. Another well-known cattle man owning an association leader is Luther Carrier of Fulton, one of his cows making 2,129.4 lb. milk and 95.8 lb. fat.

HIGH PRODUCERS REQUIRE EXTRA MINERALS

From work done by the U. S. Department of Agriculture, it is quite apparent that many men now have cows in their herds that are not producing all the milk they should and are really much more valuable cows than their present records would indicate. There are many cows which have their milk-producing capacity reduced through inadequate mineral supply. Minerals are just as important a nutrient in the ration as proteins, carbo-hydrates, fats and other vitamines. They are more important in one sense of the word, because they are more apt to be present in insufficient quantities.

Experienced dairymen are now feeding extra minerals to their dairy herds, either separately in mineral self-feeders, or else mixing right in with the other feeds. When mixed in with the other feeds, the minerals usually constitute from one to two per cent of the ration.

The minerals which are apt to be lacking in the ordinary dairy rations are calcium and phosphorus. These can best be supplied by feeding special steam bone meal which is almost an odorless bone meal preparation, especially suited for dairy cow feeding. There is no danger whatsoever of over-feeding of this material and none is ever wasted, even when extra large quantities are fed, because the cow seems to have the ability to store the surplus quantities which provides a reserve which can be drawn upon at future times when the ration provides an inadequate supply. From all the work that has been done on the feeding of minerals to cows, there seems to be no danger whatsoever from over-feeding of minerals, but there are many cows that suffer from inadequate mineral supply. An inadequate mineral supply not only limits the production but minerals are necessary for all physiological functions of the cow and when they are not present in sufficient quantities, they so weaken the cow that she is predisposed to many ordinary diseases.—*P. V. Ewing, Manhattan Building, Chicago.*

"WHY JOHNNIE LEFT THE FARM"

Many speeches have been given from time to time on why John leaves the old home farm. Perhaps some of these addresses have hit the mark to a certain extent. But no one can tell the story as well as the boy himself.

Three years ago a calf club was organized in Winnebago County, Wisconsin. During the week of organization many meetings were held in the schoolhouses, and at such meetings the young people often conducted the programs. One evening during a very interesting meeting a boy of twelve years was asked to recite. The teacher announced that the boy had composed the poem himself. Here it is.

Johnnie bought himself a pig with
money he had earned
He named her Nell and fed her well
and lots of tricks she learned
But Nellie grew to be a hog and finer
there were few
Then Father up and sold that hog—and
kept the money too.

Next, Johnnie got a little calf
In pay for hoeing corn
He loved that calf, the calf loved him
As sure as you are born
But calfie grew to be a cow
As all good calfies do
Then Father up and sold that cow and
kept the money too.

Now Johnnie loved his little pets but
Father loved the pelf
So Johnnie left the old home farm
And struck out for himself
Said Johnnies' Pa one summer's day,
"I often wonder why
These kids don't seem to like the farm,
The city is their cry
It always will be strange to me continued
Johnnies' Pa
It only goes to show though how ungrateful these kids are."
When Johnnie heard what Pa had said
He gave a bitter laugh
And thought of those empty childhood
days and of that pig and calf.

A great deal of applause greeted the youngster when he had finished. No trained speaker could have done better. During that season over 100 boys and girls cared for purebred calves in Winnebago County and owned them too. The club still prospers to-day, and many young people in that country have decided to be farmers and breeders because of it.

According to figures from Washington, D. C., States Relation Service, 6,648 boys and girls were engaged in calf club work in 33 states. Added to this number we have the Southern states. Indications point to the fact that 1922 will be even a better year.

The Holstein-Friesian Association of America calls upon it's breeders everywhere to support the leaders of this work. Back and encourage the young people who are enrolled in calf club work. This in a large way will help to solve the "Why Johnnie Left the Farm Problem." EARL J. COOPER.
Holstein-Friesian Association of America.

GETTING BIG RETURNS

The Fred F. Field Holstein Company is starting to manufacture ice cream as a business. They already have a 3,000-qt., milk business and get the largest possible returns from their great producing herd of Holsteins. W. E. Stilwell, who for a number of years was manager of the D. W. Field herd and who for the last year was superintendent of the Walton Lake Stock Farm is in charge of the milk and ice cream business. Mr. Stilwell says that they aim to give quality and service. "This always pays and gets increased business." The new enterprise started out big and we feel confident that under the management of Mr. Stilwell and with the quality product for which the Field herd is noted, the new venture will be a success.

A soldier, in telling of his experience in France, was asked what interested him the most. He replied: "I think it was the pheasants singing the Mayonnaise while Los Angeles was ringing."

Time is no respecter of persons. Even opportunities may come at inopportune times.

Junior Department

Allegheny County Junior Breeders Organize

At a meeting held at Imperial, Pa., May 3d, seven enthusiastic young breeders organized a Junior Breeders' Association, with Arthur Langer, of Oakdale, president; Fred Scott, of McKees Rocks, secretary-treasurer. The other five members of the club are: Clayton George, Joe Scott, Samuel and Oscar Culley, and John Morgan. These boys have secured registered Holstein heifers from local breeders.

It is very gratifying to know that the breeders of Holstein cattle in this community are backing the club in everything they do.

Mr. Ed. Hayes, a prominent breeder of the community has offered a registered heifer to the club; the heifer to be sold to a new club member and the funds turned over to the club as a whole.

Have Good Teacher

There were 35 present at the local judging contest of the Jefferson township Holstein calf club put on at the Hube Osborn Farm, Tilden, Nebraska. M. L. Lawritson dairy specialist of the University of Nebraska helped in the demonstration and quizzed the youngsters on their scoring after which he placed the animals and told his reasons. He gave the youngsters a talk on handling an animal so that it would show to the best advantage in the ring. Two classes were judged, one of cows and one of yearlings. Jefferson County expects to send a dairy judging team this fall to the State Fair.

In Colorado

The boys' calf club of Larimer County, Colorado, have secured their stock. Viet Bernard of Fort Collins purchased a registered Holstein calf from Crowley and Letford of Milliken, and Matthew Gormley of Wellington secured one from Whowell and Polley, Johnstown. W. S. Hill the club director accompanied the boys on their inspection trip on which the lads made their own selections.

Form Dairy Club

On April 8th, ten boys and girls of Southeast Dodge County, Nebraska organized the first dairy calf club of the county. The name chosen was Elkhorn-Platte Holstein club. It is planned to hold six or seven meetings during the season and to take up discussions of rations and management, club tours, judging demonstrations, and picnics. At the end of the season they will exhibit their stock and compete for prizes.

Polish Student Wins Prize

The well-known Wisconsin breeder, G. Mortimer, of the Thorp Holstein Breeders' Association gave a bull calf as a prize to a stock judging contest in which 42 boys and girls participated. This was won by Stanley Jasket of the Sterling School. There were over 30 animals exhibited in six different classes. The judging was done by W. J. Rogan, the Marathon County Agent. Walter Woznicki of Hatley gave a talk in Polish on, "Getting Along with Better Dairy Cattle." County Agent Knipfel had charge of the judging contest.

An old lady was crossing the street the other day. A dog ran into her with such force that it knocked her down. Just then a light auto ran over her. A gentleman witnessing the accident came to her assistance. He said: "Lady, did that dog hurt you?"

She looked at him a little dazed and replied: "No, the dog didn't hurt me, it was the tin can tied to its tail."

When the clock struck 12 the other night father came to the head of the stairway and in a rather loud tone of voice said: "Young man, is your self-starter out of order to-night?"

"It doesn't matter," retorted the young man, "as long as there's a crank in the house."

"Are you going any farther West?" "I planned to do so," said the foreign visitor. "Is there any danger from Indians?" "Not if you keep out of the way of their motor cars."

"Maude's pet dog has been run over; she'll be heartbroken. Don't tell her abruptly."

"No, I'll begin by saying it's her husband."

A REPRESENTATIVE TRIO OF VIRGINIA HOLSTEINS
OWNED BY FRANK S. WALKER, WOODBERRY FOREST, VA., PRESIDENT OF THE VIRGINIA HOLSTEIN-FRIESIAN CLUB

A BIG DAY'S OUTING

In the Arthur and Maxfield dairy which is located near Hanford, California there are 76 head of purebred cattle, the property of J. W. Arthur and William G. Maxfield. There are a number of real good ones in the herd. Jennie Lea Hengerveld made 678 lb. milk and 33.41 lb. butter in seven days, 3,057 lb. milk and 148.8 lb. butter in thirty days. She has a 305 day record of 19,118.4 lb. milk and 801.2 lb. butter, and is a daughter of Arcady Pontiac Wayne Hengerveld.

Copa De Cra Holland Bawn recently made a year record of 1,103.5 lb. butter, 22,789 lb. milk and there are a number of other cows with records nearly as large. In their herd are ten daughters of Cream Cup Fidessa Cornucopia De Kol. This herd was one of four inspected during a dairymen's excursion in company with B. H. Rawl, former Chief of the United States Dairy Department and Sam Greene, secretary of the California Dairy Council.

Starting from Hanford at 9:30 April 12th the party first visited the grade herd of George Aydelott, at Laton where there are two silos that each hold 100 ton and are filled with honey sorghum. There are 600 acres in this ranch but 300 are in plums, peaches, apricots and prunes. The sixty visitors were greatly interested in the sanitary features of this establishment.

The Arthur and Maxfield dairy was next inspected and the dairymen enjoyed looking over the high record cows and calves and listening to a talk by Mr. Rawl on selection and care of the dairy cattle. He spoke on judging and used some of the cows in this herd as a demonstration.

Dinner was served on the lawn of the J. W. Arthur home by the women of the Home Demonstration department of the Hardwick farm center. It was served simply, with lots of rich milk and ice cream. After dinner the party traveled to the Blowers ranch east of Grangeville. The manager, Ralph Blowers, is in charge of 37 cows, grade and purebred, many of the animals are daughters of King Morco Alcartra 12th, a grandson of the famous Tilly. The Blowers farm consists of 320 acres and milking machines are used all the time. Mr. Blowers thinks very much of them. He strongly endorses cow testing association work and said that all feed needed except such which could not be raised was produced on the farm.

The dairy tour was continued at the A. B. Comfort ranch, near Guernsey. This is a purebred Holstein establishment with a concrete silo, milking machines, hay chopper, and other machinery where a cow testing demonstration was given by Louis Brown, the official cow tester of this district. The tour was voted a success by all who took part.

The tour followed the annual banquet of the dairy department when the result of the ten months' competition were made made known. The prize winners were:

PUREBRED DIVISION

Class A. High herd average; award silver cup—Arthur & Maxfield, Hanford, 21 cows, average 13,595 lb. milk, 439.23 lb. butter fat. Holstein cows.

Class B. Best five cows in any herd; award gold medal—Arthur & Maxfield, Hanford, average 9,431 lb. milk, 643.6 lb. butter fat. Holstein cows.

Class C. Best cow in any herd; award gold medal—Arthur & Maxfield, Hanford, 20,375 lb. milk and 702.6 lb. butter fat. Holstein cow.

Class D. Best first calf heifer (under 3 years); award gold medal—A. B. Comfort, Hanford, 19,777 lb. milk, 591 lb. butter fat. Holstein cow.

GRADE DIVISION

Class A. Herds 5, 20 cows; award silver cup—W. L. Kendall, Lenmoore, six cows, average 8,435 lb. milk, 404.5 lb. butter fat.

Class B. Herds 21 to 50 cows; award silver cup—C. M. Blowers, Inc., Hanford, 37 cows, average 9,336 lb. milk, 334.62 lb. butter fat. Holstein cows.

Class C. Herds 51 and over; award silver cup—Post-Card Ranch, Corcoran, 136 cows, average 7,562 lb. milk, 257.1 lb. butter fat. Holstein cows.

Class D. Best herd in grade division; award gold medal—W. L. Kendall, Lemoore, six cows average, 8,435 lb. milk, 404.50 lb. butter fat.

Class E. Best five cows in grade division; award gold medal—C. M. Blowers, Inc., Hanford, average 12,687 lb. milk, 467.2 lb. butter fat.

Class F. Best cow in grade division; award gold medal—W. L. Kendall, Lemoore, average 10,536 lb. milk, 539 lb. butter fat.

GRAND PRIZE

Best cow in the entire association; award gold medal—Arthur & Maxfield, Hanford, 20,375 lb. milk, 702.6 lb. butter fat.

Wonders never cease. They are beginning to appreciate Woodrow Wilson before he dies.

NORTON ONCE COUNTY AGENT

Dairymen do not always appreciate their county agents. There are some of our best cattle breeders and business men who at one time were county or farm bureau agents. A high class business man known to many of our readers is M. J. Norton of the Carnation Milk Products Co. Mr. Norton was at one time engaged in extension work in Skagit County, Washington and was instrumental in bringing the first purebred bull into the county. At that time the average daily production of the cows of the county was 16 lb. of milk a day. After four years of service the average daily production of the cows in the county had reached 23 lb. with the result that thousands of dollars were added to the earnings of the dairymen.

The difficulties of bringing up a dairy organization in this district were something tremendous. It was natural oat land, where it had been easy to get good crops year after year and it was very hard to get the farmers to even attempt dairying. To-day Skagit County is a great dairy district, one of the greatest in the point of the average production in the United States. Mr. Norton says that in all his experience he has never known a man who placed a purebred bull at the head of his herd to ever go back to a grade or native herdsire, while he knows of a large number who owned native cows and who placed a purebred bull at the head of the herd that are now breeding purebreds exclusively.

FIRE SALE

The County Home at Reading, Pennsylvania, recently added to its herd thirteen registered Holsteins purchased from H. F. Schaeffer of Easton. The committee purchasing the animals were Directors Swope, Herbine and McGowan. Mr. Schaeffer recently had the misfortune to have fire destroy his modern barn and so sacrificed his animals.

Young Bull Sale

SEVEN Selected Bulls consisting of one Guernsey and six Holsteins will be sold at Public Sale in the Stock Judging Pavilion at the Pennsylvania State College,

Thursday, June 15, 1922

at 4:00 P. M.

The Guernsey and one Holstein are now ready for light service. All bulls offered are good individuals from dams with high yearly records and will make creditable herd sires.

MADE A GOOD BUY

It is not always the high priced bulls that turn out to be the best sires. Stanhope of Glencoe was purchased in 1894 at a public sale by the veteran Oregon Holstein breeder, P. A. Frakes, for just Thirteen Dollars ($13.00) and the bull was more than a year old at the time. His daughters were good ones and one of his granddaughters is Stanhope Belle Johanna, 34.22 lb. butter and 859.7 lb. milk in a week; 1,242.5 lb. butter and 32,453.8 lb. milk in a year.

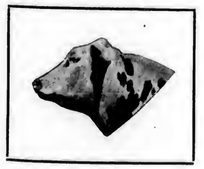
The pioneer work of Mr. Frakes, "Pa", as he is usually called in his own neighborhood, has done much for the Holstein industry of the Northwest. He started breeding Holsteins in 1887 by purchasing a couple of purebred cows and a bull. Animals bred in his herd have won high honors in great shows and a number of wonderful producers trace their pedigrees to foundation animals of the Frakes herd.

HOME MIXED RATION

The New York State College of Agriculture in its Feed Service which is prepared by Professor Savage, recommends the following home mixed grain rations for cows in milk:

IN THE BARN

300 lb. wheat bran
300 lb. ground oats
400 lb. hominy
600 lb. gluten feed
200 lb. cottonseed meal 43%
200 lb. oil meal



AFTER TURNING ON PASTURE.

400 lb. hominy
300 lb. bran, ground oats, barley or buckwheat
200 lb. gluten feed
100 lb. cottonseed meal 36%

The disappointment of manhood succeeds to the delusion of youth; let us hope that the heritage of old age is not despair.—*Disraeli.*

IT COSTS A LOT LESS

to advertise and make sales than it does to feed surplus stock.

Write for particulars about the Holstein Breeder and Dairyman special advertising offer for one year contracts on space of this size.

"IT'S A WINNER"

AT PLEASANT HILL

The milkers in the Pleasant Hill herd are making a lot of good records. K. S. V. H. Della Beauty finished a year test of 759.25 lb. butter, 18,707.1 lb. milk as a junior two-year-old. When fresh she made a 24-lb. butter record. K. S. V. H. Marcia Cornucopia, calving at two years and two days old produced 24.12 lb. butter, 470.7 lb. milk in seven days, and 92.85 lb. butter, 1,853 lb. milk in thirty days. K. S. V. H. Fluffy as a senior three-year-old produced 23.66 lb. butter, 550 lb. milk in a week. K. S. V. H. Vonda Veeman at 26 months of age made 23.55 lb. butter, 387.3 lb. milk in seven days and K. S. V. H. Maggie Johanna at 24 months old made 21.66 lb. butter, 345.3 lb. milk.

King Sadie Vale Hengerveld is certainly proving himself to be a great sire and Mr. W. D. Robens is expecting great things from this son of King Korndyke Sadie Vale and S. V. H. Belle De Kol, who was a 37-lb. three-year-old daughter of Sir Veeman Hengerveld.

The daughters of King Sadie Vale Hengerveld are not the only good ones in the Pleasant Hill herd. K. P. M. V. Constance Beauty Hengerveld produced 994.11 lb. butter, 19,228 lb. milk in a year. This daughter of K. P. M. V. freshened at twenty-five-months-old.

K. K. S. V. Lena Veeman as a senior four-year old made 939.93 lb. butter, 22,810.9 lb. milk in a year. She is a daughter of King Korndyke Sadie Vale. Another daughter of this bull, K. K. S. V. Freda Veeman as a junior two-year-old produced 23.81 lb. butter, 483.7 lb. milk in seven days, 97.76 lb. butter, 2,050.4 lb. milk in thirty days.

The daughters of Sir Veeman Hengerveld are also making good in both short time and long time tests. S. V. H. Lucille, who made a 26-lb. seven-day record when just 26 months old finished the year with 665.12 lb. butter, 17,918.2 lb. milk. S. V. H. Zilla Korndyke Nellie calved at 26 months old, produced 23.01 lb. butter, 472.7 lb. milk in seven days, 97.28 lb. butter, 2,000 lb. milk in thirty days. S. V. H. Elma Korndyke freshened two years, 11 days old, and made 20.26 lb. butter, 367.1 lb. milk in a week.

Sir Veeman Hengerveld now has twenty 30-lb. daughters and seven daughters with year records that average over 1,000 lb. butter. All these two-year-olds are promising candidates for large records so that it can be seen that the Pleasant Hill herd intends to keep the Advanced Registry office busy for a long time to come.

NEW STATE RECORD

Lilac Hedge Colantha Zubrod, owned by J. D. Bacon, Grand Forks, North Dakota has made a new milk and butter record for that state. During the year she produced 23,963 lb. milk, 1,017.50 lb. butter fat. The previous state record was held by a Guernsey. Lilac beat her out by more than 50 lb. fat.

HIGH SCHOOL JUDGING CONTEST

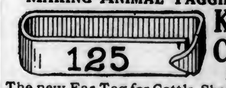
The stock-judging contest at Washburn, Kansas, was won by the Highland Park High School judging team which made an average grade of 525. Seaman Rural High School was second, with an average of 509, Washburn third with a grade of 480 and Silver Lake High School was fourth with a grade of 447.

Clarence Hershey, of Highland Park, was given the highest grade in the contest, 630. Joseph Hook, of Seaman, was second, with 550, and Keith Van Horn, of Washburn was third with 528. The three youths will represent Shawnee County in the Kansas State Stock Judging Contest at the Kansas State Agricultural College May 10th and 11th.

The judging contest was held under the joint auspices of the Washburn High School and the Shawnee County Farm Bureau. Five teams competed and judged eight classes of live stock, including horses, dairy and fat cattle and swine. The Farm Bureau donated a silver loving cup to the winning team which must be won three times by a school before the cup becomes its permanent property.

WILL AID JUNIOR WORK

More than 200 attended the Tri-County Holstein-Friesian Club at the Osburn House, New York, April 28th. The principal speaker was Dr. Burch, of the New York State Veterinary College, who talked on "Contagious Abortion Among Cattle."



It was voted to contribute $25 to aid the Junior Project work which is being started in Monroe County under the direction of the Monroe County Board of Junior Extension. A silver loving cup will be presented to the boy winning first prize in calf club work at the Rochester exposition next fall. After the business meeting there was an entertainment and luncheon which all thoroughly enjoyed.

Ketchum Mfg. Co., Luzerne, N.Y.

BUILT ON A DAIRY BASIS

At the Mt. Hermon School there are 350 registered Holsteins of which no less than 348 were bred and developed in the herd. All the animals trace back to ten foundation cows, and a large percentage of them back to one.

The senior herdsire is Colantha Sir Walker Korndyke, who at the present time has no less than 80 semi-officially tested daughters. He has 125 living daughters, 21 of which have made semi-official records with an average production of better than 20,000 lbs. One daughter of this bull, Mt. Hermon Gladice Colantha, the early part of this year closed a 365-day record of 30,157 lb. milk and 1,177 lb. butter. This cow was exhibited at the Eastern States Exposition last fall where she won the gold medal for the best A. R. O. Massachusetts exhibit. She has been a consistent prize winner at many shows and has carried off the grand championship nearly every time. Her dam, Miss Gladice Butter Boy, has three other record daughters and several sons, all of which have been prize winners at some of the largest shows of New England. One daughter of this cow made 20,000 lb. milk in a year as a three-year-old, another at the same age produced 22,000 lb. milk, while a four-year-old daughter has a record of 20,400 lb., and in turn has two daughters, one of which has made 21,000 lb. milk in a year as a four-year-old and then freshened three days after completing her record, while the other, who made 20,000 milk in a year as a two-year-old is again in test as a four-year-old and has made better than 700 lb. milk in a week. The Gladice family as this strain is termed, exemplifies in a marked degree individuality plus production.

There are a number of good stories concerning the development of the Mt. Hermon herd, which is federally accredited. Starting with 10 animals in 1904 they have developed over 700. The average annual production was increased from 6,000 lb. to 10,000 lb. milk and nearly all the young bulls have been sold to dairymen at farmers' prices, in order that the local men could breed up and develop their stock.

The Mt. Hermon School is known to some people as the Dwight L. Moody School. The principal is Henry F. Cutler, but Holstein men are better acquainted with the director of the Agricultural Department, who is T .E. Elder. one of the directors of the Holstein-Friesian Association of America.

Heifers Wanted

I want to buy fifteen or twenty heifers, coming two or three years old, bred to freshen next fall.

They must be good individuals, come from a healthy herd and show promise of making profitable producers. They will have a first class opportunity and are wanted to put into a herd for breeding purposes, not for speculation.

E. M. HASTINGS CO., Pulaski, N. Y.

PREACHER AND FARMER

The Reverend N. L. Browning is pastor of the local Christian church at Hemet, California. Mr. Browning is as good a farmer as he is a preacher and has a five-acre ranch and a couple of purebred Holsteins, Bess Hartog Pietertje De Kol and Segis De Kol Bess. The latter has been the leader of the Riverside County Cow Testing Association three times, and one of her sons is at the head of the County Farm. Tested as a five-year-old, she produced 158.4 lb. milk, 31.645 lb. butter in a week. Bess Hartog Pietertje De Kol also has a good record and is the dam of two promising heifer calves.

Mrs. Browning is interested in the cattle and when Segis De Kol Bess was on test and Mr. Browning smashed his finger she did the milking until he could resume his duties. The Brownings are members of the Hemet Valley Holstein Breeders' Association.

KANSAS BUYING

Kansas dairymen are buying quite a few good Holsteins. Clarence Seeber, secretary of the Barton County Holstein-Friesian Association and J. M. Almquist of the Merritt-Schwier Creamery Company reached Great Bend, Kansas, April 25th with 45 purebred Holstein cows, 36 grade Holsteins and three good Holstein bulls. They had orders for 19 more grade cows that they could not fill owing to the inclemency of the Wisconsin weather.

BUYING GOOD BULLS

The well-known Michigan Holstein breeder Dudley E. Waters, Maryland Farms, reports the sale of two young bulls to the recently organized Holstein-Friesian Bull Association of East Fruitport, Muskegon County.

One is a son of Glen Alex King De Kol, the Maryland Farms junior herd sire and is from a daughter of Colantha Sir Korndyke Clothilde with a record of 21.46 lb. butter, 510.9 lb. milk. The other is by Colantha Sir Korndyke Clothilde, the Maryland Farms senior herdsire and is from a 21 lb. three-year-old daughter of Prince Segis Korndyke.

The son of the Colantha bull is a full brother to Maryland Walker Colantha, the grand champion at the West Michigan State Fair, 1920. She has a record of 27.36 lb. butter, 736 lb. milk in seven days; 110.7 lb. butter, 3,026.7 lb. milk in thirty days.

NEW FAIR BUILDING AT RICHMOND

Owners of registered Holsteins will be interested to learn that the Virginia State Fair Association is erecting another building this year to house dairy cattle. In spite of the fact that there has been more activity among the Guernsey Breeders' Association, they having a paid secretary who travels over the State continuously, there were exhibited at the State Fair last fall 122 Holsteins, 118 Jerseys and 92 Guernseys. There were three County Holstein Herds. The qualjty of the cattle show was excellent and our State Dairyman said they would compare favorably with any show ring in the country, not excepting the National Dairy Show. We not only had more Holsteins in open competition, but the Boys' and Girls' Calf Clubs led at the State Fair in the number of Holsteins entered.

W. L. KIRBY, *Agricultural Agent.*

IDAHO RECORDS

Besides Idaho Violet Posch Ormsby, who has two different years made over 1,000 lb. butter, there are other Holsteins in the State of Idaho that are making good records. Viola Shadeland, owned by F. O. Johnson, of Boise, as a nine-year-old recently produced 19,125.6 lb. milk, 862.57 lb. butter, the third highest year record ever made in the state.

The first junior two-year-old to make a year record is Idaho Segis Cinderella Korndyke, owned in the University of Idaho herd in Moscow. She produced 12,792.9 lb. milk, 565.29 lb. butter.

QUITE A BABY

Canary Maid Segis, No. 479,019, owned by H. S. Crabill, Toms Brook, Virginia, gave birth on April 28th to a daughter that weighed 124 lb. This is claimed to be the heaviest calf ever born in this state.

He used to walk in the moonlight with one arm full. Now he walks the floor with both arms full.

KINGTHORP HERD ACCREDITED

One of the very latest herds to go on the accredited list, is that at Kingthorp Farm, Northboro, Mass., the property of Frederick A. King. In this herd there are 43 animals and nearly every one of milking age on the place has an A. R. O. record and all of them will have as soon as possible. The Kingthorp animals are large, well grown and fine individuals. They are also producers, for example, the junior two-year-old Agawam Margaret made 23 lb. butter in seven days and the three-year-old Beauty Allamuchy Tricksey made 24.5 lb.

The herdsire Agawam King Joh is making good. He is by a son and from a daughter of King Joh who sired Highland Burke Joh, that as a four-year-old recently made over 40 lb. butter in seven days and a correspondingly large thirty-day record. Other daughters of King Joh are making good in official test. He promises to rank with the real good sires of the breed.

King Joh is by King Segis Pontiac Alcartra who has had two granddaughters that have, as heifers, recently made over 40 lb. butter in seven days.

Agawam King Joh is siring some splendid calves with good top lines, animals that look as though they will make good when they become of milking age.

YOU WILL HEAR FROM HIM

The well-known Minnesota Breeder, E. H. Smith, has been in New York City for the last two or three years. Mr. Smith is the manager of the American Linseed Company and is now located at St. Paul, Minn. A new dairy feed called the Alinco Dairy Ration is being put on the market by the American Linseed Company. Mr. Smith has had the experience to put a first class dairy ration on the market both from the manufacturing and the consumer's ends. Mr. Smith was the owner of the Zuyder Zee herd and was formerly located near Duluth.

JAPS BUYING AGAIN

Representatives of the Japanese Government purchased, late in April, a carload of purebred Holstein youngsters in Ramsey County, Minn., for the Nakomani stock farm at Sapporo Hokkaido, Japan, owned and operated under the direction of the Nippon government. Twenty-eight head, the oldest a year old were in the shipment and the average price was $625.

The buyers spent the week in the company of J. E. McMahon, superintendent of the Ramsey County farm, from which he sold them a two-months'-old bull calf and three heifers nearly a year old.

SOUND YOUR KLAXON

"Willie!"

"Yes, mamma."

"What in the world are you pinching baby for? Let him alone!"

"Aw I ain't doin' nothin'. We're only playin' automobile, an' he's the horn."

WORTHY ENTERPRISE

The Pennington County Holstein Breeders' Association aim to place a purebred sire on each farm in the county. There are at the present time 25 animals listed at the First and Peoples' State Bank, Thief River Falls, Minn., for the convenience of those who wish to take advantage of the offer which is, that any of the breeders will sell a young registered sire at a low price to anyone who desires such an animal and will take in first payment the scrub sire now in the purchaser's herd and will arrange for additional payments on easy terms or if desired the bank will lend the balance to the purchaser at 6% interest.

Gus Hilliard purchased Lady's Echo De Kol, from the McFarland herd. This is a son of Sir Inko De Kol Beets, one of the very best individuals in the district.

WINNING PRIZES

The Arkansas Valley Sugar Beet & Irrigated Land Company, Holly, Colorado, exhibited a number of their high-class Holsteins at the Southwestern Stock Show at Lamar, in April and captured a number of prizes. They also exhibited eight head at the Kansas Livestock Show where they carried off several ribbons. A number of prizes were won by the herd of L. Wirt Markhan, Lamar.

BEST BUSINESS ON EARTH

A short distance from Wall Lake, Iowa, there is a 240 acre farm owned by G. J. Van Glan. On the farm are 45 purebred Holsteins nearly all young. The milk is skimmed, the cream sold and the skim milk fed to the hogs of which a large number are raised each year. No steers are kept which is something unusual in this vicinity. Mr. Van Glan is planning to build an up-to-date dairy barn and believes that dairying with purebred Holsteins is the best business on earth.

HOW ONE HERD WAS BUILT

Ten years ago Charles A. Mark, Hardin County, Iowa, started to build a herd of registered Holsteins. He purchased one purebred cow and one-third interest in a registered bull. To-day he has a herd of 25 females and has raised 20 males most of which have been sold.

On March 30, 1912, he purchased Florence Jewel De Kol 2d. a ten-year-old cow that weighed 1,400 lb. and had a seven day milk record of 20.98 lb. butter, 514 lb. milk. At the same sale, Mr. Mark and two of his neighbors bought a bull calf, the total of his investment being $235.

Florence Jewel De Kol 2d raised three heifers before she quit. These three heifers have established quite a record. One, at the age of five years had been the mother of six calves, five of which were heifers, inculding heifer twins at her second and fourth freshening. One of her twin daughters also produced twins and so did another daughter of old Florence.

During the early days of the herd Mr. Mark was fortunate to have a large proportion of heifer calves. At the end of 1920 there were 16 purebred females on the place. Since January 1, 1921, thirteen calves have been added, nine of which were heifers, a total of twenty-five females descending from the one cow in less than ten years.

During this time twenty male calves have been born of which five were vealed and eleven sold for breeding stock, the average price obtained being more than $100.

The Mark herd was one of the first dairy herds in the Hardin County to have a Federal accredited certificate and that it is one of high quality is shown by the fact that when enrolled in the cow testing association it was the highest producing herd in Hardin County.

In the latest Mexican revolution nothing was overthrown except a hatrack.

Franklin County Holstein Breeders Association

CONSIGNMENT SALE OF

50 Head of Cumberland Valley's Best Registered Holsteins

at Red Bridge Park, Chambersburg, Pa.

May 31st, 1922, at 12 o'clock

The animals offered in this sale have ALL been carefully selected as advertising representatives of Franklin County in the Holstein Industry. This is a QUALITY SALE well worthy of your attendance. ALL animals selected are either from Accredited Herds or Herds under Federal Supervision and are sold subject to a 60-day retest. Show animals. Splendid individuals. A number of A.R.O. Cows. ALL bulls offered have A.R.O. Dams. Grandsons and Granddaughters of Pontiac Korndyke from proven sires.

Chambersburg is on the Cumberland Valley Division of the Pennsylvania Railroad and the Lincoln Highway. Good Roads. Motor to this sale and see the beautiful Cumberland Valley AT HER BEST.

Chambersburg, Pa.

YEARLING "CHAMP" AT DEYSHERS

They are making a number of very fine official records in the herd of Abner S. Deysher of Reading, Pa. Mr. Deysher is very proud of the fact that Echo Sylvia Mechthilde a daughter of Champion Echo Sylvia Pontiac has produced over 70 lb. milk a day for 10 consecutive days as a yearling. Her best day was 77.4 lb. From the looks of the heifer and the record book one has every right to believe that she is about to keep up this gait for quite a while. She is making between 18 and 19 lb. of butter a week and is gaining. Mr. Deysher is in hopes that she will make a 20-lb. seven-day butter record.

Like many of the daughters of Champion Echo Sylvia Pontiac she is a real good individual, good at the shoulders with a large barrel and extra good through the hind quarters. We aim to show a picture of this heiter in an early issue although it may be only be a snap shot. In the herd there are three daughters of Champion Echo Sylvia Pontiac which all recently freshened as yearlings and all are making good.

Hazlewood Ormsby Posch 2d, the first prize cow at the 1921 Brentwood Sale is fresh again, has a nice bull calf and is milking to beat the band. She produced 106.2 lb. milk in a day and 716.2 lb. milk in seven days. Several who saw her at Brentwood a year ago and who have seen her recently, say that she has improved since she has been in her Pennsylvania home.

SEE HIM AT KANSAS CITY

Chestnut Hill Farms of Gibsonia, Pa. has consigned to the Kansas City sale, a son of Frenesta Creole Pontiac, whose picture appeared in the March 22d issue of the HOLSTEIN BREEDER AND DAIRYMAN. Frenesta is the holder of the Pennsylvania State record for seven-and thirty-day milk production in the senior four-year-old class. She produced 708.5 lb. milk in seven days and 2,819.2 lb. milk in thirty days. Two different years in official test she has exceeded 30 lb. butter and 700 lb. milk in a week and she has a long list of large records.

Frenesta was bred, developed and is owned by F. R. Babcock, proprietor of Chestnut Hill Farms and under the care of G. H. Burdick the manager, made her splendid records. Her sire is King Pontiac Hengerveld Ormsby whose dam K. P. Jeweline is a daughter of King of the Pontiacs. At one time K. P. Jeweline and her full sister K. P. Jewel were the only two two-year-old full sisters each with year records above 800 lb. of butter and their dam Pontiac Jewel and her full sister Pontiac Artis were the only full sisters with year records averaging above 1000 lb. butter.

Frenesta is one of the three 30-lb. daughters of King Pontiac Hengerveld Ormsby and all three of these daughters made over 600 lb. milk in seven days. He has another daughter now in test that is hitting a 30-lb. clip. More particulars later.

IDAHO VIOLET AGAIN

They think a whole lot of Idaho Violet Posch Ormsby, at the University of Idaho. She was born on the University farm, September 19, 1912. She freshened for the first with a heifer calf on April 11, 1915. Since that date she has produced 99,097.9 lb. milk, 3,781.14 lb. fat, an average of 19,819.54 lb. milk, 754.23 lb. fat per year.

During her life she has dropped five calves, two bulls and three heifers all of which are in the university herd at the present time. Her sons were first in their classes at the 1921 Pacific International Livestock Show and one was senior champion at the 1921 Western Royal Livestock Show at Spokane. Her oldest daughter was senior champion at the Spokane Inter-state Fair in 1921, and her yearling daughter won second place in her class at the same show. Two of her daughters have made splendid long time records in the university herd.

Violet recently finished a year record of 21,379.3 lb. milk, 805.91 lb. butter fat, thereby breaking the state record for all ages and breeds. Last year she captured the state record with a total of 21,399 lb. milk, 800.97 lb. fat, which has stood until recently broken by herself. This is her second record of over 1,000 lb. butter in a year.

She is also a show cow and was the grand champion at the Western Royal Livestock show in 1921. It is planned to build up the university herd around her family. Violet is probably the best known cow in the state as some 2,000 Idaho boys have scored her in the course of their instructions on dairy cattle judging.

FANCY HOLSTEIN BARN

It is claimed that the finest dairy barn in western Michigan, is on the Blythefield Farm, owned by Joseph Brewer, Grand Rapids. This barn has its own feed mill, is electrically lighted and is equipped with the latest dairy barn machinery. The milk produced is sold as certified milk in Grand Rapids. To insure the bacteria count being as low as possible, Mr. Brewer offers his men a bonus for every month that they keep the bacteria count under the maximum requirement of 10,000 per cubic centimeter. Frequently it is as low as 300. The herd of high producing purebred Holsteins is one of the chief attractions of this establishment.

NEW SALEM BREEDING CIRCUIT

An average net profit of $54.20 was earned by the animals owned by the members of the New Salem, N. D. Holstein Breeders' Association. The circuit has 17 members with 227 cows of which 177 were purebred Holsteins. The year's production was 1,515,412 lb. milk, which yielded 54,144.9 lb. butter fat. This was worth $18,834.25. The cost of feed was $8,172.69 and the net profit was $10,676.25. The average of the circuit cows was 274 lb. butter fat and the state average was less than 200 lb.

IN LOUISIANA

Model Prince Segis, whose name is sufficient indication of his breeding will head the herd at the Orphanage, Lake Charles, Louisiana. It is planned to build up a good producing herd of registered black and whites.

CINCO

The Cinco Cigar company purchased 14 head of high grade Holsteins from Mrs. Christ Bast of Germantown, Wisconsin. The Bast herd was considered the best producing grade herd in Washington County and had an average of more than 500 lb. butter. Mrs. Bast intends to put in purebreds.

MERRYALL FARMS HERD UNDER STATE AND FEDERAL SUPERVISION

Our Herd Sire is

King Sylvia Johanna Pontiac

Brother to Carnation King Sylvia and son of Otego Valley Christmas Belle; 40.56 lb. butter, 651.2 lb. milk in 7-day official test. Our herd is run for production coupled with economy and profit. Cows in this herd have made and are still making dandy records in both short time and long time semi-official work. A cow we sold to State College produced 22,247 lb. of milk, 851.1 lb. butter in a year; and we think we have others just as good. *Come and see for yourself.*

C. W. NEWMAN, **Wyalusing, Pennsylvania**

Have you noticed the great records that heifers, sired by sons of KING VALDESSA are making?

✠ ✠

Why not come to the fountainhead and get for yourself a bull that will make money for you?

✠ ✠

KING VALDESSA

A Bull of royal breeding and remarkable individuality who sires every day and all-the-year-round producers, and whose sons inherit their Dad's transmitting ability.

LACKAWANNA COUNTY HOLSTEINS

The herds of Lackawanna County consist of stock directly descended from cattle imported direct from Holland in early Holstein days by old time Lackawanna County breeders —pioneers of the breed.

These men were capable judges and selected their animals for type, individuality and producing capacity; desirable characteristics readily apparent in the present cattle of the county.

Lackawanna cattle are healthy—many of the herds are under Federal supervision.

Quotations will be cheerfully given on single animals or carloads—and it is a pleasure to show the goods.

INTENTIONAL SECOND EXPOSURE

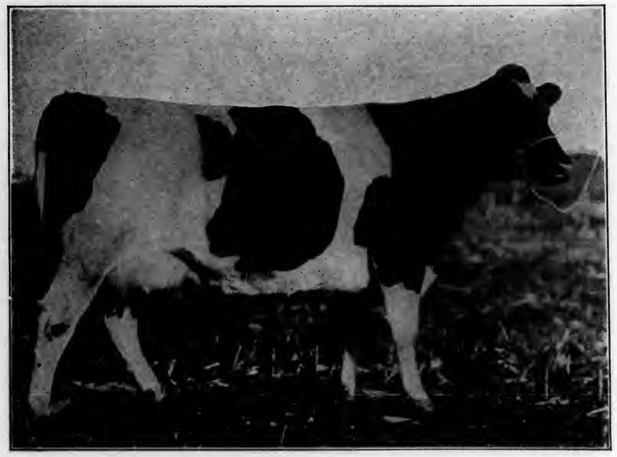
KING TWEEDE SPRING FARM

His Sire, Spring Farm King, noted for the wonderful producing capacity of his daughters, is by King of the Pontiacs from a 34-lb. cow and is full brother to the first 44-lb. cow.

His Dam, Dressie Lady Pontiac made over 30 pound butter and 600 lb. milk in a week, is a daughter of Spring Farm King Pontiac, and has a 33.98 lb. full sister.

He is only five years old and has twelve A. R. O. daughters. Ten average over 20 lb. butter at an average age of less than three years.

In the Berks herd he will have the opportunity his individuality, breeding and transmitting ability deserves.



His daughters are not for sale; his sons can be bought now at lower prices than you will have to pay one year from now.

READY FOR SERVICE, a son of King Tweede Spring Farm from Aaggie Durkje Cornucopia, who has two seven-day records of 23.22 lb. butter, 492.4 lb. milk, and 22.86 lb. butter, 522.3 lb. milk. Several other bulls from top price animals I have purchased at great public sales.

Write for pedigrees and particulars, or better yet, come and see the bulls and their dams. They are priced to sell.

VOL. I HARRISBURG, PA., JUNE 8, 1922 NO. 11

KANSAS CITY CONVENTION

Lowden Reelected President—Transfer Fee Increased—Offices of Secretary, Superintendent of Advanced Registry and Treasurer Appointive

THE thirty-seventh annual convention of the Holstein-Friesian Association of America convened Wednesday, at 10 a. m., June 7, 1922, in Convention Hall, Kansas City, Mo.

This is the first meeting held under the delegate plan. Few representatives were present and the general attendance small. The Kansas City Chamber of Commerce extended the hospitality of the city. Following a brief address of welcome, the reading of the call of the meeting and the minutes of the last meeting were dispensed with by motions of W. B. Barney and O. U. Kellogg, seconded by Vice-President Geo. E. Stevenson.

President Lowden, with the preliminary work dispensed with, gave a very strong and forceful talk, calling attention to the substantiality of the dairy industry as shown by bankers' published statements. He said that there is a steadier market for milk and dairy products than there was a year ago and emphasized the fact that now is the time for young men to start in the cattle business as conditions are improving. In noting the progress of the Association, he brought out the fact that the membership had increased 800 during the year and that the Advanced Register work in long time testing had increased 40% despite money scarcity, the Holstein breeders show courage.

He touched on the work of the Judging Committee, correlating show type and producing capacity, and commended the work of publishing test records in local county papers and the calf club work being carried on by Calf Club Leader Earl Cooper. He believes that the national association should operate through state associations, utilizing existing organizations. President Lowden commended very highly the good work that Dr. McCullum is doing in placing before the public the facts concerning the food values of milk and dairy products.

Following a motion by Judge Peasley, seconded by Mr. Barney, the report of the Committee on Credentials was placed on file. In referring to this report President Lowden brought out the fact that states not represented by delegates comprise 3% of the membership.

HON. FRANK O. LOWDEN
Reelected President of the Holstein-Friesian Association of America.

James Reynolds obtained the opinion of the chair that delegates present should vote proportionately the total delegate vote of the state.

C. F. Bigler moved that a Nominating Committee be appointed, whereupon President Lowden named the following: John B. Irwin, Minn.; Frank Knowles, Mass.; O. U. Kellogg, New York; A. P. Kaye, Wisconsin; W. S. Moscrip, Minnesota; L. M. Thompson, Pennsylvania; and Glenn Davis, Missouri.

The balance of the morning was given over to an address by Dr. McCullum, which will be given in a later issue.

Immediately following the opening of the afternoon session a motion was made and duly carried to make permanent the temporary delegate list. The reports of the officers, auditors and department heads, with the exception of the Finance Committee were read and accepted. The report of the latter committee was held until later in the meeting.

The report of the Special Committee appointed to draft suitable resolutions on the death of W. J. Gillett, of Rosendale, Wis., and of F. S. Stimson, of Hollywood, Wash., was presented and, upon motion, duly made and seconded, they are to be embossed and placed on record.

C. F. Bigler offered a resolution to urge senators and representatives to obtain suitable appropriations to effectually carry out tuberculosis eradication.

The meeting endorsed the Voight Bill, which was passed by the House and is now before the Senate.

J. M. Kelley offered a resolution that, as soon as the finances of the Association would permit, a department be created to advertise Holstein milk. This resolution was unanimously adopted after Mr. Kelley had talked for forty-five minutes explaining his viewpoint

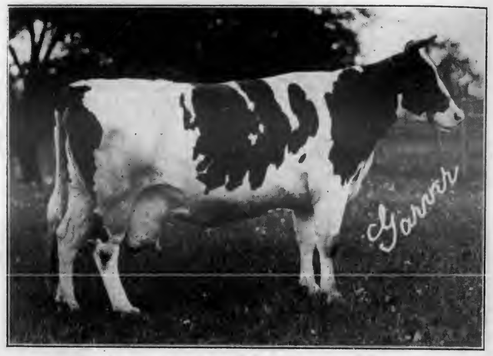
(*Continued on page 360*)

Field Day at John Erickson's

By L. L. Oldham

SOME men are born great, some achieve greatness and some have greatness thrust upon them." John Erickson, of Waupaca, Wisconsin, has achieved greatness. The name "Erickson" will for years and years to come be coupled with high class, big producing Holsteins wherever they are known and mentioned. Fully 10,000 champions of the black and white breed laid aside their working tools and journeyed to this shrine of Holstein greatness to pay homage to one Badger citizen who in 25 years of faithful devotion has made his name common in every household where Holstein-Friesian cattle are known and appreciated.

From every county in Wisconsin and from many counties in adjoining states came the rank and file of Holstein ownership. Primarily they came to observe,

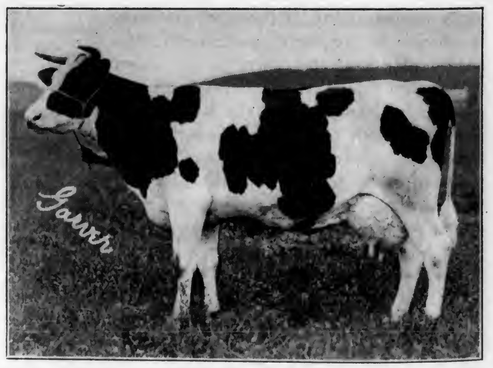


WAUPACA DAIRY QUEEN

Reading from left to right: Evelyn Olson—The Waupaca County Dairy Queen; John Erickson; Esther Erickson—Maid of Honor to the Dairy Queen; Mrs. John Erickson.

but they also came to honor by their presence, for in their hearts was the one thought—well done, good and faithful servant, by your deeds shall ye be known. Agriculture may be slow to recognize, with monument and medal, the greatness of those who do for her, but owners of Holsteins who know and understand the full sense and meaning of the term "breeder" will picture in their minds an arrangement of the chairs in the Hall of Fame so that this molder of Holstein perfection can take his place alongside captains of industry and other foremost figures in the world of achievement.

Without exception Field Day at Erickson Farms was the greatest event of its kind ever staged in the Middle West. It was a fitting recognition on the part of the Middle Western Holsteiners in commemoration of the completion of 25 years' association with a dairy cattle breed which has in the same length of time made a similar spectacular bid for highest honors in the field of dairy cattle attainment. John Erickson, a plain, practical farmer with limited means, a quarter of a century ago started breeding Holsteins in a modest way and through faith, courage, persistence, industry, patience, good judgment and untiring vigilance has developed what is considered by many the premier

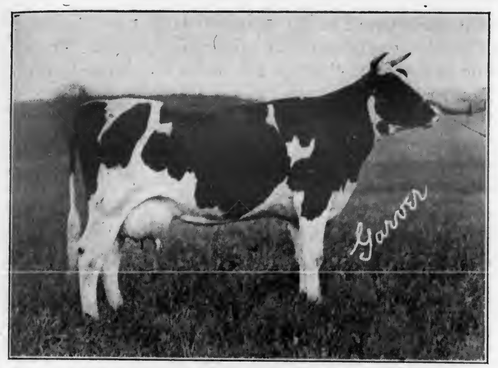


BESS JOHANNA PIETERTJE MERCEDES

28,660.1 lb. milk, 1,239.64 lb. butter in a year as a senior four-year-old; 23,360 lb. milk, 1,072.60 lb. butter in a year as a junior three-year-old. Both Wisconsin State Butter Records.

dairy herd of America. No competent judge of the breed can pass through the Erickson Barn without saying that this herd combines the points comprising Holstein perfection, namely: health, size, type, breeding and producing ability as exemplified in superior individuality, good udders, dairy temperament and other material evidences to a wonderful degree.

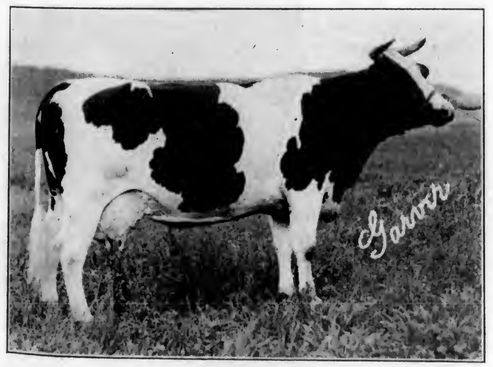
The name "Erickson" and the abbreviated symbol "37th" are intimately connected. Without detracting



PRINCESS DELLA 3d

632 lb. milk, 35.11 lb. butter as a junior three-year-old; Wisconsin State Record in class. She has a year record of 958.62 lb. butter, 22,600.30 lb. milk, calving at twenty-four months old. Photo taken seven days after finishing her new state record.

in any way from this great sire it is only fair to say that Mr. Erickson has a high producing herd long before "37th" was born and this is shown by the fact that the Erickson herd won the Wisconsin Dairy Cow Competition in 1910. To me the acquisition of "37th" was but an incident in a well-rounded plan of success, born in the conception of faith that came in the form of an opportunity to this good man just as it is supposed to come to all of us at some time in life.



On the Lone Pine Farm have been developed four great families, namely: The Fobes, The Prides, The Daisies and The Dellas. Out of these families have come the great records of performance which many of us know and appreciate as outstanding. I will not labor with mention of records, they are too well known

PRINCESS DE ORMSBY

27.91 lb. butter in seven days; 20,800.1 lb. milk, 911.45 lb. butter in 365 days, calving at twenty-six months old. Now on test as a four-year-old.

to all interested to need further comment. However, it is unusual to find two World's Records and all of the State Records in the yearly division in heifer form in a great dairy state like Wisconsin held by the animals of one herd. It is likewise uncommon to find 17 two-year-olds in a herd on yearly test average of 769.03 lb. butter, 17,697.4 lb. milk. Five of the 17 are above 20,800 lb. milk, nine are above 20,200 lb. milk, eight average 908 lb. butter and 15 average 801 lb. butter.

DAISY AAGGIE ORMSBY 3d

22,151.3 lb. milk, 1,088.28 lb. butter in 365 days as a yearling. The World's record yearling heifer.

Early in the morning until well past the milking hour throngs crowded the barns, reading the placarded announcement of achievement of each individual member of the herd and reviewing the points of excellence of Marathon Bess Burke, Ambassador Fobes and Fobes Sensation.

There was entertainment and instruction for young and old. Professors Humphrey and Oosterhuis gave dairy cow lectures and judging demonstrations which were keenly listened to. The young people paid rapt attention to Earl Cooper and Tom Bewick when they spoke on calf club work, while the Hon. C. P. Norgord, D. D. Aitken, K. L. Hatch and the writer talked to the general assemblage. For many the most interesting feature of the program came last, when A. W. Ritchie, president of the Waupaca Holstein Association, presented the loving cup to Mr. Erickson with the compliments of the Waupaca breeders. Reid Murray, of the College of Agriculture, County Agent James Dance and a number of competent committees attended to the preliminaries. The writer presented the Dairy Queen, Miss Evelyn Olson, and her Maid of Honor, Miss Esther Erickson. Ex-president D. D. Aitken made the presentation speech and then Mr. Ritchie delivered the loving cup to its recipient, a lasting tribute from his immediate friends and neighboring breeders.

The whole event was filmed by a motion picture camera operated by the college photographer, Mr. Diemer, while a Graphlex in the hands of the well-known advertising and pedigreeman, Mr. James R. Garver, snapped many interesting views, of which a few are herewith shown to permit those who were unable to be present to see some of the scenes.

The Success Family

The Father of Success is—Work.

The Mother of Success is—Ambition.

The oldest son is—Common Sense.

Some of the other boys are—Perseverance, Honesty, Thoroughness, Foresight, Enthusiasm, Coöperation.

The oldest daughter is—Character.

Some of the sisters are—Cheerfulness, Loyalty, Courtesy, Care, Economy, Sincerity.

The baby is—Opportunity.

Get acquainted with the "old man" and you will be able to get along pretty well with the rest of the family. —*Canadian Power Farmer.*

Wedding Guest—"Where's the bridegroom?"

Bride—"Just gone out on a little errand."

Wedding Guest—"Something important, I suppose, or he wouldn't have left you so soon after the ceremony."

Bride—"Oh, yes; he went out to see if papa's wedding check was good."

The Soulful One—"Just listen to what Bobby says: 'If thou wouldst know why men go mad, go gaze into thy mirror.' Isn't that sweet?"

The Worldly One—"Sweet! Why it's an insult. After all, you're not as bad as all that!"

A farmer, having been stung by a bee, lived ten minutes. If it had been a Presidential bee he might have lived four years.

Self-control is a simple matter of looking the early strawberries over and then ordering a pound of prunes.

INTENTIONAL SECOND EXPOSURE

KANSAS CITY CONVENTION

(*Continued from page 357*)

and impressing those present with the advisability of such a campaign.

Axel Hansen moved the resolution prepared by J. C. Marlowe, Mankato, Minn., that cows finishing year records and calving to conform with the requirements of the ten months' division be credited with both ten months and year records on the books of the Advanced Registry. Supt. Gardner opposed this resolution on the grounds that a cow having double records would have undue advantage. After rules were suspended to allow non-delegates to speak, Mr. Marlowe said that if accident prevented a cow from calving in time for ten months' requirements, the record is lost. Mr. Stevenson moved to lay the motion on the table. This motion was lost. After a brief discussion, Floyd Overton moved that the resolution be referred to the Board of Directors. Mr. Aitken made a similar motion with the request that they should act. This was seconded by Judge Peasley. President Lowden ruled that rules and regulations are the jurisdiction of the Board of Directors unless due notice of amendment is given. The Aitken amendment was lost by a standing vote. Overton amendment carried unanimously. The Hansen motion was carried with Overton amendment as the sense of the meeting.

GEORGE E. STEVENSON
Retiring Vice-President.

After all the resolutions bearing on the transfer fee had been read, as a substitute, J. B. Irwin moved that the fees be made one dollar and fifty cents for transfers filed three months from the date of the sale; double fees for applications filed later; double fees for non-members; fifty cents from each transfer to be equitably apportioned to such states as designated by the Board of Directors. Mr. Irwin's motion was seconded by Mr. Oldham.

In the absence of Mr. J. M. Hackney, the resolution which he offered empowering the Board of Directors to appoint the Secretary, Treasurer and Superintendent of Advanced Registry, was presented by Mr. Kaye, of Wisconsin, seconded by Dudley Waters, of Michigan. Judge Peasley put up a strong argument in opposition to the Hackney amendment, pointing out that our present association had been very successful under the old system when the members were boss. He brought out the fact that the delegate system, as adopted at St. Paul, was a disfranchisement of the general membership. The Hackney amendment proposed to disfranchise the delegates in having a voice as to who should act as Secretary, Superintendent of Advanced Registry, and Treasurer. Following the discussion the resolution was adopted with few dissenting votes.

Mr. J. A. Reynolds asked that the Stevenson resolution amendment No. 21, on color markings, be substituted for his own amendment No. 19 and moved its adoption. This was carried unanimously. Mr. Bigler presented resolution No. 20; Mr. Reynolds moved to strike out the words "without reference to territorial division." Both motions were carried. The Elder resolution, No. 26, was withdrawn, while the Palmer amendment, No. 28, was tabled on motion of Mr. Irwin. In regard to the twenty-fourth amendment, Mr. Reynolds explained that under the present regulation, one or more members of a firm holding limited membership in the association can each become delegates, and that inserting the word individual would avert this. Carried. In the thirty-second amendment Reynolds said first two words were the only ones added. On a motion by Ex-President Aitken, a vote of thanks was extended to the Entertainment Committee for the delightful manner in which they had entertained the Association.

Thirty-fourth, thirty-fifth, thirty-first and thirty-sixth amendments were carried. In the thirty-ninth amendment, Mr. Elder moved the adoption of the first four paragraphs. The advisability of this was questioned by Mr. Irwin. Mr. Elder said that the breeders winning a large proportion of the money did not need it. On roll call eighty-eight were for the amendment and two against it, whereupon, on the motion of Judge Peasely, the vote was made unanimous.

On motion of Judge Peasley, a committee will be appointed by the president to clarify amendments in future years.

The Nominating Committee suggested the following: President, F. O. Lowden; Vice-president, J. M. Kelley; directors for four years: W. S. Moscrip, W. G. Davidson, J. A. Bell, Jr., and H. W. Norton, Jr.; directors for three years: G. A. Fox, T. E. Elder; director for two years: W. H. Mott. Roll call was unanimous.

WM. G. DAVIDSON
Newly Elected Director.

The report of the Finance Committtee was adopted unanimously.

Mr. Barker suggested Cleveland as the place for the next annual meeting. Mr. Waters seconded this and suggested Grand Rapids, Michigan, for the next year. Richmond, Virginia, was advocated by the representative from that city and Condee, from California, seconded this. Judge Peasley suggested Springfield. On motion of Floyd Stevens the question was referred to the Board of Directors. There being no other business, the meeting adjourned. The above report was received by wire. A more complete and detailed report will appear in our next issue.

Preliminary Meetings.

A meeting of the judging committee was held in the Dorice Room of the Hotel Baltimore, on Monday, June 5th. This committee was appointed in Philadelphia last March and consists of W. S. Moscrip, Lake Elmo, Minn.; R. E. Haeger, Algonquin, Ill.; W. H. Standish, Lyons, Ohio; A. C. Oosterhuis, Oconomowoc, Wis.; Axel Hansen, Savage, Minn.; T. E. Elder, Mt. Hermon, Mass.; Ward Stevens, Liverpool, N. Y., and Professor H. H. Kildee.

After much discussion the committee recommended that temporary lameness should not disqualify animals from the show ring, nor should temporary swellings of the udder, although animals with defective udders should be debarred. Junior calf classes should be eliminated at fall fairs, but permitted at winter fairs, providing no calf be entered under six months of age.

In A. R. O. classes the certificates or official credits should be filed with the fair secretaries or displayed in the ring when the animal is shown. Long time records only are to be considered, no handicap to be given for ten months' records. Superintendents or the one in charge of cattle shows should check registry certificates with color markings, ages and identify animals.

Following the meeting, the Judging Committee worked with the sculptor, Gozo Kawamura, and the animal painter, Edwin Megargee, on a clay model of an ideal animal of the breed. After ideal models of both male and female are completed, copies will be given to all state agricultural colleges, educational institutions and breeders' clubs.

A meeting of the officers of the state associations was held Monday evening, to which all were invited. The various state secretaries were present and gave talks. Mr. E. M. Clark, of Ohio, told of the state association work in Ohio, and J. W. Bartlett, Field Secretary of the New Jersey Holstein-Friesian Coöperative Association, explained the plan that is being carried out in Mercer County, New Jersey.

Earl Cooper, National Calf Club Leader, said that eighty per cent of the entrants in Calf Clubs are successful in the Holstein states, but that in some cases there are only fifty per cent successful because of lack of encouragement. President Frank O. Lowden said that the tasks of children must be made attractive in order to retain their interest, and he announced that the Board of Directors had directed that the Juniors be given membership privileges as to fees in registering and transferring animals. In the course of his remarks he said that a strong national organization depends upon strong state organizations, and they in turn depend upon strong local clubs.

E. R. Zimmer, Field Secretary of the New York Association, suggested county conferences and the use of inquiry blanks. Field Secretary C. L. Blackman, of the New England Association, and C. M. Long, Field Secretary of the Illinois Association, agreed with Mr. Zimmer. Robt. Geiger, Field Secretary of Minnesota, urged coöperation with county agents. Mr. Eves, of Iowa, substantiated Mr Geiger in his remarks. Brief talks were given by H. W. Norton, Jr., Field Secretary of Michigan Association, and by Mr. P. A. Condee, of California. Chas. Bigler, President of the New York Association, and Mr. Zimmer urged the breeders to coöperate in securing indemnities for cattle slaughtered to prevent the spread of tuberculosis. Mr. Kaufman, of Missouri, and Vice-president Geo. E. Stevenson touched on Area Work in connection with tuberculosis indemnities. Dr. L. M. Thompson, President of the Susquehanna County, Penna., Holstein Club, suggested breed associations form committees to investigate cases of reaction of tested cows after interstate shipment.

In judging and awarding prizes to the state herds consigned to the National Sale, New York stood first, Kansas, second and Missouri third. The judges were Moscrip, Haeger and Ward Stevens.

After the judging on Tuesday, various educational addresses were given. President Lowden spoke briefly on the perfect preparation shown for entertaining the convention. These addresses or a summary of them will be given in later issues.

In the evening, pictures of the early officers of the Association and also of famous animals were shown. These were followed by open forum at which Secretary Houghton presided. The speakers were Judge Peasley, Axel Hanson, J. C. Marlowe, and J. M. Kelley.

Third Co-operative National Sale

Kansas City, Mo., June 8, 1922.
[By Wire.]

Holstein Breeder and Dairyman:—The average of the first day's sale is $493. Top price $2,225 paid for Highland Burke Joh, 40 lb. cow consigned by Hawley and Murphy, Liverpool, N. Y.

(Signed), Staff Representative.

The Cabana Case

OUR attention has been called to the decision of the Court of Appeals in the case brought by Oliver Cabana, Jr., against the Holstein-Friesian Association of America nearly three years ago. This decision affirms the decision of the Appellate Division of the Fourth Department and establishes the right of the Board of Directors to investigate the claims of fraud made regarding certain records which were made at Pine Grove Farms, *Providing They Proceed According To Law.*

The Breeder and Dairyman has long since come to the conclusion that the great hullabaloo made over this so-called exposure has been unduly magnified and for a purpose. We are clearly of the opinion that the extensive publicity given to this matter *Before It Had Been Thoroughly Investigated,* was a positive detriment to the Holstein industry, to the Holstein Associa-

(*Continued on page 368*)

What the Census Reveals

THE United States Department of Agriculture has analyzed the census figures and have found that the states with the highest percentage of purebred herdsires have the highest producing dairy cows. The forty-eight states were ranked in the order of percentage of purebred sires and are led by Arizona, with 91%, while North Dakota, with 8%, brings up the rear. The states were divided into four groups of twelve each, and the leading group on the purebred sire basis was the leading group for milk yield.

In the first group the average percentage of purebred dairy bulls for the twelve states was 51% and the average yearly milk production was 4,068 lb.; for the second group the figures were 30%, and 3,375 lb.; for the third group, 19% and 2,761 lb.; and for the fourth, 12% and 2,087 lb.

A study of the table will reveal a number of surprises. The Pacific Coast, as might be expected, ranks very high in average production, but very few would have expected to find Rhode Island standing second. In point of production, Washington is first with 4,911 lb. milk as the average yield of her dairy cows; California, third; New Jersey, fourth; Massachusetts, fifth; and New York, sixth. Arizona is far in the lead in the percentage of purebred dairy herd sires but it is somewhat of a surprise that the six New England states appear in the first eight places and it will be somewhat more of a surprise to find Minnesota in thirty-fourth place with only 16% of her dairy sires purebreds, while her average milk production is only 3,044 lb.

The lesson the tables carry is shown in the sharp differences between the groups. The states with the highest percentage of purebred dairy sires lead in average milk production. Group number one, with 51% of purebreds shows an average milk production of twice that of group number four with 12% of purebred sires. It pays to head your dairy herd with purebred bulls.

Grade Cows at the National Dairy Show

FOR the first time in the history of the National Dairy Show, a classification for grade cows sired by purebred bulls and having cow testing association records has been arranged. The first class is for cows having production records of 500 lb. or more of butter fat. Another class is for cows having production records of from 350 to 500 lb. butter fat. A group of five cows from a single testing association make up the third class, and the fourth class is for four cows sired by one registered bull. The fifth class for grades is for the champion cow. The same prizes are offered for these grade classes as for similar classes of purebreds. These classes added to the grade demonstrations that the breed associations are developing to put on exhibit at this year's show clearly demonstrate how easy it is for every dairyman to have high producing cows working for him instead of his doing all the work for small returns.

W. E. SKINNER,
General Mgr.,
National Dairy Show.

Never do things by halves. Some girls acquire airs, some acquire millionaires.

Congress Provides for Indemnities

PRESIDENT Harding has signed the Agricultural Appropriation Bill for the fiscal year 1923, which sets aside a sum of $2,877,600 for the tuberculosis eradication campaign of which $2,027,600 is for payment of indemnities. Of this, $300,000 became immediately available. The item relating to tuberculosis in this bill is herewith reproduced in full.

"For investigating the disease of tuberculosis of animals, for its control and eradication, for the tuberculin testing of animals, and for researches concerning the cause of the disease, its modes of spread, and methods of treatment and prevention, including demonstrations, the formation of organizations, and such other means as may be necessary, either independently or in coöperation with farmers, associations, State, Territory, or county authorities, $2,877,600, of which $850,000 shall be set aside for administrative and operating expenses and $2,027,600, of which $300,000 shall be immediately available, for the payment of indemnities:

"Provided, however, That in carrying out the purpose of this appropriation, if in the opinion of the Secretary of Agriculture it shall be necessary to destroy tuberculous animals and to compensate owners for loss thereof, he may, in his discretion, and in accordance with such rules and regulations as he may prescribe, expend in the city of Washington or elsewhere out of the moneys of this appropriation, such sums as he shall determine to be necessary, within the limitations above provided, for the reimbursement of owners of animals so destroyed, in coöperation with such States, Territories, counties, or municipalities, as shall by law or by suitable action in keeping with its authority in the matter, and by rules and regulations adopted and enforced in pursuance thereof, provide inspection of tuberculous animals and for compensation to owners of animals so destroyed, but no part of the money hereby appropriated shall be used in compensating owners of such animals except in coöperation with and supplementary to payments to be made by State, Territory, county or municipality where condemnation of such animals shall take place; nor shall any payment be made hereunder as compensation for or on account of any such animal destroyed if at the time of inspection or test of such animal, or at the time of condemnation thereof, it shall belong to or be upon the premises of any person, firm, or corporation, to which it has been sold, shipped, or delivered for the purpose of being slaughtered:

"Provided further, That out of the money hereby appropriated no payments as compensation for any tuberculosis animal destroyed shall exceed one-third of the difference between the appraised value of such animal and the value of the salvage thereof; that no payment hereunder shall exceed the amount paid or to be paid by the State, Territory, county or municipality, where the animal shall be condemned; and that in no case shall any payment hereunder be more than $25 for any grade animal or more than $50 for any purebred animal, and no payment shall be made unless the owner has complied with all lawful quarantine regulations."

"She sends me a draft for 1,000 kisses." "Take that around to the bank and get it certified. She's a flirt."

Do Purebred Bulls Pay?

IT is rather astonishing that the dairy breed associations have not blazoned the country with posters advertising the merits of the purebred bull to improve the common run of dairy cows in the country. Some data has been published by all the dairy associations and demonstration exhibits have been made by them, but no one can charge any of them with extravagance in this respect.

Consider the New Salem breeding circuit in North Dakota, where an entire community pulled itself out of a slough of poverty by milking cows and then made itself really prosperous by growing into Holsteins—and that "on the range." Observe the Amherst-Nelsonville Cow Testing Association in Wisconsin, where the herds headed by a purebred bull average 80 pounds more fat per cow annually than herds which do not have a purebred bull at the head. Then confirm your practical observations with data of scientific accuracy obtained by scientific men at the Iowa Experiment Station. That institution made a most thorough study of what a purebred dairy bull will do on scrub cows, both in the appearance of the offspring and in their production. Here is what they found: Five scrub cows in 23 periods of lactation produced an average of 3,660 pounds of milk and 172 pounds of fat (decimals carried as units or disregarded). The daughters of these scrub cows by purebred bulls (Holstein, Guernsey and Jersey) in 21 lactations produced an average of 5,999 pounds of milk and 261 pounds of fat. Their daughters by purebred bulls in six lactations produced an average of 8,402 pounds of milk and 358 pounds of fat. The per cent of increase credited to the purebred bulls used for the first cross was 64 per cent milk and 52 per cent fat, and the second-cross heifers gave 130 per cent more milk and 109 per cent more fat than their scrub grandams. The increase in milk alone in the two generations was 4,742 lb. per cow. Even at such a low price as $1.50 per 100 pounds, this milk was worth $71.13, which is more than 7 per cent interest on $1,000. Still more is added to the return in the increased value of the progeny. Do purebred bulls pay? Ask, rather—can any dairy farmer afford not to use a purebred bull in the face of such facts?—*The Field.*

"Ulrich Egg has had his name changed and is doubtless crowing about it," says an exchange that apparently doesn't know that eggs have nothing to do with the crowing.

"Will this lip rouge stand kissing?"

"I really don't know, miss," said the urbane drug clerk, "However, we are always willing to test our goods."

Insurance Agent—"Now that you are married I suppose you will take out a policy?"

Newwed—"Oh, no, I guess not. I don't think she's going to be dangerous."

The fellow who is driven to drink doesn't need a chaser.

Treat Her Fair

CONSIDER the dairy cow, she is the mother of prosperity; treat her with the respect and consideration that is her due, for literally speaking from her do great blessings flow. Feed her well that she may give you bounteous return and shelter from winter's biting blasts and summer's scorching heat. Drive her not with a cudgel or a brick-bat nor kick her in her stall. Meek is her manner and great is her desire and power to do much good. See that she liveth in cleanly quarters and keep from her immediate presence all filth and barnyard waste that she may reward you with a fluid sweet and clean in life-giving elements. Hers is a great power for good and always will she reward him that doth give unto her the maximum of care and attention. Consider the dairy cow—she is worth consideration.—H. E. JUNG, *in Pacific Dairy Review.*

The husband arrived home much later than usual "from the office." He took off his boots and stole into the bedroom. His wife began to stir. Quickly the panic-stricken man went to the cradle of his first-born and began to rock it vigorously.

"What are you doing there, Robert?" queried his wife.

"I've been sitting here for nearly two hours trying to get this baby to sleep," he growled.

"Why, Robert, I've got him here in bed with me," replied his wife.

A film star, suing for divorce, says her husband didn't want her to stay in the movies, but she doesn't mention who did.

In real life many a love scene is staged to make some other girl jealous.

A Coming Holstein Centre

By Geo. A. Montgomery

FARMERS in the Linn Community, Washington County, Kansas are going into the Holstein business. Until the last few years this has been a grain farming neighborhood, but farmers are beginning to learn that this type of farming is depleting the fertility of their soil, and they are adopting dairying as a means of rebuilding and conserving soil fertility.

May 13, 1922, ninety-three head of Holsteins, thirty-two purebreds and sixty-one grades, were shipped in by farmers of the community. They came from Dodge and Jefferson counties, Wisconsin. The shipment increased the number of Holsteins in the Linn community 200 per cent. Orders have been received for more than a carload in addition to those already distributed. These orders came in to the committee in charge of shipping in the other cattle, and it is believed that an importation equally as large as this one will be made next fall.

Farmers who are buying the Holsteins are interested in getting good sires, and it is probable that a bull club

HEIFERS AT LINN, KANSAS
Some of the good Holstein heifers that will form the foundation of big producing herds in the Linn Community.

will be organized in the near future. Farmers figure that by pooling their resources they will be able to have the use of bulls with good production records back of them at a minimum cost to each cattle owner. Many of the breeders are beginners and do not own enough cows to warrant the ownership of a first-class bull. All but twenty-five of the ninety-three head went to men who never before had owned a Holstein. Seven of the men are starting with purebred Holsteins.

Henry Hatesohl, a farmer who lives near Greenleaf, was the first man in the south half of Washington County to own a Holstein. He got some grade animals nine years ago. Less than two years ago he bought eight purebred heifers at a sale at Wichita. The heifers, as three-year-olds, were in the Washington Cow Testing Association last year. The Association finished the year's work not long ago, and the eight heifers averaged 338.2 pounds of butter fat each. The lowest produced 300.4 pounds, and the highest 381 pounds. Mr. Hatesohl gave his experiences with the black and white cows at a meeting of the stockholders of the Linn coöperative creamery February 1, 1922, and this had much to do with getting other farmers in the notion of importing some Holsteins.

Mr. Hatesohl and C. R. Gearhart, extension dairyman of the Kansas State Agricultural College, were the men selected to go to Wisconsin to buy cattle. They visited 130 herds in that state and bought cattle from 35 of these. All the purebreds are from proven bulls, and many are from tested cows. All were from herds free from tuberculosis.

The Exchange State Bank of Linn is backing the importation of cattle, and financed those who needed it. They took notes drawn for 18 months, and require that the purchaser pay one-eighteenth of the face each month until the debt is cancelled. H. J. Meierkord the cashier, is an owner of Holsteins.

The Linn coöperative creamery last year bought 128,427 pounds of butter fat. This is twice as much as was produced in the community before the creamery was established. The creamery is capitalized at $15,000 and last year paid an 8 per cent stock dividend and $5,265.53 in patronage dividends. The patronage dividends were paid at the rate of 4.1 cents for each pound of butter fat delivered. The creamery buys only from stockholders which now number 219. There are 300 shares of stock and most of the patrons own only one share.

The cover illustration on this issue of THE HOLSTEIN BREEDER AND DAIRYMAN shows a picture taken at a recent demonstration of judging cattle at Linn. These demonstrations are of great interest to the dairymen and dairywomen of this community who eagerly welcome the opportunity to learn the points of a good animal and how to select the best. The other illustration is a photograph taken of some of the heifers brought from Wisconsin and, while only a snapshot, gives some idea of the quality of the animals and their attractive appearance. As these animals are all from herds that are tuberculosis free, it can be seen that the Linn community are starting right and that, in the not far distant future, dairying and the breeding of purebred Holstein-Friesians are bound to bring much more wealth to this section of the United States.

June

We hail the glad and joyous June,
The month when nature seems in tune,
The glad and happy springtime past
Gives place to summer here at last.

We seek the woods, the brook, the rill,
The little nook so meek and still,
On every hand we find surprise as
Nature's wonders meet our eyes.

We bid the wedded pair good-bye,
We grasp the bridal wreath, we sigh,
May coming months bring forth desires,
Fulfilled with all this June inspires.

When people claim that they can see through you, it it just as well to have a clear conscience.

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

June 8, 1922

The Holstein Breeder and Dairyman **was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.**

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Extension Work We Should Do

DAIRY Breed Associations at different times have spent a great deal of money advertising the good qualities of their favorite animals. All the leading dairy breeds have, at some time or other, attempted extension work of this kind.

It is the opinion of many disinterested observers that much of the money and time spent has been practically wasted as far as the general owners of common cattle are concerned, and it is to this great force rather than to those who already have purebred cattle that we must look for the future expansion of the Holstein breed. It is of little value to themselves or to their business for the purebred owners to get together at banquets, entertainments, etc., and tell *each other* of the good points of their favorite breed and of the success that may be attained by engaging in the purebred business and keeping registered cattle. Such a procedure is very much on the same order as that of an old church whose membership never do any proselytizing, contribute to any missionary work, or allow the younger generation to join.

When the owners of purebred cattle can tell those who do not know that purebreds produce not only more, but at a lower net cost—more economically—they are building for expansion of their business when they can back up their assertions by facts and figures compiled by disinterested observers.

The statistical experts of the United States Department of Agriculture have analyzed the census figures relating to herds of dairy cattle headed by purebred sires and the producing capacity evidenced by such herds. They have taken the 48 states and have arranged them in four groups, ranking them in the order of percentage of purebred herd headers. The first group of 12 states show an average of 51% of dairy purebred bulls and the average production of the milk in these dozen states is 4,068 lb. The second group of states, which, by the way, includes several of those we think of as the great dairy states, show an average of 30% of purebred dairy herd sires and an average production of 3,375 lb. milk, or a difference of nearly 700 lbs. Just as striking is the difference between this group and group number three, which have only 19% of dairy herd sires and an average production of 2,761 lb. milk. Here we have a drop of a trifle over 600 lb., which when you consider the entire number of cows in a state indicates that such states labor under a material handicap when meeting the competition of their sister states where better dairy practices are in vogue. Group number four has only 12% of dairy bulls purebred and the average production of the dairy cows in this group is 2,087 lb. milk, or only a trifle over half the amount shown for group one.

The law of averages is one of the great fundamental facts of life and business and works with unfailing accuracy. An insurance expert cannot tell you how long any one man will live but he can take a group of one thousand men, selected at random, and tell you very closely how many will die each year. This national investigation shows the average production of the cows in every state in the union and the correlation between such production and purebred dairy herd sires.

That it pays to head a dairy herd with a purebred sire is a maxim that has been told many times to owners of dairy cattle. Examples have been taken from the records of cow testing associations and from facts gained in the prosecution of many a so-called dairy census among patrons of creameries, cheese factories, and milk shipping stations. This nation-wide investigation has confirmed the deductions of students of agricultural industry, who certainly are indebted to the Department of Agriculture experts who have so painstakingly worked out these statistics.

Stop, Look and Listen!

IN the legal proceedings brought by Mr. Paul T. Brady, a prominent breeder, New York business man and member of the Holstein-Friesian Association of America, we find reflected the timely warning uttered by Judge Peasley during the annual meeting held at Syracuse in 1921, which, like all previous warnings, was entirely ignored by the politicians in control of the Association's affairs.

While it is regrettable that the Holstein industry in general and the small breeder and dairyman in particular will suffer more or less from the publicity attendant upon a court proceeding of this character where official delinquencies are brought to light, we are not sure but that the ultimate results may be beneficial to all.

It is quite clear that, when the Holstein-Friesian Association of America was organized under Chapter 333 of the Laws of 1885, it was provided that its affairs should be administered by a Board of *six directors*.

When the Association was re-incorporated in 1914 under the Membership Corporation Law of the State of New York, *no change in the number of directors was made,* and the certificate filed named the six directors who were to serve until the next annual meeting.

It is plain, and a Judge of the Supreme Court of the State of New York has said, that notwithstanding the election of nine directors from 1914 up to 1919, there was no time during that period when the Association was legally entitled to have more than six directors.

At the Philadelphia meeting of June, 1919, as a result of political manipulation and the urgent demands of the Aitken machine, a resolution was put through changing the number of directors from nine to sixteen; and it was at this same meeting and by the same method that the Board of Directors so elected voted a salary of $12,000.00 a year to D. D. Aitken and made James Reynolds of Ohio, who has been a member of the Association scarcely a year, Chairman of the Executive Committee.

It was at the Philadelphia meeting that the transfer fee was raised from 25 cents to $1.00 although the proposed resolution printed in the call provided that it should be raised from 25 cents to 50 cents. It was during this year that Aitken began his "whirlwind campaigns" and that $140,000.00 was spent in so-called "extension work." It was in 1919 and 1920 that D. D. Aitken drew from the Treasury of the Association something like $33,000.00, being $24,000.00 for salary and the balance for office rent, hotel bills, traveling expenses, stenographers' fees and office furniture.

And now—after due warning—after the expenditure of thousands of dollars of the money paid into the Association Treasury by the members for registration and transfer fees; after the small breeder, whose interest in the Holstein industry is because he breeds cattle for a livelihood and not as a hobby, finds the value of his cattle and the price of milk at the lowest point known in years, he sees the Association—*his Association*—attacked and made the laughing stock of other breed organizations because of the incompetency, and inefficiency of its high salaried and expensive officers in the administration of Association affairs.

It is not the purpose of the BREEDER AND DAIRYMAN at this time to anticipate what the results of this action brought by Mr. Brady in the Supreme Court of New York County may be; or what the Court may direct shall be done. The affidavit made and signed by Mr. Brady upon which the preliminary court order was granted and which is printed in this issue of the BREEDER AND DAIRYMAN in full, is surely a scathing indictment of official incompetency in the Holstein-Friesian Association and the sooner such is wiped out the better.

If we have made mistakes let us admit the fact frankly, and rectify them. Let us set our Holstein house in order. If we are to use our Association power to stamp out "washed sales," "crooked records" or "fictitious prices," or to compel the doing of those things which are set forth in the original articles of incorporation as being the legitimate purpose of our Association, let us be sure that no man can raise his hand and make a defense for wrong doing the illegality of Association management.

In other words, the BREEDER AND DAIRYMAN wants to see the affairs of the Holstein-Friesian Association administered honestly and economically in the interests of the men who milk their own cows. We want to see *the gross extravagances of the past three years abolished.* We want to see the power to manage its affairs vested in men whose honesty and ability are beyond question, and to have the small breeders who are the backbone of the Association recognized as the ones whose interests should at all times be foremost in the minds of those clothed with the power of Association management. We want to see all illegalities corrected and the law obeyed. We want to see the right of every member respected and protected so that he may have the fullest power of expressing his will in the direction of Association affairs.

Mr. Brady's action may be, after all, a blessing in disguise. Let us hope it may prove so to be. In any event, let us hope that wisdom may come from experience, even though it may be costly, and let us hope that the sun of political manipulation is going down behind the hill "hypocrisy" forever, and that a new day will soon dawn for the small breeders and dairymen who constitute fully 90% of the Holstein-Friesian Association.

Shall We Test Our Entire Herds?

OUR esteemed contemporary, "The Field" says that dairy breeders may soon have to consider a recasting of Advanced Registry classifications in order to give the owners of big producing herds a broader basis of measuring the productive capacity of their cows. "Is not the next step the Advanced Registry testing of the entire herd? The cow testing associations are pointing the way and where purebred herds are members of such associations, it would be only a step toward official recognition by the breed association."

There is much merit in this proposition. There are many herds in which each cow is put into cow testing association work as soon as possible. Why not an Honor Roll for herds that have a general average above a certain minimum? The Field has taken the pains to consult with a number of authorities on animal breeding, who say the idea is sound.

The raising of the general average is far more important than any outstanding performance, this is a general rule of universal application. An increase of only a few pounds for every cow in each dairy in a state means more to the economic wealth of the state, the dairy interest and the entire country than does the marvelous performances of a Segis Pietertje Prospect or a Bella Pontiac, although far less spectacular.

"Nobody can say my brother hasn't made good. He began at the foot and worked up to the top."

"He's a congressman, then?"

"No, but he began as a bootblack and now he's a barber."

Teacher (after spending twenty minutes teaching the pronunciation of "vase")—"What do you see on the mantlepiece at home?"

Jackie—"Father's feet."

THE CABANA CASE

(*Continued from page 361*)

tion and that it worked a positive money loss to every man engaged in the breeding of purebred Holstein cattle.

We are just as clearly of the opinion that the extensive publicity given this matter was for the purpose of covering up certain things that were going on within the Association by way of irregular practices, improper expenditure of money, the enormous sums paid out for $12,000 Presidents, and so-called "extension" work, and that the whole proceeding was badly bungled from beginning to end.

We learn that Oliver Cabana, Jr., is making an extensive tour in Europe. Whether his absence will cause any further delay or not we cannot say, but for the good of the Association and the Holstein industry, THE BREEDER AND DAIRYMAN hopes to see the truth or falsity of the Cole episode quickly determined and we trust that the Board of Directors will proceed promptly to ascertain the truth, now that the court has held that they have the power to act.

The Brady Proceeding Adjourned by Request of Association Counsel

WE have just received a report from a representative of the BREEDER AND DAIRYMAN who was present at the hearing of the matter of Paul T. Brady vs. Holstein-Friesian Association, New York City, June 5, 1922, stating that the matter was adjourned for two weeks upon the request of O. U. Kellogg, Attorney for the Association.

The question of vacating the restraining order granted by Judge Tierney which enjoined the Association from holding the Annual Meeting at Kansas City came up for consideration, and the Association was permitted to hold its meeting subject to the intimation of Counsel that nothing would be done at such meeting that would prejudice the rights of Mr. Brady in the action which he has instituted to determine the legality or illegality of our Board of Directors.

We want our readers to know that they will be given the fullest report possible on this subject and at the earliest possible date.

Legal Action Restrains Delegates

LIKE a bolt from the blue comes the news to the members of the Holstein-Friesian Association of America that Mr. Paul T. Brady, vice-president of the Westinghouse Electric Company and member of the National Association since 1914, has brought an action in the Supreme Court of the State of New York asking why an order should not be granted declaring that the National Association has no legal right or authority, or ever has had, to have or elect a Board of Directors consisting of more than six members; and restraining the association's officers and directors from receiving and counting votes at the coming annual meeting on June 7th at Kansas City on the grounds that the amendment calling the delegate system into operation was illegally adopted at the special meeting held at St. Paul last October. The petition was verified May 26th and the case is set for June 5th at the County Court House in New York City.

The matter is of such supreme importance to the members of the Association that THE HOLSTEIN BREEDER AND DAIRYMAN has secured a copy of Mr. Brady's petition and is publishing it in full, so that our readers can see Mr. Brady's entire claim as duly set forth.

SUPREME COURT OF THE STATE OF NEW YORK,
COUNTY OF NEW YORK.

IN THE MATTER *of* Elections of Directors of HOLSTEIN-FRIESIAN ASSOCIATION OF AMERICA.	ORDER TO SHOW CAUSE.

Upon the annexed petition of Paul T. Brady, verified May 26, 1922, let Holstein-Friesian Association of America, DeLancey B. Armstrong, William B. Barney, John A. Bell, Jr., Albert L. Brockway, B. B. Davis, Henry F. du Pont, Thomas E. Elder, Fred F. Field, G. Watson French, Malcolm H. Gardner, Frederick L. Houghton, John B. Irwin, John M. Kelly, Frank O. Lowden, William A. Matteson, Frank L. Morris, Horace W. Norton, Jr., H. V. Noyes, Fred Pabst, James A. Reynolds, Rudolph J. Shaefer, E. C. Schroeder, Wing R. Smith, George E. Stevenson, and George E. Van Hagen show cause at a Special Term, Part I, of this court, to be held in and for the County of New York, at the County Court House, in the Borough of Manhattan, City of New York, on the 5th day of June, 1922, at 10 o'clock A. M., or as soon thereafter as counsel can be heard, pursuant to Section 32 of the General Corporation Law of the State of New York, why an order should not be granted:

I. Declaring that the said Holstein-Friesian Association of America has no legal right or authority nor has it ever had any legal right or authority to have or elect a Board of Directors consisting of more than six members.

II. Declaring the election of directors of the Holstein-Friesian Association of America for the year 1921 to be illegal and void.

III. Declaring that all of the offices of director of the said Association are now vacant.

IV. Declaring illegal, void and of no effect the amendment of the by-laws taken and had at the special meeting of the said Association held in the City of St. Paul, in the State of Minnesota, on or about the 10th day of October, 1921.

V. Restraining the said association and its officers and directors from receiving votes at the annual meeting on June 7, 1922, cast by delegates appointed or elected pursuant to the amendment of the by-laws illegally adopted at the special meeting of the Association held at St. Paul, in the State of Minnesota, on or about October 10, 1921.

VI. Staying the proposed election of directors at the annual meeting of the said Association called for the 7th day of June, 1922, to be held at Kansas City, in the State of Missouri.

VII. Directing that a new election of six directors be held within the State of New York and under the control and supervision of this court.

VIII. Giving to the petitioner such other and further relief as justice may require in the premises.

Due reason appearing therefor, service of a copy of this order and the petition may be made on each of the following non-residents, by mailing to them, on or before May 31, 1922, an uncertified copy of this order and petition, enclosed in a securely sealed and postpaid wrapper, directed to said non-residents at the addresses designated below:

Name of Non-Resident	*Address*
William B. Barney	Des Moines, Iowa
John A. Bell, Jr.	1519 Oliver Building, Pittsburgh, Pa.
B. B. Davis	1200 First National Bank Building, Omaha, Neb.
Henry F. du Pont	Winterthur, Dela.
Thomas E. Elder	Mt. Hermon, Mass.
Fred F. Field	Brockton, Mass.
G. Watson French	Davenport, Mass.
Malcolm H. Gardner	Delevan, Wis.
Frederick L. Houghton	Brattleboro, Vt.
John M. Kelly	Baraboo, Wis.
Frank O. Lowden	Oregon, Ill.
Horace W. Norton, Jr.	Old State Block, Lansing, Mich.
Fred Pabst	Oconomowoc, Wis.
James A. Reynolds	9526 Kinsman Road, Cleveland, O.
Rudolph J. Schaefer	Appleton, Wis.
E. C. Schroeder	Moorehead, Minn.
George E. Stevenson	Clarks Summit, Pa.
George Van Hagen	Railway Exchange Building, Chicago, Ill.
Frank L. Morris	Woodland, Calif.

AND IT IS FURTHER ORDERED that service of this order and petition upon each of the following defendants:

Wing R. Smith	Syracuse, New York
DeLancey B. Armstrong	Watertown, New York
H. V. Noyes	Kenwood, New York
William A. Matteson	Utica, New York

shall be sufficient if an uncertified copy of the order and petition be personally served on said defendants within the State of New York on or before June 2, 1922, and service upon said Holstein-Friesian Association of America may be made within the State of New York on or before June 2, 1922, by personally serving an uncertified copy of this order and petition on any of the persons now acting as officers of the said Association.

It appearing that the duties of directors of the Holstein-Friesian Association of America can be performed by the eight directors, whose terms of office do not expire until 1923, it is

FURTHER ORDERED, that pending the hearing and determination of this motion, the election of any further directors of said Association be and the same hereby is stayed; and it is

FURTHER ORDERED, that pending the hearing and determination of this motion, the Association shall not count any votes cast by delegates in pursuance of the amendment of the by-laws alleged to have been illegally adopted at the meeting held on October 10th, 1921.

JOHN M. TIERNEY,
Justice of the Supreme Court
of the State of New York.

Dated, May 26th, 1922.

SUPREME COURT OF THE STATE OF NEW YORK,
COUNTY OF NEW YORK.

IN THE MATTER *of* Elections of Directors of HOLSTEIN-FRIESIAN ASSOCIATION OF AMERICA.	PETITION.

TO THE SUPREME COURT OF THE STATE OF NEW YORK, IN AND FOR THE COUNTY OF NEW YORK:

The petition of Paul T. Brady respectfully shows on information and belief:

FIRST: Your petitioner is a member in good standing of the Holstein-Friesian Association of America and has been a member in good standing since 1914.

SECOND: The Holstein-Friesian Association of America (hereinafter referred to as the "Association"), is a membership corporation, organized and created by Chapter 333 of the Laws of 1885 of the State of New York. The Association was reincorporated as a membership corporation under the provisions of the General Membership Corporations Law of the State of New York by certificate filed in the office of the Secretary of State on January 2, 1914, and in the office of the Clerk of Onondaga County on January 6, 1914.

THIRD: Said certificate of reincorporation provided for six directors and designated the names and addresses of the six directors to serve until the first annual meeting thereafter.

FOURTH: The first annual meeting of the Association after the filing of the certificate of reincorporation was held on or about June 3, 1914. Three directors were elected at said annual meeting and three directors were elected at each of the annual meetings held in the years 1915 and 1916.

FIFTH: The procedure required by law to increase the number of directors from six to nine was never taken by the Association. From 1916 until 1919 the annual meetings of the members of the Association were held outside of the State of New York, and during said period nine directors, elected at annual meetings performed the duties of the board of directors of the Association.

SIXTH: On information and belief, at the annual meeting of the Association on June 4th, 1919, a resolution of the Association was adopted providing for an increase in the number of directors from nine to sixteen and at said annual meeting ten additional directors were elected before the filing of the certificate of increase of the number of directors in pursuance of Section 14 of the Membership Corporations Law of the State of New York.

SEVENTH: By the provisions of Section 14 of the said Membership Corporations Law, a majority of the directors are required to sign, acknowledge and file an amended certificate, specifying the reduction or increase in the number of directors and thereupon the number of directors shall be the number stated in said certificate. Thirty days after the election on June 4, 1919, eight directors illegally elected at said annual meeting, and three directors elected prior to said annual meeting, filed an amended certificate changing the number of directors of the Association from nine to sixteen. The election of the said directors was illegal and void because said certificate was not filed before the election of sixteen directors of the Association and it was not signed by a majority of the six directors legally authorized to act as directors at the time of the adoption of the resolution.

EIGHTH: In a suit in equity in the Supreme Court of the State of New York by Oliver Cabana, Jr., against the Association and reported in 112 Misc. 262, 271, Mr. Justice Sears in his opinion said:

> "There was no proceeding under Section 14 of the Membership Corporations Law to increase the number of directors from six to nine between the time of the filing of the certificate and the Philadelphia meeting of 1919. During that period the fundamental law of the Association limited the directorate to six. Likewise the increase of the Board at the Philadelphia meeting did not become legally effective until the filing of the certificate in the proper offices required by Section 14 of the Membership Corporations Law.
>
> "Even the certificate of increase filed after the Philadelphia meeting is insufficient, for the reason that it is not signed by a majority of the directors, but bears the signature as stated above of eight elected at the Philadelphia meeting, and of only three of the preceding directors, which latter three are themselves but de facto directors, being members of a board of nine which was only entitled to six. * * *
>
> "These interesting questions are not, however, before the court in the instant case. In order that they might be raised, the action would have to be one to test the right of the individual defendants other than Graham to hold their offices. In other words, the attack would have to be direct, while here it is collateral."

The judgment was affirmed with only a minor modification by the Appellate Division in 196 App. Div. 842, and also affirmed without opinion by the Court of Appeals in May, 1922.

NINTH: The aforesaid opinion that the number of directors of the Association had never been legally increased beyond six, was based on the evidence submitted during the trial and the record thereof will be produced on the argument of this proceeding and used as part of this petition.

TENTH: At an annual meeting held on June 1, 1921, notwithstanding thirteen directors had been elected and were illegally acting as directors, Horace W. Norton, Jr., DeLancey B. Armstrong, Thomas E. Elder and John M. Kelley were elected directors of the Association.

ELEVENTH: At the annual meeting of the Association on June 2, 1920, notwithstanding thirteen directors had been elected and were illegally acting as such, Peter Small, H. V. Noyes, William B. Barney and E. C. Schroeder were elected directors of the Association.

TWELFTH: At the annual meeting of the Association on June 4th, 1919, notwithstanding eight directors had been illegally elected and were acting as directors, James A. Reynolds, Rudolph J. Schaefer, G. Watson French, Fred F. Field, John A. Bell, Jr., Henry F. DuPont and Horace W. Norton, Jr., were illegally elected directors of the Association.

THIRTEENTH: The election of directors at the annual meeting of the Association on June 1, 1921, and each and every other election of directors of the Association since the reincorporation thereof, were illegal and invalid, because the number of directors of the Association was never lawfully increased from six directors, provided for in the certificate of reincorporation.

FOURTEENTH: On information and belief, until October, 1921, the members of the Association voted in person or by proxy, under the provisions of Section 8, Article III. of the by-laws, which authorized voting in person or by proxy, but prohibited any salaried officer or employee from voting by proxy. At a special meeting of the Association held on the 10th day of October, 1921, 960 proxies were voted by James A. Reynolds, a salaried officer of the Association, in favor of a resolution amending the by-laws and providing for voting by delegates chosen by members, on the basis of one delegate to each two hundred members or fraction thereof, residing in the several states. Said resolution amending the by-laws is void and illegal because 960 proxies were unlawfully voted by a salaried official and except for said 960 votes the resolution would have been defeated.

FIFTEENTH: An annual meeting of the Association has been called for the seventh day of June, 1922, at ten o'clock in the forenoon, for the election of eight directors and other business, and at the said meeting the Association will receive votes cast by delegates instead of members.

SIXTEENTH: On information and belief, the following named persons, whose addresses are hereinafter set forth, are now illegally acting as directors of the Association:

F. L. Morris, of Woodland, California; H. F. du Pont, of Winterthur, Delaware; John A. Bell, Jr., of 1519 Oliver Building, Pittsburgh, Pennsylvania; Horace W. Norton, Jr., of Old State Block, Lansing, Michigan; G. Watson French, of Davenport, Iowa; Fred F. Field, of Brockton, Massachusetts; James A. Reynolds, of 9526 Kinsman Road, Cleveland, Ohio; Rudolph J. Schaefer, of Appleton, Wisconsin; E. C. Schroeder, of Moorhead, Minnesota; William B. Barney, of Des Moines, Iowa; H. V. Noyes, of Kenwood, New York; Peter Small, of Chesterland, Ohio; DeLancey B. Armstrong, of Watertown, New York; Fred Pabst, of Oconomowoc, Wisconsin; John M. Kelley, of Baraboo, Wisconsin, and Thomas E. Elder, of Mount Hermon, Massachusetts.

SEVENTEENTH: The Association as of the 31st day of December, 1921, had on hand a surplus fund in excess of $300,000, and during the eight months beginning May 1st and ending December 31st, 1921, the Association expended in the regular course of its business more than $250,000.

EIGHTEENTH: The aforesaid illegal directors of the Association designate five members of the Board of Directors to act as an Executive Committee with all the powers of the Board of Directors during the recess of said Board, and a Finance Committee of three members with power to prepare budgets, estimates of expenses, appropriations, and under the direction of the Board of Directors, to invest and reinvest the surplus funds of the Association.

NINETEENTH: Your petitioner is aggrieved by and complains of the aforesaid elections and of the proceedings, acts and matters touching the same.

TWENTIETH: On information and belief, all but two of the aforesaid directors of the Association reside outside of the State of New York.

TWENTY-FIRST: The reason why your petitioner asks for an order to show cause is, that there is no action or proceeding pending in this matter and your petitioner desires a direction from the court as to the manner in which service is to be made upon the Association and the alleged directors thereof, and also because the issues raised by this proceeding should be determined before the annual meeting of the Association to be held on June 7, 1922, and there is insufficient time to give the usual notice of motion and secure a determination before said annual meeting.

TWENTY-SECOND: The names and addresses of the officers of the Association are:

President, Frank O. Lowden, Oregon, Illinois.
Vice-President, George E. Stevenson, Clarks Summit, Pennsylvania.
Treasurer, Wing R. Smith, Syracuse, New York.
Secretary, Fred L. Houghton, Brattleboro, Vermont.
Superintendent of Advanced Registry, Malcolm H. Gardner, Delevan, Wisconsin.

TWENTY-THIRD: No previous application for this or any similar order has been made.

WHEREFORE, your petitioner prays that an order be made herein:

I. Declaring that the said Holstein-Friesian Association of America has no legal right or authority nor has it ever had any legal right or authority to have or elect a Board of Directors consisting of more than six members.

II. Declaring the election of directors of the Holstein-Friesian Association of America for the year 1921 to be illegal and void.

III. Declaring that all of the offices of director of the said Association are now vacant.

IV. Declaring illegal, void and of no effect the amendment of the by-laws taken and had at the special meeting of the SAID ASSOCIATION held in the City of St. Paul, in the State of Minnesota, on or about the 10th day of October, 1921.

V. Restraining the SAID ASSOCIATION and its officers and directors from the receiving votes at the annual meeting on June 7, 1922, cast by delegates appointed or elected pursuant to the amendment of the By-Laws illegally adopted at the special meeting of the ASSOCIATION held at St. Paul, in the State of Minnesota, on or about October 10, 1921.

VI. Staying the proposed election of directors at the annual meeting of the SAID ASSOCIATION called for the 7th day of June, 1922, to be held at Kansas City, in the State of Missouri.

VII. Directing that a new election of six directors be held within the State of New York, and under the control and supervision of this Court.

VIII. Giving to the petitioner such other and further relief as justice may require in the premises.

PAUL T. BRADY,
Petitioner.

STATE OF NEW YORK, }
County of New York } ss.:

PAUL T. BRADY, being duly sworn, says that he is the petitioner above named; that he has read the foregoing petition and knows the contents thereof; that the same is true to the knowledge of deponent, except as to the matters therein stated to be alleged upon information and belief, and as to those matters he believes it to be true.

PAUL T. BRADY.

Why Not Be On the Honor Roll

THE dairyman, like every man of affairs, should study his business from every conceivable angle and should be the greatest booster of his own enterprises. In times past this has not always been the case, but to-day, throughout the entire country, there is a decided improvement.

In the great State of Wisconsin, there are 115 cow testing associations with, in round numbers, 32,000 members. Of this number there are only two associations which have arrived at the third degree. Perhaps you don't know the three degrees of dairy excellence. They are:

First—Every member uses a registered dairy bull. This is the primary step on the "road to light."

Second—Every member's wife serves real butter on the table. The dairyman has been blamed for selling his milk and cream and feeding himself and family on imitation butter. In times past this came from animal fats and by-products of the great slaughterhouses but now the "coconut cow" is the most serious competitor of the dairy animal. The dairyman who eats or purchases "oleo" supports his competitor and helps to finance the advertising of a rival business.

Third—Every member's herd is listed free from tuberculosis. It is of little value for an owner of cattle to introduce improved blood into his herd, animals with the ability to produce more at a lower cost, if, at the same time, he introduces disease which is likely to wreck his entire enterprise.

Cow Testing Association Reports

A WHALE OF A MILKER

Cow Testing Association work is revealing the fact that there are many good sires whose daughters have not had the opportunity to be entered in A. R. O. work. Perhaps the time is coming when the great breed associations will recognize cow testing association records, credit the cows with them, and give due credit to the sires and dams of the record-making animals.

One bull whose daughters are making fine records in test association work is Lothian De Kol Korndyke, who stands at the head of the herd owned by Ivo V. Otto, of Carlisle, Penna. One daughter of this bull recently produced 93.3 lb. milk in one day on *twice-a-day milking*, giving 47.7 lb. at one milking and 45.6 lb. at the second milking. This cow freshened in November, averaged 80 lb. milk a day for three months and afterwards produced practically 12000 lb. milk in six months.

Another daughter of this bull produced 10,619 lb. milk, 492 lb. butter in six months; another, 9,495 lb. in six months, yet another, 8,769 lb. in six months and a fifth daughter 2,964 lb. milk in one month. Others have done nearly as well. Lothian De Kol Korndyke is a son of K P B A Fedora King who was by King Pontiac Brookside Abbekerk and from Novelty Fedora Hengerveld, 22,946.9 lb. milk, 1,022.21 lb. butter in a year as a four-year-old. The dam of this bull is Lothian Mary De Kol 2d, 23,581.70 lb. milk, 983.98 lb. butter in a year as a senior three-year-old.

IN OLE VIRGINNY

During April, 623 cows were tested in the Fairfax County Virginia, Cow Test Association. These were in 26 herds. There were 143 cows that produced over 40 lb. butter fat, 37 more than 50 lb., 9 more than 60 lb., and 2 over 70 lb. The leading eight in order of butter fat production were all black and whites, a grade Holstein owned by J. R. McMillian of Herndon being first with 1,952 lb. milk and 80 lb. fat.

The high herd for the month consisted of 16 registered Holsteins owned by P. B. Crandall with an average of 1,271 lb. milk, 42.1 lb. butter fat. The average for the whole Association was 806.4 lb. milk and 31.6 lb. butter fat. The Association has grown from about 350 cows in December to a total of 670 cows at the present time.

FIRST AND THIRD

The report of L. D. Fairbairn shows that 268 cows were tested in the Grays Harbor, Washington, Cow Testing Association during the month of April. The average production of milk was 828.3 lb. and the average production of butter fat was 30.5 lb. There were 47 cows exceeded the 40-lb. mark. In class one, 15 cows or more milking, the Holstein herd of J. B. Ebinger of Elma led with an average of 1,357.3 lb. milk, 44.5 lb. butter fat. A Jersey herd was second and the 21-cow Holstein dairy of W. J. Berns was third with 917.1 lb. milk and 35.3 lb. butter fat. Class two, less than 15 cows, is headed by the ten-cow dairy of Ed. Valentine with an average of 1,169.4 lb. milk, 38.1 lb. fat.

The highest purebred for the month was a registered Holstein owned by W. S. Valentine, with 1,722 lb. milk, 44.77 lb. butter fat. In the grade class, J. B. Ebinger's cows took first, third, fourth and fifth places, a Valentine cow coming second.

REGISTERED HOLSTEINS LEAD

During April, 410 cows were tested in the Delavan-Lake Geneva, Wis., Cow Testing Association and of this number 40 exceeded 40 lb. butter fat, eleven produced more than 50 lb. fat. The high cow is a four-year-old registered Holstein, owned by H. F. Parks, Elkhorn, with 1,494 lb. milk, 55.3 lb. fat. Second to her was another Holstein, owned by Leon Flitcroft, of Walworth, with 1,126 lb. milk, 55.2 lb. fat.

High herd was owned by Albert Witt, of Delavan, whose nine head of registered Holsteins made an average of 1,198.8 lb. milk containing 37.9 lb. fat. C. W. Schmaling, of Delavan, had the second high herd, his 36 head of Holsteins averaging 1,028.5 lb. milk and 35.1 lb. butter fat.

LEADS IN JERSEY COUNTRY

The registered herd of Chris Lillegard, Boise, Idaho, averaged 1,348 lb. milk, 46.7 lb. fat in the Ada County Cow Testing Association. The Registered Holstein herd of C. S. & R. H. Musser, Nampa averaged 1,205 lb. milk, 41.3 lb. fat. A grade Holstein dairy owned by William Messersmith, Boise. averaged 985 lb. milk, 35.8 lb. fat for thirteen cows.

In the month there were 204 cows tested and they averaged 759 lb. milk, 30.75 lb. butter fat.

WINS MURPHY BULL

The contest between the two Door County Cow Testing Associations ended April 30th. The winner of the purebred bull offered as a prize by the Murphy Farms is Alfred Beuchner, of Sawyer, Wis., whose herd of 12 cows averaged 39.3 lb. fat per month. The prize bull is a grandson of King Segis Pontiac Count, and his dam has a seven-day record of 20 lb. butter, 469 lb. milk.

FOUR LEADING HERDS

Two cows in the Hardin County Iowa, Cow Testing Association produced more than 60 lb. butter fat, and six over 50 lb. The average production of 312 cows was 721 lb. milk, 27.6 lb. butter fat. A Jersey led with 65.3 lb. fat, a purebred Holstein, owned by Wm. Eckel, was second with 1,482 lb. milk, 56.3 lb. fat. Holsteins, either grades or purebreds, filled six of the other seven first positions. W. F. McCord, Iowa Falls, had the highest producing herd. His twenty Holsteins averaged 1,164 lb. milk, 28.6 lb. fat. Holstein herds ranked second, third and fourth, W. H Drier, Iowa Falls. holding second, C. T. Emmert, Steamboat Rock, third and J. D. Long, Union, fourth.

MERIT RIBBON WINNERS

The Northwest Farmstead, Minneapolis, Minnesota, offered merit ribbons to each of the grade cows in the Minnesota Cow Testing Associations which produced 365 pounds or more butter fat in a year. Six grade Holsteins in the South Hennepin County Cow Testing Association recently qualified, having completed their year's work January 31, 1922.

S. C. Campbell, of Hopkins, is the owner of three of the cows which produced respectively 383 lb., 369.1 lb. and 367.3 lb. butter fat. Two of the cows owned by C. A. Harrison, of Minneapolis, were Jenny, who produced 403.1 lb., and Anoka, who gave 441.0 lb. butter fat. In the herd of Pauly Brothers, Chanhassen, one grade Holstein finished her year's work with 374.8 lb.

DOUBLED THE AVERAGE

Queen Aaggie Gerben De Kol, owned by E. W. Luther of Richfield Township led the Summit County, Ohio, Cow Testing Association No. 1 for the month of March with 2,611 lb. milk, 67.95 lb. fat. The 269 cows in the 22 herds now included in the association averaged 32 lb. butter so that Queen more than topped the average.

The high herd for milk production consisted of eight registered Holsteins and was owned by C. E. Lee, Boston township, with an average of 1,258 lb. milk. The herd of Clyde Miller topped the butter fat average with 43 lb. butter.

IN MICHIGAN

A registered Holstein owned by Chester Ball, of the Alfa Stock Farm, Dowagiac, Mich., led the South Van Buren Cow Testing Association by producing 96.7 lb. butter in a month. Four registered Holsteins produced better than 60 lb. fat, ten above 50 lb. and twenty-two above 40 lb. There were 198 cows tested.

A YEAR'S DEVELOPMENT

The Dale and Hortonville Cow Testing Association has finished its first year. There were 450 cows tested during that time and of these 45 were sold for beef and 12 for dairying purposes. Two purebred Guernseys and six purebred Holstein herd sires were purchased in the association. There is only one grade sire in the 26 herds on test. Twenty-two cows produced 400 or more pounds butter fat in a year, and thirty-six produced 365 lb.

The average feed cost per 100 lb. milk of all herds in the association was 84 cents. The average cost per pound of butter fat production was $.217. The average price received was 42 cents. The price charged for silage was $7.00, corn stover $6.00, hay $18.00 and grain mixtures at current prices.

The herd of grade Holsteins, owned by Clair Earle, Medina, Wisconsin, carried off the honors by averaging 11,317 lb. milk, 374.6 lb. butter fat. The average feed cost was $.646 per 100 lb. milk and $.195 per pound of butter fat. This herd consists of eleven cows.

JUNE AGAIN

For the second month, June, a purebred Holstein owned by John Tyner & Son, heads the Lake Pepin Cow Testing Association, this time with a record of 84.6 lb. fat to her credit. In February she made 91.5 lb. and in March produced 1,922 lb. milk with an average test of 4.4 per cent butter fat.

The purebred Holstein, Johanna, owned by G. M. Dwelle, Lake City, Minnesota, is the high milk producer, making 1,938 lb. The dairy herd of John Tyner & Son led with an average production of 44.8 lb. butter fat, 1,228 lb milk. This herd is only slightly ahead of that of Nels Mattson & Son, which had an average of 42.9 lb. fat.

QUARTER OF A TON

Records of 365 lb. or more butter fat were made by 29 out of 246 cows in the Greenville Cow Testing Association during the third year of its organization. The cow with the highest record for the year was a grade Holstein owned by Fred C. Kaphingst. She produced 504.2 lb. butter fat. Mr. Kaphingst's herd of eleven grade and purebred Holsteins carried off the honors by averaging 12,561 lb. milk. The average price received for the fat was 42 cents and the cost of production was 22 cents.

THREE OVER NINETY

Twenty different animals made over 60 lb. fat in the Cedar Grove, Wisconsin, Cow Testing Association during March and every one was a black and white. Three registered Holsteins each made over 90 lb. fat in a month. D. W. Huenink owned the leaders, two five-year-olds, one that made 2,827 lb. milk, 99.9 lb. fat, and one that made 2,492 lb. milk, 95.3 lb. fat. The third high cow, owned by Camp Olson, produced 2,260 lb. milk, 94.9 lb. fat. Fifty cows each produced over 50 lb. fat in a month, and a two-year-old, owned by E. J. Huenink, has made 7,585 lb. milk, 289.9 lb. butter fat in five months, freshening on November 25, 1921. The ten-cow dairy of John Brethouwer was high with an average of 1,545.6 lb. milk, 57 lb. butter fat and the Huenink herd second with 1,631.8 lb. milk, 56.2 lb. fat.

TIED FOR FAT

The mixed grade and purebred herd of F. Dreischmeier led the Hillsboro Wisconsin, testing association for the month ending May 1st. The average was 1,030 lb. milk, 43.4 lb. butter fat. The fat average was tied by the herd of Albert Kahler, but they only produced 939 lb. milk. The Kahler herd had been in milk all winter and both high herds were fed grain.

The high cow was a grade Holstein owned by F. Dreischmeier. She was a six-year-old, who freshened in January and she made 1,525 lb. milk, 61 lb. fat. Three animals of the Dreischmeier herd were in the leading twelve.

A purebred Holstein owned by F. Havlik was in third place with the production of 1,531 lb. milk, 57.4 lb. fat.

FOUR HERDS AVERAGE FORTY

Sixty-six cows in the Leopolis-Tilleda Marion Cow Testing Association produced over forty pounds of fat for the month of March. The registered Holstein herd of E. A. Hohn led the association with an average of 1,324 lb. milk, 48.5 lb. fat. H. Juede's herd of Marion, Wisconsin, was second, N. J. Brunner's third and Hubert Maas' fourth. These four herds averaged over 40 lb. fat per head.

The two high cows were owned by E. A. Hohn, the leader making 81.9 lb. fat. E. A. Hohn had 11 cows in the 40 lb. class, Hubert Maas had four cows, and August Weisman had five.

YOUNG HERD PROMINENT

The April report of the Somerset, Pennsylvania, Cow Testing Association shows black and white cows in prominent places. A registered Holstein, owned by Albert W. Young, led with 2,643 lb. milk, 84.6 lb. butter fat. A grade in the same herd is in second place, having produced 2,322 lb. milk, 76.6 lb. butter fat; a registered cow also owned by Mr. Young is third with 1,398 lb. milk, 55.9 lb. fat, while another registered cow of the Young Dairy is fifth with 1,605 lb. milk, 54.6 lb. fat.

MAKING BIG SHOWING

During March 123 cows in the Oconomowoc Cow Testing Association produced over 40 lb. butter fat, 51 over 50 lb. The highest producing cow is a purebred Holstein owned by Paul Reid, Oconomowoc, Wis., with 1,758 lb. milk, 82.6 lb. butter fat to her credit. In three months this cow made 272.8 lb. fat.

THE WYOMING ASSOCIATION

The highest producing cow for both milk and butter fat in the Wyoming County, Pa., Cow Testing Association for the month of April is Lady Heerniga Alcartra, a registered Holstein, owned by D. M. Bartron. She produced 1,923.0 lb. milk, 69.2 lb. fat. This cow will be sold when Mr. Bartron holds his dispersal sale next October.

Charles Ace of Tunkhannock, continues to lay claim to the best herd of milk producers. His entire herd, seventeen head, averaged 1,265.8 lb. milk, 41.8 lb. fat. He is closely followed by the herd owned by Mr. Riker, of Factoryville, Pa., which had an average of 1,254.3 lb. milk, 43.6 lb. fat. Mr. Riker has several cows not entered in the association.

There are 373 cows in milk in the association, 84 of which produced more than 40 lb. fat and 20 more than 50 lb. fat; 114 produced better than 1,000 lb. milk and 61 over 1,200 lb. milk.

RAY G. SLOAT, *Tester.*

FIRST FIVE

The Holstein breeders around Quincy, Illinois, are feeling joyful because they furnished the five highest cows in their test association during April. The leader was a junior three-year-old owned by Wilbur Coe, that produced 1,911 lb. milk, 68.8 lb. butter fat. She was milked three times a day and was fed a dairy ration consisting of three pounds bran, 7.2 lb. ground oats and corn, and three pounds cotton seed meal and oil meal, together with corn silage and alfalfa hay. Four cows following her were owned by S. A. McNay, B. Terstriep, and the Soldiers' and Sailors' Home.

The leading herd consisted of eleven grade Holsteins owned by Mr. Terstriep. They averaged 1,031 lb. milk, 40.98 lb. butter fat.

IN DARIEN

The April report of the Darien, Wisconsin, Cow Testing Association shows that 31 cows produced over 40 lb. fat during the month. The leader was Ruby a grade Holstein, owned by Wirt Hyndman of Sharon. She produced 1,812 lb. milk, 72.5 lb. butter fat. Homebrook Bess Pontiac, a registered Holstein, owned by Ralph Peters was second with 1,716 lb. milk, 68.6 lb. butter fat. The high herd was owned by Mr. Peters and made 1,320 lb. milk, 43.44 lb. fat.

IN OREGON

The leader of the 66 cows on the honor roll of the Lewis County, Oregon Cow Testing Association was Linden Clara Pasma, a purebred Holstein, owned by H. Brouchard of Hanaford Valley. She made 2,025 lb. milk, 77 lb. butter fat. Nathan Hamilton's three-year-old was second with a production of 2,184 lb. milk, 67 lb. fat. There were 444 cows tested. The average production was 728 lb. milk, 39.13 lb. fat.

THE ILLINOIS ASSOCIATION

The purebred Holstein certainly carried off the honors in the State of Illinois for the month of April. Purebred black and white cows headed eleven of the associations and grade Holsteins three others. Jerseys carried off the rest. Four of the leaders each made over 92 lb. of fat in the month and all four were registered Holsteins, one being owned by A. E. Howard, Dundee; the others by Buffalo Creek Farm, Arlington Heights, Rock River Farms, Byron; and A. D. Cornue, Hebron. Black and white cows compose all or part of sixteen of the eighteen biggest producing herds that head their respective associations, the other two being purebred Jerseys.

Seven of the herds leading their respective associations, consist entirely of purebred Holsteins. W. C. Van Pappelendam's, six-cow dairy headed the list with an average of 1,711 lb. milk, 53.9 lb. butter fat.

The breed furnished nine of the ten highest producing cows of the state. Buffalo Creek Farms having two, and Rock River Farms, four. The Howard cow with 2,415 lb. milk, 99 lb. fat is the leader, Geo. Diehl Effingham owned the cow in tenth place, with 1,626 lb. milk, 78 lb. fat.

Of the ten highest producing herds in the entire state four consisted entirely of purebred Holsteins and purebred black and white cows compose part of five of the other six.

The Van Pappelendam herd is first, the E. F. Clark seven-cow dairy is second with 1,303 lb. milk, 48.9 lb. fat. Rock River Farms, have 77 cows, grades and purebred Holsteins, that average 1,154 lb. milk, 40.8 lb. fat and although this herd is in tenth place, considering the number of animals in the herd their performance reflects even more credit on the breed than does the showing made by the others, creditable as it is.

The tester's notes appended to the report are quite interesting. One of the testers tells of how he gets publicity of the records made in his association. C. J. Rieck says that a purebred Holstein calf club was organized in DuPage County and nine purebred Holstein calves placed with six live-wire boys. W. O. Tucker says that Holsteins are fast taking the places of shorthorns in the community where he operates and that production has been increased about 2,000 lb. per cow in the past year.

H. R. Fletcher tells that he is emphasizing the proving of sires through cow testing association records of their daughters and says that although several sires in use in the herds in his district are not in bull association work yet a study of the records made by their daughters are both interesting and profitable. Fred Kasserman claims to have helped in the first purebred Holstein sale by reading pedigrees telling of the record of the animal itself or of its dam. These cow testing association records helped in the sale of quite a few of the animals.

TESTING IN MISSOURI

During the month of April, 233 cows in 44 herds were tested by representatives of the Missouri College of Agriculture. Of these 52 were Holsteins in nine herds, besides four run in seven-day tests. The five leaders were all registered Holsteins. The credited production of Plum Clothilde Pontiac owned by the Pickering Farms, is 2,367.5 lb. milk, 83.643 lb. fat. Fobes Homestead Rauward, owned by S. C. Lindsey is second with 2,006.3 lb. milk, 79.251 lb. fat. Tete Ormsby Johanna, of Pickering Farms, made 2,180.4 lb. milk, 77.731 lb. fat, and is followed by Campus Lady Hengerveld, owned by the University of Missouri, with 1,853.1 lb. milk, 75.606 lb. fat. Alice Clothilde Piebe, owned by Glenn G. Davis, president of the Missouri State Association, has 1,956.7 lb. milk, 71.811 lb. fat.

Registered Holsteins held ten of the first eleven places, a Jersey being in sixth place and a Jersey in twelfth, a Guernsey in thirteenth, followed by three Holsteins so that twelve out of the first fifteen animals were black and whites.

NO GRADE SIRES HERE

Countess Boon Inka, owned by Albert Johnson, Chetek Wisconsin was the high cow in the Chetek Cow Testing Association for the month of April. She produced 88.8 lb. milk in a day 2,617 lb. milk, 83.7 lb. butter fat in a month. There are no grade sires in this association and of the 33 herds twenty-one are headed by purebred Holstein sires and ten by purebred Guernseys.

AN OHIO BEAUTY

White Beauty Pontiac, owned by Martin J. Dunn of Wakeman, led all the Ohio cow testing associations for both milk and butter fat production, during April. She produced 3,270 lb. milk, 95 lb. fat. Mr. Dunn is a member of the Butler Road Association of Huron County.

WASHINGTON COUNTY

A purebred Holstein owned by R. A. Eldridge led the Washington County, Testing Association for the month of April with a production of 2,040 lb. milk, 71.4 lb. butter fat. Cyrus Stouffer had five cows on the honor roll.

An Indianapolis woman was visiting her three-year-old grandson, and one day saw him standing before the mirror looking at himself and saying: "Yes, that's me." "Thomas," said grandmother, "you should say, 'That is I.'" Thomas looked puzzzled and then replied: "Well, it might be I, but it looks like me."

"You told me to file these letters, sir," said the new yoeman.

"Yes," returned the officer.

"Well, I was just thinkin' that it'd be easier to trim them with a pair of scissors."

FEED STEAM BONE MEAL

Many dairymen now recognize the necessity for supplying extra minerals to their dairy herds, but so many different types of minerals are available for feeding that they are more or less at sea as to which is the best kind of mineral to use. Practically all of the experiment stations and college authorities have agreed that steam bone meal is the one ideal form for supplying these necessary minerals.

This steam bone meal is not the ordinary raw bone meal, nor fertilizer material, but is a specially prepared steam bone meal that is tanked and then extracted with naptha and finely ground. The bones that are used are fresh, clean bones and as gelatine for human food is one of the products that comes from these bones, it is necessary that they be strictly clean and fresh. Cows usually object to distinct animal odors such as are found in the ordinary fertilizer bone meal, but this special steam bone meal is practically free from this animal odor such as we are all familiar with in the case of tankage or meat meal. It is usually advisable to feed this special steam bone meal mixed right in with the concentrate portion of the ration to the extent of two or three per cent.

When this special steam bone meal is fed in this way, one is insured against decreased production, due to an inadequate mineral supply, and also those who feed extra minerals, have, as a rule, had healthier and more profitable herds. The feeding of this steam bone meal is becoming quite a general practice among the more experienced dairymen.

P. V. Ewing.

READING HERD INCREASED

The directors of the Reading County Home have added to their present herd of pedigreed Holsteins, six more animals purchased from Abner S. Deysher, also of Reading. This makes a herd of 40 purebred animals at the County Home. At the meeting that decided to make the purchase of these animals, all the members of the Board were present with President Jacob Swope in the chair. A committee consisting of Messrs, McGowan, Herbine and Swope inspected the farm.

CONSTRUCTIVE PROGRAM

The Middletown Valley Grange has an interesting program for 1922. One item on the program is to have every person shipping milk into Washington a member of the Maryland and Virginia Milk Producers Association. Another of the ten points of the program is to organize a Holstein Herdsire Club. Variety tests of corn and wheat, a good roads meeting and a community picnic are other items.

In being right, some men appear
Of honesty bereft.
Their only thought lies in the fear
Of being left.

SECURE BEDDING NOW

"In time of Peace prepare for War" is a maxim that is kept in mind by business men as well as by governments. During times of plenty the big corporations set aside a part of their profits for a reserve fund from which they can draw when the business sky is overcast. During the summer months the bedding problem does not trouble the dairyman, but this is just the time to lay in a supply for the winter. At this time of the year, traffic is moving freely on the railroads. The planer mills are turning out large quantities of shavings and sawdust and make a low price so that to move these by-products.

The business dairyman will take advantage of these conditions and lay in a supply to be used when he needs it. Baled shavings can be stored almost anywhere on the farm. They take up but little room and if it is necessary to move them from one place to another it costs but very little compared to the expense and labor of moving bedding in other forms. The difference between the summer price and the winter price is considerable, shavings do not deteriorate, and it is the wise man who takes advantage of his opportunities.

SCRUB SIRES DOOMED

Participation in the better sires, better stock campaign, which is being waged by the Federal and State Agricultural authorities in coöperation, involves the signing of a blank in which the farmer lists his breeding stock and agrees to use a purebred sire for all classes of farm animals kept. In most cases these blanks are distributed by county agents.

In one day recently the Department received 182 such blanks signed by farmers in Rockingham County, Virginia, and indorsed by Charles W. Wampler, County Agent. Other large numbers received in one day from individual communities were 39 from Green County, Ohio, and 37 from Guernsey County, Ohio.

Such action by groups and clubs of livestock owners will put herds owned by entire communities on a better paying basis as scrubs and grade sires are disposed of and purebred sires are put in their places.

BLACK AND WHITES SHINE

During the month of April, 25 herds containing 286 cows were tested in the Volant Cow Testing Association, which operates in Lawrence County, Pa. Thirty-nine cows produced over 40 lb. fat, 12 over 50 lb., while 15 gave over 1,200 lb. milk. Forty-seven mature cows qualified for the honor roll as well as fifteen two-year-olds.

The leading seven animals for fat production were all black and whites, a registered HIolstein owned by D. B. Reynolds, being in first place with 1,740 lb. milk, 73.1 lb. fat. Mr. Reynolds also had the holder of the sixth place. Grade Holsteins, owned by Alford Bros., held 2d, 3d, 4th, and 5th places, with a registered Holstein, owned by C. M. Hartzell, in seventh, with exactly 54 lb. fat.

The leading five two-year-olds were also black and whites, a registered Holstein owned by R. B. Stoner, being in first place with 939 lb. milk, 38.5 lb. fat. A grade belonging to Alford Bros., was second with 38 lb. fat and registered Holsteins, owned by D. B. Reynolds filled the next three places each one producing over 36 lb. fat in the month.

HOLSTEIN LEADS IN CUMBERLAND COUNTY

Holsteins made a good showing in the Cumberland County, Pa., Cow Testing Association for the month ending May 15th. The Supervisor, A. A. Raudabaugh, tested 259 cows in 26 herds during the month. Forty-six cows produced over 40 lb. fat, 21 over 50 lb., while 42 exceeded 1,200 lb. milk. The leader was a registered Holstein, owned by A. R. Loudon, she making 2,271 lb. milk, 83.3 lb. fat. A registered Holstein owned by G. W. Strock, was second with 1,440 lb. milk, 67.7 lb. fat. A grade Holstein was in third place while one of Ivo V. Otto's registered cows was fourth with 66.4 lb. fat. Among the ten high producing cows is a Milking Shorthorn in eighth place, the rest are black and whites. The G. W. Strock herd was represented by two purebreds, Ivo V. Otto by two and E. H. Otto by one, in the first ten.

BRENTWOOD CHAMPION FRESH

Carnation Matador Pontiac which Abner S. Deysher, Reading, Pa., purchased at the Brentwood Sale last March, has freshened with a nice bull calf. We are sorry to say that she milks from but three quarters, one of her front quarters being dry. She produced 23.125 lb. butter, 401.9 lb. milk in seven days averaging 4.6% fat. Those who attended the Brentwood Sale will remember the individuality of this fine daughter of Matador Segis Walker. She crowned a number of notable show ring performances by winning grand championship at the Brentwood Show and during the sale, Mr. Deysher purchased her for $4,200. Her calf was by Carnation Pietertje Colantha a son of the world's champion year milk producer, Segis Pietertje Prospect.

NEW STATE CHAMPION

Redfield Daisy Girl 592,757 is the new state champion junior two-year-old of South Dakota. Her record of 26.48 lb. butter from 400.3 lb. milk places her ahead of the former champion Plentywood Segis Walker with 26.15 lb. She is a member of the herd of the Redfield State School and Home, which has the largest herd of purebred Holsteins in the State, the largest number of cows in the advanced registry and is State and Federally accredited. The new champion is a daughter of Redfield Korndyke Maid, grand champion at the 1921 South Dakota State Fair, a cow that has produced over 100 lb. milk in a day.

DRASTIC T. B. RULE

An order recently issued by Dr. J. H. Mercer Kansas State Livestock Sanitary Commissioner, says that all cattle sold in the state for dairy purposes must have a tuberculin test record showing that animals have been tested by a State or Federal accredited veterinarian not more than 90 days previous to the date of sale.

It is further stated that dairy cattle cannot be sold at private or public sales except under a tuberculin retest guarantee which must be applied by a veterinarian holding a commission from the Livestock commissioner or the Federal department, such test to be given not less than 60 days or more than 90 days from the sale. If reactors are discovered, they will be returned to the original owner or slaughtered. In each case the livestock commissioner is given supervision of the disposal of the animals.

In other words, dairy cattle must have a clean bill of health in order to be sold anywhere in Kansas. The plan is to eliminate completely the tubercular cow from the State. Allen County, Kansas, already has such a regulation which was put in force by the Board of Commissioners of Allen County early in February last year.

A GOOD SHOWING

In the herd of M. C. Kronemann of Fergus Falls, Minn., a number of good records have recently been made. The four-year-old Tillie Cloverlawn made 948.05 lb. butter in a year. Luella of Meadowlawn produced 804.08 lb. butter and 20.696 lb. milk as a six-year-old. The two-year-old King Korndyke Pontiac Lass Queen made 682.25 lb. butter and 17,150.4 lb. milk in 305 days. Lady Crown Hill as a two-year-old made 602.15 lb. butter and 14,122.6 lb. milk in 305 days. The four-year-old Crown Hill Artis 6th in 305 days produced 643.01 lb. butter and 15,236.5 lb. milk and the two-year-old heifer Piebe Rue Johanna is credited with a 10-months record of 573.09 lb. butter and 15,378.8 lb. milk.

MADE A STATE RECORD

The Wisconsin State record for thirty days butter production in the junior four-year class was recently beaten by Walcowis Ollie Butter Maid of the Dickinson Farms, Lake Geneva, with a production of 3,115.2 lb. milk, which averaged 3.48% fat, equivalent to 135.89 lb. butter. She displaces Raymondale Abbekerk De Kol with 128.2 lb. butter. She is sired by the great show bull Iowana Sir Ollie and her dam is Beauty De Kol Butter Maid Segis, a 28-lb. three-year-old granddaughter of King Segis.

CLUB ACTIVITIES

BRATTLEBORO BUSINESS

During the week ending May 13th, there were 2,146 certificates of registry issued, 1,567 female and 579 male. In the same time there were 1,666 transfers issued, 1,112 female and 554 male. Twenty-six applications for membership were received.

There were 2,076 certificates of registry, 1,460 female and 616 male, issued for the week ending May 20th. There were also 1,964 certificates of transfer issued, 1,404 female and 560 male.

The female, Hattie Valdessa Pontiac No. 557,118, which is recorded in the 43d Volume has been renamed Bell Farm Hattie.

The list of prefixes reserved is as follows:
Akona, B. A. Norris, Anoka, Minn.
Bear Creek, Baldwin & Nowlin, Bennington, Mich.
Cashmere, Omer E. Foust, Blue Creek, Wash.
Creek View, Jason M. Eby, Gordonville, Pa.
Farmside, F. M. Kost, Carlisle, Pa.
Glenham, William R. Whittingham, Corbett, Md.
Haycote, Julia W. Hayes, New Milford, Conn.
Kelseyacres, J. D. Kelsey & Son, Madison, Conn.
Kenhurst, Bert Kennedy, Riverside, Cal.
Little Conneauttee, W. K. Cummings, Edinboro, Pa.
Lourett, Harold A. Ransom, Castleton, Vt.
Lowdale, Harry McCord, Walden, N. Y.
Marlen, B. F. Nelson, Minneapolis, Minn.
Marple, W. E. Gorman, Upper Darby, Pa.
May Valley, Harry Heath, Lamar, Colo.
Merrygold, Elmer Frazier, Middletown, Ind.
Randview, Ernest A. Kirchhoff, Arlington Heights, Ill.
Saron, G. P. Christiansen, Saronville, Neb.
Scholtop, Wayne S. Schultz, Palm, Pa.
Victor Dairy, H. M. Hempel, Howard Lake, Minn.
Waldon, Walter W. Hoover, Wellsville, Pa.
Walnut Drive, John De Kleine, Byron Center, Mich.

ORGANIZING JUNIOR CLUB

The Jefferson County Holstein-Friesian Breeders' Association held a meeting at the James Service Hall, Fort Atkinson, Wisconsin, around the first of May. T. L. Bewick, state boys' and girls' club leader from the College of Agriculture. Madison, spoke on the organizing of Junior Holstein Breeders' Clubs.

The breeders plan to furnish a sufficient number of straight, purebred heifer calves, with good individuality, at a reasonable price to prospective club members. He recommended that the price of these calves be fixed by a committee, appointed by the officers of the breeders' asssociation. He advocated mutual insurance, stating that the most important single principle of club work is ownership, and in order to insure ownership, the youngster should not only have the animal registered in his own name, but should be assisted in financing his project and should have the benefit of practical supervision.

CALF CLUB BOYS PUT PUREBREDS ON THE FARM

The progressive breeders of to-day realize that in the present generation of Calf Club members lies the future of the Dairy Industry and that better boys and girls as well as better live stock breeders can best be developed through club work.

The Mercer County Calf Club of New Jersey recently held its monthly meeting with every officer a boy of about sixteen years of age. Fathers of the boys were in the audience. Business moved along as though every one was an old hand at the public meeting game. Every boy present was a possessor of at least one purebred Holstein-Friesian heifer. Some of the fathers never had a purebred until their sons started. State Club leaders can point to hundreds of cases where a club boy or girl has put the first purebred on the home farm.

Holstein breeders of New Jersey believe in club work. Every boy or girl who is a Calf Club member can also be a member of the County as well as the State Association. And most of them are taking advantage of this offer.

By June 1st, several thousand boys and girls will be enrolled in Calf Clubs in the United States. The Holstein-Friesian Association of America in coöperation with the State Club leaders and the State Holstein Associations, is helping young people everywhere to develop into better dairymen and women. Assistance in planning a club, and free literature for club work can be secured by writing to the Extension Service—Holstein-Friesian Association of America, 910 S. Michigan Ave., Chicago, Ill.

EARL J. COOPER.
Holstein-Friesian Association of America.

BY THE SIRE ROUTE

A Holstein Dairy Booster meeting was held in the City Hall at St. Clair, May 2d. S. D. Whiting told his experience in grading up his shorthorn herd by the use of a purebred Holstein sire. He is milking sixteen cows and during the month of March they brought in $320 while about 100 lb. of whole milk was kept out daily. For the first 15 days of April they brought in just a few cents over $170. He gives much of the credit to the purebred Holstein sires with which he has headed his dairy. He is a member of the Blue Earth County Cow Testing Association. Some of his grade cows milk 65 lb. a day, and two produced 100 lb. butter during the month of March as the association records show.

L. E. McMillan, County Agent, talked on the dairy cow. He said that 1,500,000 dairy cows are being kept at a loss and advised the use of purebred sires and explained the methods of cow testing associations. He said it was necessary to advertise dairy products, milk has been known to save the lives of many people and that little was said about it, while on the other hand patent medicines, in many cases of little value, were advertised broadcast and much money was spent for these remedies.

J. C. Marlow, secretary of the Blue Earth County Holstein Association, and E. A. Boie, cashier of the National Bank of Commerce, Mankato, and G. Hubner, cashier of the St. Clair State Bank, urged coöperation of the town and country.

BREEDERS COMBINE

The livestock breeders of Madison County met in Fredericktown, Missouri, early in April and organized a county-wide breeders' organization, with T. S. Kinder, a breeder of Holsteins, as president; C. L. Witner, a breeder of Herefords, vice-president; and John Wiegenstein, a breeder of Jerseys, as secretary-treasurer. This association has for its purpose the improvement of livestock in Madison County and the development of the county livestock show. According to H. M. Garlock, of the Missouri College of Agriculture, this association is the direct outgrowth of last year's campaign for better stock. During the past year nine purebred bulls and twenty purebred females were brought into Madison County.

SIRE CLUB OWNERSHIP

The Ottowa County Holstein Club was organized October 21, 1919, at Oak Harbor, Ohio. The organizers were L. L. Herring, C. F. Biehler, Fred Allen and Dr. R. D. Heller.

Shares were sold for $50 each. There are now twenty-nine members, most of whom own two shares. The first bull purchased was King Valdessa Fayne Beets, 296,291. He is now three years old and during the year and one-half he has been owned by the club at least 100 calves have been sired by him. This bull is a son of King Valdessa Pontiac, whose daughters are making such splendid records in the Bell herd. His dam, Johanna Fayne Beets, made 27.32 lb. butter in seven days as a senior four-year-old. The junior bull, King of the Pontiacs Son 9th, 344,960, is a year old, and weighs 1,000 lb. His dam, Elm Side City Farm Maid, has completed a year record of 1,228.02 lb. butter, 27,671.9 lb. milk. The sire's dam, Pauline Brightview, has a year record of 25,606.1 lb. milk, 1,119.91 lb. butter made in strictly official test.

The bulls are under the supervision of Veterinary Doctor R. D. Heller, C. F. Biehler, Rock Ridge, is president of the club, and the secretary is L. L. Herring, who is also president of the Ottowa County Farm Bureau.

FIRST IN COUNTY

About forty Holstein breeders and Calf Club boys met at Somerville, New Jersey, late in April. The first junior Holstein Association was formed in the county, Secretary Bartlett being the chief organizer. The New Jersey idea is for the county association to sell each boy and girl club member a membership in the county organization at fifty cents a year until the younger member becomes of age. The juniors are part of the county association but have their own officers and direct their own meetings. The principal speakers on organizing were Henry Schmidt, State Holstein Chairman of Club Work, Charles Parker, president of the Mercer County Juniors, Eugene Drake, secretary of the Mercer Club, and Dr. R. N. Gordon Darby, a veterinarian located in Somerville. Dr. Darby talked on herd efficiency and various subjects relating to breeding together with remedies for some of the problems that arise.

PLAN BOOSTER DAY

At the annual meeting of the Muskingum County Holstein-Friesian Association held at the Farm Bureau office of Zanesville, Ohio, May 3d, officers were elected as follows: President, Charles D. Paxton; vice-president, Elba Howell; secretary and treasurer, G. K. Browning. Walter Redman, Ralph Rehl and County Agent Barnhart were appointed as a committee to draft a constitution and by-laws. It is planned to hold a Holstein Booster Day on June 1st, with an all-day picnic on the farm of Charles D. Paxton.

CANADIAN RECORDS

The list of Canadian records reported during April showed two 30-lb. mature cows, two senior four-year-olds over 30 lb., a 34-lb. senior three-year-old, and the official confirmation of the 36-lb. record made by the senior two-year-old Echo Sylvia Laura.

Roxie Valdessa Posch, owned by A. N. Chambers, Salford, Ontario, produced 664.2 lb. milk, 30.21 lb. butter in seven days. Raymondale Abbekerk made 658.7 lb. milk, 30.12 lb. butter in seven days. Flanders Pontiac Segis Princess heads the senior four-year-old class with 706.3 lb. milk, 33 lb. butter in seven days and 2,639.4 lb. milk, 132.49 lb. in thirty days. She is owned by E. G. Stevenson, Amherstburg, Ont. Richfield Korndyke Segis made 540.8 lb. milk 30.88 lb. butter; Spotty Posch Hawthorne made 504.7 lb. milk, 26.35 lb. butter, and heads the junior four-year class.

The Chambers herd furnishes the leader of the senior three-year-old class in Echo Sylvia Pontiac with 767.5 lb. milk, 34.7 lb. butter in seven days, and 2,841.5 lb. milk, 137.82 lb. butter in thirty days. She is followed by Lakeview Rattler 9th with 559.6 lb. milk, 26.91 lb. butter. This makes at least seven tested daughters for old Lakeview Rattler, who herself has a seven-day record of 37.54 lb. butter, 831.25 lb. milk. The daughters of this cow were named after their dam and Lakeview Rattler 7th is the only one that does not, so far, have an official record. Clyde May Echo Pontiac heads the junior three-year-olds, with 473.8 lb. milk, 27.46 lb. butter. She is a member of the Avondale herd. The sensation of the report is the record of the Canadian champion senior two-year-old, Echo Sylvia Laura. It is claimed that she is the world's champion for heifer with first calf. Her picture appears in the May 8th issue, page 292, of THE HOLSTEIN BREEDER AND DAIRYMAN.

Springbank Snow Countess leads the junior two-year-old class with 484.5 lb. milk, 28.72 lb. fat in seven days, and 1,966.2 lb. milk, 115.25 lb. butter in thirty days. She is owned by T. H. Dent & Son, Woodstock, Ont.

During the month long time records were completed by 63 cows and heifers. In the 365-day division four mature cows exceeded 1,000 lb. butter and three over 26,000 lb. milk. Jemima Johanna of Llenroc 2d, owned by W. C. Houck, Chippewa, Ont., made 29180 lb. milk, 1,168.75 lb. butter. She is a daughter of Jemima Johanna of Riverside 30,373 lb. milk, 1,280 lb. butter. Jemima Johanna of Llenroc 2d and her dam now hold the world's record for milk production for mother and daughter.

Sunnybrook Annie Bell, owned by W. G. Gooderham, Toronto, Ont., produced 26,951 lb. milk, 1,133.75 lb. butter; and Gertrude Jean De Kol is third with 26,554 lb. milk, 1,051.25 lb. butter.

Pontiac Choice Goods leads the four-year class with 24,170 lb. milk, 950 lb. butter and is owned by Dr. A. A. McLachlan Rosthern, Sask. Raymondale Helena, owned by D. Raymond, Vaudreuil, Quebec, leads the three-year class with 16,713 lb. milk, 781.25 lb. butter. Her stable mate, Raymondale Duchess is the head of the two-year class, with 19,072 lb. milk, 896.25 lb. butter.

Queen Beulah in the 305-day division, makes a new high Canadian record in the mature class, 21,284 lb. milk, 957.50 lb. butter. She is owned by Dr. H. A. Clark, Brockville, Ontario. Spirea Belle ties the high record in the four-year-class with 17,276 lb. milk, 727.50 lb. butter.

The Houck stable furnishes another good one in the three-year-old, Llenroc Johanna Rue Pontiac, with 14,745 lb. milk, 636.25 lb. butter. The two-year-old class also shows a new high record made by Lusette with 12,161 lb. milk, 615 lb. butter. She is owned by Geo. Ed. Houle, Nicolet, Quebec.

GIRLS WIN FIRST AND SECOND

It is estimated that more than 800 people attended the round-up and sale of the St. Charles County Calf Club which was held at St. Charles, Missouri, on April 22d. Sixty-four boys and girls, from all parts of the county, were members and forty-one of them were there with their calves and others would have been there but for the bad roads due to the recent heavy rains. The judges were Glenn Davis, president of the Missouri Holstein-Friesian Association and E. M. Harmon, Extension Dairy Specialist of the Missouri College of Agriculture. Both pronounced this the best calf club they ever knew of. The three prizes were won by residents of Cottleville, Corine Hillenkamp winning first prize of $25, Miss Adele Arras, second prize of $15 and Fred Hoffman, third of $10. Each member was required to keep the record of the time spent in caring for the animal, the ration fed, the cost and the gains made. The story of the calf as well as the type, individuality and condition entered into the placing of awards.

The calves were selected by a representative of the Missouri Holstein Association. Among them were five purebred bulls, of which three were in the sale. Three calves died but the loss was covered by insurance. The judging was followed by a parade after which there was an auction, Henry Achelpol, of Orchard Farm, donating his services as auctioneer. Prices ranged from $50 to $300, which was obtained for the Hillenkamp heifer, which also won first in the community show last year.

WRITE OR WIRE FOR TERMS AND DATES

MAKING A START

Public sales have a decided influence on the building up of the breed. Oftentimes men who have a purebred herd sire but no purebred females attend these sales and when a heifer or old cow is selling at what they believe is a low price they put in a bid and, if successsful in obtaining the animal, make a start in the purebred business. At the sale of the Cumberland County Holstein-Friesian Breeders the representative of THE HOLSTEIN BREEDER AND DAIRYMAN rode from the sale in the same seat as Geo. E. Nilson, of Boiling Springs. The freemasonry that is prevalent among all interested in the black and white breed started conversation immediately. Mr. Nilson bid off three heifers at this sale and we found that he had only one other heifer calf besides a herd sire of Alcartra breeding. The animals Mr. Nilson secured were two yearlings, granddaughters of King Pontiac Alcartra Veeman, a son of King Segis Pontiac Alcartra, from a 29-lb. daughter of King Veeman Hengerveld, and another yearling carrying quite a little Korndyke blood.

CASH DEAL

One of the largest cash transactions of registered Holsteins in Tulare County, Cal., was a recent sale of seven heifers made by F. S. Borror and Son to P. M. Longan, owner of Toteco Stock and Fruit Ranch. All seven of these heifers are bred to Sir Aaggie Meade whose three nearest dams have year records averaging 1,229 lb. butter. There are two daughters of Sir Aaggie De Kol Acme 2d whose three nearest dams average nearly 1,200 lb. in a year, two daughters of Segis Pontiac Abbekerk a 31-lb. bull for which R. C. Sturgeon paid $3,200 and two daughters of Prince Gelsche Walker Alcartra. All these heifers will be given official records and then started on year records under the care of Mark L. Borror as soon as they freshen.

Young Bull Sale

SEVEN Selected Bulls consisting of one Guernsey and six Holsteins will be sold at Public Sale in the Stock Judging Pavilion at the Pennsylvania State College,

Thursday, June 15, 1922

at 4:00 P. M.

The Guernsey and one Holstein are now ready for light service. All bulls offered are good individuals from dams with high yearly records and will make creditable herd sires.

Nov. 7-8-9—Sedalia, Mo., Pettis County Holstein-Friesian Co.

CUMBERLAND COUNTY SALE

The fifth annual sale of the Cumberland County Holstein-Friesian Breeders was held at Carlisle, Penna., May 23, in McHenry's Sale Stables. It was a beautful day but it was the general opinion that this worked to the disadvantage of the event because many of the farmers did not wish to lose the day and were planting corn instead of attending the sale. Two hundred or more did attend the sale, however, and a number of bargains were picked up by those who were on the alert.

The honors of the sale were carried off by the consignment of W. A. Woods, four of whose animals brought $300 or better. Velstra Wayne Burke, an eight-year-old cow, topped the sale, being struck off for $327.50 to W. E. McMeen, Port Royal. She is a granddaughter of Christopher Columbo, son of De Kol 2d's Butter Boy 3d, from Pontiac Columbo, one of the great daughters of Hengerveld De Kol. Mr. Woods led Tranquillity K A Jennie, a three-year-old daughter of Korndyke Abbekerk, with a 20-lb. record made as a two-year-old, into the ring with her daughter, a yearling, Ormsby Jennie, sired by King Ormsby Abbekerk Helena. The preference of either was struck off to D. E. Witherspoon, Chambersburg, for $307.50. He took the mother and the heifer was started off again with a first bid of $100. She went for $325 to W. E. McMeen. Sunshine Cornucopia Girl, who had just closed a seven-day record of 22.47 lb. butter, 498.20 lb. milk, went for $300 to L. D. Weary, of Mechanicsburg.

The top price for a male was $262.50, obtained for Huntsdale King Ormsby Echo. This bull was only four months old, but he was a very fine one, well grown and nearly all white. He was consigned by the Huntsdale Stock Farm and is sired by King Ormsby Abbekerk Helena who is Wood's herd sire and was from Colantha Echo Korndyke, a large handsome cow, with a seven-day record of 27.28 lb. butter, 589 lb. milk. Both sire and dam were splendid individuals. The son was purchased by J. H. Lear, of Carlisle.

Other good buyers were S. Page Cline, Shippensburg and C. J. Degen & Son, Mifflintown. Forty-two animals brought $5,154, an average of $122.71. This included small bull calves and a large number of heifer calves. The animals were all of good size and condition and, although there were not many A. R. O. records, yet the cow testing association records that were given with the animals showed that they were producers. The pedigrees were read by S. R. Miller; A .A. Raudabaugh, supervisor for the testing association, told of the test association records and clerked the sale, while Geo. Deitch was auctioneer.

The animals bringing $125 or more with the names and addresses of their purchasers follow:

Consigned by J. H. Lear, Carlisle.

3	Venus Jewel Segis Prilly, 4 yrs., S. Page Cline, Shippensburg	$212 50
12	Queen Korndyke Johanna Abbekerk, 4 yrs., C. K. Fertig, Dauphin	140 00

Consigned by W. A. Woods, Carlisle.

15	Ormsby Jennie, 1 yr., W. E. McMeen, Port Royal	325 00
16	Tranquillity K A Jennie, 3 yrs., D. E. Witherspoon, Chambersburg	307 50
17	Sunshine Cornucopia Girl, 7 yrs., L. D. Weary, Mechanicsburg	300 00
18	Velstra Wayne Burke, 8 yrs., W. E. McMeen	327 50
19	Tranquillity Ormsby Fayne, 2 yrs., L. D. Weary	190 00

Consigned by E. C. Ludt, Carlisle.

21	Madaline Fenwick Jones 3d, 8 yrs., S. Page Cline	152 50
23	Ormsby Pledge Korndyke, 2 yrs., H. L. McMeen	157 50

Consigned by Huntsdale Stock Farm, Huntsdale.

31	Huntsdale King Ormsby Echo, 4 mo., J. H. Lear, Carlisle	262 50

Consigned by J. M. Hemphill, Shippensburg.

35	Cornucopia Prilly Janet, 3 yrs., S. Page Cline	175 00
37	Artis Katrina Colantha, 2 yrs., C. J. Degen & Son, Mifflintown	150 00

Consigned by William S. Ker, Carlisle.

38	Windsor Hill Wirdum De Kol, 3 yrs., S. Page Cline	170 00
39	Windsor Hill Cornucopia Korndyke, 3 yrs., E. H. Otto, Carlisle	135 00

Consigned by Ivo V. Otto, Carlisle.

41	Boiling Springs Aaggie Eveland, 4 yrs., D. E. Witherspoon, Chambersburg	165 00

THE PELTZ SALE

The purebred Holstein Sale held on the farm of J. P. Peltz, Chaska, Minnesota, April 17th, was very successful. Favorable weather brought out many prospective purchasers. There were about 250 people present. Four breeders of Carver County consigned 49 head and plan to hold a similiar sale each year. The bidding was active and with the exception of 17 head all the stock remain in the county. The top price of the sale was $725 which Kratzke Brothers of Cologne paid for the five-months-old heifer calf, Beauty Ormsby, a daughter of Sir Pietertje Ormsby Mercedes 37th. Mr. Peltz offered a one-half interest in two bulls, he retaining the other half-interest. Kratzke Brothers paid $500 for the half-interest in Sir Nanette Ormsby, a son of Sir Pietertje Ormsby Mercedes 37th and $260 for half interest in King Artis O. K. L. The average price for all the females of all ages was $192.64, the average price for all the males was $132.84.

The animals bringing $150 or more with names of purchasers and prices paid are:

Consigned by E. J. Atkins, Mayer, Minn.

Pearl Do Beets, R. S. Smith, Minneapolis, Minn.	$185

Consigned by O. E. Hendricks, Mayer, Minn.

Minnesota Star Segis Delilah, Geo. R. Smith	175

Consigned by Kratzke Brothers, Cologne, Minn.

Korndyke Sadie Vale Konigen, Ferd Heuer, Norwood	170
Pearl Sadie Vale Beets 3d, Axel Hansen, Savage	180
Ruby Piebe Beets De Kol 2d, J. L. Pouliat	250
Model Darius Rovilla Lad, Albert Beck, Cologne	150

Consigned by J. P. Peltz, St. Bonifacius, Minn.

Arizona Piebe De Kol, William Peltz, Waconia	300
Bairdland Pontiac Mercedes, J. B. Irwin, Minneapolis	250
Beauty Ormsby, Kratzke Bros., Cologne	725
Belle Pontiac Homestead 2d, Axel Hansen	270
Clothilde Seer Manor Ormsby, William Klatt, Mayer	150
Kosa Echo, William Peltz	300
Marge Elgin Von Count 2d, J. L. Pouliat	280
Miss Haide Ormsby, A. Hanson	210
Miss Ormsby Korndyke Doede, J. B. Irwin	255
Mustinka Queen Ormsby, J. B. Irwin	260
Pansy Alcartra, R. S. Smith	325
Taylor Pietertje Ormsby, Axel Hanson	200
T. & C. Echo Duchess Clothilde, L. Sterner	195
T. & C. Maxine Ormsby, William Peltz	150
King Artis O. K. L., One-half interest, Kratzke Bros.	260
Sir Nanette Ormsby, One-half interest, Kratzke Bros.	500

FRANKLIN COUNTY BREEDERS' SALE

Despite the fact that a large crowd, which included breeders from three different states, attended the Franklin County Holstein Breeders' Association Consignment Sale at Chambersburg, Pennsylvania, May 31, prices ruled low. The milk market was said to be the cause and was the only one apparent, as the animals were of choice individuality and were from accredited herds, or herds under Federal supervision. The day was fine, and as Colonel Baxter remarked, the only thing one could find fault with was the prices obtained. Those who wanted cattle and did not attend lost a rare opportunity.

The highest price was $205, which H. W. Small & Son, Chambersburg, paid for Hadria Korndyke, a six-year-old A. R. O. daughter of Sir Fairview Pontiac Korndyke.. She was a real dairy cow but this could be said of many of the offerings.

County Agent Knode opened the sale by calling attention to the production of the animals in cow testing association work. He said the consignments were a credit to the county and Colonel Baxter agreed with him. Some of the animals went to West Virginia, some to Maryland and the majority remained in this state. All were sold subject to a sixty-day retest. The manager of the sale and pedigree reader was S. R. Miller, with Geo. W. Baxter as auctioneer. The forty animals sold for $4,210, an average of $105.25.

The animals bringing $125 or more with names and addresses of their purchasers are:

Consigned by Chas. B. Nigh, Hagerstown, Md.

1	Aaggie Grove Butter Girl, 6 yrs., R. A. Eldridge	$150
20	S J P K Esther, 5 yrs., M. J. Brumbaugh	130

Consigned by Omwake & Speck, Greencastle, Pa.

4	S J P K Jetta, 4 yrs., Jno. M. Martin, Smithsburg, Pa.	130
6	Hadria Korndyke, 6 yrs., H. W. Small & Son, Chambersburg, Pa	205
7	Jessie Hengerveld Diota 3d, 8 yrs., M. J. Brumbaugh, Greencastle, Pa.	175
9	De Kol Maud Veeman, 4 yrs., Ray G. Kell, Chambersburg	135
13	Calamity Korndyke Netherland, 1 yr., M. J. Brumbaugh	130

Consigned by D. H. Yankey, Fayetteville, Pa.

22	Beckey Mechthilde Aaggie, 5 yrs., H. W. Shugart, Carlisle	140
24	Fayette Dairy Lilith Burke, 3 yrs., E. E. Widmeyer, Berkeley Springs, W. Va.	125

Consigned by J. Fred Davison, Chambersburg, Pa.

30	Pauline De Kol Beauty Alban, 4 yrs., P. C. Yost, Berkeley Springs, W. Va.	130

Consigned by C. P. Snively, Chambersburg, Pa.

31	Franchette Pontiac Brooks, 5 yrs., E. S. Grimm, Waynesboro, Pa.	160

Consigned by Russell A. Eldridge, Hagerstown, Md.

33	Cambria De Kol Zoe 2d, 9 yrs., C. Howard Nigh, Hagerstown, Md.	140
34	Lady Josephine Korndyke De Kol, 5 yrs., Roy L. Hoffman, Hagerstown	140

THE BRATTLEBORO SALE

The Purebred Livestock Sales Company held another of their great sales at Brattleboro, Vermont, May 24th and 25th. The prices realized, generally speaking, were not what they should be, but when it is considered that the milk market is in about the worst shape it has been in six years and that the cattle market is away off, the prices obtained carry considerable encouragement. The sale management feel gratified that buyers from New York State and Pennsylvania patronized this event and that one of the best buyers is so intensely interested in purebred Holsteins that he came from the distant island of Curacoa, Dutch West Indies and obtained some of the choicest offerings. This gentleman showed excellent judgment in his selections. The Sales Company conducted the event in a very high-class manner. Cols. B. V. Kelley, D. A. Perry and James McDonald, representing New York, Ohio and Vermont, cried the sale. The total was $19,840 obtained for 123 animals, old and young, an average of $161.30. Queen Alexander Segis, a seven-months'-old heifer sired by King December Segis, he a grandson of King Segis from the twice 30-lb. cow, Gundrieda Phillips De Kol, 33.60 lb. won first prize in the show. She was consigned by the Lovell Park Farm and went cheap enough for $85 to F. C. Batt of Buffalo, N. Y.

(Continued on page 380)

HEADS HOLLINS INSTITUTE HERD

One of the real good Virginia Bulls is Colonel Pietertje Ormsby who heads the herd at the Hollins Institute. The sire of this bull is Sir Pietertje Skylark Ormsby, a grandson of Dutchess Skylark Ormsby the first cow to make 1,500 lb. butter in a year. His dam Miss Pietertje Colantha Ormsby has a year record made as a senior two-year-old of 940.2 lb. butter and 18,452.9 lb. milk. She is a daughter of Sir Pietertje Ormsby Mercedes and her dam Miss Colantha Korndyke Ormsby has a seven-day butter record of 34.08 lb. and has a year record made as a senior four-year-old of 1,089.44 lb. butter. She is by a son of the famous Colantha 4th Johanna and her dam Miss Korndyke Maid Ormsby made 30.75 lb. butter in a week, 1,255.62 lb. butter in a year. She is a daughter of the former world champion for 30-day butter production, Pietertje Maid Ormsby.

The dam of Colantha Pietertje Ormsby is Queen Pietertje Mercedes Ormsby another daughter of Sir Pietertje Ormsby Mercedes. Calving at six years two months and 23 days old this heifer produced 673.12 lb. butter and 15,540.2 lb. milk in a year. Her dam has at least two year records above 600 lb. butter each mae as a heifer and as a four-year-old produced 782.48 lb. butter and over 18,000 lb. milk in a year. Her dam, Queen Ormsby Pietertje has a year record of 993.22 lb. butter and over 21,000 lb. milk made in a year as a senior three-year-old and is a daughter of Sir Pietertje Ormsby Mercedes from the famous transmitting cow Queen Piebe of Fairview.

Every line of this pedigree shows tremendous production and is specially strong on year records. His dam is only a heifer, her long time record being reported this year. She is expected to materially increase her present official mark. At the head of the great accredited herd at the Hollins Institute, Colonel Pietertje Ormsby will have the opportunity to which his individuality and breeding entitles him. The Hollins Institute is under the supervision of Mr. Joseph A. Turner, one of the big men in Virginia's Holstein affairs.

Wouldn't it be funny if everybody believed everybody?

WASHINGTON DAIRY NEWS

The Mason County Cow Testing Association was formed by County Agent H. E. Drew. Twelve members with 76 cows were signed up and agreed to eliminate all unprofitable cows at the end of the year. The organization was formed without cost to the members through the coöperation of the local creamery.

A dairy club was organized in the Snoqualmie Valley with George R. Abbott local leader. The boys will buy cows that are milking or will soon freshen. They will meet once a month to test the milk, calculate the returns and figure rations. The club was organized by A. B. Nystrom, county agent of King county.

A dairy tour was held in Clallam county and fifty-two farmers made the trip, visiting nine herds which has been tested by the cow testing association. Posters were placed near the herds to bring to the attention of the people the most striking results of the work. After examining the different herds, the dairymen met at Sequim and were addressed by William Bishop, president of the Washington State Holstein Association. County Agent A. W. Holland assisted in conducting the tour.

There is quite a little activity in Washington Dairy circles. The Stillaquamish Valley Dairy Club of Snohomish County is planning a trip to the homes of the various members of the club. The Nascelle Valley Calf Club of Pacific County has just had such a tour in which each member visited the homes of the other club members.

As a result of the purebred sire campaign conducted by the Extension Service of the State College, three registered dairy sires were placed in Pierce County by County Agent L. T. Oldroyd during the past month.

Feeding lectures were given in five communities in Lewis County by Don Magruder, dairy specialist of the State College. A total of 190 persons attended the lectures.

A purebred Holstein club was organized in the Grandview district of Yakima County by County Club Agent E. C. Scott. Five of the nine members have secured their heifers or cows.

A two-day Dairy School was held in Walla Walla, feeding, breeding, herd management and stock judging were discussed.

A cow testing association is being formed in Spokane County by County Agent O. V. Patton.

DICKENSON SELLS GOOD ONE

A. J. Miller & Son of Janesville, Wis., has purchased from the Walcowis Farms of Lake Geneva, a son of Iowana Sir Ollie. His dam, as a junior two-year-old produced 19.21 lb. butter in seven days and averaged over 60 lb. milk a day. In 305 days she produced 627 lb. butter and 15,225 lb. milk and is being again fitted for long time test.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Continued from page 379)

The top price was $665, which F. A. Perret Gentil, of Curacoa, paid for the eighteen-months'-old bull Tranquility Ormsby Goldie, sired by King of the Ormsbys from Tranquility K. A. Goldie a daughter of Korndyke Abbekerk with records of 31.62 lb. butter, 615.8 lb. milk in a week made as a four-year-old. That well-known breeder F. T. Metcalf of Holyoke, Mass., paid $500 for Nanuet Robena Pontiac Fayne a granddaughter of Spring Farm King Pontiac 6th consigned by Sandy Brook Farm, Hallowell, Me. The same gentlemen bought two others for over $400 each. Mr. Gentil took a number of real good ones besides the bull.
